Believing the aged will continue to be one of the country's major problems in the future and that many will be referred to hospitals, every step will be taken to meet the situation, board members agree

For several years, General's social service department has been more than handicapped for lack of suitable space and facilities, more so than any other department. It is hoped through the postwar expansion program that the situation will be remedied to the extent that greater service than ever before may be rendered \*

Employees of Marcy State Hospital have oversubscribed their self-established quota of \$15,000 for the Seventh War Loan by \$253 and have allocated the funds to Whitesboro and Stittville to enable those places to meet their given quotas, Dr Neil D Black, chairman of the drive in the hospital, has announced

The hospital is not located within a district which has a given quota and during the last four bond drives has established its own goal Of the funds raised, \$7,000 will be allocated to Stittville and the remainder to Whitesboro, Dr Black said

There are approximately four hundred employees in the hospital A meeting was called of the heads of departments when a goal was decided upon and

Dr Black was elected chairman

The White Plains Branch of the New York Orthopaedic Hospital, closed for two years, has been sold to the Catholic Archdiocese of New York, it was disclosed recently

The use to which the property will be put has not been decided, it was said Presumably it will be

used either as a hospital or school \*

With \$400,000 already subscribed toward the Building Fund of the Columbia Memorial Hospital much interest was taken in the reports of the Memorial Gifts Committee and the Industrial Committee at the dinner meeting held in the General Worth Hotel, Hudson, on July 18 James E Leath, of Kinderhook, introduced the speakers, among whom was Liu Liang-mo, Chinese lecturer and writer Mr Liang-mo is a graduate of Shanghai University

and did graduate work in sociology at the University of Pennsylvania

In his own country, he is called the "Morale Builder of China" because of his work in bringing the soldier and civilian together for better understanding '

Plans for the construction of a medical and surgical building at the Hudson River State Hospital as a postwar project are nearing completion, according to Dr Frederick MacCurdy, commissioner of the State Department of Mental Hygene The estimated cost of the structure is \$2,400,000

At the same time, Dr MacCurdy said that plans for a \$600,000 storehouse and cold storage building, including a bakery, have been completed and that plans for an addition to accommodate 350 additional tubercular patients at Hudson River State Hospital are being developed — It is estimated that this addi-tion, plus the cost of demolishing some other buildings, will cost \$925,000 Another project calls for acquiring additional power plant equipment at a cost of \$300,000

Dr MacCurdy said the state is preparing a postwar building program for its mental hygiene institutions that eventually will entail the spending of \$130,000,000 and that when the program is completed, the institutions should be equipped to handle the state's mental patients for many years \*

Approval of a site for a new veterans' hospital was announced in July by representatives of the U S Veterans Administration and the Saratoga Springs authority \*

The third report of the Monticello Hospital The highlight of drive showed a total of \$73,441 the report meeting was the returns made from the Village of Woodridge Louis Blumberg, Bons Fogelson, Morris Fox, Mrs William Krieger, M Kaplan, Mrs Casper, and others, all assisted in this fine work, making a partial report of the Committee, totaling \$5,000

Earl A Stratton, general chairman for South Fallsburgh, reported \$2,000 additional

The Monticello men and women reported \$3,353, thus bringing the total up to \$73,441 \*

Through the efforts of the Auxiliary of the Saranac Lake General Hospital a total of \$2,187 34 has been raised for general upkeep and other needs of the hospital

A net profit of \$1,000 was realized for the show, "Hi-Lites of 1945," which was presented July 2 in

[Continued on page 2006]

# How comfortable can a cold be?

The sneezes and the snuffles usually run their course—but a few drops of Sulmefrin make breathing easier and bring quick comfort. Nasal congestion is relieved and the danger of sinusitis and other bacterial infections con siderably lessened

Sulmefrm is a stabilized aqueous solution of an effective vasoconstrictor—44-desoxyepbedrine bydrochloride (0.125%)—plus sulfathiazole sodium (2.5%) Miklly alkaline, non irritating, Sulmefrm does not impede ciliary action. Administered by spray, drops or tamponage.

MANUFACTURING CHEMISTS TO THE MEDICAL PROFESSION SINCE 1868

[Continued from page 2004]

The gross returns the Harnetstown town hall

from the evening were \$1,388 30

The show was presented by professional and local talent and organizations of the village Mrs W Warriner Woodruff was chairman of arrangements for the show

A net profit of \$1,18734 was realized from the Hospital rummage sale, tag day, and food sale held June 23 in Saranac Lake Mrs Spencer Schwartz

was the chairman

2006

The tag day under direction of Aaron Shapiro netted \$404 10, the food sale held by the Sisterhood of the Jewish Community Center raised \$180, and the rummage sale returned \$603 24 \*

The United States Veterans Administration has approved a new contract with Albany Hospital for bed patient care of World War II veterans with service-connected disabilities

The new contract, which runs for the entire 1945-1946 federal government fiscal year, replaces one

negotiated last April

News of the approval of the latest contract reached Mr George J Pickett, Albany County veter-ans' service officer, in a letter from Rep William T Byrne, whose influence was enlisted in the days when stricken World War II veterans were literally charity patients, being transported for medical attention in police prowl cars

Dr Thomas Hale, medical director of Albany Hospital, confirming the news of the new contract, revealed also that the Veterans Administration had agreed to increase the rate for bed patient care from

\$6 92 to \$7 52 a day

The original rate was based on experience under the Federal Government's maternal and infancy Under the law, the rate is re-evalucare program ated once a year As a result of the latest re-evaluation, the Veterans Administration now is paying the higher rate for bed patient care of Albany Area veterans

In addition, Dr Hale said, a contract for clinical visit care for veterans with service-connected disabilities has been renewed at the old rate of \$150 a

As a result of these developments, Albany area veterans with service-connected disabilities are assured of both types of care at Albany Hospital until June 30, 1946 \*

A \$76,000 loan to New York City for completion of plans for a hospital for study and treatment of tropical and communicable diseases was approved on July 16 by the Federal Works Agency in Washington The 300-bed hospital, to cost \$2,200,000, is planned by the Department of Public Works as a postwar project

Under an agreement drawn up with Mayor La Guardia, it will be staffed by the Columbia-Presbyterian Medical Center \*

With W Beach Day, of New York City, chairman of the Board, presiding, the annual meetings of the members and directors of the Mary Imogene Bassett Hospital, Cooperstown, were held in the library of the hospital on July 18

In addition to the transaction of the routine business of the board, including the presentation of

several reports, the resignation from the Board of Henry R. Labouisse, Jr, of New York and Washington, was accepted To fill his place, Stephen C Clark, of Cooperstown, was elected a member of the board \*

[N Y State J M

At a meeting of the Board of Directors of the Dodge Memorial Hospital Association on July 17 at Erwin Library, in Boonville, a resolution was adopted by those in attendance which authorized and directed the officers of the association to convey the land and building formerly belonging to the Dodge Memorial Hospital Association to the Village of Boonville The resolution was adopted on the condition that it be used for public purposes and

shall carry the Dodge name
Frank W Whiter, chairman of the Board of

Directors, presided over the meeting \*

Medical and surgical supplies have been received by the Tarrytown Hospital from the Tarrytown Office of Civilian Defense, it was announced at a recent meeting of the board of directors of the hospital Miss Madge Cook, hospital superintendent, said that she was "extremely grateful" for the many items received \*

The Arnold Gregory Memorial Hospital, in Albion, is a beneficiary to the amount of \$12,000 or more in the will of Miss Belle O Stafford, of Rochester, who died there June 17, leaving an estate estimated at \$55,000 in value \*

John W Fiske, who for the past eleven years has been superintendent of the Northern Westchester Hospital, in Mt Kisco, has resigned his position, On that date he will become effective October 1 superintendent emeritus

During the period of Mr Fiske's superintendency, the hospital has been enlarged in the number of rooms and patients accommodated, and has in other respects improved its facilities Last year a campaign was undertaken and successfully completed

for a fund to make extensive additions \*

A \$12,000 memorial subscription to the Buffalo General Hospital Building fund has been received from Thomas B Lockwood, it was announced on July 23 by General Chairman Carlton P Cooke It will establish, as a memorial to Marion Lobdell Lockwood, the solarium atop the new hospital building

In memory of her husband, George F Rand, Jr, F Rand, president of Children's Hospital, Mrs George F Rand, president of Children's Hospital, has subscribed the cost of building, furmshing, and equipping two private rooms on the seventh floor of the new building

A bed in a semiprivate two-bed room on the second floor of the expanded hospital will be established as a memorial to Charles Miller Ramsdell through a

\$2,100 subscription by Mrs Charles M Ramsdell
A bed in a 12-bed ward on the third floor will be
memorialized in the name of Josiah Letchworth

through the \$1,500 subscription of Mrs Josiah Letchworth and Geoffrey J Letchworth

Three new subscriptions by corporations and individuals totaling \$16,200 were reported on July 25

Mrs Grace R Johnston subscribed \$7,200 jointly with the J W Clement Co for a four-bed room on the fourth floor of the new building in memory of her husband, David Lorimer Johnston.

In honor of Edward J Barcalo, a subscription of \$6,000, covering the cost of hulding, furnishing, and equipping a medical study room on the ground floor of the expanded hospital was made by the Barcalo

Manufacturing Co
Subscribed by Harry F Coward, Charles H Hickman, and Raymond W Wattles, of the firm Hickman, Coward & Wattles, Inc, was \$3,000 for a waiting room on the second floor The dedicatory tablet is to be inscribed, "Patience Is a Virtue"\*

Vast plans for enlargement of the state's facilities for the care of mental cases include an expenditure of \$6,000,000 for new Rochester State Hospital construction, it was disclosed on July 22

Dr John L Van de Mark, superintendent of the hospital, in revealing the planned expansion, said, however, that the whole enlargement program is in a state of fluidity and plans as of the present are not crystallized into blueprints

In total, the State Department of Mental Hygiene plans to spend \$150,000,000 in a postwar building program, it was reported from Albany \*

Mr and Mrs Ernest L Woodward, of Le Roy, have given to St Jerome Hospital, in Batavia, \$50,000 to be added to the fund for the crection of the new hospital building, which is to be erected as soon as postwar conditions permit

The gift is made as a tribute to Cpl Robert Louis Graney, son of Dr and Mrs Charles D Graney, of Le Roy, who was killed in action in France in October of last year \*

The Wyckoff Heights Hospital, in Brooklyn, announces that its School for Practical Nurses opened September 1 Young women of 18 or over, with two years of high school or its equivalent, are

eligible to enter
The course is of one year's duration, and consists of classroom instruction, and, after a few weeks, practical work in the hospital wards, under direction of the instructiess. Those who successfully complete the first three months will receive caps. Upon the completion of the entire course, there will be commencement exercises, with the awarding of hospital pins and diplomas, and the graduates will be fully qualified to take the New York State examination for licensing as graduate practical nurses.\*

The Hygena Nursing Bottle Co has subscribed \$12,000 to the \$4,000,000 Buffalo General Hospital Building Fund to establish a memorial in the enlarged General Hospital, Henry W Wendt, chairman of the committee on corporation subscriptions, has reported

The memorial, Wendt said, will be a nursery on

the north floor of the new hospital building in honor of Dr William More Decker, the inventor of the Hygeia wide-mouth nursing bottle \*

George W Furey, of Brightwaters, again heads the annual drive to secure funds for the maintenance of the Southside Hospital, Bay Shore \*

About 2,000 persons attended the picme at Rhoads General Hospital picme grounds, which climaxed the celebration at the hospital of the 170th anniversary of the Army Medical Department on July 27

Residents of Utica and vicinity were thanked by Colonel Canning, commanding officer of Rhoads Hospital, at the morning ceremonies for "their splendid cooperation and generosity, without which the hospital could not have accomplished the great work it has been doing for the past two years"\*

Fourteen Gray Ladies, newly assigned to the Occupational Therapy Department at Rhoads General Hospital, were guests of the department on July 24 at a "welcoming tea" in the Officers' Club Capt Newton C McCollough, assistant chief of

Capt Newton C McCollough, assistant chief of the orthopedic section and chief of the occupational therapy department, spoke on the purpose of the work which the Gray Ladies are expected to perform in the wards and described some of the patients they will meet

The fourteen Gray Ladies, selected from the new class which recently commenced work at Rhonds, will do occupational therapy work in the bed wards, assisting patients who are unable to go to the Occupational Therapy Shop They'll teach leather work, chip carving, cord knotting, clay modeling, woodburning, and the making of bracelets \*

Repair work on the foundation of Millard Fillmore Hospital in Buffalo got under way in July The project will cost an estimated \$35,000

The project will cost an estimated \$35,000 Superintendent Harold Grimm emphasized that there will be no new construction and that only the foundation of the old building, erected in 1927, is to be repaired New steel pilings must be driven under some of its columns \*

Ground was broken on July 25 at Auburn Citi Hospital for the new War Memorial Building The new building will be of brick, four stories in height and 92 feet in length. It will add forty-seven beds, mostly in private rooms, to the hospital's present facilities, which for some time have been hard pressed to care for patients admitted and essential facilities. While no date has been specified for the completion of the building, because of shortages and restrictions occasioned by the war, construction is to he pressed as rapidly as conditions permit.

The membership board of St John's Hospital, Batavia, held its annual meeting during July and reports of President George J Madden and Treasurer Richard Hannan were received and tentative plans for future operations considered

[Continued on page 2010]

# with a new therapeutic efficacy in New Highly Cosmetic Form

On exposed body surfaces, where ordinary tar preparations have proved so objectionable to the patient, non staining, non-soiling TARBONIS is especially appreciated its vehicle is a greaseless, vanishing type cream which cannot be detected on the skin after application—yet it presents tar with a therapeutic efficacy superior to tar in its older forms

The active ingredients of TAR-BONIS, a unique liquor carbonis detergens, is extracted from selected tars by a process distinctly its own-resulting in considerably higher concentrations of sulfurs and unsaturated hydrocarbons, the substances to which the action of tar is attributed. In additional carbons is attributed.

tion, it yields a more uniform product, virtually free from irritant properties. The vehicle in which this liquor earbonis detergens is presented to the usues, assures full utilization, thus making TARBONIS therapeutically equivalent, if not superior, to tar outments of much higher concentration.

Physicians are invited to send for a clinical test sample of TARBONIS and for a copy of the comprehensive, illustrated brochure on tar therapy THE TARBONIS COMPANY

Distributed in Canada by Fisher & Burpe, Lid., Winnipeg, Man.

### [Continued from page 2008]

The hospital was opened to convalescent and chronic patients following the termination of the contract with the Board of Supervisors in 1942 For twelve years prior to that the hospital had been used as a county sanitarium for tuberculosis patients \*

Construction of a \$50,000 addition to the patients' recreation building at Rhoads General Hospital, Utica, has been started, it was announced on July 25 by Col A. J. Canning, commanding officer

The addition, three two-story wings on the front of the present two-story building, will be constructed by the middle of September, according to First Lt. William L McGarry, assistant post engineer \*

Nassau County needs one thousand eighty-four more hospital beds to care for its present population alone, County Executive J. Russel Sprague declared in Mineola on July 25 in an appeal for the Long Beach Memorial Hospital Fund Campaign for which he is honorary chairman

"According to the United States Public Health Service," said Mr Sprague, "there should be a minimum of 4 6 hospital beds for each 1,000 population. That means that Nassau, with its present population of approximately 500,000, should have at least 2,300 beds to care for immediate needs We have only 1,216, a deficit of 1,084"\*

The hospital in Greenport started its annual campaign for maintenance and buildings funds in July \*

## ATTENTION INSURANCE COMPANIES

We have watched the development of hospital and sickness insurance in the past several years and we are convinced that the standard model United States citizen can be taken care of better, more completely and efficiently by private insurance interests than by governmental control, but there is one gent we would like to get our hands on—it's that verbose hombre who conjures up all the foolish questions on the various insurance forms—those blanks of iniquity that are firmly presented to the doctor with a request to "Please fill in." These forms are to be completed by the physician so that the patient will be able to secure some negotiable Morgenthau pocket lettuce to pay the hospital bill and doctor—if and when.

The insurance company merely wants to know the patient's name, address, sex, age, married or single, occupation, present illness, past history, physical examination, laboratory tests, x-ray reports, operation performed, type of anesthetic used, pathologist's report, name of the hospital, exact hour of admission, exact hour of discharge, length of total disability, length of partial disability, and so on into the night At the end of all of these questions the physician is asked to give his permission for the in-

surance company to inspect the hospital record so that they can get the same information which he has just given them

Oh, Aesculapius! Oh, Apollo! Grant us rehef from this deluge of forms, blanks, and questionnaires

There used to be a time when illness was quite a confidential matter—something intimately personal between the patient and the physician, now what happens at the doctor's office and at the hospital becomes more or less common property for all the investigators, clerks, and roustabouts interested in knowing something about somebody else. It's like having a physical examination on the City Hall steps at high noon

We appreciate the problems of insurance companies in their efforts to get important information concerning their policy holders, but many of the questions asked are entirely unnecessary and rhetorically redundant. The present lack of simplicity in the ever-increasing number of insurance questionnaires regarding accidents and illness is what is driving physicians to the brink of despair—for some it's no drive, just a short putt—J J Lightbody, M.D., in Detroit Medical News, June 18, 1945

## NEW TYPE AMBULANCE

An improved ambulance, which will carry 12 instead of 4 litter cases in greater comfort, has been developed at the request of the Surgeon General by the Ordnance Department in collaboration with the Army Medical Department By May 31 twenty-five of these new ambulances were carrying casualties from ships and planes to Army Hospitals

The new ambulance has an alumnum body with a front-wheel drive which allows the bed of the truck to be placed lower, making it easier to move patients in and out It is smoother riding than the old type and provides such refinements as a heater for use in cold weather, roof ventilating fans to keep the air fresh, window shades to provide privacy in traffic, and individual electric lights over each litter. There are ample compartments for bedding and utensils. A comfortable scat is provided the attendant next to the driver. Both sit enclosed with the patients—Connecticut State M. J. June, 1945

# In Indolent and Slow-Healing Wounds

When tissue stimulation is required to induce healing, Morruguent Ointment has proved of highly beneficial influence. Since it contains the unsaponified active principles of cod liver oil in concentrated form, it is more powerful than cod liver oil itself

Morruguent Ointment accelerates liquefaction of dead tissue, and stimulates granulation and epithelization. It forms a protective, nonirritant coating—does not form an adherent coagulum—aids in the healing of burns, of pyogenic skin infections, of infected as well as noninfected wounds—and lessens scarring

# MORRUGUENT

Apply directly to the lesion, cover with gaute, and bandage lightly if desired. Renew as often as necessary Morruguent Ointment is supplied in 2-oz. collapsible tubes, and in 1-lb and 5 lb jars.

THE S E MASSENGILL COMPANY

NEW YORK . SAN FRANCISCO . KANSAS CITY

## Iron Tablets to Blood Donors

Since the inauguration of the Blood Donor Service to procure blood for military use, certain centers have been used as "pilot" centers to investigate methods pertaining to the taking of blood and to observe the effects of the donating of blood on the donors themselves Early in the program investi-gators in the Columbus, Ohio, St. Louis, Missouri, and Detroit, Michigan, centers began a study on the effects of iron on the regeneration of hemoglobin These studies have now been completed and soon will be published in detailed form, but we would like to bring a few of the conclusions to your attention at this time First of all, it is apparent that less than 1 per cent of male donors have a hemoglobin level of lower than 12 3Gm per 100 cc of blood, which is the threshold level that we have established for Practically all of the both male and female donors eligible male donors, that is, those with hemoglobin above 123 Gm, regenerate their blood quickly and almost all of these attain their predonation hemo-globin level in four weeks or less. The investigation of female donors, however, showed somewhat different results Approximately 10 per cent of women in the 18- to 60-year age groups who appear to make their first blood donation must be refused because they have less than the threshold level of 123 Gm Furthermore, those with hemoglobin above this level show a considerable variance in the speed of regeneration after a blood donation Some form new hemoglobin as rapidly as males, but most of them take a longer time and a few will not reach their predonation level by the end of eight to ten weeks, at which time they may have made appointments for another donation. It was the two latter groups that we were particularly interested in and it was found that hemoglobinogenesis was meas-urably and significantly increased by the taking of even as little as 5 grains of iron daily

We feel that blood donors have an increased demand for iron that can be in a sense compared to the increased demand for iron known to be present in the last trimester of pregnancy In the latter it is almost universal practice to prescribe iron to maintain iron reserves and it is apparent that many blood donors likewise will benefit by supplemental

Beginning shortly, the American Red Cross New York Blood Donor Center will offer to each female donor an envelope containing approximately one liundred 21/1-grain tablets of a ferrous salt No insistence will be made that they take the tablets, and they will be given only to women who have just completed a blood donation Under no circumstances will iron tablets be distributed to anyone who is rejected as a donor because she fails to meet our hemoglobin standard Objections may be raised by women who have donated previously but they will be, as in the past, referred to their own physicians

The following is a copy of the inscription on the envelope which the donor receives

### To Blood Donors

As millions know from experience, healthy adults can donate a pint of blood every eight weeks without impairing their health in any way The body soon replaces the blood given, which is composed principally of fluids, proteins, and red blood cells containing iron. All these are obtained through a normal diet, with the occasional exception of iron

Recent studies conducted by the Blood Donor Service, however, demonstrate that addition of iron to the diet of women donors usually speeds replacement of the red cells, just as salt tablets on a hot summer day speed the replacement of salt lost through perspiration Accordingly, enough iron tablets to replace the amount of iron in a pint of blood are now being given to donors desiring them

Those wishing to take them should take one tablet before breakfast the first day dollowing the donation, one before breakfast and one before lunch the second day, and one before each meal the third day, and thereafter until all the tablets

in this envelope have been used

MARY HEISS BOYNTON, M D Physician-in-Charge Red Cross Blood Donor Service New York, New York HENRY S BLAKE, Lt (MC)USNR National Technical Director Blood Donor Service American Red Cross

## Mental Hygiene Clinics

A forward-looking step has just been taken by Westchester County in appropriating funds for the establishment of a county-wide network of mental hygiene clinics to render psychiatric service to adults and children These clinics are to form a division of mental hygiene in the County Department of Health with a staff appointed by the Commissioner of Health Six of them will be spotted about the county in whatever localities show the greatest need, readiness to cooperate, and accesssibility to

The plan for these clinics organized with a Committee of the Westchester County Council of Social Agencies which later became the Mental Hygiene Association of Westchester County A small group spent a year in assessing the existing facilities, the need, and possible plans for expansion of the heretofore meager services Their plan was first of all presented to the County Medical Society for criticism and endorsement Having received the unqualified approval of the Medical Society, the newly formed Mental Hygene Association then discussed its plans with the Commissioner of Health, the Commissioner of Public Welfare, veterans groups, nursery-school councils, parent-teacher organizations, the various family societies, school beautiful and the societies, school and the societies of the societies of the societies. principals and superintendents, and public-health With the backing of these nursing organizations groups the Commissioner of Health, Dr William A Holla, presented the plan to the County Board of Health In April, 1945, Dr Edwin G Ramsdell, Chairman of the Board of Health, and Dr Holla presented the plan much as originally outlined to the County Board of Supervisors The appropriation was made by the Supervisors on August 6

The Westchester plan for mental hygiene clinics is unique in several aspects First of all, it provides wider county coverage of service than any plan now

in operation

the surrounding area

Second, it is unique in New York State in so far as In Westchester County the it affects the veteran veteran and his family will receive psychiatric treatment in a general mental-hygiene climic for the community rather than in a service "for veterans

[Continued on page 2014]

WHEN the physician reaches a decision that conception would present an undue hazard to health, the "RAMSES" Flexible Cushioned Diaphragm may be prescribed with confidence. The unique patented construction of the rim provides a wide unundented area of contact with the vaginal walls, plus a buffer against spring pressure.

"RAMSES" Flexible Cushioned Diaphragms are manufactured in gradations of 5 millimeters in sizes ranging from 50 to 95 millimeters. They are available on the prescription or order of physicians through recognized pharmacies.

## Ramses flexible cushioned diaphragm

New York 19, N.Y.

[Continued from page 2012]

only" Medically speaking, this would seem to be a sound program, for surely an initial step in the treatment of a psychoneurotic veteran is his accept-Westchester has set ance of his status as a civilian up its mental hygiene service in such form as to favor

such acceptance

Third, in recognition of the shortage of psychiatrists the plan has been devised to make the most economic use of such psychiatric supervision as can be secured Each of the clinics will be staffed by a qualified psychiatric case worker who will not only make case studies but carry on a certain amount of actual therapy under the supervision of the directing psychiatrist A central staff for the whole county consisting of two psychiatrists, a case supervisor, and a psychologist will circulate among all six Treatment for the more complex cases will be given by the psychiatrists Other patients will be treated by the case worker under the psychiatrist's supervision and with occasional direct assist-

Fourth, the Westchester plan is unique in the flexibility of relationship between the County Health Department and those cities in the county which are not in the county health area, but have their own health departments under direct supervision of the State Department of Health By special arrangement with the state authorities the county will receive reimbursement for half the cost of the mental hygiene services and then may provide service to any city not within the county health area which desires such service at cost. Mount Vernon, one of the cities outside the county health area, has already signified its desire to contract for mental hygiene service under this plan Public opinion on the same question is becoming articulate in Yonkers

No final decisions have been made as yet on the location of clinics, other than that in Mount Vernon, and the staff has not yet been employed With the assistance of a Clinic Committee nominated by the Mental Hygiene Association and appointed by the Commissioner of Health, the Commissioner of Health is drawing up staff qualifications based on state requirements and also on the peculiar demands of the Westchester situation The Commissioner of Health admits that the search for psychiatrists, psychologists, and case workers with experience not only with adults but also in child guidance will be difficult Any staff suggestions that those reading this Journal may care to make would be wel-

The newly formed Mental Hygiene Association which originated and promulgated this plan is to act as the educational and interpretative arm of the clinics and, indeed, of that of other psychiatric services in the county which have been chiefly diag-The Association plans, with the conostre to date operation of the Health Department and Grasslands Hospital, of the Department of Welfare, to hold clinic study sessions, discussion groups, and conferences with those professional groups in the county who are circumstanced to be in touch with the need for psychiatric service, particularly general practitioners and pediatricians, ministers, school principals, guidance deans, and teachers of public and private schools, public health nurses, and social workers

It is hoped that these clinics will reach a cross section of the population With that purpose in mind service is to be on the basis of a graduated fee runming from nothing to approximate cost and based on ability to pay The clinics will offer not only psychiatric treatment, which is the service most lacking in Westchester, but also diagnosis of cases which may need other types of care and consultation with those who are troubled about the problems of children or adults but do not care to make a

direct referral

Physicians throughout the state will watch the development of this plan with interest. It is be-lieved that physicians of the state will note with pleasure that while the Mental Hygiene Association of Westchester County is a lay organization somewhat similar in function to the well-known tuberculosis associations in their field, the medical group is well represented in its councils Dr Laurance D Redway, Chairman of the Medical Society, and Dr Lawson G Lowrey, Director of the Brooklyn Child Guidance Clinic and resident of the county, are vice-presidents of the organization. The Board, which numbers about fifty, includes sixteen phys-cians, six of whom are psychiatrists, the balance being scattered among general practice and other spe-Partly because of medical participation in the Board and partly because of the conviction of the lay members that medical guidance in this field is essential, all of the planning which leads to the establishment of the new clinics has been carried out in consultation with the Westchester County Medi-We believe this is one among many faccal Society tors which augur well for the future of the clinics and the Mental Hygiene Association

> WILLIAM A HOLLA, M.D. Commissioner of Health Westchester County

August 13, 1945

## CHEMICAL STOPS TB GERMS IN TEST-TUBE EXPERIMENTS

Discovery of a new antigerm mold chemical that stops human tuberculosis bacilli in test-tube experiments is announced by Dr Isadore E Gerber and Milton Gross, of the Hudson County Tuberculosis Hospital in Jersey City (Science, June 15)

Whether the new substance will prove effective in treating tuberculosis is not stated in the scientific report, which covers only preliminary study of the substance Penicillin, most famous of the mold

antigerm chemicals, has no effect on tuberculosis germs The mold from which the new substance was extracted has not yet been completely identified but is one of a group of Aspergillaceae, of which family The scientists are Penicillium is also a member now striving to isolate and purify the active maternal in the mold extract and determine the growth conditions necessary for best yield.—Science News Letter, June 23, 1945

## Woman's Auxiliary

## To the Medical Society of the State of New York

## County News

Nassau County The Woman's Auxiliary to the Nassau County Medical Society takes pleasure in announcing that the first meeting of their new and tenth year will be the customary Membership Tea on September 25 at the Nassau Hospital Audito-

At 3 15 PM Army Personnel will show a film entitled "Returned for Duty" Two or three war veterans will speak following presentation of the film on how our wounded soldiers are being helped

to regain their health

On October 30 the Auxiliary has been invited by the Nassau County Medical Society to join them at their meeting to hear Dr Joseph Lawrence, director at the Washington office of the Council on Medical Service and Public Relations of the American Medical Association

For the November meeting the Auxiliary is spon- . two or three times daily

soring the Cancer Institute which is being held at the Garden City Hotel on November 14 A most interesting program is being planned by the Nassau County Cancer Committee

From September 11-15 at the Mineola Fair, members of the Auxiliary served at the booths pre-

The general theme of the chibit was "Rehabitation," a subject of great interest to us all Static exhibits and movies, shown by the Army Signal Corps, were originally intended for use of Army Medical Static representation. Medical Staff personnel, but are now released for

public showing

The films, "Reconditioning of the Convalescent for Return to Duty" and "Diary of a Sergeant," which was recently reviewed in Life, were presented

## EXPENDABLE REFRIGERATORS PROLONG LIFE OF WHOLE BLOOD

Whole blood, flown from this country to the European Theater of Operations, keeps in condition for transfusions five days longer than formerly, or as long as twenty-one days, because of a new system of refrigeration inaugurated in April, according to the Office of the Surgeon General

The bottled blood is now being flown overseas daily in compact, expendable iceboxes made of metal foil on cotton insulating board which keep the blood within safe temperatures between 39 and 50 F The containers, measuring 21 by 21 by 25 inches, weigh only 105 pounds when carrying their full capacity of 24 bottles Each bottle contains about a pint and a half of whole "O"-type blood An elaborate system has been set up overseas to

complete delivery

The blood to be delivered is flown to focal points in all forward areas Blood bank detachments at these points service all Communications Zone medical installations in the area and truck the blood farther forward to advance detachments which deliver it to the operating surgeons

Brig Gen Fred W Rankin, USA, director of the Surgical Consultants Division, Office of the Surgeon General, stated that whole blood plays such a vital role in the saving of lives that anything extending its use is of prime importance —Connecticut State MJ,

June, 1945

## CIVILIAN COMMITTEE TO AID ARMY'S PROGRAM FOR THE BLIND

An Honorary Civilian Advisory Committee to the Surgeon General has been formed to cooperate in the Army's social adjustment training program for the blind

All members of the committee are individually

prominent in civilian work for the blind

At the first meeting held on March 21 at the American Foundation for the Blind in New York City, Dr Robert B Irwin, of New York City, was elected chairman, and Mr Joseph G Cauffman, of Overbrook, Pennsylvania, secretary, Mr Peter J Salmon, of Brooklyn, Mr W L McDamel, of Washington, D.C., and Mr. Henry P. Johnson, of Tampa, Florida were elected field consultants. These constitute the Executive Committee

Other members of the Advisory Committee include Dr Gabriel Farrell, of Watertown, Massachusetts, Mr Eber L Palmer of Batavia, New York, Col E A Baker, of Toronto, Canada, Mr Philip N Harrison, of Harrisburg, Pennsylvania, Dr Roma S Cheek, of Raleigh, North Carolina, Rev Thomas J Carroll of Navitor Massachusetts and Mrs Lee J Carroll, of Newton, Massachusetts and Mrs Lee Johnson, of Jefferson City, Missouri — Release from the Office of the Surgeon General, March 31, 1945

The active ingredient of Koromex Jelly is phenylmercuric acctate, whose remarkable contraceptive efficiency was affirmed in the illuminating report by Eastman and Scott (Human Fertility 9 33 June 1944) Their clinical and experimental data confirmed the earlier findings of Baker, Ranson and Tynen (Lancet 2 832 October 15, 1938) In addition to its excellent sperimental efficacy, Koromex Jelly possesses to a high degree those other qualities which are physiologically and aesthetically so important to patients. For these reasons you can prescribe Koromex Jelly with confidence

#### REVIEWED

The Specialization of Medicine With Particular Reference to Ophthalmology By George Rosen Octavo of 94 pages New York, Froben Press, 1944 Paper, \$2 00

Dr Rosen has written an important and interesting discussion of specialization in medicine with

particular reference to ophthalmology

In addition to being a contribution to medical history, Dr Rosen's study will be of the greatest interest to those who are interested in sociologic aspects of the practice of medicine and especially in the current trend of medical practice. Specialists, particularly ophthalmologists, will be amused and in some cases chagrined to learn the low esteem in which specialists were held in other years. All physicians will find much of value in this scholarly work.

MILTON PLOTZ

Foundations of Neuropsychiatry By Stanloy Cobb, M D Third revised and enlarged edition of the work formerly known as A Preface to Nervous Disease Octavo of 252 pages, illustrated Baltimore, Williams & Wilkins Co , 1944 Cloth, \$2 50

This is the third cdition of Cobb's original lecture outlines to medical students. The title is misleading and is based almost entirely upon the addition of a chapter called "Psychopathology," otherwise, the book is an up-to-date example of a competent, simplo, understandable, and descriptive course in the foundations of neurology. Limited

to this scope, the book is excellent for medical students, and is a handy reference for physicians and even specialists, with good bibliographies at the end of each chapter and a good index. Cobb's antiquated concepts of psychology and psychiatry being subdivisions of physiology and neurology only damage the value of the book. His capacity for making the complicated neural mechanisms understandable in compact form should be sufficient. Subsequent editions should drop all references to psychology or psychopathology.

SAM PARKER

Arthritis and Allied Conditions By Bernard I Comroe, M D Third edition, revised Octavo of 1,359 pages, illustrated Philadelphia, Lea & Febiger, 1944 Cloth, \$12

This greatly enlarged third edition contains a wealth of knowledge on the subject presented in detailed, concise, terse form. The subject matter in every instance, after a running descriptive account, is "boxed in" in summary. Each chapter is complete in itself. There is very little controversal matter. A reading gives the impression that all has been well digested. The book is well illustrated and well supplemented by bibliographics. This volume is an important part of the library both of the specialist and the general practitioner.

GEORGE E ANDERSON

[Continued on page 2020]

The well nourished baby is more resistant to the common ills of infancy. Moreover it is during that all important first year of life that the very foundation of *future* health and ruggedness is laid. Similac fed infants are notably well nourished, for Similac provides breast milk proportions of fat, protein, carbohydrate and minerals, in forms that are physically and metabolically suited to the infant's requirements. Similac dependably nourishes the bottle fed infant— *from birth intil weaning* 

A powdered modified milk product especially prepared for infant feeding, made from tuberculin tested core smilk (casein modified) from which part of the botter fat is removed and to which has been added lactose, olive oil, cocount oil, corn oil and fish liver oil concentrate

[Continued from page 2018]

Practical Anaesthetics For Students, Hospital Residents and Practitioners By J Ross Mac-Kenzie, M D Octavo of 136 pages, illustrated Baltimore, Williams & Wilkins Co., 1944 Cloth, \$3 00

Anesthesia with a Scotch accent is the theme of this short book. The author states that it is primarily for the teaching of interns and those general practitioners across the water who apparently still administer some anesthetics

The principles of anesthesia appear to be about the same in the British Isles as they are here, some of the preoperative drugs sound strange but probably are only so in name. The apparatus described is sometimes of British make and sometimes our more familiar American machines

The various chapters cover, in the customary routine method, the different anesthetic agents in common use and the apparatus necessary for their administration, the complications and sequelae of anesthesia, and the use of gases in therapy

It would seem to be a book very well suited to the groups for which it is written, short and to the point with all the serious pitfalls and dangers emphasized and the essentials for the student easy to find in the text

G W Tong

Boyd, M D Fourth edition, revised Octavo of 857 pages, illustrated Philadelphia, Lea & Febiger, 1944. Cloth, \$10

The fourth edition of this text, which has by now become a standard work in its field, carries many of the recent advances dealing with the pathology of internal diseases. Many of the sections dealing with the diseases of the cardiovascular system have been rewritten in part or in whole The new material added under this heading includes the demonstration of the collateral coronary circulation by injection, the relation of trauma to coronary thrombosis, and the history of cardiac infarction

Similarly, that portion of the work dealing with lung disease has been revised Information concerning the virus causation of pneumonia such as Q fever, pattacosis, and primary atypical pneumonia embodies the latest ideas on these subjects is a good account of asbestosis under the pneumokomotic lung diseases Mention is made in the text of the well-known blast injuries of the lung Also, in connection with war pathology, the syndrome of crush nephritis receives mention

All in all, the book still remains, by virtue of its recent complete revision, a companion text to the writer's Surgical Pathology and one which will serve the needs of the medical student as well as of those practicing physicians who have fortunately retained for themselves a live interest in the correlation of pathology with the clinical manifesta-tions of disease

THEO J CURPHEY

Surgery of the Hand. By Sterling Bunnell, M D Quarto of 734 pages, illustrated Philadelphia, J B Lippincott Co , 1944 Cloth, \$12

This volume is most timely and represents years of work by one of the most capable surgeons in this field It is the reviewer's opinion that a better book on this subject has never been written Every surgeon doing traumatic work should have this volume at hand at all times There may be some disagreement as to Dr Bunnell's method of removable-wire suture in tendon repair, but there should be no contention regarding the principle he has laid down for treating all injuries of the hand

The chapter on phylogeny and comparative anatomy is excellent and helps to explain some of our injuries, infections, deformities, fractures, and tumors

The chapter on tumors was written by Dr  $m L \, D$ Howard, Jr, and covers exceedingly well the unusual as well as the common variety of hand tumors.

The photographs and illustrations throughout this book are exceptionally clear and most instruc-

HERBERT T WIKLE

Segmental Neuralgia in Painful Syndromes By Bernard Judovich, M D, and William Bates, M D Octavo of 313 pages, illustrated Philadel-phia, F A Davis Co, 1944. Cloth, \$500

This book presents a fairly simple and clear description of the diagnosis and treatment of the various types of referred pain. This is a field in which in the past relatively little attention has been paid to the importance of the various supporting structures of the body as causes of pain remote from the area in which the disturbance originates

The authors should be congratulated on their simple and clearly illustrated accounts of the various

pain syndromes and their management

ARTHUR SHAPIRO

Modern Clinical Syphilology Diagnosis, Treatment, Case Study By John H Stokes, MD, Herman Beerman, M D, and Norman R. Ingraham, Jr, MD, with the collaboration of eight members of the faculty of the University of Pennsylvania Third edition. Octavo of 1,332 pages, illustrated. Philadelphia, W B Saunders Co, 1944. Cloth, \$10

The authors have achieved their purpose of producing "a single-volume, comprehensive summation of diagnosis and treatment factually authoritative and up to date" The material is chiefly arranged under the headings of bacteriology, pathology and immunology, diagnostic tests, treatment with arsenicals, heavy metals and iodides, diagnosis of primary and secondary syphilis including relapse, reinfection, and progression of lesions, late syphilis, which includes cardiovascular and unerosyphilis, congenital syphilis, and penicillin therapy All of the relevant data relating to these subjects are there—often in the minutest detail. The authors convey the impression that the arsenical drugs will continue to have a place in the management of, syphilis for another decade before being entirely replaced—presumably by penicillin

Excluding the index, the volume contains 1,272 pages with 911 illustrations and text figures be regarded as a reference book of the highest quality

ARTHUR W GRACE

With Special Practical Neurological Diagnosis Reference to the Problems of Neurosurgery Glen Spurling, M D Third edition Octavo of 237 pages, illustrated Springfield, Ill, Charles C Thomas, 1944 Cloth, \$4 00

The appearance of the third edition of this book within a period of nine years attests to its usefulness and popularity among undergraduate students and physicians not specially trained in neurologic

diagnostics The suggested outline for history taking, the observations to be carried out on physical examination, the consideration of abnormal cere-hrospinal-fluid findings, and the help that may be expected from roentgen-ray examination are all elaborated in an orderly and logical manner

E Jefferson Browder

All About Feeding Children By Milton J E Senn, M D, and Phyllis Krafft Newill Octavo of 269 pages Garden City, Douhleday, Doran & Co, 1944 Cloth, \$250

This is a practical and well-written book for parents who wish to know the "why and wherefore" of the feeding of their children. It is original in its substance, and is written in a style readily understood by lay people. Although it will not take the place of the doctor, it will help to supplement the doctor's directions and instructions. Physicians, other than pediatricians, will benefit from reading chapters 8, 9, and 10

HARRY APPEL

The Surgeon's Hands and Other Poems By Ida Norton Munson Octavo of 79 pages Boston, Bruce Humphries, Inc., 1944 Cloth, \$2 00

This little hook of short poems by a contemporary poet covers a variety of subjects. A large number of these poems are sonnets, the hook being named from the first one in the collection. The author sees "loveliness" in the surgeon's hands and praises them for their ability to ease pain and give rest to suffering humanity.

ARTHUR C JACOBSON

Theory of Occupational Therapy By Norah A Haworth and E Mary MacDonald Second edition Octavo of 148 pages, illustrated London, Bailliere, Tindall & Cox, 1944 (Baltimore, Williams & Wilkins Co) Cloth, \$250

Occupational therapy is more often discussed than actually practiced by physicians, but it is occasionally prescribed by many doctors. The war casualities have again brought this subject to the front, as the vast majority of the injured servicemen require some form of occupational therapy. The authors have rewritten their book, which first appeared in 1940. The present edition contains numerous additions adaptable to the war casualities. The book is brief, but covers the outline of the subject. It is really a sort of formulary of occupational therapy, and fills a definite need. The general practitioner, the specialist, and the physiotherapist will each find the book a very helpful aid in his work. It is highly recommended as a brief but authoritative outline of the subject.

IRVING J SANDS

The Etiology, Diagnosis, and Treatment of Amebiasis. By Col Charles Franklin Craig, U.S.A., Ret, D.S.M. Octavo of 332 pages, illustrated. Baltimore, Williams & Wilkins Co., 1944 Cloth, \$4 50

In the opinion of the reviewer it is no exaggeration to say that this book is one which should be in the possession of every general practitioner. As the author indicates in the preface, we may expect the incidence of amelic infection in this country to be increased by veterans returning from tropical service. "This will add to the already considerable percentage of infections with this parasite in this

country, conservatively estimated at 10 per cent of the population, and will render the diagnosis and treatment of this infection of still greater importance from the standpoint of public health"

This monograph on amchiasis represents the complete revision and hringing up to date of a previous work on the same subject by Colonel Craig, and constitutes a very complete account of Endamocha histolytica and the varied pathologic states and clinical manifestations to which it may give rise. Although written primarily for the practitioner, there is an excellent and extensive exposition of laboratory diagnosis.

There are many pertinent illustrations, both

drawings and photographs

E J TIFFANY

The Abortion Problem. Proceedings of the Conference Held Under the Auspices of the Committee on Maternal Health, Inc., at the New York Academy of Medicine, June 19 and 20, 1942 Editorial Committee, Earl T Engle, Ph D, and others Octavo of 182 pages, illustrated. Baltimore, Williams & Wilkins Co, 1944 Cloth, \$250

This little hook merits the attention of every physician, but gynecologists and obstetricians particularly will be interested and stimulated by this study. Apparently it is but the heginning of a serious attempt to solve a problem which is not a purely medical one, although physicians do well to assume leadership in its solution. The high standing of the participants and the quality of Dr. Taylor's work as chairman and editor make the book very readable.

CHARLES A GORDON

The Chemistry and Pharmacy of Vegetable Drugs Dealing With the Derivation and Properties of All the Principal Vegetable Drugs By Noel L Allport Octavo of 252 pages, illustrated. Brooklyn, Chemical Publishing Co., 1944. Cloth, \$4.75

This hook deals with the derivation and properties of all the principal vegetable drugs. The author himself admits that the subject matter is of interest only to those practicing pharmacy. Strictly speaking, it is a text on pharmacognosy. It can be used by the physician from time to time as a reference book, and then only on some academic question.

CHARLES SOLOMON

Textbook of Medical Treatment By various authors Edited by D M Dunlop, M D, L S P Davidson, M D, and J W McNee, M D Third edition Octavo of 1,218 pages, illustrated Baltimore, Williams & Wilkins Co, 1944

Each edition of this textbook.

Each edition of this texthook of Scottish medical practice (the third in five years) has been an improvement on its predecessor. The present edition

will be received with much satisfaction

Individual chapters may have been handled more successfully in other treatises but the volume as a whole is thoroughly satisfactory Extraneous material is rigidly excluded and subject matter often neglected in similar works is well handled. For example, there is an excellent chapter on psychotherapy and a superb section on the treatment of rheumatism with emphasis on physiotherapy.

period

STANLEY S LAMM

Internal Medicine Its Theory and Practice In Contributions by American Authors Edited by John H. Musser, M.D. Fourth edition, revised Quarto of 1,518 pages, illustrated Philadelphia, Lea & Febiger, 1945 Cloth, \$10

An excellent review of the fourth edition of this popular book is contained in the preface by the editor himself, Dr John H Musser It deserves to be read

Attention is called to the greater emphasis given diseases which until recently have received casual As an example, there is undulant fever, to which 12 pages are devoted

In the treatment of meningococcus meningitis mention of the use of penicillin is made in a perfunctory manner, here reference to it is less than 2 lines

The statement (page 231) that "sporadic cases of mild typhus fever known as Brill's disease have occurred in New York and other American cities, notably in the southeastern US" is not the presentday conception, the typhus occurring in the south-castern US is the murine type, while Brill's dis-case is a subclassification of the classical epidemic variety

The chapter on malaria and those on the more important tropical diseases receive adequate space

The treatment of subacute bacterial endocarditis covered in an 8-line paragraph. This demands is covered in an 8-line paragraph. This demands complete revision in the light of recent activity in this field. The statement, "Various drugs, vaccines, and serums have been tried without any apparent influence on the disease" is definitely not the up-to-date conception

One is pleased to note the omission of the special-These belong in separate textbooks

The omission of any reference whatever to psychosomatic medicine is underestimating its influence in modern medicine When one popular text on the practice of medicine begins with an introductory chapter on this subject, and a popular, widely read weekly lay magazine gives a detailed dissertation on it, then surely one expects it to be mentioned in a textbook on internal medicine

The progress in medicine is so rapid that to remain up to date the interval of time between the submission of the material and its publication must

be very brief indeed

S R. BLATTEIS

Arterial Hypertension Its Diagnosis and Treatment. By Irvine H Page, M D, and Arthur Curtis Corcoran, M D Octavo of 352 pages, illustrated Chicago, Year Book Publishers, 1945 Cloth, \$3 75

In this volume the authors have attempted to cover a very large field in a relatively short work, as a glance at the Table of Contents will show Nevertheless, the subject matter is in general well handled, if the arrangement is at times a little con-For example, in the chapter on psychotherapy it is not clear why the subject's diet, obesity, and the "iminor vices"—alcohol and tobacco—should The classification of hypertension is not very satisfying in that it includes a long list of diseases and conditions in which hypertension may occur and yet many of them play no part in the production of hypertension. The electrocardiographic changes seen in hypertension are well de-The chapter on tests of renal function scribed should be useful to those interested in the finer de-tails of complete renal study. The treatment of hypertension by nephrectomy and by operations upon the sympathetic nervous system is discussed in a sound and conservative manner The book is recommonded for what it purports to be—a manual for the care of the patient with hypertension

EDWIN P MAYNARD, JR.

American Medical Practice In the Perspectives By Bernhard J Stern, Ph D Octavo New York, The Commonwealth of a Century of 156 pages Cloth, \$1 50 Fund, 1945

Dr Stern's monograph is the first of a series of studies on medicine and the changing order sponsored by a committee of the New York Academy of Medicine In this indispensable introduction to the general problem, Dr Stern traces the development of American medicine, the attitude toward it of the American public, and the present status of medical practice especially in relation to trends for the future

Dr Stern has brought to his task an attitude sympathetic to the problem of the practicing physician and a long experience in dealing with the sociologic aspects of medicine His statistical data, which will now have to be modified drastically by the return of military physicians and possible changes in the conditions of practice, will be invaluable to anyone interested in this wide field His inferences, and occasionally some of his personal biases may be subject to attack, especially by the more conservative wing of medical opinion Nevertheless, all will welcome it as a challenging, though in some respects personal, statement of a pressing problem, always with us, but more urgent than ever in a rapidly changing world

# Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the JOURNAL The members of the committee are Oliver W. H. Mitchell, M.D., Chairman (428 Greenwood Place, Syracuse), George Baehr, M.D., and Charles D. Post, M.D.

# Teaching Day for Orange County

CANCER will be the subject of a teaching day at the Middletown State Homeopathic Hospital, Middletown, New York, on Tuesday, September 18 The program will be presented under the auspices of the Medical Society of the County of Orange, the Tumor Clinic Association of the State of New York, the Medical Society of the State of New York, and the New York State Department of Health, Division of Cancer Control

The meeting will be called to order at 4 00 PM, and Dr George E Kenny, president of the Medical Society of the County of Orange, will give the open-

ing remarks

Dr H M Gasparian, assistant director of the Ogden Memorial Tumor Chinic, Cornwall, is chairman of the afternoon meeting, which will consist of the following three lectures "Cancer of the Skin and Allied Tumors," by Dr Earl D Osborne, professor of dermatology and syphilology, University of Buffalo School of Medicine, "Cancer of the Uterus and Vagina," by Dr Arthur J Wallingford, profes-

sor of gynecology, Albany Medical College, and "Diagnosis and Curability of Intraoral Cancer," by Dr Hayes Martin, attending surgeon, Memorial Hospital, New York City

The evening program will begin at 7 30 r m, with Dr James W Walton, roentgenologist of E A Horton Memorial Hospital Tumor Clinic, Middletown,

as the chairman

Dr Cushman D Haagensen, assistant professor of surgery, College of Physicians and Surgeons, Columbia University, and Dr George E Binkley, attending surgeon, Memorial Hospital, New York City, will give lectures on "Cancer of the Breast" and "Cancer of the Colon and Rectum," respectively

Dinner will be served at 6 30 PM at the Middle-

town State Homeopathic Hospital

The cancer committee arranging the program consists of Dr H M Gasparian, chairman, and Drs Earl R VanAmburgh, James W Walton, and Meyer Zodikoff

# Endocrines in Gynecology

NASSAU County Medical Society will be given postgraduate instruction in "The Practical Applications of Endocrines in Gynecology" on Tuesday, September 25 at 9 00 PM in the MacArthur Auditorium, Mercy Hospital, Rockville Centre, Long

Island Dr M A Goldberger, associate gynecologist at Mount Sinai Hospital, will give the instruction, which has been arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York.

## Cancer Instruction at Rochester

AN EVENING devoted to instruction on cancer will be held on Tuesday, October 9, at 8 00 r m at the Academy of Medicine, in Rochester

The two lectures arranged for the evening program are "Careinoma of the Colon," to be given by Dr John H Garlock, attending surgeon, Mt Sinai Hospital, and "Progress in Cancer Research," by Dr John J Morton, Jr, professor of surgery, the University of Rochester School of Medicine and Dentistry

Dr J Craig Potter is chairman of the meeting
The program is being presented under the auspices
of the Medical Society of the County of Monroe,
Rochester Academy of Medicine, the Seventh Distriet Branch of the Medical Society of the State of
New York, the University of Rochester School of
Medicine and Dentistry, the Tumor Clinic of the
State of New York, the Medical Society of the
State of New York, and the New York State Department of Health, Division of Cancer Control

# Sullivan County Lecture

"PENICILLIN Therapy" will be the subject of Dr R C Arnold's lecture on Wednesday, October 10, at 8 30 PM at the Lenape Hotel, in Liberty

Dr Arnold is a surgeon in the USPHS, at the Venereal Disease Research Laboratory, US Marine Hospital, Staten Island. His lecture has been ar-

ranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York for the Sullivan County Medical Society

This instruction is provided by the Medical Soeiety of the State of New York with the cooperation of the New York State Department of Health

#### CADET NURSE RECRUITMENT EXCEEDS QUOTA

During the last twelve months 61,471 new student nurses have enrolled in schools of nursing, Surgeon General Thomas Parran of the Public Health Serv ice, Federal Security Agency, who administers the U.S. Cadet Nurse Corps announced on June 30 This is the second consecutive year the corps has exceeded its recruitment quota, he said

The quota for the fiscal year ending today was 60 000, he said. For the last six months of 1945 the annual quota will be the same as last year s. \lilitary and civilian nursing needs will be reviewed by the Public Health Service late in the year to deter mine whether any change in the student-nurse quota is indicated in relation to the course of the war

Dr Parran said that more than \$12,000,000 has been donated in news and advertising space to the Cadet Nurse recultment campaign by industry, press, radio, and screen, without cost to the Govern ment. This has been a major contribution to the success of the drive he said.

# for SUPPLEMENTAL TREATMENTS

No animal laboratory tests can supply information as a guide to the proper choice of therapeutic footwear. Only the hard-earned experience gained over a generation of fitting shoes to all conditions of feet, and learning from the experience of individuals in all age groups not fitted properly before, can provide the essential knowledge adequate for manufacturing and fitting helpful shoes

Add to this the recommendations of specialists in medicine and you have a dependable source for beneficial footwear that supplements your treatments of any member of the family

# Different in form

Maltine with Vitamin Concentrates has long been appreciated by physicians for the unusual prescription and dosage control afforded by its liquid form and its solely professional publicity. Potent, palatable and economical, it finds equally high favor with patients. A balanced multiple vitamin preparation for use as a rational dietary supplement, it is compounded with the precision typical of all Maltine products. Each fluid ounce contains

Vitamin A	10,000 USP Unds
Vitamin D	1000 USP Units
Vitamin B <sub>1</sub>	3 Milligrams
	Thramine Hydrochloride
Vitamin B <sub>2</sub>	.4 Milligrams Riboflavin
Nicotinamide	40 Milligrams
Pantothenic Acid	350 Micrograms
Dicalcium Phosphate	
Maltine	q.s
Avadable only through med	scription pharmacies in bottles Malline Campany, New York.

# Maltine with Vitamin Concentrates

# This, too, will be written in history

Among the many brilliant originations, the inspired improvisations, of the Medical Corps in World War II was the use of

the 'ambulance on wings' When the photograph above was taken, the casualties lined up had just been wounded! Already they had been given emergency medical aid and in a matter of minutes were on their way to a base hospital with completo facilities far away from the combat zono Thanks to such immediate surgical care, quick hospitaliza

tion, and all the companion advance ments of wartime medical science, 97 out of every 100 such casualties lived!

Thanks should be proffered most generously to the incredible diligence of those "soldiers in white" who created and tirclessly practiced these techniques-the medical men in the service whose rest all too often was no more than a moment and a cigarette Incidentally, that cigarette was very likely a Camel. an especial favorite of all fighting men

Definite results in recently treated acute bronchial asthma cases, have proven the beneficial properties of ETHER-IN-OIL used in conjunction with other standard medications

BRONCHIAL ASTHMA

Six patients, having had an attack of acute asthma from two to five days, were thus treated (Dr Maietta, N E J Med; Vol 227, p 985) All of them responded fairly well, but not satisfactorily to injections of epinephrine Four of them received one intramuscular injection of ETHER-IN-OIL; the remaining two received 2 each Within two hours, the asthmatic symptoms were rapidly controlled The patients became quieter, were able to breathe more easily and expectorate more freely Thereafter, the usual palliative medications effectively controlled the symptoms

ETHER-IN-OIL (Brewer) is recommended in addition to (or in conjunction with) Brewer's LUASMIN capsules and enteric-coated tablets—oral medication representing timed therapy in the symptomatic control of Bronchial Asthma

EFFECTIVE ESTROGENIC MANAGEMENT Schieffelin

Schieffelin & Co. search Laboratories Phermaceutical ans 20 COOPER SQUAR

Providing relief from the more distressing symptoms of the menopause, with a mini mum of inconvenience and expense to both the physician and the patient, this synthetic estrogen is an important part of the scheme of management of the climacteric patient

To this convenience and economy may be added the fact that Schieffelin BEN ZESTROL is well tolerated, making it a notable contribution to the treatment of all conditions for which estrogen therapy is indicated.

Schieffelin BENZESTROL is available for oral, parenteral and local administra tion.

Schieffelin BENZESTROL Tablets '0.5, 10, 20 and 50 mg 50s-100s-1000s

Schieffelin BENZESTROL Solution 5.0 mg. per cc 10 cc vials

Zandek has summed up the influence of the anterior putnitary upon sex functions in these words

"Without the auterior labe hormone, no good activity!
no orulation! no sex rhythm! Without the anterior labe,
atrophy of the sex mechanism! Without the anterior labe,
no conception!"

Where supplementation of deficient anterior pitultary follicle simulating and luteinizing hormones is indicated, Gonadophysin presents these fractions prepared from fresh sheep glands in stable powder form. Solution for injection is easily and quickly prepared by adding the sterile diluting solution which accompanies each ampul.

Gonadophysia is being used with definite therspeutic effect in developmental disturbances of the reproductive system resulting from gonadotropic horizons deficiency, the management of menstrual disorders referrable to ovarian dysfunction, and in functional menorausal states.

> Supplied in pockages of three earns type ampuls (500 Rat Units each) and three 5 es ampuls of dissolving solution.

Gonadophysin is the registered tredsmark of G. D. Sente & Co., Chicago SD. Illinois

LENIGALLOL

triacetylpyrogallol,

Council Accepted

Allays itching Reduces hyperemia Promotes formation of normal skin For the usual case of eczema, prescribe Lenigallol 6% in an ointment base, with or without zinc oxide. Stronger applications may be required for more resistant eczema and athletes' foot.

BILHUBER-KNOLL CORP. - - ORANGE, NEW JERSEY

The chief active glycoside of Digitalis purpurea...

as effective by mouth as by vein...

virtually free from nausea and vomiting due to local action

DIGITALINE NATIVELLE (be original ploneer digitoxin the chief active glycoside of Dlgi talis purpures in pure, crystalline form, brings to digitulis therapy a notable efficacy and simplicity of dosage It permuts of effective rapid, single-dose oral digital ization within 3 to 6 hours, with average dose that almost never leads to nausea or vomit ing from local irritant action-

NOTE THESE ADVANTAGES

1—Polency Since it is the chief active glycoside of Digitalis pur purea, Digitaline Nativelle liter ally is digitalls freed from the inert material which in digitalis leaf preparations clings to the active substance. Hence, weight for weight it is 1000 times as potent as USP All digitalis when given orally, one milligram exerting approximately the same action as one gram of whole leaf digitalis This potency is con stant permuting of precise dosage by weight, instead of hio-

2-Absorption Digitaline Natl velle is absorbed quantitatively, probably directly from the stom Dosage is therefore the same hy mouth as hy vein

3-Speedy Action: There is no demnnstrable difference in the

speed with which its full action is exerted whether it is given orally or Intravenously 4-Less Local Irritation The dos

nge required for digitalization is so small that nauses and vomit ing from local irritant action are almost never encountered

#### ACTION AND INDICATIONS

Since Digitaline Nativelle is the chief active glycoslde of Digitalis purpurea, its action is that of die italis. It is indicated whenever digitalis is called for

#### SINGLE DOSE DIGITALIZATION

In urgent cases, it is recommended that the entire oral digl talizing dose-12 mg estab-lished as average la more than a thousand consecutive un selected cases-be given at one time Its full effect will be pro-duced in 3 to 6 hours. In other cases if preferred this dosage may he given in divided amounts. over 12 to 24 honrs

#### MAINTENANCE

It is recommended that mainte nance dosage he instituted with 0 1 mg (equivalent to 11/4 gr of digitalls leaf) daily and in creased if and as required

Available on prescription through all pharmacles

Physicians are invited to send for samples literature and bibliography

THE ORIGINAL DIGITOXIN, -IN PURE CRYSTALLINE FORM

# PAREDRINE-SULFATHIAZOLE SUSPENSION

Vasoconstriction in minutes— Bacteriostasis for hours

# For prolonged Bacteriostasis in Nasal and Sinus Infections

When Parcdrine Suifa thiazole Suspension is instilled into the nose on retiring, the Michaelm (increarystalline) sulfa thiazole can often be observed on infected mucosa the next morning—conclusive evidence that bacteriostasis has persisted allynight long

The fundamental reason for the striking success of arcdring Sulfathiarole Suspension is the fact that it is not a solution, but a suspension of micro crystals of free sulfathiarole. Unlike solutions of solution sulfathiarole, the Suspension does not quickly wash away it remains on those areas where chiary action is impaired by infection—and thus provides prolonged bacteriostasis precisely where it is needed nost

In addition to this outstanding advantage, Parc drinc Suifatinazole Suspension—whose pll range is slightly acid, 55 to 65—does not irritate or sting, and it does not broduce such central nervous side effects as insonnia, restlessness and nervousness.

SMITH, KLINF & FRENCH LABORAFORILS

imed at AVAILABLE IN packages of 24 tablets, sanitaped, in slip-sleeve your patient requires your prescription boxes. scription to obtain this product from the pharmacist.

bodily function is in a massoabnormal condition of health?

And in the sovereign State of California<sup>3</sup> A 1678 would "amend the medical practice act, (and) proposes to authorize the board of medical examiners to issue a herb practitioner's certificate" And Texas, in its turn

tioner's certificate" And Texas, in its turn has H 972 introduced to amend the medical practice act, proposes that nothing in the act shall be construed so as to affect 'naturopathic physicians,' duly licensed under the laws of the state, who confine their practice to naturopathy as defined by statutes"

• • •

Well, it seems that all the Empire State can show at the moment in the way of pseudo-scientific balderdash, aside from the perennial chiropractic bill, is the following

"At the close of a bombastic dissertation on psychiatry, metaphysics and related subjects Royal Leo Gaynor, dean of a two-room academy of higher learning raided as a diploma mill last fall, was convicted in Special Sessions Court today on charges of violating the State education law. The good doctor acted as his own attorney, with assists from the three judges of the court. They interposed objections when necessary and generally assisted in the defense

"Gaynor was found guilty soon after court con-

vened following the luncheon recess

"The first witness to appear against the 56-yearold educator was his colleague and vice-dean of the college, George William Manus Manus, 36, pleaded guilty to similar charges last week and will be sentenced March 14

"Manus testified that he had known Gaynor since 1938 and that both had taught the science of psychoplastics in California This science was not de-

fined "4

It was Phineas T Barnum, was it not, who said one was born every minute? His estimate was probably reasonably correct for his day and age

Communicable Disease Care In General Hospitals The Division of Communicable Diseases has just released a 16-page mimeographed pamphlet emphasizing the importance of applying sound aseptic measures in all departments of the hospital

but dealing particularly with such technics in the care of recognized communicable disease cases. Among the subjects discussed are the organization of a communicable-disease unit, individual equipment for the care of the patient, precautionary care in regard to attendants, disinfection and disposal of body discharges, and care of dishes, linen, equipment, etc. Variations in technics are grouped according to the anatomic source of the infecting micro-organism, i.e., nose and throat infections, enteric infections, and skin infections.

Most general hospitals have admitted persons with certain communicable diseases such as pneumonia, but illogically have refused others, such as those with meningococcal meningitis There is need today to widen the scope of acceptance so that a patient acutely ill with any communicable disease and in need of hospital care may re-This will mean only an occasional case, unless there is an epidemic Owing to the rapid downward trend of certain communicable discases and the abandonment of routine hospitalization as a community means of control, special buildings for the care of such diseases are empty or only partially utilized and are operated at high The alternative is hospitalization in the general hospital proper The new pamphlet, entitled "Precautions to Use in Giving Care to a Patient with a Communicable Disease, in a General Hospital," should be of help in showing how this may be done with safety to all concerned

Some hospitals may feel that it is unwise while there is a shortage of help to broaden the scope of their services in the care of communicable diseases. In such instances, the adequacy of present facilities and the training of personnel along these lines can at least be studied and a goal set for future attainment.

Copies of the pamphlet may be obtained either through local district health offices or from the State Department of Health, State Office Building, Albany 1, New York

The epidemiology and precautionary care of most communicable diseases has now been well enough established it would seem to justify such a procedure as is here called for Public enlightenment has reached a point where little or no opposition to such care in general hospitals should be anticipated, and the savings in money alone as well as economy of administration seem to recommend it to the taxpayer

#### ORTHOSTATIC (LORDOTIC) ALBUMINURIA

Including Studies on Patients in Hyperextension Body Casts

ABRAHAM I. FRIEDMAN, Lt ,(MC), AUS\*, and HILTON S READ, Lt Col ,(MC), AUS

(From the Finney General Hospital, Thomasville, Georgia)

THE presence of albumin in the urine of young individuals in apparent good health is often the cause for concern by physician and patient alike Ita presence abould initiate a thorough study in order to establish its cause scale physical examinations for inductees conducted by civilian and military physicians have demonstrated the importance of this fact Candidates have been rejected by medical examiners because albumin was found in their urino, although later studies showed that their albuminuma was of the benign type (Young, et al.,1 Murpby\*)

Ande from albuminuria due to organio disease of the kidney, there is a group which is probably the result of a minor physiologic disorder of the kidney This group is referred to as "benign albuminuma " MacLean, during World War I, after examining 50,000 soldiers in training, discovered that 5 per cent had albumin in their urine with no inflammatory process of their genitournary tract This percentage has been confirmed by other investigators. Some of these cases of benign albuminuria are transitory, and may occur after strenuous exercise, prolonged exposure to sun, cold baths, or the ingestion of large amounts of protem, but by far the greatest percentage of this group is related to posture, and induced by the upright position of the in-This was first described by Stirling dıvidual The name "orthostatic" (from the Greek, orthos-straight, statikos-standing), given it by Teissier in 1899, by which it is most commonly known, should be applied only to the appropriate subsection of benign albuminuria.

The cause of this condition is still unknown However, it is generally believed that orthostatio albuminuria is due to somo disturbance of the renal circulation, leading to congestion and venous stams induced by the upright position The pathogenesis has been the subject of dis-

cussion of two main schools of thought

Erlanger and Hooker<sup>10</sup> felt that the upright position in susceptible individuals induces a lowering of pulse pressure, with subsequent deficiency in renal circulation and consequent nppearance of albuminums. They showed that lowering pulse pressure favored appearance of albuminuria, while elevation of pulse pressure caused albuminum to disappear or diminish

Jeblo<sup>11</sup> felt that lordosis was the main contributing factor in producing orthostatic albuminurns According to him, lordous caused a mechanical obstruction to the renal circulation by pressure on the renal vein, resulting in renal The lordesis was most marked when the patient assumed an erect posture, thereby causing albuminums in this position, and disappeared when the patient reclined, accounting for the disappearance of albuminums in the recumbent position Many authors have tended to confirm this "lordotic" concept of orthostatic albuminums, among them Sonne (1920).11 Rieser and Russer (1922),13 and Beer (1937) 14

In 1937, Rytaud16 took intravenous urograms on patients both in the recumbent and upright positions, and found that some of the urograms were normal in the supine position, but became abnormal, with poor concentration of dve on the left side, when in the upright position of the anatomic position of the renal arterles and veins suggests that the left renal vein is more easily compressed than the right, inasmuch as it has to cross over to the right to join the vens cava In doing so, it is separated from the vertebral column by the aerta, which is a relatively firm structure Thus, if lordosis affects the kidney through mechanical interference, the left kidney might suffer the effect These observations have been confirmed experimentally on animals by Starr 15 when compression of the renal vein caused albumin to appear in the urine

Jeblo was ablo to induce or increase albuminuria in susceptible individuals by placing them in exaggerated lordosis. Some of these provocative lordotic tests have been very useful in the differential diagnosis of benign albuminuria case described below illustrates the lordetic type of orthostatic albuminuria and the use of these provocative tests

#### Case Reports

Case 1-A 24-year-old white private was admitted to Finney General Hospital on May 19. 1945 for surgical repair of a gunshot wound of the left index finger, incurred in Germany, February 2 1045 He was transferred to our Medical Service on June 27, 1945, because initial urinalysis showed presence of 3 plus albumin and nonprotein nitrogen was 40 9 mg, per cent. A review of his past history revealed enurces up to the age of 19, since that time he has hed mild necturia. He has never

July 2, 1945 July 3, 1945	Up one hour On arising	1 030	H- Neg	Neg Neg.
July 3, 1945	Standing one hour	1 026	Trace	Neg

had any history of urinary-tract or venereal infection and has had no operations. On induction examination in July, 1944, he had to have a repeat urinalysis before being accepted for military service. He stated that his father had kidney and heart trouble and one sister had died of a heart attack.

Physical examination revealed a normal, welldeveloped, fairly well-nourished individual, 5 feet 8 inches tall, weighing 139 pounds His posture was very poor, with rounding of shoulders and moderate dorsal kyphosis His head and neck were normal, and his eye grounds revealed normal His tonsils were small but did not appear to be infected. His heart was not enlarged, there were no murmurs, and he had a normal sinus Blood pressure was 110/80-72 were clear to percussion and auscultation The abdomen was soft, the prostate was not enlarged nor tender The extremities were negative was no peripheral edema and reflexes were equal and active bilaterally

Laboratory studies, including stool specimen for ova and parasites, blood Kahn test, and malaria smear, were all negative A blood count taken June 26, 1945, showed a red blood count of 4,426,000, and a white blood count of 7,800, with 75 per cent neutrophils and 25 per cent lymphocytes, and hemoglobin, 95 per cent Nonprotein nitrogen on June 28 was normal at 27 4 mg, and creatinine was 15 mg Urine specimens taken on June 29 and 30, with the patient on bed rest, were completely negative both for albumin and on microscopic study On July 2, after being up for one hour, urinalysis showed 1 plus albumin Further urine studies taken on arising and at various times during the day after the patient was up showed the presence of albumin only when the patient was up on his feet These studies are summarized in Table 1

Renal concentration test showed good concentration with specific gravity ranging from 1026 to 1037 Total blood protein was normal at 74 Gm., with an albumin-globulin ratio of 46/28 Phenolsulphonphthalein test showed good excretion of dye, with a total excretion of 86 per cent after two hours An intravenous urogram was completely negative X-rays of the dorsal and lumbar spine showed minimal scoliosis and lordosis

Because of the accumulated normal studies and the demonstrable postural factor, it was thought that this patient had being albuminum of the orthostatic type. In order to confirm this, provocative lordotic tests were performed as follows. The patient was placed in exaggerated lordotic position by inserting three pillows underneath his lumbar region for one hour while lying in the supine position. At the expiration of the hour, urine was collected

for examination. The pillows were then removed, and urine was collected after he lay flat on his back, without the pillows, for another hour. The next day he was placed in exaggerated lordosis while standing, by having him arch his back considerably, standing away from the wall with his shoulders against the wall. After he was in this position for three-quarters of an hour, urine was collected. The results of these tests are shown in Table 2, and reveal a marked increase in the albuminum during the time that he was in exaggerated lordosis, and an almost complete disappearance of albuminums when he was again placed in a recumbent, flat position. Table 2 summarizes these findings

TABLE 2

Type Specimen /	Albumin	Microscopic Study

Standing in marked lordosis,  3/4 hour	++	Neg

The patient satisfied all the criteria of orthostatic albuminum as mentioned by various authors recently (Young, et al., Prince<sup>17</sup>)

One naturally wonders if other, perhaps intangible factors, besides posture, are present in these individuals, or can orthostatic albuminuma be produced in normal nonsusceptible individuals by placing them in exaggerated lordosis? We therefore made some observations on a small series of orthopedic patients in the hospital who have been in exaggerated lordosis for several months due to hyperextension body casts for fractured vertebrae were encouraged to undertake these studies by Lt Col. Leshe E Bovik, (MC), Chief of the Surgical Service of Finney General Hospital Although the number of cases is small and cannot be considered representative, we believe that it gives some indication as to the role played by lordosis in the production of albuminums in normal individuals

Case 2—A staff sergeant, 24 years old, sustained a compression fracture of the sixth, seventh, eighth, and minth dorsal vertebrae, on March 17, 1945, in France He was put in a hyperextension cast on that date, and was admitted to this hospital on July 7, 1945 Physical examination was negative Blood pressure was 130/80 Urine studies on July 10, 1945, were morning specimen, albumin negative, microscopic study—5–10 red blood cells,

an occasional white blood cell per high-power field, and a few epithelial cells. Uring on arising on July 11, 1945, was specific gravity, 1 010, albumin negamicroscopic study-negative. One hour after arising, the specific gravity was 1 020, albu min was negative, microscopic study-negative Two hours after rising specific gravity, 1022, albumin negative, microscopic study-negative. Urine on arising on July 13 1945 was albumin microscopie study-negative. Two hours after rising albumin was negative microscopic study-negative. Concentration test was normal, specific gravity, ranging from 1 022 to 1 023. Nonprotein nitrogen was 20 8 mg, and phenolsulphonphthalein test, 100 per cent excretion after two hours, 60 per cent after the first half hour

Case 3 - A 27 year-old corporal sustained a fall on his back in Italy, April 15, 1945, causing a fracture of the second lumbar vertebra. He was admitted to Finney General Hospatal on July 5, 1945 He had been in a hyperextension cast since April 15 Physical examination was negative Blood pressure was 124/82 Urine studies on July 7, 1945 were albumin negative, microscopic study shewed an occasional white blood cell per high-power field. On July 11, 1945, the urine on arising showed a specific gravity of 1.012, albumin negative, microscopic study-negative. One hour after rising, the specific gravity was 1 015, albumin negative and microscopic study was negative. Two hours after rising, the specific gravity was 1 015, albumin was negative, and the microscopic study was negative. Three hours after mang, the specific gravity was 1.018, albumin negative and microscople study negative. Nonprotein nitrogen was 806 mg. per cent. Phenolsulphenphthalein test en July 16, was 78.5 per cent in two hours, 57 per cent appearing after the first half hour

Case 4.—A 35-year-old private first class sustained to compression fracture of the seventh dorsal vertebra on March 20, 1045, in Germany A hyper-extension cast was applied on that date. He was admitted to Finney General Hospital en July 6, 1045 Physical examination was negative Blood pressure was 110/70 Urine studies on July 7 1045 were albumin negative, microscopie study showed 30 te 40 white blood cells per high-power field. Urine on anxing, July 11, 1945 was specific gravity 1.022, albumin negative, microscopie

study—negative. One hour after arising it was specific gravity, 1017, albumin negative, microscopic study—negative. Two hours after arising, the specific gravity was 1017, albumin was negative, and microscopic study showed numerous red blood cells, occasional clumps per high-power field. Three hours after arising, the specific gravity was 1018 albumin negative, and microscopic study showed numerous red blood cells, with occasional red blood clumps per high-power field. Non-protein nitrogen was 30.2 mg. Phenolsulphon-phthaken test showed exerction after one-half hour of 51 per cent, total exerction after two hours, 81 per cent.

Case 5 -The patient, 34 years old, sustained a fracture of the lamina of the fifth cervical vertebra. with subluxation of the fifth on the mith carvical vertebra in Germany, May 17, 1945 A hyperextension cast was applied on that date. Blood pressure was 120/78. He was admitted to Finney General Hospital on July 11 1945 Urine studies on July 16, on anxing, showed specific gravity, 1 024. albumin negative, and microscopic study—negative. One hour after ansing it was specific gravity. albumin negative, microscopic studynegative. Three hours after arising, the specific gravity was 1021, albumin negative, and microscople study negative. Nenprotein nitrogen was 28.6 mg. Urmalysis on July 17, 1945 at 1 30 r.u. was specific gravity, 1015, albumin negative microscopic study negative. Specific gravity at 4 30 P.M. was 1 022, albumin negative, microscopic study negative. Specific gravity at 5 45 P.M. was 1.016, albumin negative microscopic study negative. Phenelsulphonphthalein test showed 100 per cent excretion after two hours, 55 per cent appearing after half an hour The renal function (concentration) test was normal. The specific gravity was 1 019, 1 019, and 1 020,

Case 6—A second lieutenant, 33 years of age, was wounded in action in Germany on March 7, 1945, when his jeep hit a land mine. He sustained a compression fracture of the body of the ninth dersal vertebra. He was put in a hyperextension cast immediately, and was admitted to Finney General Hospital on April 17 1945 Physical examination was negative, blood pressure was 133/82. Urinalysis on admission showed albumin negative, and microscopie study negative. Urinalysis on July 15

1945, on arising, showed specific gravity, 1012, albumin negative, microscopic study negative One hour after arising, specific gravity was 1 020, albumin was negative, and microscopic study was negative Three hours after ansing, the specific gravity was 1010, albumin was negative, and the microscopic study was negative Nonprotein nitrogen was 294 mg Renal concentration test was normal, specific gravity ranging from 1016 to The phenolsulphonphthalem test showed a total excretion of 65 per cent, 35 per cent after the first half hour

Despite the low excretion of dye in this case, no albuminuria was evident and the renal concentration test was normal These reports are tabulated in Table 3

As shown in Table 3 above, albuminuria did not appear in any of the 5 patients who were in extreme lordosis due to hyperextension body casts, despite the fact that 3 of the 5 patients had been in hyperextension casts with exaggerated lumbar lordosis for over four months, and the others for periods ranging from two to four Case 3 showed the presence of several white blood cells per high-power field on microscopic examination of the urine, and Cases 2 and 4 showed the presence of red blood cells on occasional specimens Renal function tests on all of these patients were negative and showed no alteration in the renal function, except for low phenolsulphonphthalem excretion in Case 6

Six additional patients with unrelated medical or surgical conditions and with no previous history of renal infection were selected at random Urine was examined on arising, after the patient was up for two hours, and also after placing him in exaggerated lordosis for one to two hours by putting three pillows below the lumbar spine as described in Case 1 above The results of the urinalyses on all of these patients were negative, and did not show the presence of albumin either on arising, after being up two to three hours, or, what is perhaps more pertinent, after lying in exaggerated lordosis for a period of one hour These observations would appear to be in agreement with previously recorded opinions that lordosis is not the only contributing factor in the production of orthostatic albuminuma Lewison, Freidlich, and Ragins in 1928<sup>18</sup> observed that

most patients with extreme lumbar lordosis, due to poliomyelitis, muscular dystrophy, or hip-joint disease, have no albuminuria whatsoever

## Summary

- A brief review of the subject of orthostatic albuminuma is presented Mobilization of masses of young individuals has stressed the importance of this condition
- Provocative lordotic tests are described in a case of orthostatic albuminuma
- A series of 5 orthopedic patients, wearing hyperextension body casts, is reported, in all of whom repeated urine studies were negative for albumin, and renal function remained unimpaired
- 4 Six patients, with unrelated medical and surgical conditions, were placed in exaggerated lordosis for periods of one to two hours these patients had negative urine studies, and the appearance of albumin could not be induced
- Observations confirm the fact that although lordosis plays a role in the pathogenesis of orthostatic albuminum in susceptible individuals, it has no influence in producing albuminuria in normal, nonsusceptible individuals

#### DRINKING UNNECESSARY WATER

In these days when many physicians and dietitians are exhorting everyone to drink large amounts of unneeded water, I find it helpful occasionally to ask the patient if he has been following the present-day fad and trying to drown himself from the inside out I have seen several persons with heart and kidney disease who got themselves into serious trouble in this way, and I have seen the drinking of excess water produce puzzling insomnia, diarrhea, polyuria, edema of the ankles, and indigestion. I remember a woman with a diarrhea that no one had been able to stop It stopped overnight when I got her to give up her three extra quarts of water a day!

Actually, physiologists cannot see the reason for our taking more water than our body calls for or needs Its handling and excretion only means more work for heart and kidneys Fortunately, the body's need for water is exactly determined by the individual's thirst—Alvarez, Walter C Nervousness, Indigestion, and Pain, New York, Paul B Hoeber, Inc., 1943, p 50 -North Carolina M J, July, 1945

# PRELIMINARY REPORT OF THE COMBINED EFFECTS OF VITAMIN-B COMPLEX WITH AMINO ACIDS

Max Jacobson, MD, New York City

R ECENT research work in inologic chemistry has demonstrated the over increasing importance of amino acids in luman nutrition, as well as their relationship to the vitamina Their role in the chemistry of enzymes and cellular metabolism suggested investigating their effect in vitamin utilization

Some of the tissue proteins, either by conjunction with an active prosthetic group, or by some slight modification in structure, assume the role of enzymes' and catalyze many digestive and

metabolic reactions

The physiologic relationships between vitamins and amino acids, their derivatives and aggregates, are, for the most part, either association or indirect in character. Protein-vitamin combinations catalyze many important oxidation-reductions, and the partnership of vitamin-containing enzymes (proteins and amino acids) and coenzymes facilitates many important metabolic transformations.

It has recently been shown that approximately half of the thiamin in milk is more or less firmly bound with protein. The probable combination of serine with ethanolamine in the cephalin molecule is another point of contact between a vitamin

(cboline) and an amino acid 3

The ensymo, coensyme, and vitamin relationships have been observed and reported on by Northrop, Bauman and Stare, Heidelberger

and Smythe, and many others

The coenzymes, like the enzymes, are catalysts, but they are of lower molecular weight than proteins, and, unlike the proteins, they are heat stable and dialyzable. A number of them hince been shown to be derived from vitamins, which constitute the active group in the molecule.

It has been reported that vitamins enter into the metabolism of bemoglobin, riboflavin, and pyridoxine in hemoglobin regeneration in dogs and rabbits, following blood withdrawal.<sup>4</sup>

Ascorbic acid also plays an important role in

bemoglobin catabolism.

Based on the above-mentioned findings, it was decided at Polychnic Hospital that a clinical investigation be instigated, using a combination of vitamins and specific amino acide—both by oral and by parenteral administration. The oral combination contains glutamic acid, for its role in the metabolism of the nervo tissue and its activation with the protolytic ensyme. Tyrosine and choline are incorporated for their hypotropic

action Cysteme is used to morease the cholme effect, which, in its turn, favors the absorption of the fat-soluble vitamins, A. D. and E

Urea has been added to obtain the maximum effect from the amine acids as well as a more complete absorption of the water-soluble vitamins present, such as thiamin, riboflavin, nia-enamide, calcium pantothenate, pyridoxine, and ascorbic acid Pyridoxine has shown promise in chemical agranulocytosis

The following is a report of the clinical results About 1,000 patients were treated for various diseases. An average of eight to ten injections was found necessary for successful treatment, although in most cases a marked improvement in the patient's condition was evidenced after the first few injections. Oral medication was applied either separately or combined with the injections, and continued after the injections were stopped.

The first patients to be treated with this compound were suffering from exhaustion resulting from physical strain, delayed convalescence after infectious diseases and surgical interventions, malnutration, and anemic conditions, including pregnancy anemia. In addition to the objective clinical improvements, almost immediate effects were noted in the relief from nervous tension, in crease of ability of coordinated action and thinking, relief from insomnia, and increased appetite. This demonstrated that the B complex plus amino acid produces a better systemic function than the B complex alone.

The problem of achieving an objective evaluation was solved by checking the subjective improvements amultaneously with a series of blood counts. The results of these blood counts invariably substantiated the subjective claims by showing an increase of hemoglobin and red blood cells, often after the first mjection. In two years the overwhelming majority of cases which were under constant treatment and observation showed that these improvements were permanent.

Employees of a department store, the office staff of a defense factory, and the nursing personnel of a bospital participated in a series of tests Statistics showed that many patients with subnormal blood counts experienced a rapid rise in hemoglobin and red blood cells after treatment. In addition, a marked improvement in their general health as well as a sharp drop in absenteeism resulted.

Increased organic resistance was also accompanied by increased resistance to respiratory infections Many improvements of clinical syndromes were observed and recorded in the early stages of this investigation. They have since become accepted tenets in vitamin researchtheir synergistic action shows betterment in lung tuberculosis and arthritis, fast recovery after operations and infectious diseases, and resistance to shock

Neuroses, organ neuroses, and shock differ only in the matter of degree It is generally recognized that organ neurosis, or the breakdown of a single organic function, is one of the body's main defenses in forestalling the breakdown of a personality through extrinsic or intrinsic pressure

Whether this breakdown manifests itself in the form of such disturbances of allergy, organ neuroses, or shock will depend entirely on the forces involved The transfer, however, will always occur on the roads of the central and pempheral nervous system For this reason it was considered important to test the response of a nerve accessible to objective clinical observation

This clinical research has been conducted at the Polyclinic Hospital (Hard of Hearing Department), under the director, Dr S J Kopetsky, by Dr A Jellineck and Dr H Hirschfield (Adetailed report will be published separately)

Patients with hearing disorders, as well as normal persons, showed either an immediate or a delayed increase in hearing acuity upon treatment with this compound In normal persons, this effect appeared as hyperacusis All patients were tested regularly with the audiometer improved hearing was evidenced, for the most

part, in the higher octaves, which is of special significance This fact suggests a direct influence of the compound on the nerve function. since it is the high-frequency range which is first affected in damages to the acoustic nerve has been observed frequently in military personnel and industrial workers exposed to loud noises, as it was in the case of persons whose hearing disorders started in early childhood

### Conclusion

Synergistic actions are being increasingly applied in modern biochemistry and are herewith used for the first time in vitamin therapy

Amino acids have been investigated, up to now. solely from a nutritional standpoint. Our approach, however, has been guided by their enzymatic and functional properties The advantage is that each of the amino acids used in the preparation has in itself an important function in the human organism

Therefore, it is apparent that the synergistic action claimed here not only involves the cell metabolism itself, but, at the same time, benefits from an improved function of the central and pempheral nervous system

155 East Seventy-Second Street

#### CONTAGIOUS DISEASES AMONG DUTCH CHILDREN

Infectious diseases due to malnutration are continuing to take their toll among the children of Holland

Thousands of Dutch youngsters are suffering from tuberculosis, dysentery, and diphtheria, and the already overcrowded hospitals are unable to cope with the unprecedented demands upon their services Owing to the difficulty of obtaining nourishing foods in the western part of Holland, tuber-

culosis is very prevalent.

Infants and very young children have become especially susceptible to diseases because of the lack of pure milk

The Nazis took away a large number of cows to help feed their own people Insufficient pasteurization of available milk, the lack of clean clothing, and the scarcity of fuel for heating homes during the winter months were contributory factors in undermining the physical resistance of these

Diphtheria and various skin diseases, includ-

ing scabies, are particularly prevalent among babies and children under four

Medical officials are doing all they can to fight disease, but they are hampered by a severe shortage of medicines, ointments, bandages, and instruments Even baby bottles, disinfectants, and ingredients for such simple remedies as cough syrup are unavail-Another handicap is the lack of sanatoriums for the hospitalization of tuberculosis victims Doctors fear that home nursing of tubercular patients may spread the disease to the rest of the population.

In order to check any increase of various diseases, repatriates from the concentration camps in Germany must undergo a strict physical examination, including a thorough delousing process, to prevent any possible typhoid epidemic Furthermore, all of them are under obligation to have an x-ray examination for tuberculosis one week after their return to civilian life—Release from the Netherlands Information Bureau, June 14, 1945

# DERMATOPHYTOSIS OF FEET (ATHLETE'S FOOT) ITS SUCCESSFUL TREAT MENT WITH SODIUM PERBORATE (50 PER CENT) IN COLD CREAM OR LANOLIN

B M Becker, M D, Brooklyn, New York

ONE of the minor but very annoying conditions about which the physician is often consulted is that of "athlete's foot." Its prevalence is widespread and it affects both sexes equally. Although its incidence is greatest during bot weather, it is by no means confined to the summer season. The number of remedies employed for its treatment only attests to its recalcutrancy and chronicity.

For many years the writer suffered from a severo form of dermatophytosis of the feet, with occasional remissions. The latest or last attack, which began about mid December, 1944, was of particular severity. There were deep fissures on both feet, with bleeding especially marked on the left foot, and excoriations, with thickening of the dermis and exfoliation. Pain was not marked, but the itching was so intense it interfered with sleep. Even during waking hours, in the midst of work, the writer had to stop and press down hard with the heel of one foot upon the toe of the other in order to afford himself a measure of temporary relief

The usual remodes recommended for this condition were tried and discarded, for they afforded only temporary and partial relief. Ethyl-chlorids spraywas used and brought about complete consistion of itching, but only for abort periods of time. As much as one hundred Gms. were used in one evening and yet the itching returned upon retiring

On studying his condition, the writer observed that the interspaces between the big toe and the second toe, on both feet, were entirely free from the disease and the next interdigital spaces (between the second and third and the third and fourth toes) were comparatively free from involvement. The severest manifestation of the condition was found between the fourth and fifth toes of both feet. In other words, there was a gradient of severity from

within outward, the innermost interdigital space having the least involvement and the outermost the greatest. Since the free access of air is least in the interspace between the fourth and fifth toos (due to the anatomic configuration of the foot and aggravated by faulty footger), and ventilation of the Interdigital spaces progressively improves from without inward, the writer concluded that the disease is caused by a facultatively anneroble fungus

As a result of this conclusion, pledgets of cotton saturated with hydrogen peroxide were placed between the toes. This measure gave no relief probably due to the fact that hydrogen peroxide is very unstable when exposed to the air, and the liberation of oxygen is of very short duration. Then a 50 per cent sodium perborate cintment in cold cream was used. This was thoroughly ruhbed into the affected parts and an excess was left in the inter spaces.

At first a mild irritation of the involved tiesues was experienced, due to the gritiness of the preparation, but within an hour all sensation of irritation and itching completely disappeared. From that time the medicament was applied morning and evenling (sometimes once daily). Treatment was continued from February 1, 1945 to and including February 20, 1945 at which date the wounds had healed entirely. To date there is no recurrence of the disease, and there are neither subjective nor objective manifestations of it.

The writer has since prescribed the preparation for several patients, and all have reported equally good results from its use.

The action of the preparation evidently depends on the constant, slow liberation of oxygen between the toes thereby inhibiting the growth and propagation of the organism responsible for the disease.

#### ELECTRON MICROSCOPE AIDS CANCER STUDY

A one-ton electron microscope powerful enough to magnify the windpipes of mosquitoes to a size of approximately 2 inches has been added to the arsenal of scientific instruments for the study of cancer at the National Cancer Institute, Bothcada, Maryland Surg. Gen. Thomas Parran, of the Public Health Service, Federal Security Agency, announced on April 30

Although installed in the National Cancer Instalte the microscope will not be restricted to the study of cancer but will be available to other divisions of the National Institute of Health, Dr Parran Pointed out.

Costing \$13,000, the microscope, built by the Radio Corporation of America, is the ninetieth in

this country It uses electrons instead of light rays, and magnetic fields instead of glass lenses, to peer into submicroscope worlds. It has reveaked for the first time how disease-lighting organisms in the blood attack disease-producing viruses. The highly magnified photographs—or electron micrographs as they are termed—show how the body protects itself from infantile paralysis, smallpox, influenza, the common cold yellow fover, and other diseases. These micrographs are important factors in determining the effectiveness of various methods of treatment. The machine will also enable scientists to compare diseased usues with healthy tissues under direct magnifications of 10 000 to 75 000 duameters.

# PYLEPHLEBITIS UNDER PENICILLIN AND SULFADIAZINE THERAPY

ABRAHAM O WILENSKY, M D, New York City

HEREWITH is the clinical history of a case of pylephlebitis with associated phlebitis of the splenic vein which recently came under my observation, and in which a cure occurred after chemo-

#### Case Report

A middle-aged man was operated upon on April

The 17, 1945, for acute suppurative appendicitis patient did not do as well as usual, and continued to run high temperatures. After four weeks, it was thought that a subphrenic abscess was present, but exploratory aspiration of the subphrenic space yielded negative results Thereafter he did not improve, and the general condition deteriorated At the end

of six weeks he was referred to me At this time the general condition of the patient was not good He was thin and emaciated moderate amount of jaundice was present There were no superficial glandular enlargements. The chest was clear and the circulation and cardiac mechanism showed no abnormality Locally there was a healed lower quadrant scar with a residual superficial granulating sinus at the lower end with practically no discharge The liver was moderately enlarged, the spleen was very much enlarged, the lower pole extending down to the iliac crest, neither one was particularly tender No intra-abdominal masses could be otherwise felt and there was no ascites

A preliminary flat plate of the abdomen corroborated the enlargement of the liver and especially of the spleen

The laboratory workout on May 25, 1945, was as

follows

Blood type A

Urine acid, orange color, specific gravity, 1011, faint trace of albumin, no sugar, microscopic study-urates, few white blood cells, many

Icteric index, 30 units (normal—8-12 units)

Red blood count, 2,790,000, hemoglobin, 55 per cent, white blood count, 14,400, polymorphonuclears, 84 per cent, lymphocytes, 16 per cent, segmented forms, 77 per cent, nonsegmented, 7 per cent

Blood culture—sterile

colı, culture—Bacillus Urine nonhemolytic staphylococcus albus, nonhemolytic diphtheroids

The diagnosis was manifestly of pylephlebitis

with thrombophlebitis of the splenic vein

In view of the marked anemia, the patient was given transfusions several times with 250 cc, of plasma and with 500 cc of whole blood on two successive days Thereafter the blood condition was as follows

On May 28, 1945, the red blood count was 2,930,-000, hemoglobin, 58 per cent, white blood count, 16,650, polymorphonuclears, 86 per cent, lymphocytes, 14 per cent, segmented forms, 76 per cent,

on May 31, 1945, the red blood count was 3,550,000, hemoglobin, 70 per cent, white blood count, 9,150, polymorphonuclears, 75 per cent, lymphocytes, 24 per cent, segmented forms, 65 per cent, nonsegmented, 10 per cent

The patient was placed on penicillin, 20,000 units

every four hours, and after the second day full doses of sulfadiazine were added

Following the initial high temperature on admission the fever receded, but during the first week of observation there were several daily chills with rises of temperature up to 105 F, and later up to 103 F During the second week the temperature curve ran around 102 F The spleen showed reces-The size of the liver did not change sion in size and the jaundice continued unchanged

Up to this time the patient had received approximately 1,000,000 units of penicillin and about 480 grains of sulfadiazine. There were no untoward manifestations, but it was thought better to inter-

rupt the drugs at this time

On the eleventh day of observation (approximately seven weeks after the appendectomy) pain developed in the upper left quadrant and left flank. The kidney was not enlarged or tender, but the spleen increased in size again. The temperature again rose to 105 F but receded again the following day with subsidence of the left abdominal pain. The penicilin was again administered, without, The temperature then however, any sulfadiazine went to its former level and remained there, falling gradually to normal on the seventeenth day of observation and remaining there until the discharge of the patient from the hospital

The patient received another 1,000,000 units of

penicillin during the second period of administration
During all of this time, the general condition of
the patient continued to improve Inasmuch as there was no hypoproteinemia and the liver function was normal, no especial effort was made in this direction. Nevertheless, the patient ate large quantitles of protein-rich food with good elimination of normal-appearing stool from the intestinal tract Coincident with this the patient progressively looked and felt better and his weight increased

The size of the liver and spleen gradually returned to normal. The jaundice lightened and then disappeared completely and free of bacteria. The urine became normal The patient left the hospital The urine became normal

well.

#### Comment

The history, postoperative course, and the physical and laboratory findings are manifestly indicative of phlebitis of the portal vein complicating the suppurative appendicitis. The enlargement of the spleen and the observed episode of pain in the splenic area with renewed enlargement of the spleen and the accompanying elevation of temperature indicate that the phlebitis spread into the splenic vein with a secondary infarction in the spleen

The following aspects are deserving of especial mention

The absence of any state of protein deficiency, indicating good liver function. On June 5, the state of the proteinemia was as follows serum protein, 69 mg per cent, serum albumin, 4.9 mg per cent (normal 4.5-65 mg per cent), serum globulin, 20 mg per cent (normal 10-30 mg

Nevertheless, because of previous studies, a high

TABLE 1

				1400	
Urine	Color	Specific Gravity	Albumin	Bugar	Microscopie Study
June 5 1945 June 6 1945	Yellow Yellow	1 005 1 005	0	<b>o</b> 0	Moderate number of bacteria many yeast cells. Yew bacteria moderate number of yeast cells. Microus threads optimized as coasional white blood cells.
June 12 1945	l ellow	1 016	U	U	Occasional epithelial and white blood cells occasional calcium usalate crystals no bacteria

protein diet was given to ensure the maximum benefit to the liver cell itself and because of its adjuvant effect upon healing in general

2 A negative blood culture is the rule in pylephlebitis Indicating the sterilizing effect of the liveupon bacteromas in general. Nevertheless, before the advent of chemotherapy this did not help in cases of pylephlebitic and practically all of them went on to a fetal issue.

8 The spread of the phleintic process into the splenic vein. The later rise in temperature indi-

cates an infarction in the spicen

4 The effect of penicilin. The patient received altogether, epproximately 2,000,000 units. The unne culture showed that bacteria of the colon group associated symbiotically with diphtheroid like organisms and with cocci were the provocationable. Previous experience indicated that penicilin would not be effective. We therefore combined it with sulfadianne. A therapeutic cure resulted. This was corroborated by the disappearance of the bacteria from the urine

5 It is not possible to say how much parenchy-

matous change occurred in the liver cells.

During observation up to the time of discharge from the hospital, the intensity of the observable icterus and its regression was as follows Mey 28 30 units, Mey 31 24 units, June 4,

24 units, June 8, 16 units June 12, 14 units.

At all times the steel contained edequate amounts

of urobilin,
On June 4 1945, the cephalin flocculation test

was reported positive, plus I
All of these laboratory facts do not permit us to
say anything more than that same imitstion of
liver function was present. An adequate measure
of this incapacity is not possible at the present time.
At the time of discharge, the patient presented no
subjective or objective indications of any liver discree. The tests of liver function were normal ther
also. Nevertheless, in view of the uncertainty of

tests of liver function in early or slight disease of the liver, it is not possible to say whother any latent disease of the liver parenchyma was present, and/or would persist, and/or would probably increase in intensity

This is a matter for future study and observation

6 There was no evidence of any complienting or associated pephritis or nephrosis. It was interesting to see the bacterium disappear under the chemotherapy. The results of urine examinations are shown in Table 1.

7 The absence of ascites. This can be explained in two ways (a) The return flow of blood was not impeded in the main portal channel. Apparently, however there was obstruction in the spleme radicle and a consequent splemenegaly (b) Evidence is accumulating that ascites in portal obstruction is not so much due to the obstruction as to the state and degree of hypoproteinsmic deficiency which accompanies it. In this case no such deficiency existed and no ascites occurred. Most probably this is the correct explanation here.

It is not possible to say whether ascites will occur at some future time as a result of some secondary portal vein narrowing. This must be kept in mind and the patient will be further observed. In view of the newer conceptions, the state of untrition will be kept at a high level to provent any protein deficiency

#### Summary

A case of portal and splenic phlebitis (pylephlebitis) occurred after an operation for acute suppurative appendicitis. The prominent symptoms in cluded (1) fever and chills, (2) enlargement of the liver with Jaundice and slight functional disability, (3) enlargement of the spleen with some infarction, (4) obsence of ascites, and (5) bacterium. The patient was put on large doses of penlelllin and sulfaduans and recovered

#### CLINICAL ALLERGY COURSE OFFERED

The School of Medicine, University of Pittaburgh, offers an Orientation Course in Clinical Allergy, under the aponosorship of The American Academy of Allergy, for five days October 1 to 5, 1946 Inclusive, at the School on Bayard Street, Pittaburgh, Penn sylvania The fee is \$40, for veterans, servicemen,

and residents it is \$10. Registration for evening round-table conferences can be made only by special arrangements.

Inquiries should be addressed to William 8. McEllroy M.D., Dean, School of Medicine University of Pittsburgh, Pittsburgh 13, Pennsylvania.

# GASTRIC LEIOMYOMA

HENRY J VIER, MD, White Plains, New York

(From the St Agnes Hospital)

ASTRIC leiomyoma is a rare lesion, and may be silent, like carcinoma of the stomach, until markedly advanced, as evidenced by the following case report

Case Report

W J F, married, age 52, a chauffeur, hospital No 2503, was admitted to St Agnes Hospital, October 14, 1944, at 10 00 P.M., because of a massive gastrointestinal hemorrhage His history, as obtained by his physician, Dr J B Polakoff, was included by the physician, Dr J B Polakoff, was included by the physician, Dr J B Polakoff, was included by the physician of th relevant He stated that he had never experienced any untoward symptoms He was emphatic in denying any indigestion, hunger pain, or distress after meals. He also denied venereal history. There had been no weight loss, appetite was good, and bowels regular He was a moderate user of tobacco and drank two bottles of beer daily For two days prior to admission, he had noticed tarry stools, but attached no significance to them Following his evening meal, October 14, he vomited this, together with a considerable quantity of bright red blood Shortly after entering the hospital he again vomited an unmeasured, though large, quantity of blood, and expelled another tarry stool He presented marked pallor, the temperature was 100 F, pulse, 140, respirations, 24, and blood pressure, 140/80

Physical Examination — Head and neck were negatively the stood of the s

tive with the exception of marked dental caries Chest was negative, heart sounds were regular, with a rapid and fair tone The abdomen was scaphoid in type, no tender areas were noted, the lower border of the liver and spleen were not palpable, and no masses were palpable. The extremities were

Blood count on admission was as follows erythrocytes, 2,870,000, hemoglobin, 36 per cent, leukocytes, 11,000, eosinophils, 2 per cent, metamorphocytes II, 10 per cent, seg, 66 per cent, lymphocytes, 20 per cent, and monocytes, 2 per cent.

Urinalysis report was alkaline, specific gravity, 1013, albumin, very faint trace, sugar, negative,

no casts

The blood Wassermann was negative and prothrombin time was 55 seconds Blood chemistry showed albumin, 58 per cent, globulin, 35 per cent, and albumin-globulin ratio, 16/1

He was given an Andresen diet and an ice bag was applied to the epigastrium, one-sixth grain of morphine was given hypodermically every six to eight hours, no further vomiting occurred, nor was any bright red blood noted in the stools During the succeeding several days, he was given repeated transfusions of blood, plasma, and electrolytes, as indicated by further blood chemistry studies

On October 27, thirteen days after admission, a gastrointestinal series was completed and reported by Dr C W Schwartz, roentgenologist, as follows "Examination of the gastrointestinal tract showed the esophagus to function in a normal manner The stomach was in a medium position When upright the greater curvature was on a level with the iliac

crests Peristalsis was rather sluggish and the waves were shallow They did not pass through the antral portion of the stomach The tone was rather poor but no tender points were made out on palpation It was freely movable The antral portion presented filling defects One large defect was seen on the greater curvature but at times this involved the entire antrum as a ring-like defect without constric-

"The outline through this area was relatively The sphincter functioned irregularly but this was due to the lack of peristals through the antrum There was no residue at the end of three The duodenum functioned quite well small intestines appeared relatively normal three hours the barium was in the colon, as far as the first part of the transverse In six hours it had progressed a little further In twenty-four hours some had been expelled, leaving a residue throughout the colon and a small residue in the appendix.

"There is a tumor involving the gastric antrum I am inclined to think this is a leiomyosarcoma or a

lymphosarcoma "

On November 2, he was operated upon under fractional spinal anesthesia (Scurocain) Anupper transverse incision was made, and a neoplastic mass about 6 cm in diameter was found in the pylone half of the stomach, it was hard, smooth in outline, and freely movable, with no fixation to surrounding structures, no evidence of invasion of the serosa or mesenterio glands, nor were any liver metastases apparent Subtotal gastrectomy was completed, using an anterior Polya technic His immediate postoperative condition was satisfactory and feedings were instituted through an Abbott-Rawson tube about twelve hours postoperatively Appropriate quantities of blood, plasma, and intravenous glucose were given

The report of Dr P T McIlroy, pathologist, was

as follows

Macroscopic Findings—Specimen consisted of a portion of the stomach wall which on section showed the presence of an encapsulated mass 6 cm in diameter, which showed the presence of an ulceration of the gastric mucosa approximately the size of a dime over the summit of the mass The tumor presented The mucosa a pinkish-grey cellular appearance

surrounding the ulcer appeared natural

Microscopic Findings — Microscopic examination showed the growth to be made up for the most part of pink-staining cells with large elongated cigar-shaped nuclei. They were arranged in interlacing bundles. No mitotic figures were observed. The

cells appeared regular in size and shape

Diagnosis — Leiomyoma of the stomach wall. His postoperative course was uneventful and he

was discharged November 11, 1944

The significant feature of this case is that this patient remained entirely comfortable and symptomfree prior to the onset of his hemorrhage, obviously due to ulceration of the neoplasm

80 Maple Avenue

#### CONFERENCES ON THERAPY

DEPARTMENTS OF PHARMACOLOGY AND MEDICINE, CORNELL UNIVERSITY MEDICAL COLLEGE AND THE NEW YORK HOSPITAL

THESE are stenographic reports, slightly edited, of conferences by the members of the Departments of Pharmacology and of Medicine of Cornell University Medical College and the New York Hospital, with collaboration of other departments and institutions. The questions and discussions involve participation by members of the staff of the college and hospital, students, and visitors. The next report will appear in the November 1 issue and will concern "Treatment of Some Tropical Diseases."

### Management of Pain Due to Muscle Spasm

DR HARRY GOLD The conference today is on the subject of the relief of pain which arises in association with the contraction of muscle. In some respects the problems here are similar to those of pain arising in other structures Central analgesic agents such as morphine, codeine, demerol, and salicylates relieve pain in muscles as they do other forms of pain Muscle pain, however, also presents some special problems in therapy Drugs are used in the case of muscle pain not only to reduce perception of pain in the brain centers but attempts are made to relax the muscle presumably for the purpose of eliminating the source of the painful impulse The term "muscle spasm" is often applied in relation to these problems and the drugs employed for the relief of such painful states are classified as antispasmodic agents

The conditions are numerous, namely, the pain of coronary artery disease, peptic ulcer, spastic colon, biliary colic, renal colic, intermittent claudication, menstrual pain, labor pain, and pain in various disorders of the skeletal muscles.

I am not sure that we are altogether clear on what is happening in the so-called spastio muscle which gives rise to pain, and how we expect the drugs to act in order to relieve the pain Perhaps a discussion of these matters may help to crystallize some of the issues.

I am inclined to the view that when pain occurs in association with the contraction of a muscle, it indicates a pathologic state or some secondary factor but not the contraction per se. The voluntary contraction of the biceps muscle of the athlete may be so extreme as to convert the muscls into an almost stony-hard mass, but it doesn't hurt The contraction of the postpartum nterus is stony hard, it also doesn't hurt. A sustained spastic contraction of the pylorus may be seen in the fluoroscopic examination, making it impossible for barrum to pass, yet this is usually quite painless The barium meal frequently discloses intense and long-lasting spastic areas in the gastromtestinal tract, which produce no pain I am not aware of any satisfactory evidence that the

normal contraction of a muscle is competent to produce pain. This, I believe, is the same as saying that a "spasm" of muscle in and of itself does not cause pain. The pain is produced by other factors, such as distortion of muscle, tearing of muscle fibers, stretching of muscle, tension within a hollow viscus, ischemia resulting from the sustained contraction of muscle, and traction upon other structures by spasm, as may occur in the case of the mesentery of the gastrointestimal tract

It is well known that skeletal muscle is sensitive to pain. If you pinch it, it hurts If you inject a little hypertonic solution into the skeletal muscle it may cause very severe pain. These do not involve muscle contraction.

A skeletal muscle which is exercised violently develops pain, not as the result of the contraction but in all probability, as the result of the accumulation of metabolites, or as the result of muscle injury

Ischemia per se in muscles does not readily produce pain, for one can completely occlude the circulation to the arm and the arm remains painless for a long time unless the muscles are made to contract during the ischemia, in which case the pain producing metabolites accumulate.

The sudden violent cramp in the calf muscles which nearly throws a patient out of bed with excruciating pain is not the result of a contraction but of distortion of the muscles, a part of the muscle contracts violently, producing pulling and tearing effects upon the rest of the muscle. This is not a case of ischemia, for the pain develops the instant the spam occurs

In the case of cardiac pain of coronary origin, the factor of ischemia seems to be paramount. Such a patient may develop pain when he walks one block before treatment, but if he receives a dose of nitroglycenne prior to the exertion, he finds it possible to walk fifteen blocks before pain develops. There is the possibility that tension upon the coronary vessels may give rise to pain although the proof here is not very satisfactory.

However, in the case of other blood vessels, it

is possible to show that tension is an important factor in producing pain. Put a blood pressure manometer cuff on the arm and raise the pressure to the diastolic level, this will prevent the return flow from the arm. The vessels of the extremity therefore fill but cannot empty. They soon overfill and are stretched. As the cuff is left in place pain develops and soon becomes very severe. This is clearly a pain in blood vessels due to stretching. The same mechanism is probably involved in the pain resulting from massive occlusion of the deep veins of the leg. The return flow is impaired while the arterial flow continues to overfill the vascular system.

The sustained contraction and spasm of the flexor muscles of the arm after a cerebral hemorrhage is usually quite painless. But pain occurs in the endeavor to stretch them

We are all familiar with the experiments of Dr Harold Wolff and his collaborators concerning the cause of migraine in which the evidence is presented that the distention of the vessels and not the contraction is the cause of the pain

We are also familiar with the experiences in the distention of the hollow viscus If a balloon is passed down into the esophagus and is then blown up, the distention gives rise to pain The same is true of the stomach

Perhaps these illustrations are sufficient to emphasize the thesis that contraction of muscle or spasm of muscle is of itself not competent to produce pain. The pain is caused by stretching, pulling, tearing, and distortion

I believe that the distinction between contraction and tension in relation to the cause of muscle pain has practical importance One might argue that the contraction or spasm gives rise to the secondary factors which cause the pain, and that, therefore, from the practical standpoint, one needs only to relieve the spasm in order to control the pain This, however, is only one way of attacking the pain in association with muscle spasm It is possible to control the factors which create tension and distortion without necessarily relaying the spasm I am inclined to think that the latter is frequently the method by which socalled antispasmodic drugs relieve muscle pain For example, atropine may exert no influence on a pyloric spasm, but if it serves to reduce the motility of the stomach it may well relieve the pain arising in association with the spasm Morphine is known to increase spasm of smooth muscle, but it may well be that a major part of its influence in abolishing biliary colic or renal colic or gastrointestinal pain may lie in the reduced activity in the face of the continuing or even increasing spasm

I do not believe that the control of pain in association with muscle contraction by means of

drugs is commonly considered in this way. Indeed, there may be a point in questioning the validity of the term "antispastic" or "spasmolytic" as applied to the group of drugs used for this purpose, for a major part of their action may be not in the relaxation of the spastic areas but in the reduction in motility of the adjacent areas which create pulls, tensions, and distortions

Let us consider briefly the agents commonly employed for the relief of pain which arises in relation to the contraction of smooth muscle nitrites relax all smooth muscle Their action is extremely brief Perhaps it should here be mentioned that all so-called antispasmodic drugs exert a very brief action Their chief use is in the control of the pain of coronary artery disease There are no drugs which are quite as effective as a 04-mg dose of nitroglycerine taken under the tongue for the prevention or the relief of the pain of effort angina Although there is some experience indicating that a gallbladder or renal colic is sometimes relieved by a dose of nitrite, the nitrite is, on the whole, not very satisfactory for these purposes I have often wondered why it is that its effect in cardiac pain should be so outstanding and its effect in other conditions associated with so-called muscle spasm should be so slight It may well be that in the case of coronary disease all that is necessary is to relax the vessels to relieve ischemia, while in other types of smooth muscle pain the chief problem is disturbed motility with the development of tensions and distortions which may continue even in the face of a degree of relaxation of a spastic area Differences in sensitivity of smooth muscles of different areas may be a factor

The xanthines, such as aminophylline, or theobromine, and sodium acetate are fairly general smooth muscle-relaxing agents. They are used with some success for the relaxation of the bronchial musculature in asthma. They are used a great deal by oral administration for the control of pain of angina pectoris. I doubt that they have much value by oral administration. The intravenous dose of 0.25 Gm of aminophylline produces fleeting relaxation of the coronary vessels and is occasionally useful for that purpose. In most of such cases, if not in all, the nitrite under the tongue is equally if not more effective.

Papaverine relaxes smooth muscle. It is said to exert its effect chiefly in hypertonic states, allowing normal motor activity to continue although there is indication that tone, amplitude and frequency of contractions are diminished. It is given in doses of 30–80 mg of the hydrochloride either orally, intramuscularly, or intravenously. The experimental results promise a great deal for this drug in the treatment of conditions requiring the relaxation of smooth

muscle, and yet there is not a single chinical condition in which it has been used in which the promises have been satisfactorily fulfilled. Clinically, its benefits are still equivocal in cardine pain, leg pains due to vascular disease such as artenesclerosis or thrombo-anguts obliterans, Raynand's disease, and muscle pains of bilary and gastrointestinal origin. I am not sure of the reasons for the poor necount this drug has given of itself. Perhaps we ought to consider much larger doses inner as much as 1 Gm in a single dose is said to be nontexic.

Atroping is the standard antispasmodic agent used for the relief of pain arising in relation to the contraction of all smooth-muscle organs It is usually employed either in the form of tablets of atropine sulfate or in the form of the tincturo of belladonna The usual dose is 0.5 to 10 cc. of the tincture which is equivalent to from 0 15 to 0.3 mg ( $^{1}/_{200}$  to  $^{1}/_{200}$  Gr) of atropine physiologic basis for the use of atropine as an antispasmodic needs to be re-examined Atropine acts by blocking the functions of the parasympathetic, but the gastrointestinal tract is notonously resistant to this action of atropine so that in animais, even after doses equivalent to 130 mg for a man, electrical stimulation of the vague still causes contraction of the gastrointestinal tract Thore is further the fact that the gastrointestinal tract enjoys great autonomy, so that even when the vagus has been severed, the tract is capable of performing its usual motor activities and engages in motor These facts, therefore, indicate perversions that on theoretic grounds atropine may be of no value at all in pain resulting from abnormal gastrointestinal motor functions. years ago Dr Walter Bastedo made an Interesting survey of the evidence concorning the action of atropine in gastrolntestinal spasm. The indications are that it may not relieve that type of spasm How, then, can we explain the fact that it sometimes relieves pain in the gastrointestinal tract? There are several possible mechanisms but I would ask you to consider this one, namely, that atropine diminishes the tone and motility of the stomach. As the result of atropine administration, it may take as much as four times as iong as normal for barrum to appear in the duodenum and two and a half times as long for it to leave the stomach completely The diminished motility may result in lower tension in the stomach even though spasm may be uninfluenced Similar diminution in motor activity of the small intestine and colon have been observed after giving suitable doses of atropine.

Dosage is a point of paramount importance The effects to which I have just referred have required a dose of 1 mg or more, which would be equivalent to about 3 oc of the tincture of belladonna This makes patients uncomfortable, impairs the vision, and dries the mouth and the akin What is more, the duration of action on the bowel is short, from one half to three hours The duration of action on other structures is often lnng-several days. There is then the trouble that it is not feasible to continue the gastrointestinal benefits without overloading the eyes and other structures through the cumulative notion of atropine I am inclined to the view that the dose of atropine which leaves the patient free of atropine discomforts is not likely to have much effect in relieving pain in the gastrointestinal tract Those who hold a contrary view will have to prove it by the "blind-test," namely, a test la which the patients will have to distinguish the medicine with atropine from the one without atropine when he does not know in ndvance which 18 which

Numerous compounds have been investigated as possible substitutes for atroplac, more particularly compounds which might exort a greater action directly on the smooth muscle of the gastrontestinal tract.

Novatropine is the methyl bromide of homatropine. It was introduced as an intestinal antispasmodle about 1916, on the basis of animal experiments which showed considerable peripheral action, with negligible central actions as compared with atropiae. It is given in somewhat larger doses than atropine, namely, 25 mg several times daily. The clinical evidence concerning its efficacy is contradictory, and that it has any material advantage over atroplae is uncertain

Syntropan is one of the more recent synthetic compounds more closely related to atroping It is the phosphate salt of the dl-tropic acid ester of 3-diethylamino-2, 2-dimethyl 1-propanol. It exerts a double action, first on the smooth muscle of the gastrointestinal tract directly, and second. it blocks the vagus The pattern of its action however, is different from that of atropine in that its actions on the salivary secretion, the eye, and the heart are relatively slight by comparison with the actions on the smooth muscle. The result is that gastrointestinal effects can be obtained with doses which cause a negligible amount of the side effects that are seen after atropine In some well-controlled experiments in which the mountry of the colon was studied in man, 10 mg doses given intravenously were found to inhibit the contractions of the large bowel without discomfort, whereas 0 6 mg of atropine, producing essentially the same effects upon the bowel, gave rise to pupillary effects and salivary discomfort. This material is used for its antispasmodio effects in oral doses of 50 mg or intravenous doses of 10

mg three or four times a day With larger doses and in more susceptible individuals, discomforts similar to those caused by atropine are produced

Trasentin is a compound which has recently received a great deal of attention as a possible antispasmodic agent This is a relatively new synthetic, chemically not related to atropine It is the diethylamino ethyl ester of diphenylacetic acid It exerts relatively little, if any, action on the peripheral vagus It is without the mydriatic, the cardiac, or the secretory effects of atropine Its action is selective on smooth muscle and on such structures it produces relaxation The direct action on smooth muscle is sufficient to counteract such powerful muscular stimulants as barrum and pituitrin, which are little affected by atropine Doses of 75 to 150 mg taken several times daily orally, or 75 mg by subcutaneous injection, produce effective relaxation of the stomach and also of the colon In comparison with atropine on the same subjects, it has been found that a dose of 50 mg intravenously causes the same as 06 mg of atropine, without the undesirable effects of the atropine

In spite of the strong indications of therapeutic value in the compounds which I have mentioned, the relief of pain in association with smooth-muscle contraction is far from satisfactory. I wonder whether the inadequacy of all of these compounds may not be due chiefly to the brevity of their action.

Calcium produces dramatic relief of lead colic and also in some cases of renal and biliary colic after an intravenous dose of from 0 25–1 Gm of calcium chloride in a 5 per cent solution. One needs approximately three times as much for an equivalent amount of calcium in the form of calcium gluconate. The relief may be transient or may last for several hours. The mechanism of its action remains obscure, for in animal experiments it fails to inhibit peristaltic movement.

Tissue extracts are widely used to control nonstriated-muscle pain. They have had considerable vogue in treatment of pain of vascular Depropanex, a deproteinated pancreatic extract, has come in for a good deal of current attention in the treatment of leg pains in connection with peripheral vascular disease and intermittent claudication An intramuscular injection of 2 or 3 cc every other day has been stated to enhance the capacity of these patients for muscle activity without pain My own experience with it is not at all encouraging. Is it not again chiefly a matter of brevity of action? An intravenous injection causes a vasorelaxation lasting fifteen to twenty minutes That doesn't quite fit the accounts in the hterature that patients will carry on better over longer periods of time as the result of an intramuscular injection a

few times a week. The use of tissue extracts as vasodilators is now a fairly old story. It goes back about twenty years. There is a large and optimistic literature, but the clinical results do not bear critical analysis.

DR JANET TRAVELL I should like to ask a question about the terms "contraction" and "spasm" in connection with what you said about pain I would agree that a simple contraction of normal muscle does not cause pain Very strong electrical stimulation of normal muscle is not painful, but when we use the term "spasm" I think we bring in another connotation, a secondary factor, and that is the time factor When we say "spasm" we have in mind a contraction which lasts over a period of time. This probably results in local ischemia with ischemic pain. I do not think the two words should be used without that distinction

DR HAROLD WOLFF That is all right if you wish to define them that way, but I did not think that spasm itself has necessarily anything to do with circulation

DR TRAVELL I think it connotes a time factor, that is, a prolonged contraction rather than a simple twitch. There are experiments which show that in tetanic contraction the blood flow is markedly reduced.

DR GOLD There is the fact to which I referred that a cramp of the leg becomes painful almost the instant the contraction begins. That pain couldn't be due to ischemia. I believe the term "spasm" would embrace this condition. I am inclined to doubt that the time factor is important.

Are there any questions from the upper rows? I do not think we have yet found the combination for securing sufficient participation from the back rows Perhaps we ought to sit in the back row

STUDENT I would like to ask Dr Wolff how pain arises when you inject hypertonic saline into a muscle

DR Wolff I would assume that that is a direct stimulation of the pain end-organs by a chemical irritant I do not believe it has anything to do with the fact that it is in muscle It is simply bringing a chemical agent, a strongly hypertonic agent, in contact with the pain end-organ

STUDENT There is no muscle spasm?

DR WOLFF There may be secondary muscle spasm which may then in itself become a source of pain at some distance, but that is not immediate. That takes some minutes to build up—perhaps ten, twelve, or fifteen minutes. If you inject hypertonic salt, there is no pain except at the site for some time, then later nearby, and finally, further away, you get the secondary ef-

fects associated with sustained contraction of skeletal muscle and possibly with ischemia.

STUDENT My impression is that the symptoms or secondary effects come on much faster than n period of minutes. It seems to me that they come on in about fifteen to twenty seconds, and that time is sufficient for spasm.

DR GOLD Dr Hansson, would you say something about the matter of pain in ekoletal musclo?

Dr. K. G. Hansson Spasm of skelctal muscle of poliomyelitis is tender and painful. In the beginning, ischemic contracture causes severe pain, probably due to chutting down of the circulation. There is pain associated with the spastic erector spinae muscles of the "painful back," and in the local spasm of torticollis or wry-neck myosilis.

DR. GOLD In all of these conditions, I take it, you have not tried to indicate whether it is the contraction of the muscle or the attending pulis and distortions which give rise to the pain. That is a distinction which I think is worth while trying to make in relation to the problems of treat-

ment

Incidentally, Dr Travell referred to spastic contraction being the cause of diminished circulation in the part, with resulting ischemic pain. You have just referred to an analogous condition occurring in the reverse order, namely, primary diminished in the circulation resulting in contraction of muscle which gives rise to pain, that is, the pain of ischemic contracture

DR. HANSON That is correct In ischemic contracture, there is spasticity of the muscle as the direct result of impairment of the circulation

VISITOR In a sudden muscle cramp does not the pain which seems to arise from the muscle come on before you can have pain due to ischemia? Does it not come on as soon as the cramp starts?

DR. GOLD How about that?

DR WOLFF That is your problem

DR. GOLD That is certainly correct. One can distinguish three conditions one, the sudden muscle cramp in which the events are all so rapid that circulation can play no part in the pain, two, the strong muscle contraction which is sustained a long time, giving rise to relative ischemia, three, the impaired circulation resulting in increased tone of the muscle and ischemic contracture. All three conditions cause pain, but I don't believe that in any of thom is the painful stimulus set off by the contraction of the muscle per se.

DR. McKeen Cattell. The story is, of course, complicated because you get contraction of localized groups of muscles which produce distortions, which are not the ordinary

movements.

DR GOLD There are so many examples of severe muscle contraction which fail to cause pain I don't know of any good example in which muscle contraction is associated with pain but in which the element of tension and distortion can be excluded

Dr Cattell, I believe you once made some experiments on animals which have a bearing on the matter we are now discussing Would you

tell us about them?

DR. CATTELL I compared the tension in strated muscle under two conditions—one, the maximum response to electrical stimulation of the nerve, and two, the maximum response resulting reflexly from a convulsant drug which caused sustained contraction of the muscle. The tension in the two cases was the same. It is fair to assume, therefore, that the maximum voluntary contraction of a muscle approaches the maximum capacity of a muscle to contract.

Dn. Gold Can we, therefore, not go further and say that if a maximum voluntary contraction of a muscle does not cause pain, a maximum involuntary contraction as occurs in spaam would not cause pain unless there were something abnormal about the movement of the muscle, namely, somothing in the nature of abnormal pulls, distortions, and tensions?

STUDENT How do you explain the pain of musclo, say of the leg, which arises twenty-four hours after an unusual exercise, wherens a musole accustomed to the exercise does not develop

pain?

INTERN The usual answer to that is the P factor A blood-pressure cuff inflated on the arm so as to occlude the circulation may be left in place for a half to three quarters of an hour without pain, but pain develops rapidly when under those conditions the muscle is made to contract. The difference is said to be due to the development of a metabolic pain factor. It is, therefore, not the want of oxygen by itself or the want of any other factor in the blood which causes the pain. The pain results from a factor which develops when a muscle contracts without adequate blood supply

DR. TRAVELL In connection with sore muscles after unaccustomed exercise, I would point out that it is not contraction which hurts, but rather stretching of the muscle If you examine your own experience the next time you develop such muscle lameness, you will find that the muscle is tender to the touch, it does not hurt when it shortens, but it causes pain when it is lengthened If it happens to be the calf muscles that are involved, dorsification of the foot is the movement which sets off pain, if it is the hamstrings, straightening the knee sets off pain. But sore muscles are often somewhat harder than normal

muscles Their tone is high and the stretch of contracted muscle gives rise to pain

DR Gold In this connection we might bring together other types of experience As Dr Hansson pointed out, impairment of the circulation leads to contraction of the muscle. The patient with occlusive vascular disease of the extremities often finds one of his greatest difficulties to be lying flat on his back. The flexor leg muscles are in a state of high tone as the result of the relative ischemia. When he tries to lie flat, the tension on these muscles produces sufficient discomfort to keep him awake. He will often say that he is comfortable in bed when he lies with his knees drawn up. Again, it is not the contraction of the muscles but the tension upon partially contracted muscles which hurts.

When Dr Stimson discussed the treatment of poliomyelitis in one of our conferences, he mentioned the fact that patients are allowed to assume whatever position seems most comfortable and the limbs are supported in those positions for in that way it avoids the stretching of the spastic muscle, since it is the stretching and not the spasm which is painful. He suggested this as a means of treating the pain of muscle spasm, while the Sister Kenny packs were being applied for the purpose of relaxing the spasm itself

I thought we might learn something, from the experience with the use of metrazol convulsions in mental disorders, about the relation between sudden muscle contractions and pain. I discovered, however, that these patients develop a confusional state with loss of orientation just before the convulsions and are not in a position to give an account of whether the sudden muscle spasms caused pain, although it is a fact that the total experience leaves them with sore muscles.

DR WALTER MODELL I have read accounts of convulsions due to strychnine poisoning one by Stalberg and Davidson in the J.A M.A. (July 8, 1933) described a particularly longdrawn-out course Pain was not an outstanding symptom There was some back and neck pain, but the long and violent convulsions seemed to be associated with terror, a sense of suffocation and anxiety, but not pain. The same is true of the muscle spasm of tetanus There is a good deal of sudden as well as sustained contraction of muscles with spasm in these cases and there is a great deal of pain in association with them The fact, however, that such patients may also show marked muscular spasticity such as rigidity of the laws which becomes painful only when attempts are made to force the jaws apart, indicates that the muscular contraction of itself is probably not the cause of the pain The sudden contraction may produce pain because of distortion, the sustained contraction may produce pain because

of relative ischemia I would like to ask Dr Travell about the time element in pain due to muscle spasm How long does the contraction have to last before you get pain?

DR TRAVELL I think two or three minutes will often produce pain. If you carry a heavy suit case you will see how often you have to change hands. That is protracted effort without the relaxation necessary, presumably, to restore the volume of blood flow.

DR MODELL That pain may be due, not to the restriction of the circulation by the contraction, but to the fact that the sustained contraction involves work in excess of the normal capacity of the local circulation

DR GOLD Dr Wolff, do you happen to know of any good experiment which indicates that the contraction of muscle can of itself produce pain?

DR Wolff I don't believe it is possible to separate the effect of the contraction alone and the effect of the circulatory changes There is the fact that if a muscle which is painfully contracted is pulled out it very often is less painful for the time being One could say, of course, that in pulling it out the circulation is promptly improved, and, therefore, the products of anova are taken away, but actually the texture of the muscle under those circumstances does not seem to change Furthermore, ergotamine, which very much would be expected to constrict the circulation, does not make the pain worse, nor does a vasodilator relieve that pain These pieces of information might be taken to indicate that the contraction alone may give rise to the pain

DR GOLD But even in such a case, in which pulling the muscle out relieves the pain, it may well be that by such pulling, if properly carried out, the contracted portion of the muscle acquires a more favorable relationship to that which is not contracted, this occurrence diminishes the distortion which is the cause of the pain

DR CATTELL One can say rather definitely on the basis of experience that a short contraction does not produce pain but one sufficiently long will become painful That, of course, involves two things—long contraction and also shutting down of the blood supply But the fact that one may carry on intermittent contraction involving just as much work over a period of time without pain would seem to put emphasis on the circulation as a factor in the pain

DR GOLD Is Dr Martin here? How about pain due to gastric spasm? I know accounts of people with spasm of the stomach producing hourglass defects without any pain at all Do you think spasm of the intestinal tract causes pain or is the pain due to the disturbed peristaltic motility? Can you relieve the pain while the patient retains the spasm?

Dr. Kirby Martin I think the whole subject is very interesting in relation to the gastrolntestinal tract because there is no organ which is constantly in motion, a portion with fast motion propelling contents along into a portion with slow motion The stomach emptles fairly rapidly The motion in the duodenum is also rapid The motion in the small bowel is slower, and in the colon there may be stasts for hours Spasm In the colon may be associated with diarrhea or By x-ray, they look the same constrpation Either may be painful or painless I know of no drug which will relieve the spasm of a so-called hourglass stomach The condition may be there for months and cause no pain I think that fully 90 per cent of the symptoms arising in the gastro-Intestinal tract have an unexplained origin. They are apparently due to some disturbances in motility which vary with the types of individuals and from time to time in the same individual

I want to give you credit for your statement about atropine I never heard that statement made by one from your department or similar departments before I agree with you absolutely I think that the effect of atropine in the usual clinical doses is due to the personality of the doc-

tor who gives it

Dr. Gold Dr Palmer, how do you manage the problems of pain with spasm in the gastroin-

testinal tract?

DR DOUGLAS PALATER There are several areas of spasm in the gastrointestinal tract. A word about cardiospasm. It is not a very frequent condition and it is necessary to distinguish It from cancer Mechanical dilatation is the only thing that helps. In my experience, belladonna, phenobarbital, and other sedatives are of no assistance in such a case Spasm in the rectum or anal spasm is very common and extremely painful The diagnosis is frequently overlooked and the condition is often badly treated It is almost always due to n lesion, generally a tear, just in the midline in the back of the anal opening The medical treatment of pain there is to maintain the bowel movement soft, using a lubricant, and to apply heat.

In the case of pylorospasm, the treatment is directed to the cause If it is caused by gastrio ulcer, the treatment is that for ulcer The same treatment applies also, if the primary condition is extrame pathology, such as gallbladder disease or chronic appendicatio. In acute pylorospesm rest is important, the stomach should also be rested by withholding food, particularly irritants, coffee, alcohol, and cold drinks Heat to the abdomen is helpful and opiates are sometimes necessary

DR. Gold As regards oplates in pylorospasm, I would be inclined to think that the relief of pain

is due to either the central supp:

pain sense or to suppression of the motility of the stomach since spasm itself is likely to be increased by the opinte

Dr. Palmer I may say n few words about the treatment of spastic colon Spastic colitis, or the so-called irritable colon, is a very frequent diagnosis. This is a condition which gives rise to n great many symptoms, gaseous distortion, distress, constipation, loose bowel movements, sometimes nausea, sleeplessness, and loss of weight. A good many people feel that it is the most common cause of abdominal distress, and some go so far as to say that, if we could make a better diagnosis of this condition there would be less people operated on for chronic appendicates You find it in both men and womon Thore are many causes Some people feel that irritative cathartics are a very frequent cause smaller number of cases are probably due to carbobydrate fermentative changes In these people you find acid etools that are mushy and contain bubbles of gas. I think much rarer is the type due to excess protein putrefaction There you have an allaline stool Theoretically, the treatment should be very simple if you could change the intestinal flora. We had an epidemio of acadophilous-milk treatments a few years ago. It was sold in all the drug stores Another cause, almost as frequent as the use of irritative cathartics, is the overexutability of the vegetative nervous system due to stress and strain, fatigue, worry, overwork, family difficulties, and the wear and tear of modern life in general. These people suffer from many, persistent, and varying gastrointestinal symptoms. Abdominal examination is apt to reveal a ropelike colon on the left side There may be a boggy distended cecum. You probably all have seen this condition which has now come to be called the spastic colon x-ray beins in the diagnosis At the end of twenty-four hours you see a lot of chopped-up discrete masses of barrum particularly on the left side, and if you give the patient a barrum enema. you find there is a narrowed cecum.

As to the treatment, bed rest, the application of heat where possible, and diet are the important factors Probably one of the most important measures is a bland diet in which at first you cut out fruits, raw fruits and raw vegetables, iced drinks, coffee, irritants of all kinds, and alcohol We all use the gastric sedatives, 1/10 grain of atropine sulfate, or combinations of ntropine or belladonna and phenobarbital Oil-retention enemas, which are retained overnight are sometimes useful

Dn Gold Could we bear from Dr McLellan about treatment of pain in disorders of the genitourinary tract?

servation indicates that pain from the kidney. pelvis, bladder, and ureter is due to hypermotility of the smooth muscle when it is distended and If these organs peristaltic waves are present become overdistended sufficiently to suppress peristaltic activity, the pain disappears An obstruction in the ureter per se, such as by a stone in the ureter, does not cause clinical renal colic, although some vague discomfort may be present A stone in the kidney pelvis may cause slight discomfort in the costovertebral angle and a stone in the ureter may give vague discomfort along the outer border of the rectus muscle from the umbilious to the suprapubic region, depending upon the location of the stone from the ureteropelvic junction to the suprapulic region may cite the case of Mrs Madigan, who had a single kidney with an infected, greatly dilated ureter containing a large stone The first symptoms of obstruction in her case were anuma and The patient readily recognized hese clinical symptoms and would come to the office asking that a catheter be passed to dislodge the With this, symptoms would disappear At no time was there pain referrable to the kid-I would presume that no peristals was present in her case It is a common observation that a ureteral stone may cause acute colic at The pain then completely subsides and an intravenous pylogram taken later shows a nonfunctioning kidney I assume this to represent a state in which the peristaltic waves have subsided, resulting in a painless pathologic condition

An overdistended bladder at the onset is always painful but if neglected or morphine is given to mask the symptoms, pain will disappear Again I interpret this observation to mean that peristaltic waves at the onset with distention cause pain which is later followed by subsidence of pain due to the subsidence of the peristaltic waves. The pain disappears because of transient paralysis of the bladder.

It is notuncommon, following ureteral catheterization in which no pathologic condition is found, that the patient may have an acute renal colic as the result of the manipulation. One interpretation that I can give is that the trauma causes spasm and that the spasm may act, as in the case of the stone, to produce pain in relation to hypermotility or hyperperistalsis

A renal colic will invariably cause spasm of the abdominal muscles, namely, the transversalis, and internal and external oblique muscles, which will stay in a state of contraction. This will result in pain in this muscle the same as prolonged contraction of any skeletal muscle.

Clinically, the so-called antispasmodics, such as atropine, syntropan, and spasmalgin, have, in

my experience, no effect in cases of severe renal colic. The only drugs which I know will relieve pain in the urinary tract due to spasm of the smooth muscles are the opiates and their derivatives. In healthy adult patients, 30 mg may be given and this repeated in one half hour if necessary. Tincture of Hyoscyamus in combination with citrates is only of value in so far as the pH of the urine is altered. Calcium gluconate given intravenously has been, in my experience, without benefit in renal colic.

DR GOLD Dr Shorr, does the pain in association with the contraction of the uterus present any special problems?

DR EPHRAIM SHORR I think we remain particularly uncertain and insecure in our treatment of pain of uterine origin. Fundamentally, this is related to the question which Dr. Gold raised with respect to the relation between muscle spasm and pain.

There are some very good accounts of the behavior of the uterus during the sexual cycle . During menstruation there are contractions, relatively slow, of moderate amplitude, which persist throughout the period of menstruction uterus is firm and the firmness is general follows a period of relative quiescence until the preovular spurt in the growth of the follicle, in the four or five days associated with the rapid development of the follicle and the increased excretion of estrogens, there is a very great increase in the amplitude and frequency of the contractions This is followed by another period of quiescence, and then a day or two premenstrually there is again an increase in the amplitude, giving rise to the menstrual characteristics of the uterine contractions From the analysis of hormonal response of uteri which have been deprived of their endogenous hormones, we know that the estrogenic hormone increases the activity of the uterus, its amplitude and frequency of contractions, and renders it much more susceptible to the action of the oxytocic principle of the posterior pituitary, and that progestin has the opposite effect

We can place women into various categories. There are those to whom these episodes of increased contractility are unassociated with any awareness of the uterine contractions, then there are all gradations between this group and the women in whom menstruation produces almost intolerable cramps, associated with so many other distressing phenomena, nausea, vomiting, and all the bizarre things that may be seen in extreme cases. There are some women who are very definitely aware of ovulation, and that there is a physiologic basis for their awareness is evident from the nature of the contractions throughout this period

Is there any difference in the contractions of the

uterus of women who have dysmenorrhen from those who have painless menstruation? The best studies I knew of, which have been made by the insertion of balloons at this time, have indicated no difference whatsoever in the force or in the frequency of the uterine contractions, so that we cannot differentiate the two types on the basis of the contraction of the uterus. The difference lies in their response to the contraction.

A great variety of thorapoutic procedures have been instituted to deal with the problem of dysmenorrhea. Of course, the simplest one is to use the analgesies, starting with the mild ones and going to codeine, and finally to morphine, but that seems to avoid contact with the hormonal influences that we do know definitely alter the rate and degree of contraction. A variety of hormonal procedures have been adopted which are

varvingly successful

There has been an attempt to classify women with dyamenorrhea into two types one type with a hypoplastic uterus, in whom estrogenic hormone thorapy is applied, and the other with a normal type of uterine contractions in whom the depressing effects of the progestical hormones on uterno contraction have been utilized. I find that those distinctions are not very clear cut, and that the response is irregular to both hormonal regimens which are usually started a few days premen strually and are continued throughout menstruation.

There is still another regmen, adopted hy Sturgs and Albright, and others, which is farly successful Large doses of estrogenic hormone are given, starting rather early in the cycle, say, about the sixth day, 10,000 rat units every third day for six doses. The succeeding period is frequently less painful or may be entirely free of pain. This is inparently an end achieved not without cost, because both assays of progestin at that time and hiopsies indicate that we have very scriously interfered with normal menstrual function. My own feeling is that these measures are justified in those women whose dusahillty is so severe as to become a serious problem.

I would like to present another point of view which seems to be borne out not only in this particular field of pain hut in so many others, namely, that of the emotional state of the patient. You will recall that the nterine contractions in dysmenorrhea ere the same as in women with painless menstruation. I think one can do very well in picking out, before one has gotten very far along in the history, those women who are likely to have dysmenorrhea. They can be distinguished from those who are likely to have painless menstruation. The state of tension, the degree of neurosis, the state of anxiety and particular stress seem to be the conditioning factors which

make, from what is apparently a perfectly normal type of contraction, one that is reacted to with pain. There are, of course, those patients in whom the pain is so severe that something must be done prior to any long-term therapy, but the aim should involve a more general approach to the problem of dysmenorrhea on the basis of personality factors. It is not one for long-range management with drugs.

Dr. Wolff Do you think the estrogen affects the contraction pattern of the nterus or the pa-

tient's reaction to it?

DR. SUORR I am not cortain, of course, but I am Inclined to the belief that the effect on the patient's reaction is the most important factor

DR. CATTELL Since your formulation would give some importance to factors influencing the central nervous system, would you not use sedatives on occasion?

DR Suonn Yes, indeed.

DR WOLFF How about alcohol and aspirin?
DR SHORE Brandy and aspirin are favorites in women under these circumstances

DR GOLD I am inclined to think that the factor of pull, distortion, or tension is not ruled out as a cause of the pain in the dysmenorrham woman. A normal pattern of contractions might very well produce no tortions in one weman, while producing painful pulls in another. It might well depend, for example, on the relation of the uterus to adjacent structure, which might very from person to person

I don't wish to take issue with the notion that the psychologic constitution of women is n very important factor. I wish merely to stress the fact that pain which arises in relation to a strong muscle contraction need not arise in the contraction itself, but in the effect of the contraction or related or adjacent structures. The difference between the normal and dysmenorrhone woman may lie in these relations rather than in the pattern of the contraction of the uterus itself. It is precisely analogous to what we have already mentioned in connection with pylorespasm. What causes the hurt is not the spasm itself, but the related movements of the stomach giving rise to tensions and tortions.

Dr. Shorn There can be no doubt of the frequent instances of dysmenorrhes being relieved by the relief of stress A vacation often does it

There is one other condition I would like to point out because I think it is overlooked more often than it should be, and that is the presence of endometriosis I do not qualify as a gynecologist, but I have lad some experience with that particular form of dysmenorrhea, and not infrequently such women will have gone for years and years to physicians, complaining of dysmenorrhea which differed in no specific degree or quality

from ordinary dysmenorrhea, without the diag-Those patients can be nosis of endometriosis relieved by surgery, as you know, but they may also be relieved, if the endometrial deposits are not too extensive, by the use of androgens drogens do two things One, they cause the endometrium to involute, two, in proper doses, they prevent the next discharge of gonadotropic stimuli from the pituitary so that a menstruation is missed, and during that period there is a regression of the endometrium It so happens that the ectopic endometrium is much less resistant to such temporary omissions of hormonal stimulation than that of the uterus, and not infrequently one or two such courses with androgenic therapy results in marked or even complete relief of pain The diagnosis of endometriosis is always to be borne in mind

DR GOLD Dr Hansson, I believe that one of the major problems in physical medicine is to relieve muscle pain Would you tell us briefly what you do?

DR HANSSON Spasm of skeletal muscle represents merely an increased tone of the muscle The action-current shown by the electromyogram is the same for a muscle spasm as it is for a normal muscle during contraction We encounter pain in the skeletal muscles in a wide variety of situations the spasticity of cerebral hemorrhage, local conditions such as myositis, as in the case of the trapezius muscle or wry neck, spasm in association with fractures or pathologic states around the joints, spasm resulting from impaired circulation as in ischemic contracture, skeletal muscle spasm due to general conditions as in meningeal irritation, and the spastic muscles of poliomyelitis

There have been some interesting experiments in recent years relating skeletal muscle spasm to acetylcholine. Prostigmine has been used for the relief of muscle spasm in poliomyelitis and in arthritis on the basis of the assumption that the resulting increase in acetylcholine at the neuromuscular junctions will relax the muscle. Some writers have made a good deal of this medication although our own experience has not been nearly as encouraging.

Spasm in the skeletal muscle will usually respond to the application of heat, either external or internal heat by means of electrical currents, or a combination of the two—In regard to external heat, there is some question of a choice between moist heat and dry heat—I believe that both do essentially the same thing physiologically

Visitor Isn't it true that the application of heat is probably the most valuable therapeutic measure in the treatment of skeletal or smoothmuscle pain? Is not the return of the circulation

to the affected parts as the result of the heat the reason for the cessation of the pain?

DR HANSSON I think that the pain of skeletal muscle is often due to impaired circulation and that the relief is due to improvement in the circulation

DR GOLD I would like to ask Dr Hansson how he decides whether he should use dry or moist heat for the relief of pain associated with skeletal-muscle spasm

Dr Hansson This is a very practical ques-As I stated, physiologically, the two are the same However, from the standpoint of the practical application, moist heat presents certain advantages In the case of dry heat, we usually use an incandescent lamp and the heat increases gradually as its application continues There is the danger of overheating Furthermore, it strikes only that part of the body on which it is focused, the areas to the side or the back fail to get any exposure On the other hand, in the case of moist heat, usually applied by moist packs, the maximum amount of heat is present at the start and with time tends to cool off toward normal There is, therefore, little danger of burning and there is the further advantage of being able to distribute the heat all around an extremity

DR GOLD Is there anything else that the physiotherapist does to relieve pain of skeletal-muscle spasm besides applying heat?

DR HANSSON Yes, indeed There are several measures which are used in physical medicine in addition to heat to promote relaxation of muscles Gentle massage, including stroking or effleurage, is often quite effective. We sometimes use iontophoresis with members of the histomine group introduced into the skin by means of electrical cur-Progressive relaxation exercises requiring the special technic of Dr Edmund Jacobson, of Chicago, are beneficial in hemiplegia or other cerebral spastic states The continuous bath as commonly used by the psychiatrists to quiet the excited patient has the effect of relaxing skeletal muscle, in this case it may be that the heat is responsible for it Cold is another measure which indirectly relaxes skeletal muscle as applied to reduce the distention of a joint capsule or hollow sac, since the pain of the distention tends to cause reflexspasm of the skeletal musclearound the joint

Visitor Could we have some advice as to how to treat the acute muscle cramp in the legs which often comes on while the patient is in bed at night? What should you do to relieve it, or what can the patient himself be instructed to do?

DR HANSSON I believe that most of these cramps are the result of a circulatory deficiency due either to a systemic lowering of the blood pressure when the patient is at rest or a local deficiency in the circulation due to vascular disease

of the extremity Therefore, the treatment should be directed teword increasing the circulotion. This can be done by the application of n liet pack or electric pad, and also by having the patient hang his legs over the side of the bed ond exercise, alternately flox and extend, the ankles and toes, or have the patient get out of bed, which he usually does instinctively, and stood or walk. These measures usually relieve the cramps. A dose of 5 or 10 grains of aspirin may be helpful Qulinie has been used for rolaxing skeletal muscles. A dose of 5 or 10 grains of quinne sulfate may also be tried.

Dr. Golo Dr Travell, yeu have had some experience with the management of skelotal muscle pain. Weuld you tell us something about what

you de?

DR TRAYFLL I have been particularly loterested in the treatment of muscle pain by means of local infiltration of nevocaine into the socalled "trigger zeoes" in the skeletal muscles The pain in the cases to which I refer is usually of obscure erigin and there is no causative diagnosis They include such syndromes as the frozen shoulder, leve-back pain, stiff neck, tenuls elbon, and stiff and painful knees A careful examination shows that the pain is associated with spasm of the muscles resulting in limitation of motion. In these cases every kind of laboratory examination is negative, x-rays of the bony structures, blood count, blood sedimentation rate, blood chemistry and the spinal fluid may show ne significant The neurologic examination abnormalities is also cerative. Those muscles which cross the loints at which limitation is observed show localized areas of deep tenderness Pain is elleited when the tender muscle is stretched. If there is pain at rest as well as oo motion, some spot in on appropriate muscle cao olmost always be found, firm pressure on which reproduces or locreases the pain This is called a trigger zone and represents an abcormal area within the muscle, from which pain is referred to oreas often located at a considerable distance from the trigger some For instance, in patients with low-back paio, trigger zones in the gluteal muscles frequeotly give use to palo radiating down the back and outer sido of the leg as far as the onkle, resulting In the chinical syndromo of sciatica

In the management of these patients, briefly, this is what I do After examination of the nucles for tender spots, restricted motieo, and paneos reclining, and the setting off of referred pain hy pressure, and ofter I have ruled out other types of pathology, I infiltrate as many trigger areas as I cao find, or as the patient will tolorate I generally use a 0.5 per coot to 0.25 per cost solution of procaine hy drochloride in physiologic saline, which must be pyrogen-free There is ne epine-

phrine in the solution. It is not necessary to infiltrate the skin. When the needle poottrates into a trigger zone, this section of the muscle usually can be seen or felt to twitch and the patient experiences in sharp radiating pain which may build up in the reference according several seconds or even minutes, spreading in waves from one part of the reference area to onother. This suggests a mechanism of pain reference in the central porveus system based on o "reverberating neurose circuit" as postulated years ugo by Hinsey to explain motor afterdischarges.

But to come back to the patient When a trigger area is found, the needle is moved rapidly back and forth in this region until the whole area has been "peppered" with the solution and the patient oc leoger feels the movement of the occile or the introduction of the fluid. The trigger area 10 o large muscle mass seems to be o glebular spot nbout a centlmeter in diamoter er in a small muscle, only 2 or 3 mm in diameter. In making the injection, it is not necessary to retract on the plunger of the syringe to determine whether the point of the needle may be located in n blood vessel because during the injectico the needle is kept in metion so that he mere than h drop er two is introduced at any one point and because the solution of procume hydrochleride used as sedilute The total amount of the solution injected in attempting to abelish any single trigger sone ranges usually from about 2 to 5 ce

It should be emphasized that the infiltration of an active trigger area should be repeated until deep tenderness of that site is inholished, even though several trials are necessary. The incomplete blocking of trigger areas is probably responsible for most of the inferpoin and some of the failores from this type of treatmoot. In creased paio for a day or two following the treatmoot also results when the reference orea, instead

of the trigger zone, is infiltrated

Another reason for o poor end result is that the search for additional trigger areas is oot sufficiently persistect. When marked relief from pain nod disability has been secured for a period of time and the pain subsequently recurs, one should first reinvestigate the trigger areas already injected, but it will generally be found that the trigger zones located elsewhere than in the muscles already treated are now responsible for the recurrence of pain. This is usually confirmed by a change in the site of pain.

Sometimes disagreeable but not dangerous reoctions to procaioe hydrochleride are encouotered, such as light hendedness, duxiness, drowsiness, or motor incoordination. The patient feels
as if ho had had a strong cocktail. These effects
wear off withio fifteen or twenty minutes ood aro
due to actions of the drug on the central nervous

system They are much less noticeable if the treatment is given with the patient lying down Some patients apparently have a true idiosyncrasy to procaine hydrochloride, with immediate collapse symptoms which can be antidoted by epinephrine, but this is infrequent and usually may be anticipated by a careful history for allergies

A rare reaction is the delayed appearance of convulsive movements, or convulsions, one or two hours after the procaine. I have seen this once in about 500 patients treated by this technic. This reaction may be prevented or abolished by the barbiturates, and as a precaution, and also to make the patient less apprehensive, I often give pentobarbital sodium, 0.1 Gm by mouth, ten or fifteen minutes to a half hour before the treatment is begun. I also limit the amount of procaine used at the first visit to 100 mg, and increase it gradually, if need be, at later visits

In patients with a known allergy to procaine, I use plain physiologic saline solution for infiltration. I have now quite a group of patients who have been treated in this way with physiologic saline alone from start to finish, and it is my impression that the results are just as good as when procaine is used. The addition of procaine to the solution unquestionably makes the injection more pleasant to the patient in that the pain set off by needling the trigger zone is less intense and of shorter duration than when saline alone is used.

Now, as to the mechanism of the relief of pain by this kind of treatment. The most puzzling fact is that a procedure with such temporary pharmacologic effects produces in many instances long-lasting or permanent relief. For instance, if the pain is of short duration, of the order of two or three weeks, one treatment usually suffices. If it has been present for periods of months and even years, marked relief is often secured after three or four treatments given at weekly intervals. This suggests that the spasm of the muscles is a functional disorder and that the infiltration has in some way interrupted a vicious cycle.

The relief of pain cannot be the result of a simple local anesthetic action of procaine as I once thought, because saline is equally effective. Nor is the relief due to purely psychic effects of the treatment, since infiltrating nontender areas of muscle, a procedure which does not elicit any spread of pain, is quite ineffective in relieving the symptoms

Dr Nolton Bigelow has pointed out to me that Gellhorn's experiments offer the best explanation of this enigma of the relief of pain by the local infiltration of trigger zones. Gellhorn found that pain induced by the ischemic contraction of a muscle temporarily abolishes the deep tendon reflex of that particular muscle, whereas ischemia alone, in

the absence of pain, has no such effect. One must conclude that afferent pain impulses in some way block reflex pathways, possibly by using up some chemical substances necessary for the transmission of the impulse. In the patient in question, the intense discharge of pain impulses set off by infiltrating the trigger area would serve as the essential factor in breaking the vicious cycle and relaxing muscular spasm.

DR GOLD I take it, then, that you believe that the thing that relieves the muscle pain is a painful stimulus striking the trigger area rather than the anesthetization of the trigger area, is that so?

DR TRAVELL Yes, I believe that is the explanation

## Summary

DR Gold The management of pain in association with muscle spasm was the subject of the conference today. This problem is not an exclusive one. Several specialties have a stake in it—pharmacology, neurology, psychiatry, orthopedies, gastroenterology, urology, endocrinology, physical medicine, and others. Some special aspects of pain with muscle spasm as arising in these various fields were explored.

Relatively little was said about the cause of the muscle spasm itself. Concerning this, there are many suggestions in the literature—infection, fatigue, anovia, toxic factors, neuritis, vitamin deficiencies, alkalosis, hypocalcemia, and others

Neostigmine has been found to increase muscle contraction and promote spasm, while others have made use of it for the purpose of relaxing muscle. There is an interesting contribution to the subject of muscle cramps in the recent studies of van Wagtendonk and his collaborators, who isolated a dietary factor in raw cream which cures muscle stiffness in animals.

The discussion, however, turned around a different question whether the contraction of muscle per se is competent to give rise to a painful stimulus The view was expressed that the contraction of muscle does not cause pain, and that when pain arises in association with muscle contraction or spasm, it is due either to ischemia resulting from prolonged contraction, or pulls, tortions, and distentions arising in connection with Many illustrations long or brief contractions were cited of the fact that muscle spasm does not It was indicated necessarily give rise to pain that in the relief of pain associated with muscle spasm there may be two modes of attack-one, to relax the spasm itself, and two, to control those factors giving rise to pulls, tensions, and distortions of muscle and adjacent structures was some discussion of several drugs commonly

employed for the control of pain in association with spasm in smooth and in skeletal muscle, such as atropine, novatropine, syntropan, trasentin, opiates, aspirin, prostigmine, quinine, and novo-Their mechanism of action, uses, and limitations received some attention

#### MENTAL DISLASL PREVENTIVE

Prevention of mental diseases especially dementia praccox, by insulin and other shock treatments, is a far from fantastic possibility Dr Benjamin Malzberg, director of the Bureau of Statistics, New lork State Department of Mental Hygnene told members of the American Psychopathological Association meeting in New York.

Dr Malzberg bases this opinion on two facts Very favorable results are achieved by insulin shock treatment when the disease is of short duration less than a year or, better, less than six months. Changes in behavior and personality heralding the onset of dementia praecox, can often be detected at an early

stage Child guidance activities can be extended, he believes, so that 'early diagnosis and early treatment may go hand in hand, thereby writing a new page in

proventive psychiatry "

Shock treatment, especially that produced by insulin "brings about more recoveries and more cases of improvement than was formerly the rule," Dr Malzberg said, citing figures from New York stato hospitals.

Considering that dementia praccox was once held to be a deteriorating and incurable condition, this must be regarded as a contribution of the first magnitudo.

"Shock therapy does not as yet prevent mental disease," he stated, "but it restores many men and women to levels of usofulness and productivity and thereby lightens the social burden."

It is not a cure-all, many patients do not respond to the treatment and there are many relapses, he said.

Although exceptionally good results may be obtained in some institutions, others report less favorably

The difference in the technic employed for treatment, Dr Malsberg suggested, accounts for some of the variation in results. On this point he statal

"The treatment is very rigorous and in many cases it demands great courage on the part of the physidian.

Consequently there is often a temptation to stop the treatment even before the essential stages of the come are realised. This is probably the chief factor influencing the unfavorable treatment in so isotor influencing the unlaworshic treatment in so many cases. In those of our hospitals where the treatment was carried furthest, where the phyn-cians were well trained in this therapy, and recog-nized the neurologic signs developing during hypo-glycenia, the results were very favorable."— Science News Letter, May 8, 1945.

#### SEMINARS OFFERED AT CARDIAC SANATORIUM

A course of seminars on rheumatic fever and rheumatio heart disease will be held at St. Francis Sanatorium for Cardiac Children, Roslyn, during the month of October The course will begin at 10 30 A.M. on Tuesday October 2, and will continue every Tuesday and Thursday thereafter until Thursday, November 1, when the final seminar will be given.

The seminars will discuss the following subjects epidemiology pathology clinical course of disease, laboratory aids in diagnosus, public health aspects, and care and management. The participating faculty includes Dr Cary Eggleston, associato professor of clinical medicine, New York Hespital and Corneil Medical School, Dr Oswald Fenton Hedley, surgeon Public Health Service Washington, DG Dr. Thomas Ducket Long agriculture of Thomas Duckett Jones, assistant professor of medicine, House of Good Samaritan and Harvard Medical School, Dr John Rodman Paul professor of preventivo medicine, New Haven Medical School, New Haven, Connecticut, Dr Homer Fordyce Swift, Hospital of the Rockefeller Institute of Medi

cal Research, New York Dr Leo M Taran, medical director, St. Frances Sanatorium for Cardiac Chil dren, Dr William Carson Von Glahn, director of pathology at Believue Hospital and professor of pathology at New York University College of Medi-cine, and Dr. May Georgiana Wilson associate profeesor of chinical pediatrics New York Hospital and Cornell Medical School.

It is the purpose of the seminars to invite the medical profession to participate in discussions whose aim would be to separate the facts of rheu matio disease from fiction and false views, and to re-construct a true picture of this disease as it is seen in medical practice.

It is further hoped that such discussions would atimulate a search for clarification of some of the yet confusing issues surrounding the body of solid ovidence.

Further information with regard to this course may be obtained by writing to St. Francis Sana torium for Cardiac Children

# Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the Journal The members of the committee are Oliver W H Mitchell, M D, Chairman (428 Greenwood Place, Syracuse), George Baehr, M D, and Charles D Post, M D

# Jefferson County Hears Lecture on "Headache"

THE Jefferson County Medical Society heard a lecture entitled "Headache" on September 13 at 8 00 PM at the Black River Valley Club, Water-

Dr Harold G Wolff, associate professor of

medicine, and psychiatry, Cornell University Medical College, was the speaker

The instruction was arranged by the Council Committee on Public Health and Education of the Mcdical Society of the State of New York

# Instruction on the Failing Heart and Arthritis

TWO lectures in general medicine have been arranged by the Council C ranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York for the Monroe County Medical Society on October 23 and 30 Dr Harry Gold, associate professor of pharmacology, Cornell University Medical College, will speak on "Management

of the Failing Heart," and Dr Russell L Cecil, professor of clinical medicine, Cornell University Medical College, will lecture on the subject of "Evaluation of Present Methods of Treatment of Arthritis "

The instruction will be given at 8 30 PM at the Rocbester Academy of Medicine

## BROMIDES AND BARBITURATES

From a recent review of the literature on the neuropsychiatric effects of barbiturates and bromides a number of interesting points emerge have a depressing action on the entire nervous system, and the same is believed to be true of barbiturates, though some authorities think they have a selective action on midbrain vegetative cen-Their neurologic effects are slightly different Nystagmus, convulsions, and a positive Babinski are fairly frequent in cases of barbiturate intoxication, but they have not been reported in bromism The disturbances of motility in cases of barbiturate poisoning have a cerebellar character and are different from the apraxic awkwardness obscrved in Curran considers that paraphasic bromide cases speech disturbances, visual hallucinations "at a distance," confabulatory memory defects, and some other symptoms are of diagnostic value in the oblivion of bromide poisoning

Drug psychoses make up a perceptible proportion —about 1 per cent— of all admissions to mental hospitals in the USA They are about four times as common in men as in women, and the patients have usually begun to use the drugs in the third and fourth decades According to insurance sta-tistics barbiturates are responsible for about 6 per cent of the sucides and 18 per cent of the accidental deaths of policy-holders In the USA morphine addicts who have been unable to get the drug have in some cases taken to using nembutal Laboratory tests for bromides in the blood are simple and satisfactory, tests for barbiturates are in a less advanced state and do not appear to be of practical value

The treatment of bromide intoxication consists in stopping the drug, forcing fluids, and giving sodium chloride. In the treatment of barbiturate intoxication of severe degree gastric lavage is followed by the administration of 30–60 grains of magnesium sulfate. Intravenous dextrose (5 per cent) is recommended Pierotoxin has been found valuable by many workers, and a 0 3 per cent solution should be given at the rate of 1 cc a minute until corneal reflexes reappear and the patient responds to powerful It will have to be repeated at hourly or two-bourly intervals, and 3-6 mg an hour will be required. One patient is recorded as having been treated in this way for seventy-eight hours, receiving a total of 559 mg of picrotoxin before he regained consciousness

Although the dangers of barbiturate intoxication cannot be minimized, they are not now taken quite so seriously as they were before the war A great majority of the fatalities must be due to suicide The barbiturates are now very extensively employed, particularly in anestbesia, as hypnotics, for the treatment of epilepsy, and in psychiatry for producing various degrees of sedation up to continuous narcosis For these purposes they would prove in practice irreplaceable. Though they all belong to the same chemical family, they vary very widely in their physiologic effects and can be employed for a great diversity of uses It seems that the family is still a prolific one, and that further additions will supply us with drugs with new uses and with greater safety factors than in the past.—Brit. M J, M arch 31, 1945

#### 'SLEEPING PILLS AREN'T CANDY"

"The doctor said death was apparently due to an overdose of sleeping pills." Too often is this diag nosis appearing in today's papers. Whether it comes from Hollywood or Now York, or whether it happens in small towns among insgruiscan people who never make headlines, it is a reflection on inadequate law, inadequate law, indecendent and lack of unformity between laws of different states, or, according to Rits Halle Klesman in the Saturday Seeing Post for February 24, "the doctors themselves are to some extent responsible for this." According to the article, "Sleeping Fills Aren't Candy," in 1929, 2,200 000 doses of the barb tursters were sold daily and their use was rapidly increasing. A town of 10 000 inhabitants was found to have 50 addicts. In New York City there were fix times as

(Lt.

According to the article, "Sleeping Fills Aren't. Candy," in 1929, 2,200 000 doses of the barbs turates were sold daily and their use was rapidly increasing. A town of 10 000 inhabitants was found to have 50 addicts. In Now York City there were five times as many accidental deaths from their use in 1942 as there were in 1937. In San Francisco accidents from them increased 150 por cent from 1940 to 1944. In the Cook County Hospital doaths from their use increased 1400 por cent in the eight years prior to 1940. One third of all prescriptions in certain parts of the county ealif or barbiturates.

The habitual use of drugs by the addict is the same attenty. In good faith, and for legitimate reasons the physician prescribes a sodative. The effect is as expected—the patient is satisfied, and in due course to tells has aunts and uncless and all his friends about it. The original indication for the early prescription may long since have become past history, but Mr Addict to-be one night finds himself unable to steep or another night just thinks he will be unable to

sleep, and he is on his way to habitual use of the "gool" pills.

According to Mrs. Kleeman's article the Pederal law demands proper labeling and insists on sale by prescription only but this applies only to drugs in intenstate commerce. Only 33 states have any restrictive laws at all. Of these eight or nine only laws laws any stronger than the Federal law. In Pennsylvania we are fortunate to have the Dangerous Drug Act which forbids the sale of drugs accept on a physician's prescription, forbids refill without prescription, and requires a record of purchaser and amount. In addition, Pennsylvania's law requires that the dispenser record in his office the name and address of the one to whom he dispenses a drug on the Dangerous Drug list, and the quantity of the drug handed out.

In this rigid requirement Pennsylvania is almost unique among the states. Said Surgeon General Parran "The excessive and indiscriminate use of a group of drugs known as the barbiturates is a health problem of considerable and growing importance.

The sale of such drugs without medical super vivion should be restricted by legislation which will combine both the interstate and intrastate aspects of this problem." Pennsylvania for once is in the vanguard, a leader in public health and forward-looking social legislation. This law was promulgated by our State Medical Society and by the same token we should never let it be weakened.—L. T. B. in Pennsylvania M. J., May 1045

# Academy of Medicine Will Hold Annual Graduate Fortnight October 8-19

HE eighteenth graduate fortnight of the New THE eighteenth graduate localists of the York Academy of Medicine will be held from October 8 to October 19 The subject of the program is "Contributions of the War Effort to Medi-Arranged by the Committee on Medical Education, the program will be divided into four parts morning panel discussions, afternoon hospital clinics, evening addresses, and scientific exhibits and demonstrations

The evening sessions will begin on Monday, October 8 at 8 30 PM at the New York Academy of Medicine Dr Cornelius P Rhoads, acting president of the Academy, will give the address of

welcome

The scientific program of the evening will consist of the Ludwig Kast Lecture, entitled "Modern Concepts of War Neurosis" and given by William C Menninger, Col, (MC), AUS, and a lecture entitled "What Can the Practitioner Do in Treating the Neuroses?" given by Dr Thomas A C Rennie, associate professor of psychiatry, Cornell University Medical College

Medical College
On October 9, Roy R. Grinker, Lt Col, (MC),
AUS, medical executive of the Don Ce-Sar Convalescent Hospital, St Petersburg, Florida, and
Howard A Rusk, Col, (MC), AUS, chief, Convalescent Services Division, Office of the Air
Surgeon, will speak Their subjects will be "Sedation as a Technic in Psychotherapy" and "Planned Convalescence," respectively
Two lectures will be given on the evening of October 10 The lectures are "Physiologic and Psychologic Effects of Bed Rest," to be given by Dr David P Barr, professor of medicine, Cornell University Medical College, and "Evaluation of

David P Barr, professor of medicine, Cornell University Medical College, and "Evaluation of Early Postoperative Activity," by Dr John H Powers, acting surgeon-in-chief, the Mary Imogene Bassett Hospital, Cooperstown. The discussion will be led by Dr Allen O Whipple, Valentine Mott Professor of surgery, College of Physicians and Surgeons, Columbia University

On October 11 "The Use of Human Serum

Albumin in the Treatment of Edema of Renal and Hepatic Origin" will be discussed by Dr George W Thorn, Hersey Professor of the theory and practice of physic, Harvard Medical School On the same evening Dr Joseph Stokes, Jr, William H Bennett Professor of pediatrics, School of Medicine, University of Pennsylvania, will speak on "The Plasma Globulins in Prophylaxis and Treatment."

The lectures on October 12 will be "Mechanism of Shock," presented by Dr Dickinson W Richards, Jr, professor of medicine, College of Physicians and Surgeons, Columbia University, and "Management of Blood Preservation and Blood Substitutes." by Dr S Howard Armstrong, associate in medicine and research associate in physical chemistry, Harvard Medical School

The Carpenter Lecture, in memory of Dr Wesley M Carpenter, will be given on Monday, October 15, by D C Elkin, Col, (MC), AUS, chief of surgical service, Ashford General Hospital, White Sulphur Springs, West Virginia His subject will be "Treatment of Peripheral Arterial Injuries" The second lecture of the evening will be "Thrombosis and Embolism," given by Dr Arthur W Allen, lecturer in surgery, Harvard Medical School and chief of the East Surgical Service, Massachusetts General Hospital

Three lectures will be presented on October 16 They are "Reconstructive Surgery of Nerves," by T I Hoen, Lt Comdr, (MC), USN, St. Albans

Hospital, "Reconstructive Surgery of the Joints," by Dr Philip D Wilson, surgeon-in-chief, Hospital for Special Surgery, and "New Absorbable Hemostatic Agents," by Dr Virginia Kneeland Frantz, assistant professor of surgery, College of Physicians

and Surgeons, Columbia University

The program for the remaining three evening ssions is as follows October 17, "The Use of sessions is as follows Penicillin and Streptomycin in Surgical Infections. by Dr Jonathan E Rhoads, assistant professor of surgical research and associate in surgery, School of Medicine, University of Pennsylvania, "Chemotherapy in Malaria," by Dr James A. Shannon, associate professor of medicine, New York University College of Medicine, October 18, "Nutritional Needs in Acute and Chronic Illness," by Dr. John P Peters, John Slade Ely Professor of internal medicine. Yale University School of Medicine, medicine, Yale University School of Medicine, "Re-Evaluation of the Vitamins," by Dr L Emmett Holt, Jr, professor of pediatrics, New York University College of Medicinc, on October 19, "The Stimulus of War to Cardiology," by Dr Robert L Levy, professor of clinical medicine, College of Physicians and Surgeons, Columbia University, and "Flamass," by Dr H W Brown, professor of parasitology, College of Physicians and Surgeons, Columbia University

Surgeons, Columbia University

The morning panel discussions will be held at the Academy from 11 00 AM to 12 30 PM on October 9, 12, 16, and 19 Fellows of the Academy are invited to attend and participate in the discussions. The discussions will be as follows on October 9, "Psychiatric Rehabiliation," with Dr Thomas A. C. Rennie as chairman and Dr Sol Wiener Ginstein and Dr Sol Wiener Gi burg, Lt Col Roy R. Grinker, of St Petersburg, Florida, Dr Lawrence S Kubie, Col William Menninger, and Dr. Howard A. Rusk as members, on October 12, "Physical Reconstruction," with Dr. William Benham Snow as chairman and Drs. Carl Binger, John R. Cobb, Edward Hockhauser, Raymond Hussey, of Detroit, and J. Masur, of Washington, on October 16, "Vascular Surgery," with Col. D. C. Elkin as chairman and Drs. William Andrijs. Arthur. Bleksmare, and Alfred Bleksk, of Andrus, Arthur Blakemore, and Alfred Blalock, of Baltamore, on October 19, "Ununited Fractures," with Dr Philip D Wilson as chairman and Drs David Bosworth, William Darrach, Lt Col George Carpenter, and Lt Col T C Thompson as members

The afternoon hospital clinics will be held from 200 to 500 PM during the Fortnight clinies will be devoted to the course and treatment of diseases and injuries encountered during the war period Following is the schedule of the clinics October 9, Bellevue and Beth Israel, October 10, Montefiore and St Vincent's, October 11, Mornisania and Mount Sinai, October 12, Post-Graduate, October 15, Hospital for Joint Diseases and Lenox Hill October 16, Flower Fifth Avenue. Lenox Hill, October 16, Flower-Fifth Avenue Hospital and St Luke's, October 17, Neurological Institute and Presbyterian Hospital, October 18, New York Hospital and Hospital for Special Surgery, and October 19, Roosevelt Hospital and US Veterans' Facility

The scientific exhibits will demonstrate recent ad-

vances in the etiology, pathology, diagnosis, prophylaxis, and treatment of diseases and injuries during the war period. Outstanding contributions by the armed forces will constitute an important feature of the exhibit

Two periods each evening will be devoted to showing motion pictures illustrating the course and treatment of diseases and injuries of the war period and in particular, methods and means of care and rehabilitation of personnel who have incurred war disabilities.

The New York Academy Committee on Drug Exhibits and the Advisory Committee of Drug Manufacturers will provide an exhibit featuring the drugs currently used in the treatment of disease. A special exhibition of books illustrating the general subject of the Fortnight's program, and a general practitioner's bookshelt will be arranged by the staff of the Library of the Academy of Medicine

#### "DOCTOR JONES' SAYS---

carried her in and out.

"Psychosomatic diseases"—have you happened to run into that expression? Bodily diseases caused or influenced by the mind that's about what it means.

A better understanding of the effect of the mind-especially the emotions—on physical health that's going to be one of the hig advances in the field of medicine in the next few years. When I was a boy we had a set of books—"In Darkest Africa" the explorations of Stanley and so on. Well in the exploration of the mind (the hidden part of it "the anconscious," as they say) we re more or less in the same stage. We re just beginning to know something about it due largely to the psychoanalysts—the explorations they've made.

At interesting a server wither notice of same

An interesting case—or rather pair of cases there a man and his wife I've known since I was a kid. This woman—a few years after they were married—she developed some sort of paralysis got so she couldn't walk, except just dragging her feet, hanging on to something. For years her husband pushed her around in a wheel chair—

Then, after years of that, the husband began getting sick thought there was something wrong with his intestine. The doctors couldn't find anything hut he knew it was there had pain and discomfort and worried so he could hardly eat or sleep It got so, instead of him carrying his wife around, she was walting on him.

The way it looked to me he'd gotten thred of being nurse to an invalid and, down beneath his consecuences had gone on a "at-down" strike decided to get sick himself. But the most remarkable pert of it from the time he began getting sick his wife began getting well—get so she could walk as well as she ever could. One of the last times I saw her she was somewhere attending a convention.

A sisable proportion of our human ailments—deep-scated concitons if they dont actually came 'em, they affect 'em one way or another. And the foundations for these troubles are being established from the day we re born—if not before. So the first thing required for the control of psychosomatic discusses is to raise a generation of understanding parents—Paul B. Brools, M.D., in Health News

#### Workers seen in nied of psychiatric hflp

Neuropsychiatrio problems in the postwar ora will be greater among civilian war workers than among veterans Dr C Charles Burlingamo psychiatrist in chiof of the Institute of Living, liariford, Connecticut, declared at a meeting of the New York City Nursing Council for War Bervier. Dr Burlingame pointed out that civilian employees have not been screened as were members of the armed forces, and that many of them were rejected by the armed forces before taking war jobs.

As a result of labor shortages, industry has employed anyone who showed up at employment windows, he said in a talk calling for the use of 'hard headed common senso in stopping the psychiatric litters that are sweeping the coun Among war workers he continued, we re many who capable of adjusting to conditions in their home towns, were uprooted and subjected to unusual housing situations in crowded war centers.

The returning veteran, man or woman, is the best bet for industry today and will probably be the stablest group in the employment market, 'he said. In illustration, he cited from a study made for the

National Association of Manufacturers of a plant whose employees included fourteen thousand returned veterana. This group showed, he said no greater turnover than other employees in the plant one-third rated over the average in productivity and nearly one-third were employed at higher skills than when they entered service—N Y Times June 7 1.

# Medical News

# A.MA. Predicts Need For 30,000 Physicians

EVEN after demobilization has been completed, the United States will need about thirty thousand more physicians than before the war, the American Medical Association said on August 29 in

an editorial in its Journal

Pointing out that the accelerated war program resulted in a gain of only five thousand one hundred and twenty-seven doctors, the editorial said that the thirty thousand estimate was conservative since it disregarded extra physicians needed to provide replacements for casualties among medical officers, medical assistance for the liberated, and more extensive care demanded in this country

The AMA estimate of thirty thousand additional physicians covers about fifteen thousand re-

quired by the Veterans Administration, five thousand for the peacetime Army and Navy, and ten thousand to be assigned to service because of the possibility of compulsory universal military training

The A.M A. held out little hope that the full requirement would be met, saying that if enrollments and graduations continued at present levels only about forty thousand physicians would receive degrees before 1948 Before 1948, however, some twenty-four thousand physicians will have died

Another point stressed in the editorial is that with the conclusion of the war and the imminence of military training the number of admissions probably

will drop

# Typhus Commission Awards Given to New York Officers

THE United States of America Typhus Commission Medal was awarded in June to the following Medical Department officers from New York,

among others

Maj Wilham A Davis, (MC), of New York City, was awarded the medal because "both as a civilian and an officer he performed exceptionally meritorious service in connection with the work of the United States of America Typhus Commission—In the winter of 1943–44, while a staff member of the Rockefeller Foundation Health Commission, he gave valuable assistance in suppressing the typhus epidemic in Naples, Italy—After being commissioned he served as laison officer representing the Typhus Commission with the 21st Army Group (British) from November, 1944, to May, 1945—In this position he assisted in formulating policy and organizing programs, and participated in typhus control operations under campaign conditions in Belgium, Holland, the Rhincland, and at prison camps in Germany—His intelligent, energetic, and professionally competent services were of great value to the Allied Expeditionary Forces in the enforce-

ment of typhus control measures which reduced the incidence of this disease among refugees and displaced persons"

Maj Robert S Ecke, (MC), of Brooklyn, was awarded the medal for performing "exceptionally mentorious service in connection with the work of the United States of America Typhus Commission in several foreign countries After successfully evaluating vaccination against typhus in Egypt in 1943, he helped control this disease among refugees in southern Italy during the 1943-44 epidemic in Naples Later in 1944 lie carried out a valuable typhus survey and control program in the Aden Protectorate In June 1944 he made a survey of relapsing fever in the Anglo-Egyptian Sudan and in September, 1944, a typhus survey in Ethiopia, each of which formed the basis for important de-During the spring of 1945 he pioneered cisions typhus control in Yugoslavia By his investigations he contributed new knowledge of typhus fever Through constant and devoted service in situations requiring initiative and judgment he materially assisted in reducing the incidence of this disease"

# Blood Plasma Distribution Projected by State Officials

THE proposed program for more general distribution of blood plasma and blood derivatives in New York State has been brought nearer to realization with the charting of tentative plans for a service designed to make these preparations readily available to any individual who may need them, without the restrictions imposed by prohibitive cost or geographic location

Provisional plans for the organization of a state-wide service have been drawn up by the State Department of Health, through its Office of Medical Administration and Division of Laboratories and Research, in collaboration with the New York State Association of Public Health Laboratories, the State Hospital Association, and the Medical Society of

the State of New York

The objective is twofold first, immediately provision of services for outlying areas and, second, future developments which must await availability of personnel

The former calls for the reprocessing and drying of several thousand units of frozen plasma which have been in the custody of a number of hospitals

in the state and which have been released to the Department of Health by the United States Public Health Service. This material, together with a small supply of dried plasma already in the possession of the department, will be distributed through approved public-health laboratories for the purpose of establishing a supply for the smaller urban and rural communities.

This plasma will be reserved as far as possible for emergency use under conditions which will be defined by the department While no charge will be made for the plasma, it is expected that individuals benefiting from its use will be made responsible for obtaining donors who will give blood for its replace-

ment

Since experience has demonstrated that whole blood is preferable to plasma for the majority of needs, and in view of the impracticability of operating a whole blood bank except in urban areas, it is hoped that study programs may be developed during the next year in several demonstration areas in which efforts will be made to assist blood banks

in expanding services to immediate and adjacent

communities

The department considers its responsibility to lie in the sphere of promoting and assisting in the development and operation of such local facilities, provided they are logically located in the state, properly integrated with one another, and maintain satisfactory standards It does not anticipate the direct operation of blood banks wherever local facilities and interest are sufficient to support an

adequate service

In order to continue to supply dried plasma, fibrin, and other useful derivatives, and to maintain a small central reserve for civilian emergencies, it is planned to establish a pilot plant in the Division of Laboratories and Research. Such a unit would not only carry on research in the standardization of procedures, improvement of derivatives, and in related fields, but also act in an advisory capacity to blood banks and to processing units locally

It would also assist banks through the provision of materials and equipment, such as bleeding and transfusion sets, and some of the rarer derivatives which might otherwise not be available to them

Other features of the projected service are the establishment of a center of information as to where blood of unusual types may be obtained on short notice, and encouragement of the use of standardized equipment in all cooperating laboratories, making possible an interchange of facilities in emergencies

Of particular importance is the anticipated promotion of a continued graduate medical program, in ecoperation with the state and county medical societies, which will provide information concerning the value and use of whole blood and its derivatives With developments along the lines suggested and with the continued support of the physicians and the state and local medical organizations, it is believed that the State Department of Health will be able to aid in the provision of a service of value to the public and to the medical profession

proposed program is being developed as a result of the passage of enabling legislation and an appropriation of \$100,000 by the Legislature this

# County News

## Broome County

Dr Goode R Cheatham recently gave up his commission as lieutenant commander in the navy to take up private practice

A specialist in obstetrics and gyneocology, Dr Cheatham opened his offices in Endicott on August

## **Dutchess County**

The September meeting of the Society was held at the Wassaic State School, Wassaic, on Wednesday, September 12 Dinner was at 7 30 PM, and was followed by the business and scientific sessions

## Jefferson County

Dr Harold G Wolff, associate professor of medicine at Cornell University Medical College, gave a lecture on "Headache" at the Fall meeting of the county society on September 13 The meeting was held following a dinner at 6 30 P M at the Black River Valley Club

### Monroe County

The Medical Society of the County of Monroe announced recently that two doctors have returned to private practive after duty with the armed

They are Dr Morris E Missal and Dr Leonard K Stalker \*

## New York County

Dr Louis Hausman was appointed clinical professor of neuropsychiatry at the New York University College of Medicine, effective September 1, and Dr Charles W Depping, assistant clinical Dr Renato professor of otorhinolaryngology Gazmun, instructor of internal medicine, University of Chile, Santiago, has joined the department of physiology as a Rockefeller fellow Ivan C Hall, Ph D, has resigned as professor of bacteriology and director of the department of bacteriology of the college

Dr George J Heuer, professor of surgery, Cornell University Medical College, has been appointed the first Lewis Atterbury Stimson professor of surgery, a position created under the will of Dr Stimson's daughter, Miss Candace Stimson The Stimson's daughter, Miss Candace Stimson gift represents an endowment of more than \$600,000 and will serve as a memorial to the first professor of surgery at Cornell, who held the position from 1898 to 1917, when he died Coincidental with the announcement of the new professorship was one reporting the presentation of a portrait of Dr Stimson to the college by Hon Henry L Stimson, Secretary of War, son of the late physician Special ceremonies were held at the medical college to mark the presentation of the portrait and the endowment Speakers included Dr Lewis Atterbury Conner, a cousin of the late Dr Stimson, Dr Heuer, and Dr Philip M Stimson The late physician was graduated from Bellevue Hospital Medical College in A personal friend of Pasteur, Dr Stimson taught for many years as professor of physiology, anatomy, and surgery at the University and Bellevue Hospital Medical College and in 1898 collaborated with the late Oliver H. Payne in founding the Cornell University Medical College

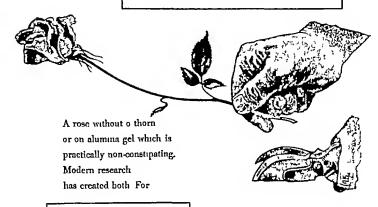

To meet the needs of returning medical officers who will want special training before going into practice, the Columbia University School of Medieine will offer three different types of training this fall, Dr Willard C Rappleye, dean of the Faculty of Medicine, disclosed on August 22

Short refresher courses in every branch of medieine, full-time clinical training at the residency level, and a general review program of the basic sciences and major clinical fields are to be introduced Dr Rappleye reported that most American hospitals are planning to increase the number of residencies to offer additional training to graduates of their house staffs

NEW YORK 11, N Y

#### [Continued from page 2106]

Certain of the Columbia refresher courses are for general practitioners, while others are for men already qualified in one of the specialties. Several hundred refresher courses, from one to eight weeks in length, are now in operation. Instruction for qualified specialists is offered in various fields of surgery.

Appointments to hospital resident services will be made, as in the past, by the individual hospitals, usually for periods of one year or longer. This program is designed particularly for medical officers who were graduated under the accelerated program of medical education and who had an abbreviated hospital training before entering military service.

A general review program of the basic sciences and major clinical fields covering a full academic year of instruction at the medical school and teaching hospitals is planned. This will be a year of review of the undergraduate training designed to help those who wish to go into general practice without taking the time for long-term residency preparation.

The sixty-five doctors and one hundred and twenty nurses who went overseas as the 2nd General Hospital from the Presbyterian Hospital, in New York City, in July 1942, have received high praise for their work from Mai Gen Paul R Hawley, chief surgeon of the European Theater of Operations

Charles P Cooper, president of Presbyteman Hospital, made public a letter from General Hawley in which he said, "I find myself at a loss for words to describe the superb quality of medical personnel that came with this unit. I have had to draw heavily upon this personnel to leaven weaker units in the theater. Despite frequent drafts—the professional talent seems inexhaustable."

General Hawley paid special tribute to Col Yale Kneeland, former assistant attending physician in medicine at the Presbyterian Hospital, who went overseas as head of the 2nd General Hospital's medical service, and later became consultant in medicine for the United Kingdom Base Hospital

He also mentioned for special commendation Col Louis M Rousselot, an assistant attending surgeon at Presbyterian before the war, who was overseas, placed in command of the 108th General Hospital, and Col Frank E Stinehfield, former assistant attending surgeon, who was in charge of rehabilitation of wounded in England

Others specially commended were Lt Col John N Robinson, Col Rudolph N Schullinger, Maj Edmund P Fowler, and Maj Jessie M Mutch, former assistant to the registrar in the Presbyterian Hospital's School of Nursing, who overseas became director of the Nursing Service in the 807th Hospital Center

At the hospital it was said that all of those mentioned for commendation except Colonel Rousselot and Major Mutch have returned to the United States, although none has been released from the Army Colonel Schullinger, former assistant attending surgeon at Presbyterian, who went overseas in

charge of the surgical services of the 2nd General Hospital, is at present chief surgeon at Halloran General Hospital, Staten Island

Three of the staff of the 2nd General Hospital have received Legion of Merit awards Colonel Stinchfield, Colonel Schullinger, and Maj Robert Patterson, former resident in fracture service at the Presbyterian

The 2nd General Hospital was among the first to be sent to France after the Allied invasion, operating first on the Cherbourg peninsula, then in Normandy, and finally in Naney Recently the unit was relieved and, according to hospital authorities, members not already back are expected home shortly \*

Lt Col I H Scheffer, (MC), USA, has been appointed chief of the Public Health Section of the Military District of Berlin He is a graduate of McGill University, taking his BS degree in 1922 and being graduated from the medical school in 1925 Prior to the war, he was superintendent of the Mctropolitan Hospital in New York City He has served on the New York State Mcdical Board in many and varied positions Colonel Scheffer was actively engaged in the campaigns of Normandy and Northern France and occupied a similar position to that he now occupies in the Paris district after the overthrow of the Vichy regime

## Oneida County

Maj George J Kraunz, who was medically discharged from the Army recently, renewed his medical practice on August 1 in Rome \*

## Orange County

Dr Eugene Bar, formerly of New York City, has been released from Army service and opened an office in Port Jervis on August 7 for the practice of his profession

Dr Bar was born in Hungary, and was graduated from the medical institutions of that country in 1914 before starting his work in the Balkans and other countries and finally came to this country twenty-two years ago \*

## Queens County

Health Commissioner Ernest L Stebbins has announced the reopening of the Antirabic Clime in the Borough of Queens at new quarters, 92-97 150th Street, Jamaica The clinic, which has been closed for more than two years, has been opened again as a result of the discovery of three rabid dogs in Queens since June 28

In Queens since June 28
According to Dr Stebbins, the Antirabic Clinic operates Monday through Friday from 2 00 to 4 00 pm, and Saturday, Sundays, and holidays from 10 00 a m to 12 00 noon. The physician-in-charge is Dr Joseph Steisel

## Schenectaday County

Dr Louis R Biagi, of Schienectady, announced that he has opened an office there for the practice of opthalmology \*

# Necrology

Howard S Brasted, M D, of Hornell, died on August 28 at the age of 57 Dr Brasted received his medical degree in 1914 from the College of Physicians and Surgeons, Columbia University He was physician at the St James Mercy Hospital and Bethesda Hospital in Hornell. A fellow of the American College of Physicians, he was vice-president of the Seventh District Branch of the Medical Society of the State of New York, as well as a member of the Steuben County Medical Society, and the

American Medical Association

Thomas Darlington, M.D., of New York City, and Health Commissioner Emeritus of the city, died on August 24 at his summer home where he had lived in retirement for the last two years A graduate of the College of Physi-86 years old cians and Surgeons, Columbia University, class of 1880, Dr Darlington was a member of the American Clinical and Climatological Society, the Medical Society of the State of New York, and the American Medical Association, and was a fellow of the Academy of Medicine He served as Health Commissioner from 1904 to 1910 and in 1930 was made Health Commissioner Emeritus He was known as the father of the New York City Sanitary Code. which resulted in a reduced death rate for the city He established at Otisville, New York, the first municipal sanatorium for the tubercular also consulting physician at the New York Foundling Hospital

William Elliott Foster, MD, of Babylon, died on August 30 at the age of 78 Dr Foster came to Babylon after completion of his studies at Wesleyan University and the New York Homeovathic Hospital He was graduated from the New York Homeopathic Medical College in 1891 A member of the medical societies of New York State and Suffolk County and of the American Medical Association, he was associate physician at the Southside Hospital,

Bay Shore

Andrew S Fritts, M D, of Binghainton, died on August 8 after an illness of four years. He was 72 years old. Dr Fritts was a past president of the Broome County Medical Society, and a fellow of the Academy of Medicine. He received his medical degree in 1897 from the College of Physicians and Surgeons, Columbia University, and practiced in

Binghamton for forty-five years

James W Graves, MD, of Herkimer, died on August 23 at the age of 61 He was graduated from Vermont Medical College in 1908, and was formerly on the staff of the Herkimer Memorial Hospital and Faxton Hospital, in Utica, and a consultant on the staff of Marcy State Hospital He was a member of the medical societies of New York State and Herkimer County and the American Medical Association Dr Graves was coroner of Herkimer County for the past twenty-eight years

Clifford E Howard, M D, of Ogdensburg, died on August 10 at the ago of 40 A native of Brockville, Ontario, he was graduated from Queens University at Ontario in 1928, and after coming to the

States was for a time on the neurological consulting staff of the Vanderbilt Clinic at the New York Medical Center He was formerly on the staff of the Binghamton State Hospital, and later became as isstant clinical director at the St Lawrence State Hospital in Ogdensburg He was a member of the American Psychiatric Society, the medical societies of St Lawrence County and New York State, the American Medical Association, and a fellow of the

Academy of Medicine, in Binghamton
Alexander William Jacobs, M D, of New York
City, died on August 8 at the age of 52 A specialist
in the treatment of cancer and allied diseases, Dr
Jacobs was a diplomate in radiology, and a member
of the American College of Radiology He received
his medical degree from the College of Physicians
and Surgeons, Columbia University, in 1915, and
was a radiotherapist on the staff of the Lebanon Hospital in the Bronx He was also a member of the
New York state and county medical societies, and

of the American Medical Association

Victor F Krakes, Lt. Cmdr, (MC)USN, of Keeseville, was killed in a motor vehicle accident in the Russell Islands on July 27 Dr Krakes had his practice in Keeseville before entering the service He was graduated from the Long Island College of Medicine in 1928 and was formerly on the staff of the Physicians Hospital in Plattsburg He was a member of the American Medical Association and the medical societies of the State of New York and of Clinton County.

Lucius J Mason, M D, of New York City, died on February 10 at the age of 74 Dr Mason received his medical degree in 1900 from the College of Physicians and Surgeons. Columbia University

of Physicians and Surgeons, Columbia University Gustav M Steinbach, MD, of Brooklyn, died on August 30 at his home. He was 42 years old He was graduated from Aberdeen University in 1933, and was elimical assistant otolaryngologist at the Brooklyn Jewish Hospital and on the staff of the Madison Park Hospital. He was a member of the Kings County Medical Society, the Medical Society of the State of New York, and the American Medical Association.

Samuel William Spencer Toms, M D, of Nyack, 84 years old, died on August 23 as the result of injuries received in a recent fall. Dr Toms received his medical degree from the University of Buffalo, School of Medicine, in 1891, and served his internship at Buffalo General Hospital He was director of the eye, ear, nose, and throat division of Nyack Hospital A member of the medical societies of New York State and of Rockland County, he was second vice-president of the former in 1907, and a member and former chairman of the publication committee of the New York State Journal of Medicine He was also a fellow of the Academy of Medicine, and a member of the American Academy of Ophthalmology and Otolaryngology

Jerome Edward Young, M.D., of Troy, died on August 10 He received his medical degree from

Albany Medical College in 1896

Precision is as important in enelgesics as in billierds PRO DOL, widely used as a general analgesic, is especially preferred for patients who cannot tolerate plain aspirin, such as cases with gestric hyperacidity or ulcers

Each full dose incorporates acetylselicylle acld, 5 gr., with dried aluminum hydroxide gel, 7½ gr. Irritant ecids, split off from ordinary espirin in the stomech, are buffered of they form. A unique process insulates selicylate from gel within each tablet until used, preventing decomposition

DOSAGE 1 or 2 tablets, repeated as required. Boxes of 24 and 60 flavored tablets.

# Veterans' Office Lists Plans for New Hospitals

PLANS for a \$200,000,000 hospital construction program to meet all anticipated veterans' requirements were made public on August 21 by the Veterans Administration

The two-year program is now before the Federal Board of Hospitalization for approval It calls for building forty new hospitals and for additions to

many existing institutions

Officials said that if the plans are indorsed by the board and funds appropriated by Congress, the administration will have hospitals with a total bed capacity of three hundred thousand at the end of the 1947 fiscal year

"We believe that will be enough for all our needs

at this time," one official said

The bed capacity of present veterans' hospitals, which are under construction or authorized, is one hundred twenty-three thousand nine hundred and The new program would add approvimately twenty-mne thousand beds

Sites tentatively selected for the hospital projects, with the bed capacity of each, include

New hospitals to be constructed during the 1946

fiscal year

General medical and surgical—New York or Massachusetts, seven hundred and fifty, in or near Buffalo, one thousand

Additions to hospitals to be built during the 1946

Convalescent—Bath (women), one hundred New hospitals to be constructed during the 1947 fiscal year

General-Saratoga Springs, three hundred and fifty Neuropsychiatric—in or near Utica, eight

hundred

Additions to hospitals to be built during the 1946 fiscal year

General—Metropolitan area New York City,

eight hundred

Neuropsychiatric—Peekskill, four hundred

# Veterans' Hospitals to Get Civilian Aides

EN Omar N Bradley, director of the Veterans Administration, announced on September 7, after a surprise visit to the Neuropsychiatric Hospital at Northport, that he would put civilian doctors and medical personnel into veterans' hospitals as soon as possible to staff them adequately

This program, he explained, would fit in with the

Army's policy of discharging doctors

While he is not aware yet whether such conditions are typical, General Bradley said the hospital at Northport had only 40 per cent of the nurses necessary, and only 60 per cent of the doctors

The Northport Hospital, which was the subject of a recent Congressional indury over the neglect of veteran patients, was admitted by General Bradley to be inadequate for the number of patients it has

The hospital, he said, was build for only 900 patients, but has 2,700, and should have one thousand two hundred and fifty attendants, but has only four hundred and seventy

The deficiency of attendants has been made up recently by the assignment of four hundred soldiers for temporary duty, who replaced other personnel charged with deficiencies

General Bradley said he had decided on a surpriso visit because he did not want things prepared for him but wanted to "know what one of these places was like '

It was his first visit to a hospital of this type and

he said he planned to visit others

Col Louis Verdel, superintendent of the hospital, told General Bradley that only twenty-three doctors were assigned to Northport

Some of them were taking care of as many as 350

patients

General Bradley indicated his belief that, while conditions at the hospital were still acute, improvements had been made since the original abuses were charged in testimony before the Congressional com-

# Drive Opens for 130,000 to Work in Hospitals

THREE government agencies opened a campaign on September 6 to recruit one hundred thirty thousand professional and nonprofessional workers for the nation's hospitals

The recruiting campaign is sponsored by the Public Health Service, the War Manpower Commission, and the Veterans Administration, in cooperation with the Red Cross

National Nursing Council for War Service and  $_{
m the}$ American Hospital Association sponsors

"Urgently needed at once" are thirty thousand

graduate nurses for general, tubercular, and psychiatric hospitals, eight thousand graduate nurses for public health nursing, two thousand graduate nurses for Veterans Administration hospitals, and ninety thousand non nursing hospital workers

The campaign, the Office of War Information said, will follow the pattern of various other drives

conducted during the war

It will include sponsored advertising through the Advertising Council for War, use of radio facilities, and local recruitment campaigns by the Nursing Council for War Services

# Improvements

A portable x-ray machine was installed on August 6 in St Charles Hospital for Crippled Children, in Port Jefferson, bought with funds raised by public subscription by the Kiwams Club of Patchogue

The x-ray was formally presented to the hospital at ceremonies in the hospital auditorium by Richard Gilmartin, Suffolk County Commissioner of Public Welfare, a member of the club

It was accepted by Mother Lucia, supervisor of the hospital, who has been associated with the institution for crippled children for the past twenty-

The Kiwanis Club undertook to raise funds for the medical equipment as an expression of public appreciation for the work of the hospital for polio sufferers during the infantile paralysis epidemic last year. The drive, which ended in January, netted \$2,100. However, wartime priorities of military and naval authorities for medical equipment delayed the actual delivery of the x-ray machine, which did not arrive at the hospital until two weeks ago.\*

# At the Helm

William J Orr, a Yonkers native and for the past fourteen years assistant to the superintendent of St John's Riverside Hospital, has become superintendent of Yonkers Professional Hospital \*

St Luke's Hospital, in Newburgh, has secured the services of Gen Royal Reynolds as superintendent, to succeed Charles A Allen, who is taking a position in Springfield, Ohio \*

Lt William J Garvin, of Yonkers, is acting head of the neuropsychiatric service at Camp Butner, North Carolina The service recently was temporarily transferred to the camp from Moore General Hospital, Swannanoa, North Carolina, and redesignated as a section under the chief of medical service, it was announced on August 15 at hospital headquarters \*

Appointment of Dr Arthur F Glaeser, of Buffalo, as physician in the division of communicable diseases, health department, has been reported to the Common Council by Health Commissioner Francis E Fronczak.

Dr Glaeser will succeed Dr Frank R Whelply, who retired recently after serving twenty-one years. Dr Fronczak also reported several appointments to the staff at the J N Adam Memorial Hospital at Perrysburg \*

# Newsy Notes

Starting October 17, the Israel Zion Hospital, Brooklyn, will hold its seventh annual postgraduate course in pathology of internal medicine under the auspices of the Joint Committee on Postgraduate Education of the Medical Society of the County of Kings, the Academy of Medicine of Brooklyn, and the Long Island College of Medicine Dr J M Ravid will conduct this course Further information may be obtained from the Registrar, 1313 Bedford Avenue, Brooklyn

Construction will be started very soon on the permanent one-thousand-bed naval hospital to be creeted at St Albans, Queens, the public relations office of the Third Naval District announced on August 28 The institution will be one of a number to be constructed under a tentative postwar plan announced recently in Washington by Vice Admiral Ross T McIntire, surgeon general of the Navy

The present hospital at St Albans has five thousand patients housed in "rather temporary structures" Construction of the new buildings is expected to be completed within eighteen months

The new hospital will replace the Brooklyn Naval Hospital as the main institution of its kind in the Third Naval District—Part of the Brooklyn hospital will be retained by the Navy Medical Department and the remainder turned over to the New

York Navy Yard in Brooklyn for training enlisted

A spokesman for Rear Admiral F A Daubin, USN, commandant of the Navy yard, emphasized that no plans for training men or utilizing any part of the hospital would become effective until the Bureau of Medicine in Washington transfers certain facilities of the Brooklyn hospital to St Albans A limited number of beds will be maintained at the Brooklyn institution to handle emergency cases among civilian and naval personnel at the yard The hospital is "adjacent to and surrounded by" the yard, although not under their control

The Albany Training School for Practical Nurses announced on August 22 that it would be converted into a postoperative hospital on September 1 because of a sbortage of registered nurses for instructors in its school operation

Dr Alvah H Traver, registrar, said he expected the condition would continue at least for a year because of the large number of registered nurses now

serving with the Armed Forces

The school's graduates will be used, he said, in
the new hospital, which will take patients who have
undergone operations in other hospitals and give
them postoperative care for a week or two \*

If the health of a community is good, it is a sound community, Dr Donald A Morrill, director of Mount Vernon Hospital, told fellow members of

Mount Vernon Rotary on August 1

Speaking at a luncheon meeting at the Knolls, on the topic, "Community Service as Exemplified by the Modern Hospital," Dr. Morrill outlined a community hospital's function as a focal point in which all community agencies are correlated in achieving "positive health"\*

Dr Jean A Curran, president of the Long Island Collego of Medicine, made public on August 13 a letter from Maj Gen Paul R Hawley, Chief Surgeon of the European Theater of Operations, commending the service rendered by the 79th General Hospital, the all-Brooklyn unit formed under the auspices of the Long Island College of Medicine from its faculty and the staffs of its affiliated hos-The letter contains the first definite information to be released on the activities of the 79th General Hospital since it was activated in November, 1942, at Camp White, Oregon Organization of the 79th General Hospital began

several months before Pearl Harbor under the direction of Dr Walter V Moore, of the Brooklyn Hospital, who has served as the hospital's executive officer with the rank of colonel since its activation

In his letter to Dr Curran, General Hawley rote "One of my last and most pleasant duties as Chief Surgeon of the European Theater of Operations is to make of record the splendid service of the 79th General Hospital

"This hospital unit first started to operate in this theater on November 6, 1943 It established first at Waringfield, Northern Ireland, where it stayed for over ten months On October 1, 1944, it opened up in the building of the Royal Victoria Hospital, Netley, Hampslure, which had been leut to us by the Royal Navy, and continued in operation there until April 30, 1945
"In May of this year the 79th General Hospital

arrived in France and is now at Sissonne'

The quality of medical personnel that came with this unit was such, General Hawley wrote, that he was able to draw upon it to strengthen other units in the theater "Despite these withdrawals upon the 79th General Hospital," he continued, "there was always an equally good man to replace one that I had to take away, and those who remain with the unit still maintain the same high standard of professional care that characterized it in the early days

"The Long Island College of Medicine can be very proud of the 79th General Hospital It has rendered outstanding service to our country, and it has been both an official and a personal pleasure for me to have had this fine unit under my direction"\*

More than \$100,000 will probably be available for the Johnstown Hospital Corporation according to information received recently This money was willed to the corporation by the late James A. Northrup, well-known glove man and a major in the first World War Mr Northrup died in 1922 and made provisions in his will that the residue of his estate should go into a fund for the erection of a hospital here after the passing of his wife, who died during August in Ogden, Utali

The Kittinger Furniture Co has subscribed \$12,000 to the \$4,000,000 Buffalo General Hospital building fund, it was reported on July 30 by Henry W Wendt, chairman of the committee on corporation subscriptions

Establishing a memorial to Irvine P Kittinger, the subscription will be applied to building, furnishing, and equipping a surgeon's suite on the fourth

floor of the expanded hospital

Langdon Albright, president of the board of trustees of Buffalo General Hospital, announced on August 2 subscriptions totaling \$40,400 by doctors of the hospital staff, who have set \$400,000 as their combined contribution to the \$4,000,000 hospital building fund \*

# COLUMBIA GIVES POSTGRADUATE COURSES IN CLINICAL MEDICINE AT MOUNT SINAI

The faculty of medicine of Columbia University has announced postgraduate courses in elimical medicine, to be given at the Mount Sinai Hospital beginning the week of October 22 Some of the courses to be given at this time will be open only to specialists They are in anesthesia, ophthalmology, otology, surgery of the gastrontestinal tract, and x-ray of the heart and great vessels (intensive course)

The rest to be given beginning October 22 will cover allergy, cardiovascular diseases, chemistry, advanced course in diseases of the chest, diagnosis and therapy, intensive clinical course in electrocardiography, gastroenterology, gastroscopy, genatrics (disease in the aged), hematology (labora-

tory course), diseases of the kidneys and arteries diseases of the liver and biliary passages, general medicine, neurology — olectroencephalography, neuroanatomy, and neuropathology—orthopedics, pathology (general and special), pediatrics, pharmacology, physical therapy, physiology of the digestive tract, and medical proctology and diseases of the colon

A course in recent advances in gynecology will be given November 12-17, and one in endocrinology and metabolism will be given December 17-22

Applications should be submitted before October 8 to the Secretary for Medical Instruction, the Mount Sinai Hospital, Fifth Avenuo at 100th Street, New York 29, Now York.

# Two Years of Health Education Summarized in Report of NYC Health Depart-

The use on an unprecedented scale of city-wide health campaigns, of free literature, radio programs, suhway posters, motion-picture showings, and other educational devices have been of assistance in helping to keep New Yorkers healthy despite the impact of wartime conditions of the past two years This fact was emphasized on July 31 by Health Commissioner Ernest L Stehbins in releasing a two-year progress report of the Bureau of Health Education of the New York City Health Department report covers the period from June, 1943, to June, 1945

Over 100,000 mail and telephone requests were answered by the Bureau of Health Education during this period, the report reveals, and nearly 4,000,000 pieces of free literature and about 60,000 posters were distributed through the Department's twentyone district health centers, as well as clinics, schools, clubs, trade unions, offices, and factories amount of material distributed during the first six months of 1945 was 64 per cent greater than that distributed during the first six months of 1944

With fewer doctors available to meetings, the Bureau shifted its emphasis to the presentation of motion picture programs growing popularity of the Bureau's motion-picture service is evidenced by the fact that from 150 to 750 programs per month were scheduled, the number increasing from 1,156 in the first six months of 1944 to 2,823 during the same months in 1945

In the field of radio, the Bureau maintained its increasing tempo by producing approximately one hundred fifteen-minute programs each year and by turning out numerous spot announcements deal-

ing with timely health topics

Special health campaigns—both city-wide and local—also provided the Department with effective means for reaching the public with vital wartime health messages One of the Health Department's most amhitious campaigns, described in the report, was a chest x-ray drive conducted in April, 1945 "For the first time," the report states, "the New York City Health Department enlisted the widespread cooperation of department stores in publicizing its April antituberculosis campaign. Viewed in retrospect, the success of the project surpassed all expectation Fifteen large department stores prepared elaborate window displays and posters displayed by chain stores, employee programs, numerous newspaper advertisements, posters, and literature helped round out the list of devices used to 'sell' chest x-rays to the people" The Department also conducted numerous other health campaigns—many of which were limited to specific neighborhoods

Through its field workers, the Bureau sought to intensify its activities in the health districts of

the city

In order to supply the people with necessary literature in the field of health conservation and disease prevention, the Bureau printed during this two-year period seventy-five new leaflets and seventeen major posters ranging in subject from home safety to diphtheria immunization, and from restaurant sanitation to health rules for the adolesMuch of this literature was designed to meet

specific needs resulting from the war

The report also indicates that for the first time in the Department's history, health posters were regularly inserted in the windows of the city's subways and elevated trains Another "notable first" was the insertion of a car card dealing with venereal disease in several street cars and bus lines throughout the city

The report was prepared by Savel Zimand, director of the Bureau of Health Education of the

Department

# National Research Council Proposed to Congress

Establishment of a National Research Foundation hy Congress for the purpose of promoting a national policy for scientific research and scientific education is proposed by Dr Vannevar Bush, director of the Office of Scientific Research and Development, in a report that he submitted on July 18 to the White House The report is titled "Science—The Endless Frontier" Prepared at the request last November of the late President Roosevelt, it recommended

That the Foundation be formed to develop scientific research, financially support basic research nonprofit organizations, encourage scientific talent in American youth by offering scholarships and fellowships, and promote long-range research on

military matters

That the Foundation consist of nine members to be selected by the President and be responsible to They shall serve four years and without compensation

That the Foundation have the following five 3 medical research, natural sciences, divisions national defense, scientific personnel and education, and publications and scientific collaboration

In submitting the report, Dr Bush said that an adequate program for Federal financial support of basic research and scientific education, as proposed in his report, would cost about \$33,000,000 at the outset and might rise gradually thereafter urging immediate legislative action to create the National Research Foundation, he said further "Early action on these recommendations is imperative if this nation is to meet the challenge of science in the crucial years ahead On the wisdom with which we bring science to bear in the war against disease, in the creation of new industries, and in the strengthening of our armed forces depends, in a large measure, our future as a nation '

Dr Bush said that science should be of paramount "Without concern to the Federal Government. scientific progress the national health would deteriorate, without scientific progress we could not liope for improvement in our standard of living or for an increased number of johs for our citizens, and without scientific progress we could not have

maintained our liberties against tyranny

"There are areas of science in which the public interest is acute but which are likely to be cultivated inadequately if left without more support than will come from private sources These areas include agriculture, housing, public health, certain medical research. Research involving expensive

[Continued from page 2118]

capital facilities beyond the capacity of private institutions should also be advanced by active Government support Private sources, however, should continue to carry their share of the financial burden"

Dr Bush pointed out that since 1900 a large number of scientific agencies have been established within the Federal Government, until in 1939 they numbered more than forty. He said that while these agencies have showed splendid achievement, they have been limited in function. Dr Bush expressed his regret at the government's lack of a

national policy for science

Scientific research being conducted today in the Departments of Agriculture, Commerce, and Interior, and the Federal Security Agency should remain where it is and should be continued, the report continued Dr Bush said that support of agricultural research by grants to the land-grant colleges and experiment stations should likewise continue, since their contribution lies in applying fundamental knowledge to the departments within which they are established While recognizing the desirability of keeping the number of independent agencies to the minimum, the report concluded that a new agency was essential to carry out the scientific program as urged by Dr Bush

"If the colleges, universities, and research institutes are to meet the rapidly increasing demands of industry and Government for new scientific knowledge, their basic research must be strengthened by the use of public funds," the report explained.

Dr Bush discussed the "serious" deficit in trained

Dr Bush discussed the "serious" deficit in trained scientific personnel in the Umted States He said that the deficit of science and technology students, who, but for the war, would have received bachelor's degrees, is about 150,000 It is estimated that the deficit of those holding advanced degrees in chemistry, engineering, geology, mathematics, physics, psychology, and the biologic sciences will amount to about 17,000 by 1955

The report recommended a program to provide twenty-four thousand undergraduate scholarships and nine hundred graduate fellowships, which would cost the Government about \$30,000,000 annually when in full operation Each year under this program six thousand undergraduate scholarships would be made available to high school graduates, and three hundred fellowships would be extended to college graduates. Those who receive such scholarships and fellowships would constitute a National Science Reserve and would be subject to call into government service in connection with scientific or technical work in time of war or other national emergency

Dr Bush stressed the necessity of having the Government provide suitable incentives to private industry in conducting research, and urgcd modification of certain provisions of both the Internal

Revenue Code and the patent system.

The war against disease in the United States was also discussed in the report. Dr. Bush said that to maintain the progress in medicine that has marked the last twenty-five years, the Government should extend financial support to basic medical research in the medical schools and in universities. Dr. Bush commented "We have taken great strides in the war against disease. The death rate for all diseases in the Army, including the overseas forces, has been reduced from 14 I per thousand in the last war to 0.6 in this war. In the last forty years life expectancy has increased from 49 to 65 years, largely

as a consequence of the reduction in the death rates of infants and children. But we are far from the goal. The annual deaths from one or two diseases far exceed the total number of American lives lost in battle during this war. Approximately 7,000,000 persons in the Umited States are mentally ill and their care costs the public over \$175,000,000 a year Clearly much illness remains for which adequate means of prevention and cure are not yet known."

Concerning the importance of military research in peacetime, Dr Bush had this to say "There must be more—and more adequate—military research in peacetime. It is essential that the civilian scientists continue in peacetime some portion of those contributions to national security which they made so effectively during the war. This can best be done through a civilian-controlled organization with close liaison with the Army and Navy, but with funds direct from Congress, and the clear power to initiate military research which will supplement and strengthen that carried on directly under the control of the Army and Navy."

The vast possibilities of using science in improving the welfare of America's millions and the nation's dominant stature among nations of the world were stressed by Dr Bush in lus report. He said "New manufacturing industries can be started and many older industries greatly strengthened and expanded if we continue to study nature's laws and apply new knowledge to practical purposes Great strides have been made in agriculture, such as control over our insect enemies, better fertilizers,

disease-resisting plants, etc

"Advances in science will also bring higher standards of living, will lead to the prevention or cure of diseases, will promote conservation of our limited national resources, and will assure means of defense against agression. But to achieve these objectives—to secure a high level of employment, to maintain a position of world leadership—the flow of new scientific knowledge must be both continuous and substantial." He urged the release of wardeveloped scientific knowledge as soon as it is expediently possible so that much of it can be used by industry and by colleges and universities and in

training young scientists

Dr Bush prepared his recommendations on the basis of reports made to him by four committees Medical Advisory Committee, Dr W W Palmer, chairman, Bard professor of medicine, Columbia University, New York City, and director of medical service of the Presbyterian Hospital, New York Science and Public Welfare Committee, Dr Isaiah Bowman, chairman, president of Johns Hopkins University, Baltimore, Committee on Discovery and Development of Scientific Talent, Dr Henry Allen Moe, chairman, secretary general of the John Simon Guggenheim Memorial Foundation, New York City, and Committee on Publication of Scientific Information, Dr Irvin Stewart, chairman, executive secretary of the Office of Scientific Research and Development

# Grants for Sugar Research Announced

Additional grants amounting to more than \$50,000 for seven leading universities and laboratories were announced on July 16 by Dr Robert C Hockett, scientific director of the Sugar Research Foundation, bringing the total grants made by the Foundation to more than \$300,000

Recipients of these grants include McGill Uni-

#### SUGGESTIONS FOR CONTRIBUTORS TO THE NEW YORK STATE **IOURNAL OF MEDICINE**

The New York State Journal of Medicine asks its contributors to follow the suggestions listed below in the preparation of their articles. In this way they will greatly feculitate the expeditious publleatinn of the Journal. These suggestions have been devised in order to save correspondence, avoid return of papers for changes, minimize the work of preparation for the printer, end save the high costs of corrections made on galley proof

Size of Articles.—It is earnestly desired that scientific articles shall not exceed 6 Journal pages at the nutside Longer articles tend to lower reader interest. An average of five or eix seems to be the most desirable from this point of view Cal culating can readily be made by multiplying the number of dnuble-spaced typewritten manuscript pages by the fraction two-fifths, e.g., twelve manu script pages will make five Journal pages.

Manuscripts.-Papers must be typewritten un one side only of white sheets consecutively num-bered, and be double spaced with one-inch margura. They should be prepared with great care so as to be typographically correct. All headings, titles subtitles, and subheadings should be typed flush with the left-hand margin This is imperative for rapid

and accurate composition by the printers

Titles—The title should be brief and typed in capital letters. The subtitle can be longer end abould be typed in caps and lower case letters. Under the title or subtitle if there is one should. appear the name of the author and city in which he lives Directly under his name should be the hospital or institution with which he is affiliated

Subbeadings Subbeadings should serted by the author at appropriate intervals.

References.—It is the unfailing practice of the New York State Jouenal or Medicine to use specific "references" rather than "hibliography" There should appear in the text reference num bers, typed above and to the right of the word to which there is a reference A list, consecutively numbered of these references should fallow at the end of the manuscript (Nate that spelling in list is same as in text.) The errangement should be as follows and should include all Items.

Books-author e surnamn fullowed by initials, title of book, edition, location and name of publisher, year of publication, volume, and name of name of number. Thus, Oaler W. Modern page number Thus, Osler W Modern Medicine, 3rd ed. Philadelphia, Lea & Febiger 1927, vol. 5, p 57

Periodicals author's surname followed by

initials, name of periodical, volume, munth (day if necessary), year of publication Thurs Leany, Leon J. New York Stete J. Thus, Leahy, Leon J New Med 40 347 (March 1) 1940

Note The Journal does not include titles of articles.

Case Reports.—Instend of abstracts of hospital histories, authors chould write these reports in a narrative style with properly completed sentences All unimportant details should be deleted with such general negative statements as fit the case

Tables.—While tables are very useful on lantern slides in the reading nf papers, they fail nf this purpose to a large extent in the printed page. For that reason it is urged that they be reduced as much as possible to descriptive language.

Illustrations.-These should be kept to the minimum necessary to make clear the points to be registered by the author. In some instances they are imperative to proper understanding in in inthers they are merely picturesque. The latter can be excluded to good effect, both as to space

and the nnt inconsiderable cost.

When illustrations are to be used they should accompany manuscripts and each should always be referred to in the text, preferably by number Drawings or graphs should not be larger than 12 × 16 inches, and must be made with jet black. India ink on white paper Do not use typeroriter for lettering. The smallest lottering on 8 × 10 incheopy should be no less than 14, inch high. Cross-section paper (white with black lines) may be used. but should not have more than 4 lines per inch. If finer ruled paper is used, the major division lines should be drawn in with black ink, omitting the finer divisions. In the case of finely ruled paper, only hlue-lined paper can be accepted. Lettering and all markings must be large enough to be readable after reduction Mail rolled or flat, never fold Photographs should be very distinct and show clear hlack and white contrasts. They must be on glossy white paper Avoid round and aval phatographs

Whenever possible 'crop' photographs, le. mark portion that can be excluded when reproduced Crop marks should be on margin of photographs. Do not run pencul lines through photographs

It is important to mark the top of the Illustration on the back, also its number as referred to in the text, thus, Fig 1, 2 and the name and address of the author

Legends should be typewritten nn nne sheet of paper and attached to the illustrations.

[Continued from page 2120]

versity Medical School, the University of Pittsburgh, Yale University Medical School, the University of Utah, New York University Medical School, Cornell University Medical School, and Brooklyn Polytechnic Institute

The studies will seek new industrial uses of sugar and further explore the nutritional values of sugar Eight of the projects call for allotments totaling \$41,500, and involve research into entirely new fields An additional \$9,500 was recommended to continue experiments on projects already begun

These studies, Dr Hockett announced, implement the original program of scientific research undertaken by the Foundation and arc designed to develop a further understanding, not only of the product itself, but of its effect on the human system

He emphasized, however, that all possible fields of research have not yet been explored Among other projects which the Foundation might support, he suggested studies for increasing the utilization of sugar for such diversified purposes as meat euring, tanning leather, fruit freezing, and in insecticides, ice cream, baking, cattle feeding, metallurgy, electroplating, paper sizing, and producing silage from hay and grass

Dr Hockett announced grants to the following

Dr Hans Selye, associate professor of histology at McGill University Medical School, \$10,000, for a three-year study of the effects of diets in protecting animals from the effects of overactivity of the

endocrine glands

Dr I M Rabinowitch, associate professor of medicine at McGill University and Director of the Department of Metabolism at the Montreal General Hospital, \$10,000, for investigation of the use of sugars in human nutrition in health and in disease Dr Rabinowitch is in charge of the Clinic for Diabetes, which is the largest clinic of its kind As a result of the high carbohydratelow calory diet he reported in 1930, diabetics today are receiving much more liberal quantities of sugar in their diets than in former years How they are able to utilize such large quantities of sugar without the aid of insulin, in the majority of cases, and possible applications of this knowledge to use of sugars in nutrition in general, are parts of the investigation which this grant will make possible

Dr Gebhard Stegeman, professor of physical chemistry at the University of Pittsburgh, \$7,000,

to collate all existing data and carry out new measurements of the physical properties of sugar and

sugar solutions for use by industrial chemists
Drs F W Zerban and Louis Sattler, of the New York Sugar Trade Laboratory, \$4,000, for further investigation of the unfermentable constituents of molasses These two doctors, the Scientific Director said, have made important contributions to the study of molasses, including identification of allulose as one of its constituents

Dr George R Cowgill, professor of nutrition at Yale University Medical School, \$3,600, to survey the vitamin content of various products of the sugar industry at the point when they reach the market The survey will cover raw sugars, soft sugars, molasses, syrups, white sugars, and high-test There is very little information, Dr molasses Hockett said, on the loss, if any, of important nutrient materials in the manufacture of white sugar Accurate knowledge, he added, will either permit reply to unjustified criticism or show just what special values the less purified sugar products possess

Professor L T Samuels, head of the Biochemistry Department at the University of Utah, Salt Lake City, \$3,500, to study the capacity of animals to adjust themselves physiologically to various types of diets Dr Hockett described as of fundamental importance a knowledge of the compensatory changes which occur in the organs when high-carbohydrate or high-protein diets are fed over a period of time This phase of diet study has so far been neglected, he added

Dr H M Wuest, of Brooklyn Polytechnic Instatute, \$1,900, to study preparation of several compounds closely related to vitamin B1 and study their

effects on assay methods
Drs Walter D Bonner and Ralph F Phillips, of the Chemistry Department at the University of Utah, \$1,500, to study production of certain glucose derivatives directly from sugar and molasses

In addition to the new grants, an additional \$5,000 was awarded to Professor L Emmett Holt, Jr, of New York University Medical School, to continue his work on the synthesis of vitamins in the intestinal tract under the influence of various diets

A renewal of a \$4,500 grant was given to Professor James M Neill, of the Department of Bacteriology and Immunology at Cornell University Medical School

## ARMY MEDICAL RESEARCH BOARD

A Medical Research Board has been set up in the Office of the Surgeon General to coordinate all Medical Department research with other staff agencies and components of the Army as well as with agencies outside the Army

Maj Gen George F Lull, USA, Deputy Surgeon General, is president, Col Thomas B Turner, MC, assistant director, Preventive Medicine Service, is special assistant to the president and Lieut Col Leon H Warren, MC, chief, Research Coordination Branch, Technical Division, Operations Service, is recorder

The Executive Committee for the Board includes Brig Gen James S Simmons, USA, chief, Pre-

ventive Medicine Service, Brig Gen Stanhope Bayne-Jones, USA, deputy chief, Preventive Medicine Service, Brig Gen James A Kelser, USA, Director, Veterinary Division, Brig Gen Rex Mc-Kinley McDowell, USA, deputy director, Dental Division, Col Howard F Currie, MC, executive officer, Supply Service, Lieut Col Roy H Turner, MC, chief, Communicable Disease Treatment Branch, Medical Division, Lieut Col John B Klopp, MC, director, Technical Division, Operations Service, and Lieut Col Michael E DeBokey MC. Service, and Lieut Col Michael E DeBakey, MC, chief, General Surgery Branch, Surgical Division — Release from the Office of the Surgeon General, Feb 28.

In place of the November meeting, the auxiliary will sponsor the Fall cancer institute at the Garden City Hotel on November 14 Mrs Arthur C Mar-

tın will serve as chairman

Orange County An executive meeting of the Woman's Auxiliary to the Medical Society of Orange County was held at the home of the president, Mrs Walter A. Schmitz, on the grounds of the State Hospital, Middletown, on September 4

Dr Charles W Layne, of Newburgh, met with the committee to assist in planning an open meeting which will be in the form of a cancer teaching pro-This meeting will be held on October 30 in the evening and the public will be invited The place and speaker will be announced later

Others who attended the executive meeting were Mrs Harry F Pohlman, of Middletown, county chairman of the Cancer Control Division of the American Cancer Society, Mrs George Kenny and Mrs Harrison F Murray, of Port Jervis, and Mrs Roswell Schmitt, Mrs David E Overton, and Mrs P Henri Faivre, of Middletown Mrs Pohlman is chairman of the cancer teaching program for October

#### RABIES "CURE"

In Volume IV, Laws of the State of New York, which contains all acts passed at the twenty-eighth and twenty-ninth sessions of the Legislature, 1804, 1805, and 1806, Mr Warren D Reist, of Williams-ville, New York, a retired mail carrier, recently found the following statement
"An Act for granting a Compensation (\$1,000) to John M. Crous for discourants and publishers."

John M Crous for discovering and publishing a Cure for the Hydrophobia or Canine Madness

Passed February 28, 1806

"And be it further enacted, That it shall be the duty of the comptroller to cause the said Prescription to be published in the several newspapers printed by the printers within the state for three weeks successively

Mr Reist wrote to the Libary of Congress regarding this alleged cure and received a copy of the following letter written by Elisha Jenkins, Comptroller of the State of New York, and published in the New York Evening Post under date of April 1,

"Pursuant to the directions of an act, entitled 'An Act for granting a compensation to John M Crous, for discovering and publishing a cure for the hydrophobia or canine madness' passed the 28th Feburary, 1806, I do hereby certify, that the said John M Crous hath this day deposited in this office a certain writing, purporting to be a remedy used by him with perfect success, for more than twenty years past, for the cure of the hydrophobia or canine madness—which writing is in the words and figures following, to wit
"'Cure For The Bite Of The Mad Dog

"The following is an account and prescription of the remedy and cure for the hydrophobia or canine madness, made by John M Crous, in conformity to an act of the legislature of the state of New York, passed at their present session, vis
"'1st. Take one ounce of the nw bone of a dog,

burned and pulverized or pounded to fine dust
"'2dly Take the false tongue of a newly foaled
colt, let that be also dried and pulverized—and,
"'3dly Take one scruple of the verdigrease,

which is raised on the surface of old copper by laying in moist earth, the coppers of George I and II are the purest and best Mix these ingredients together, and if the patient be an adult or full grown, take one common teaspoon full a day, and so in pro-portion for a child according to its age one half of a copper of the above kind if to be had, if not, then a small increased quantity of any baser metal of the kind—this to be taken in a small quantity of water

"The next morning fasting (or before eating) repeat the same as before This, if complied with after the biting of the dog and before symptoms of madness, will effectually prevent any appearance of the disorder, but if after the symptoms shall appear, a physician must immediately be applied to, to

administer the following, vis

"Three drams of the verdigrease of the kind before mentioned, mixt with half an ounce of calomel, to be taken at one dose This quantity the physician need not fear to administer, as the reaction of the venom then diffused through the whole system of the patient, neutralizes considerably the powerful quantity of the medicine—and,

"Secondly, if in four hours thereafter the patient is not completely relieved, administer four grains of

pure opium, or one
"NB The patient must be careful to avoid the use of milk for several days after taking any of the foregoing medicine

"'John M Crous "'Albeit, as John M Crous, being duly sworn, deposeth, that the above account and prescription for the remedy and cure for the hydrophobia or canine madness, is a just and true account and prescription, and the only one used and practised upon by himself for more than twenty years past, and which has never failed of perfect success in any instance of the vast number of unfortunate human beings who have been bitten by the mad dog, and who have applied to him, the deponent, for relief "John M Crous" —Submitted by A S Dean, M D, District Health Officer, in Health News, May 14, 1945

There are <u>two</u> funny things about Wilmer

The first is Wilmer's getup

The second is that he doesn't care if he does look like a castoff scarecrow

Because Wilmer s a lot smarter than he looks. While he's making more than he's ever made before, the dough he'd spend for a fancy wardrobe goes right smack into War Bonds and for this Uncle Sam is mighty proud of him

Naturally, you don t have to look like Wilmer or tramp around in rags to make your country proud of you, and your own future a whole lot more secure

All you have to do 13 keep getting those War Bonds—and then forgetting them till they come due Not bad—that four dollars for every three, and the safest investment in the world!

Why not get an extra War Bond today?

BUY ALL THE BONDS YOU CAN... KEEP ALL THE BONDS YOU BUY

## This, too, will be written in history

Among the many brilliant originations, the inspired im provisations, of the Medical

Corps in World War II was the use of the "ambulance on wings"

When the photograph above was taken, the casualties lined up had just been toounded! Already they had been given emergency medical aid, and in a matter of minutes were on their way to a baso hos pital with complete facilities far away from the combat zone. Thanks to such immediate surgical care, quick hospitaliza

tion, and all the companion advancements of wartime medical science, 97 out of every 100 such casualties lived!

Thanks should be proffered most generously to the incredible diligence of those "soldiers in white" who created and tirelessly practiced these techniques—the medical men in the service whose rest all too often was no more than a moment and a cigarette Incidentally, that cigarette was very likely a Camel,

an especial favorite of all fighting men

THROUGH ADEQUATE THERAPY OF THE MENOPAUSAL SYNDROME

When menopausal disquietude threatens emotional stability, complete control of the symptomatology-including alleviation of nervous disturbances and restoration of a sense of well being — becomes the primary therapeutic objective. • In combining ample hormonal compensation with safe sedation, Hexital offers the physician a distinctive advantageous estrogenic preparation. Hexital contains 3 mg. hexestrol (significantly less toxic than stribestrol) and 20 mg phenobarbital per tablet - Clinical evidence suggests that the combined use of hexestrol and phenobarbital (Hexital) reduces to a minimum untoward side effects, so often characteristic of synthetic estrin medication : SUPPLIED 100 and 1000 to the bottle, in scored tablets inexpensively priced LINDEN.

## hexital (HEXESTROL-PHENOBARBITAL

# DICALCIUM PHOSPHATE. With Vitagins B-C-D

IN EACH CAPSULE Dicalcium Phosphate

Vitamin B<sub>1</sub> (Themine Hydrochloris Vitamin C (Ascorbic Acid) Vitamin D (Braduted Yeast)

Indicated whenever Calcium—\*\*new us therapy is advised, Especials new for supplying the pre-natal decreas, Calcium, Phosphorus and Vinency) and D. When preferred, the Calcium capsule may be mixed with mixed.

DOSAGE. 2 to 6 captation

SAFE • Four years of intensive clinical research, with more than 1,400 published coses, have established Demeral analgesia in labor as a safe procedure. Demeral analgesia is harmless to mother and boby. It does not weaken uterine contractions or lengthen labor. There are no post-partum complications due to the drug.

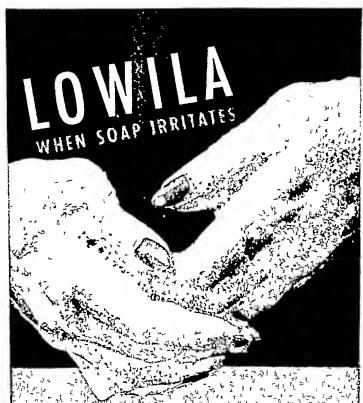

SIMPLE AND EFFECTIVE • Demeral hydrochlaride is administered orally or by Intromusculor injection. Average dose 100 mg, when the pains became regular, repeated three ar faur times of intervals of fram 1 to 4 hours. In analgesic power Demeral hydrochlaride ranks between morphine and codeine, if also has a spasmalytic effect camparable with that af atropine, as well as a sedative action. It may also be used in conjunction with scapalamine or barbiturates for omnesio.

WESTWOOD PHARMACAL CORP.
1020 MAIN STREET . . . . . . . BUFFALO 2, N. Y.

In managing cardiovascular disease, the restoration of "circulatory equilibrium", and cardiac stimulation, usually constitute the chief therapeutic objectives • Because of its potent disease, action, which is "practically noninjurious—to normal kidney tissue", Calpurate materially relieves the cardiac "load", and contributes to the prompt re-establishment of circulatory equilibrium. And by direct myocardial stimulation, Calpurate increases coronary output, and frequently achieves striking results in "relieving symptoms of congestive failure, angina and dyspnea." Calpurate also exerts a desirable dilating action on coronary vessels • Since Calpurate is almost insoluble in the stomach, yet readily absorbable in the intestine, it is remarkably free from gastric irritation—even on prolonged administration 3.4

FORMULA Calcium theobromine—calcium gluconate in molecular proportions • PACKAGED as tablets (each containing 7½ gr calcium theobromine—calcium gluconate) in bottles of 100, 500 and 1,000—or as powder in 1 oz bottles • ALSO AVAILABLE with ¼ gr phenobarbital per tablet when sedation is desired.

THE MALTBIE CHEMICAL COMPANY . NEWARK, NEW JERSEY

## CALPURATE

Relieves Symptoms - Yet Avoids G-I Upset

Synopsis of Diseases of the Heart and Arteries, 3rd ed., C. V. Mosby Co., St. Louis, 1944. 3 WIPPERN, V. and GUNN S. A. Medical Times, 70, 197, 1942. 4 ZISKIN T. Journal-Lancet, 57, 292, 1937.

HE literature is replete with reports on splendid results from massive doses of vitamin C in allergies and other C deficiency conditions, but doctors using this therapy find they have many patients who "can't take it"

ın milk

For your patients who find straight vitamin C irritating, SODASCORBATE (sodium ascorbate) may be helpful For the first time, SODASCORBATE offers vitamin C in dry, neutral form, free from the gastric irritation and acid shift effects that so frequently result from massive doses of this vitamin.

Now you can use this effective new therapy without hesitancy—can freely administer large and frequent doses of vitamin C without undesired side effects Each SODASCORBATE Tablet contains 120 mg of sodium ascorbate, equivalent in

# Accent on Velvet Smoothness

The process used in manufacturing the "RAMSES"\* Flexible Cushioned Diaphragm produces a dome which is soft and pliable and can best be described as being as smooth as velvet.

This velvet-smoothness lessens the possibility of irritation during use.

The "RAMSES" Flexible Cushioned Diaphragm is manufactured in sizes of 50 to 95 millimeters in gradations of 5 millimeters. It is available on the order or prescription of the physician through any recognized pharmac-

## CONFIRM THE RATIONALE

Testimonials may have to be brushed aside in the critical evaluation of a mode of treatment. But when outstanding clinicians voluntarily state their satisfaction based on critical observation of patient after patient, their findings may well be accepted as substantiation.

Darthronol, the multiphasic systemic approach to arthritis, has merited its wide and rapidly growing acceptance. The many favorable reports of its efficacy in the treatment of chronic arthritis, received from clinicians

#### **Each Capsule Contains:**

Vitamin D (Irradiated Ergosterol)	50 000 USP Units
Vitamin A	5 000 U S.P Units
Ascorbic Acid	50 mg.
Thiemine Hydrochloride	2 mg.
Riboflavin	1 mg.
Pyridoxine Hydrochloride	0.1 mg.
Calcium Pantothenate	0.333 mg.
Nlacinamida	10 mg
Mixed Natural Tocopherols	3 4 mg.

Originally introduced as DARTHRON

in every section of the country, are based solely on the subjective and objective improvement of their patients

The therapeutic value of each of the nine active constituents of Darthronol is well established. Darthronol furnishes in a single capsule not only massive dosage of vitamin D<sub>2</sub> but also adequate potencies of the eight other vitamins so essential for the proper functioning of the many metabolic processes

Darthronol presents a convenient and effective method of utilizing the newest concepts in antiarthritic therapy by treating not only the local articular involvement, but also the general systemic disturbances

W. VAN BUREN ST.,

ADJUSTED TO RECOGNIZED INADEQUACIES IN DIETS OF EARLY INFANCY

The average diet of early infancy provides less than the daily minimum requirements of thinmine and nicotinic acid and, in the case of the breast fed infant, a barely adequate amount of riboflavin

#### White's MULTI-BETA LIQUID

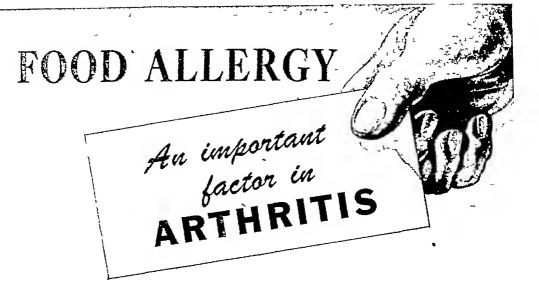

Is specifically formulated to correct these inadequacies, providing—in drop-dosage form—thiamine, riboflavin and nicotinuc acid, in amounts proportionate to their insufficiency in the average diet of early infancy

Fire or more drops daily assure a gener us supply of all clinically important B

vitamins during the critical months of early life,

Supplied in bottles (with suitable droppers) of 10 cc., 25 cc and 50 cc.

Turnbuil\* has recently reemphasized the role of food allergy in arthritis. By means of individually arranged diets based upon cutaneous tests, gratifying relief from symptoms was obtained in many instances for periods of from one year to over eight years

The Arlington Diagnostic Allergen Set simplifies office diagnosis of specific sensitivities in arthritis. It contains 80 of the commonest allergens — 60 foods.. 20 miscellaneous. These dry allergens will not deteriorate and require no refrigeration.

Since food sensitivity in arthritis appears to be a changeable rather than a static phenomenon, physicians find it decidedly convenient to have this stable diagnostic set at hand for testing and retesting whenever required.

Arlington Food Allergy Diagnostic Sets are available at leading prescription pharmacies or may be ordered direct at \$9.75 each

BAN FRANCISCO WANGED COTT

For many, many years it has been our privilege to work closely with physicians and surgeons in the design, improvement and manufacture of scientific supports to meet the physiological, surgical and maternity needs of their patients. Evolved by the late Mr. S. H. Camp, the basic system of patented adjustment principles, incorporated in models graded to various types of body build, provides the endless number of combinations made necessary for precise fitting by the endless variations in the human figure. This has met the test of 40 years of practice. Accepted by the medical profession from the first, Camp Supports are today recognized as standard throughout the United States and many foreign countries. In this challenging new era we once again pledge to keep faith with the profession: FIRST, by maintaining consistent research; SECOND, by manufacturing scientific supports of the finest quality in full variety at prices based on intrinsic value; THIRD, to assure precise filling of prescriptions through the regular education and training of Camp fitters; and FOURTH, to adhere to the policy of ethical distribution. We trust that these standards will continue to be your hallmark of quality and your symbol of confidence wherever scientific supports are indicated.

Restorative treatments in the relaxing environment of the Saratoga Spa have become more widely known in medical circles as, year by year, increasing numbers of physicians have found them beneficial to patients

The therapeutic powers of the Spa's naturally carbonated mineral waters are being utilized more extensively than ever, for postwar strain is bringing us an unusually large number of patients suffering from cardiac, rheumatic or vascular disorders of a chronic nature

Here your patient, relaxed in mind and body, is in skilled hands which are guided by your directions in a regimen of treatment that you recommend Well trained physicians are available in Saratoga Springs for consultation with your patient on the details of the program

Thus the Spa lightens your heavy wartime burden, with full assurance that your patient will receive the best of care to prepare him for your continued medical direction

## "PHYSICIAN, GIVE HEED TO THINE OWN HEALTH"

Many physicians have recently come to the Spa for the same kind of treat ments that helped their patients here After a restorative "cure" at the Spa, you, too, would return to your practice refreshed—revitalized—ready for the busy days that still he ahead

# IN ANEMIA OF CHRONIC BLOOD LOSS

In the management of chronic blood loss, therapy designed to support red cell and hemoglobin formation is essential. Iron must be supplied to correct hypochromia, liver and the B vitamins bolster an overworked bone marrow in the production of red cells. The combination is more effective than iron alone.

#### HEPATINIC

presents iron in readily assimilable ferrous form, together with Crude (Unfractionated) Liver Concentrate and Vitamin B Complex.

Crude (Unfractionated) Liver Concentrate is prepared so that it retains the crythropoietic and nutritional principles of whole liver which are lost in the highly refined concentrates Furthermore, it is subjected to enzymatic digestion to provide maximum assimilation and prompt therapeutic response.

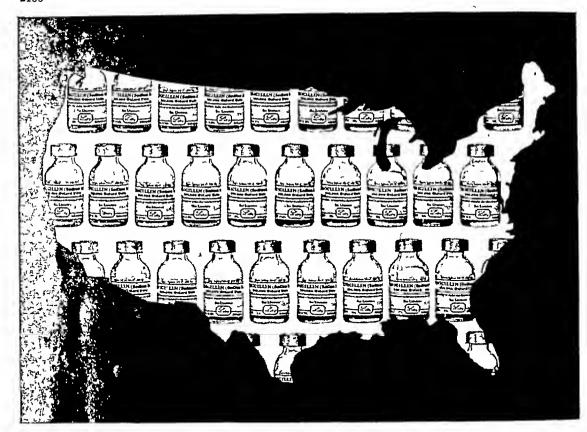

The appealing and palatable taste of Hepatinioassures patient acceptance and particularly recommends the product for pediatrics

FORMULA: Each fluidounce Elixir Hepatinic contains

Ferrous Saliate 12 gr., Crudo (Unfractionated) Liver Concentrate (equivalent to 660 gr fresh liver) 60 gr Thiamine Hydrochloride 2 mg., Ribofavin 4 mg., Nlacinamide 20 mg., together with pyradoxine, pantothenio acid, choline, folio acid, vitamin Bio, vitamin Bit biotin, inositot, pera-amino-bearous acid and other factors of the vitamin B complex

Bottles of one pint and one gallon Tasting samples on request

### **Editorial**

#### Of Congress and the Medical Profession

To those nail-biters who incline to view with alarm by day and wrestle with a night-mare in the wee small hours because of the current edition of the Wagner-Murray-Dingell bill, we can offer some grains of comfort, for what they are worth

Let it be pointed out that Congress, now having reconvened after the Summer recess, seems to be economy-minded. The time when a four-year, two-front war has just been hrought to a successful conclusion as yet unpaid for, except in terms of human life laid on the line, would seem to us to be a reasonably good moment for anyone to pause for thought before myolving the Nation in a huge, amorphous, indeterminate scheme, half socialist, half fascist, as far as its medical and hospital provision are concerned, the yearly dollar cost of which would be the enuity alent of another modest war

We feel that at this point Congress is likely to be rensible of the dammed-up opinion of some eight million of our citizens who will uniquestionably have something to say about what they want and do not want in the near future. Some forty thousand physicians still

with the armed forces will want the opportunity to inquire with many of us who have not been away, why the medical and hospital provisions of the current bill have been drawn up after so little conference with and so little recognition of the American Medical Association, and why such a bill is necessary or even advisable. Why must we have a single, rigid, nation-wide over-all plan? Are we on the verge of imminent physical and mental dissolution that great haste is necessary? We doubt it. Have we so much surplus earning power that we can squander it hastily as we have done so many times in the past with respect to our natural resources? We doubt that, too

Do we orave to extend the power, might, dominion, and glory of the Federal government at the expense of States' rights? If so, why, and how much, and what for, and at what cost? The wealth of a nation is not its buried gold, its vaulted silver, its orculating currency—that dross!—but in its imagination, its collective will, its enterprise, its individual will, the willingness of each to put his shoulder to the wheel for a full day's

work for a full day's pay in whatever medium may be current Respecting the medical profession particularly, States' rights can only be secured by adequate and whole-hearted efforts at the county and state levels to meet the medical obligations which must be assumed if the Federal government is to be denied a further usurpation of power and regulation Good medical service, well distributed at these levels, becomes at the same time a right reserved, a priori, to the various states, the sum total of which constitutes a national asset

We believe that Congress, under its new guidance and sensible of its postwar obligations, economy-minded, and sobered by its new responsibility of world leadership, will be disposed to repose in the various states the confidence which we feel they have deserved to mind their own business and regulate their own affairs. Congress, like the rest of us, is possibly wearied of the jungle of expensive Federal agencies, excusable perhaps under war conditions but not otherwise tolerable.

If we are not to have the Federal power and glory extended domestically, the medical profession at least will have to arouse itself at the county and state levels. For too long a time we have seen the same faces and heard the same voices at meetings. For too long a time we have seen the same backs carrying the burden of committee work, the hard, time-consuming drudgery that has to be done, and done well, and done all the time All honor to the comparatively few who.

have, year after weary year, carried the responsibility for the organizational progress of the profession. They have done what they could But what of the rest? "Too busy", "not interested", "the Society is run by a clique", "a bunch of medical fascists",—almost any excuse to cover indifference, laziness, disinterest, and the numerous asthenias the flesh is heir to. Yet service to the profession itself is just as much a part of good medical care, just as important to the maintenance of States' rights as ever attendance at town meetings or intelligent voting has been and continues to be

However disposed Congress may be to conserve States' rights and to oppose the extension of Federal power and glory, it cannot successfully do so without the willingness, the desire, the aid and assistance of all citizens at the state and county levels It is to be hoped that our returning medical officers will give this matter the thought and implementation it deserves. It is an admonition also to those medical men who have not carned their share of the load in terms of work for their county and state societies futile to expect others to preserve for you what you yourself do not consider worth the time and trouble to work for, to think about, and to improve right where you are, so that local guidance and control of local medical service in the public interest can safely be left in your hands in the opinion of others It is not what we think of ourselves but how others think of us which determines their attitude toward us as a going concern

### A New Approach to the Cancer Problem

The embryonal theory of cancer has survived for more than a hundred years Lobstein, in 1829, conceived that tumors arose from embryonal tissues which had lost the control of the organism. In 1874 Durante stated that all tumors, and especially malignant ones, arise from embryonal groups of cells. The modern embryonal theory was elaborated by Cohnheim. Briefly, this theory holds that tumors originate either from tissues misplaced during embryonal development or from superfluous cells which

retain their embryonal character without necessarily being displaced. Ewing expressed the opinion that the most important fact in our knowledge of tumor genesis is that embryonal cells possess more than any others the essential factors of tumor growth

There is abundant evidence that many kinds of tumors do originate in persisting or misplaced embryonal cells, but it is also known that such cells do not necessarily produce tumors. Attempts to produce malignant tumors experimentally by transplanta-

tion of embryonal tissues have not succeeded Many studies have shown that something more than the separation of cell groups from their natural environment is necessary carcinogenio factor is vet to be found cent research conducted by Harry S N Greene, at Yale University School of Medione, seems to open a promising approach to the problem.

Having first demonstrated that ombryonic mammalian tissues could be grown in adults of the same or alien species, Greeno implanted embryonic tissues which had been impregnated with a carcinogen, methylcholanthrene. Varioue tissues and organs, including lung, etomach, intestine, ekin, muscle. and cartilage, were used. In thirty to thirty-five days the transplants measured 1 to 15 cm in diameter and showed all the structural and cellular characters of cancer The diagnosie of cancer was based on hiologic behavior as well as on morphology, and such diagnosis was not made unless the tissue possessed the ability to grow and to duplicate its structure in alion species. Approximately 60

1 Greens, Barry S N Science 101: 644 (June 21) 1945.

per cent of the transplants fulfilled both the morphologic and hiologic requirements

Active invasion of the tissues of the host was apparent by the forty-fifth day Metastasis ocurred but most of the animals were killed for etudy at too early a date to allow accumulation of significant data.

The significance of these experiments cannot be better expressed than in the concluding paragraph of Greene's preliminary report

These experiments were instituted on the assumption that the reserve atores of stem or partially differentiated cells of the body formed the source of neoplastic cells in adult animals and that embryonic tissues might prove a more favorable medium for the experimental production of tumore than the corresponding tissues of adult animals The results obtained support this assump-The method described offers a means of producing carcinomas in a variety of internal organs in a relatively short time Moreover, the ability to transplant treated tissues heterologously and to test the susceptibility of embryonic organs of resistant species after transfer to susceptible hosts and vice versa offers a new approach to a study of the nature and mode of action of carcinogenic chemicals

#### Current Editorial Comment

#### Of This and That

Well over two hundred thousand women have entered the armed services as nurses, Wacs, Waves, Spars, and Marines, number of women workers has moreased in the past four years hy six million, at the. end of last year there were seventeen and a quarter million women employed in the United States 1 These figures do not inolude the very numerous women volunteer workers carrying on a variety of activities in the Red Cross and other vital occupations

It is extremely gratifying, says the Statistical Bulletin of the Metropolitan Life Insurance Company, which this year celebrates its twenty-fifth annivorsary of useful service to its many readers, "to find that mortality among women in the main working ages of life has declined during the war period "

Among white women 15 to 54 years of age insured by the Metropolitan Life Insurance Company, the death rate hetween 1939 and 1944 for all causes combined fell from 327 5 per 100,000 to 274 5, or one sixth. Tuberoulosis deaths fell more than one fifth, mortality from diseases of the heart, artenes, and kidneys, despite the strains of war, declined 18 per cent

The death rate from diseases of the puerperal state declined by almost one third This is truly a remarkable decrease and is attributed to the effectiveness of the sulfa drugs in the treatment of puerperal septicemia, to better prenatal and postnatal care, and to more satisfactory care during labor

This report seems to us to be of very great significance in view of the grave forebodings expressed by some physicians as to the effeet of wartime occupations and stresses

t Statistical Bulletin, Metropolitan Life Insurance Co p. 3 (Feb.) 1945

upon the female working population Apparently industrial hygiene and sanitation, industrial medical service, and medical service in general for the female working population is being maintained at a very high level of efficiency to achieve such outstanding results Washington papers please copy

In a careful study of 696 cases of registrants with psychiatric diagnoses from the New York City selective service area, Col Samuel J Kopetzky, (MC), AUS, has checked the validity of psychiatric criteria used in the rejection of men for service with the armed forces He observes that

"It should be borne in mind that the entire sample, excluding a very small number for reasons of error in diagnosis and differences in diagnosis by psychiatrists, met the criteria of rejection for military service outlined in the mobilization regulations In brief, the guards against accepting men for military service as reflected in these diagnostic criteria are valid when the findings of this study are weighed in terms of the high discharge rate for those men who have a definite history of mental illness To date, one of every four men inducted into military service with a history of mental illness prior to induction has been discharged Clearly, to accept men from this group is costly As stated in the mobilization regulations, these 'unstable individuals form weak points in the military organization and often break down under stress, endangering the lives of others as well as the national security '

"For the community, accountable for their well-being, their service in the armed forces becomes a problem, particularly when their condition has worsened during service and they are discharged. It would be extremely desirable to secure data relating to the effects of military service on this group. Of course, the possible range of problems for the discharged man and his family is also of considerable importance.

"In summary, it seems that the diagnostic criteria for selecting men who are mentally fit for military service are extremely valid. The problems inherent in selection rest in a large measure on the methods of detection of mental illness in registrants during the process of selection. De-

tection of mental illness is very difficult in a great many instances, as shown by the fact 53 men of every 1,000 are accepted for military service who have a history of mental illness of such nature as to warrant rejection It can be assumed that many registrants have been mentally ill and have not been known to the psychiatric divisions of Bellevue Hospital and Kings County Hospital It would be significant to secure information about those persons who have used the outpatient departments of psychiatric divisions and private psychiatric resources in the community. It would be of interest to find out the number in this group and also the seventy of their specific conditions The latter would be helpful in determining whether a smaller number of persons with mental conditions which are nonacceptable for military service have had contact with an outpatient department of a psychiatric divison than of persons known to the inpatient departments

"The Selective Service System has been aware of the difficult and exacting process of selecting men who are mentally fit for the armed forces and therefore put into effect, as of February 1, 1944, the Medical Survey Program gram recommended that information about registrants may be obtained from the following 'the registrant's personal or private sources physician, social-service exchanges, hospitals and clinics, public and private social agencies of recognized standing, United States Employment Service, the present or former employer of the registrant, public or private schools, and correctional institutions or agencies ' The program also sets forth procedures to check the names of registrants with the state central file for mental diseases if such an agency exists. In view of some of the results of this study, it seems that there is striking evidence of the need for a complete central file, including all persons known to the inpatient and outpatient departments of the psychiatric divisions of all hospitals

"In conclusion, it is evident that the Medical Survey Program provides, to a great extent, a better means for a more satisfactory selection of men who are mentally suited for the responsibilities of military service. The medical survey procedures have proved their value, and in the New York City area the psychiatric card catalogue has been a valuable aid in keeping the mentally unfit from being accepted for military service."

<sup>&</sup>lt;sup>2</sup> War Medicine 6 357-368 (Dec.) 1944

### William Avery Groat, BS, MD

Ex president, Medical Society of the State of New York
Born November 9, 1876 Died September 9, 1945

In the passing of William Avory Groat, of Syracuse, New York, the medical profession loses one of its most able counselors and loyal supportors From the time of graduation from the medical school his interest was continuous and progressive, for the advancement of medical science To this end he made important contributions, especially in the fields of hematology and metabolism

His interests were wide and varied, his reading was voluminous and he possessed that fortunate combination of the scientific and cultural which made him an influence not only in the profession of his choice but in the fields of art, literature, and music of his community. His ability to discern the real values of this complex age was perhaps the truest measure of his erudition.

Dr Groat was born in Canastota, New York, and received his medical degree at Syracuse University College of Medicine in 1900, in 1901 he became a member of the faculty and from 1911 until his death was professor of clinical pathology. He was an adviser to the Board of Athletics and for many years a trustee of his Alma Mater

As a practicing physician, he was a member of the staffs of St Joseph Hospital, Syra-

cuse Memorial Hospital, the University Hospital of the Good Shepherd, City Hospital, the Syracuse Psychopathic Hospital, and the Syracuse Free Dispensary He was a Fellow of the American College of Physicians and held membership in numerous scientific and honorary societies. He was serving as chief of the medical staff of Syracuse Memorial Hospital when, in 1938, he was elected President of the Medical Society of the State of New York He has also served as a member of its Board of Trustees

In World War I he was a major in the Medical Corps of the United States Army and continued to serve as a heutenant colonel in the Medical Reserve Corps

In the loss which this Society so keenly feels by the death of a former President, we are reminded that it is from the minds and talents of such physicians that we gain the strength and wisdom to grow in the service to which we aspire

### ABNORMALITIES OF THE PARATHYROID CALCIUM PHOSPHORUS VITAMIN D COMPLEX

JAMES FINLAY HART, M.D., and JAMES R. LISA. M.D. New York City

(From the Metabolic Department, First Medical Dwisson, and the Pathologic Laboratories City Hospital, Welfare Island)

WERE interested to know the rate of necurrence, the types encountered, the treatment employed, and the therapeutic response in those cases that might be classified as abnormall ties of the parathyroid-calcium-phosphorus-vitamin D complex admitted to the New York City Hospital, Welfare Island, during the last ten years

With that in view we made a study of the histories of all cases recorded as adenoma of the brainlyroid, parathyroid discase, late and renal rickets, esteriis cystica fibrosa solitary bone cyst, pathologio fracture of the bones, multiple myeloma, renal lithiasis, hyperculcinosis, hyperculcinosis

anst three years of the All told, there were 25 cases in the files that were lasted under one or another of the above categories. However, after a careful perusal we were left with only 9 that had satisfactory histories or sufficient data to justify their inclusion. The final count was 3 patients with hyperparathyroidism, 2 of whom had an adenoma removed in the City Hospital and 1 who had the removal in another hospital, 4 cases of bone cysts, 1 case diagnosed as osteogenesis imperfecta, and 1 case of tetany. We will present first the histories of the 3 proved cases of adenoma.

#### Case Reports

Case 1—(95 322) Rosetta J a colored woman, 31 years old, was admitted to the surgical service of Dr F W Bancroft on February 23 1940 Her chief complaint was a cold of three weeks and a painful swelling of the knee of two days' duration. Her past history was negative. Her bowels were normal hut she passed large quantities of urne at frequent intervals with nocturia three to four times a night for a long time. There was no dysuma and there was no known trauma to the knee. Recently she had noticed marked weakness and had had a poor appetite and a bad taste in her mouth for some months. Her menses started after endoerine therapy at 18 years and since then had been regular with a 3/28 sequence. She has had frequent head aches recently

She was a poorly neurished and poorly developed colored woman who appeared chronically ill. Her

pupils and fundi were normal. Her heart was recorded as enlarged The sounds were necentuated with the second acrtic sound marked The refleces were normal The right knee was tender and swellen Her blood pressure was 198/120 The lungs were clear A Mosenthal urine test showed 1015-1010-1017 There was a trace of albumin and many white blood cells.

On admission her Wassermann test was 4 plus. The nonprotein nitrogen was 30 mg., glucose, 91 mg, calcium, 166 mg., phosphorus, 1.8 mg, and phosphatase, 12.1 (Bodansky) A diagnosis was then made of syphilis, hypertension, and hyperpara thyroidism An electrocardiogram was negative, while a chest plate revealed numerous fibrotic changes in the region of the costochondral junctions. the nature of which was not clear at that time to the roentgenologist Subsequent x-rays showed similar changes in the upper end of the right tibia, the pubic bones the long hones of the extremities, and the phalanges. The calvarium was markedly thickened, giving a cotton-wool appearance suggesting Paget s disease. At a slightly later date the con clusions from the x-rays were that films of the whole body, while showing bone destruction and bone production, were of an irregular nature and gave no positive evidence of any specific bone disease.

Further laboratory reports were March 1, 1940, calcium, 16.2 phosphorus, 1.84 March 5, 1940, calcium, 16.6 phosphorus (serum), 2.36, phosphorus (serum), 2.36, phosphorus, 12.1, cholesterol 200, and cholesterol esters, 125 March 11, 1940, phosphorus (serum), 190 plasma, 236, March 27, 1940 calcium in the urno in twenty-four hours, 115 07 mg in 1,370 cc., April 4, 1940 serum allumin, 28 per cent, serum globulin, 2.7 per cent. The urino was negative for

Bence-Jones protein

An intravenous pyelogram was done on March 11 1940 and the report stated that the kidneys had fauly good function. There were no calcific shad ows. A bopey of the rib was taken on April 4, 1940. The report stated that "The most prominent feature is the widespread loose moderately cellular, fibrohlastic tissue with small esteed spicules. A few areas are so loose that they appear to have small cysts. In one large area the appearance of the tassue is quite different. It consists of a very cellular fibroblastic notwork, very slightly vascular, has many grant cells of the epulis type, and is free of exteods spicules. At the periphery, the esteed spicules are small and closely resemble the nuclei of the grant cells." The diagnosis was esteits fibroes compatible with parathyroid tumor.

An examination of the neck falled to show any evidence of a tumor of the parathyroid However on April 18, 1040, Dr Bancroft performed an exploratory operation and on opening the left side

found a tumor mass, the size and shape of a lima bean, lying lateral and posterior to the inferior portion of the left lobe of the thyroid. This was unattached to the thyroid but had its own blood supply. It was removed and the right side was investigated but no abnormal masses were found.

2174

The pathologic report was "The specimen consists of the left parathyroid It is pyriform and of brown-red color It measures 3 by 2 by 0 8 cm is soft and the capsule appears smooth scopically, the architecture consists of interlacing columns of cells separated by a rich capillary bed The great majority of the cells have a finely granular, rather opaque cytoplasm and a central round or oval homogeneously stained nucleus A very few opaque cells have hyperchromatic nuclei, while nucleoh are absent A few larger cells with clear protoplasm are scattered among the opaque cells The nuclei are round and central A third type of cell is present, fairly large, and with an oxyphilic homogeneous cytoplasm These occur either singly or in small clusters The connective tissue along the larger vessels is only moderately abundant and contains a rare mast cell. Eosinophils are not present either in the circulating blood or in the connective tissue Vesicles with colloid are not 'found The diagnosis is adenoma of the parathyroid."

On April 22, 1941, the fifth postoperative day, the patient developed early signs of spasmophilia The Chvostek and Trusseau signs were positive On April 24, 1941, 20 grains of calcium gluconate were given intravenously at three different times In addition 10 grains of calcium lactate and 10 minims of viosterol were given by mouth three times a day Fifty units of parathyroid extract were injected twice on April 24 The blood showed calcium, 10 4 mg, phosphorus, 3 1 mg, and phosphatase, 195 The parathyroid extract was discontinued the next day but the calcium and the viosterol were carried on to the first of May, when the lactate was raised to 30 grains three times a day and so continued until she was discharged on May 19

On April 30 the calcium was 98 mg, the phosphorus, 363, and the phosphatase, 145 On May 13 the calcium was 84 mg, the phosphorus, 41 mg, and the phosphatase, 14 On May 19, 1941, she was discharged to the clinic

Case 2—(109313) Mary G was admitted to the surgical service of Dr S W Crossman on September 9, 1941, for pain in the right hip and knee Three weeks previously she had fallen on her hip and was incapacitated Sho fell again with great pain and was brought into the hospital.

She had had gallstones removed in 1936, and had complained of arthritis in both knees for over one year. Her menstruation hegan at 17, was regular, and lasted three to four days. She was pregnant twice and had two children

She was a 51-year-old Italian woman, not acutely ill, complaining of pain in the right hip, femur, and knee. Her blood pressure was 170/90. On entrance x-rays were taken of the right hip and knee. There was a fracture of the right femoral neck with moderate overriding of the fragments. Marked decalcification of the bones was noted, with elevation

of the periosteum throughout the right femoral Marked absorption of bone in the region of the pubes and ischial bones was seen, especially on These findings suggested a pathologic the right fracture and osteoclastic malignant changes in the pelvis and the femur Oblique films of the knee revealed osteoporosis and decalcification of the bones, especially in the region of the condyles of the femur and the tibia The lungs showed no metastasis, but there was a tortuous calcified lateral thoracic artery in the left middle lung field. Films of the elbow revealed osseous densities above the olecranon process in the posterior part of the elbow, giving a mottled appearance Films of the lumbosacral spine and pelvis illustrated marked degrees of decalcification, especially in the region of the neck of the right femur and the symphysis pubis There was extensive calcification of the small pelvic arteries On October 6, 1941, films of both legs showed marked decalcification of the bones but very little periosteal elevation. The right tibia had a moth-eaten and ground-glass appearance was a calcific mottling of the subcutaneous portions of the left leg The skull film revealed a normal sella turcica and no evidence of a gross lesion linear calcification traversing the pituitary fossa most hkely represented calcification of the internal carotid

[N Y State J M

On October 29, 1941, films of the hand showed marked calcification of the smaller and larger There were irregularities in the contour of the shafts of the phalanges Both thumbs exhibited dorsal bowing of the distal phalanges On November 14, 1941, films of the skull presented slight thickening of the table of the cranial vault There was a stippled and punctate appearance of the bones The acromicelavicular joints showed decalcification In the pelvis there was multiple calcification of the arteries The conclusion of the roentgenologist was that absorption of bone, decalcification, thickening of the periosteum, sub-cutaneous calcinosis, and extensive calcification of the arteries suggested a systemic disorder, particularly of the calcium metabolism

On November 26 Dr Crossman decided to do an exploratory operation for adenoma of the parathyroid He found the left lower parathyroid gland was friable, slightly yellowish, and the shape of a sphere with a diameter of 1 25 cm The pathologic report stated that it was a nodular, well-encapsulated, soft, yellowish-brown mass of tissue which measured 3 by 2 by 11/2 cm On the cut surface the appearance was homogeneous Microscopically, it was mostly a diffuse sheath of polygonal cells with small dark oval or round nuclei. In some areas acınar configuration was noted Many areas were composed of water-clear cells, other areas of oxyphilic cells The tissue was almost entirely free from stroma The capsule was thin The diagnosis was parathyroid adenoma.

Table 1 gives the laboratory reports, the pertinent clinical findings, and the treatment up to December 6, 1941, when the patient died in uremic coma

Case 3—(123476) (This case will be presented very briefly as it is being published elsewhere in

toto by Dr Jules Cohen, of the staff of the City Hos-pital.) The patient, P B, was a man, 23 years old, who had been suffering from renal lithinsis for two years. All x-rays were negative for bone changes. He had persistent hypercalcomia, averaging be-tween 14 and 16 mg., while the phosphorus ro-mained normal. There was evidence of hypercalciuma obtained from the Sulkowitz test. In the hospital he was predominantly a renal case. An adenoma of the parathyroid was removed later at another hospital.

It would seem that there were 3 recognized cases of adenoma of the parathyroid among appreximately 01,000 admissions to the City Hospital during that ten-year period They were all adults, 2 being women and 1 a man. The 2 women gave symptoms suggestive of hone pathelogy, whereas the man showed outstandingly a clinical case of renal lithiasis no inclination toward tetany in any of these cases except after the adenema was removed The state of the kidneys varied in each mer dence In the first there was a history of polyuma with noctura for some tune. There was a moderately low fixed specific gravity and the urine gave evidence of renal changes. There was, however, no protein retention in the blood Hypertension could be accountable for these findings Her intravenous pyelogram was nega tive and at no time during her stay was the nonprotein nitrogen raised. In the second case there was no history of renal disease and the entrance urine was negative. She was in the hospital over ten weeks before the first evidence of renal changes appeared On November 21, 19the blood phosphorus was reprize a Then on November 25 the nitrogen was found to be 82 mg zur 2 ... ine 34 mg On the next day 1 phorus was 8 04 mg and the warren 112 mg, with the urea nitroge -November 28 the nonprotein amg and the creatmine, 5 mg. nenprotein mitrogen, and crashigh until death. cium, parathyroid extract, and vitamin D given early carried her over the crisis This was folloned by normal calcium values Case 2 also went into a similar state on the fifth postoperative day It required very large doses of calcium, parathyroid extract, and vitamin D to make any improvement in the patient's tetany Unfortunately, this patient began some form of kidney failure five days before the operation, as shown by the blood phosphorus of 723 mg on that date The uremia progressed very fast, complicating the picture and finally bringing about death eleven days after the operation The treatment of the third case, outside of the parathyroid surgery, was concerned solely with The therapeutic response in the renal litluasis the first case was very satisfactory, in the second it was effective but of no practical value because of the rapidly progressive uremia, and in the third case it was of decided value

In the next group are 4 cases of bone cyst These are termed solitary cysts, as there is usually no other involvement in the body

Case 4—(91104) George D, a white boy of 10 years, entered the surgical service of Dr. Crossman because of injury to the left shoulder. X-rays on entrance showed a puthologic fracture of the surgical neck of the left humerus. The previous history was negative, as was the physical examination except for the shoulder.

The x-ray report stated that the cortex was expanded and thinned down and that multilocular cysts were present. The lesion gave the appearance of a giant-cell tumor involving the proximal end of the left humerus. At entrance the blood chemistry showed calcium, 119 mg, phosphorus, 65 mg, and phosphatase, 65. The urinalysis was reported as showing specific gravity, 1014, albumin, negative, and Bence-Jones protein, negative.

A curettage and biopsy was done and the pathologic report was of a bone cyst, giant-cell tumor of the bone On October 16, 1939, x-rays of the humerus gave no furthir evidence of hone changes On November 6, 1939, films exhibited satisfactory healing, and on November 24, 1939, the cysts had coalesced

Another biopsy was taken on November 6, 1939 The specimen consisted of an irregular connective-tissue stroma containing many fibroblasts and an occasional polymorphonuclear cell. Several irregular cystic areas were noted, containing red blood cells The diagnosis was osteitis fibrosa cystica. On December 3, 1939, the patient was discharged to the chinc

He returned to the hospital two years later for a few days because of an injury to his head. He had no further fractures and was apparently in good health in the interim. The kidneys seemed to be normal, as the only specimen tested showed a specific gravity of 1 030 and was otherwise negative.

Case 6—(94922) Marie C, a white girl of 16 years, was admitted to the surgical service of Dr Bancroft

on April 1, 1940 Her chief complaint was pain on motion in the upper part of the left humerus On March 29, 1940, she had fallen downstairs Otherwise the history was negative

The x-rays showed in the proximal one third of the shaft of the left humerus a marked thinning of the cortex, with expansion of the medullary portion, indicating a large solitary cyst. The cyst had thinned down the cortex sufficiently so that a frac-On April 4, 1940, x-rays of the pelvis, ture resulted sacrum, both the femora, the right scapula, and humerus with the outer two thirds of the right clavicle failed to show any evidence of pathology Films of the bones of both legs and the right foot The blood Wassermann test were also negative was negative, while the calcium was 10 3 mg, the phosphorus, 3 43 mg, the cholesterol, 143 mg, and the cholesterol esters, 80 mg

On April 15, 1940, the patient had a curettage of the bone cyst plus a bono graft. The greater portion of the tissue submitted for microscopic study consisted of cellular fibrosis, somewhat loose in character and with many hemorrhages. At the periphery were osteoid and osseous spioules separated by a less cellular fibrosis. The spicules were surrounded by numerous osteoblasts. The diagnosis was osteitis fibrosa. She was discharged on May 6, 1940.

Case 6—(86575) Victoria A was admitted to the surgical service of Dr I Kross on April 21, 1939 She was a white woman, aged 26, who had begun having pains in the right hip two months before admittance She was poorly nourished and presented little previous history

An entrance x-ray of the right hip joint revealed multiple cystic changes involving the head of the femur and the acetabulum. The lungs were normal. The blood calcium at that time was 11.1 mg. Further x-rays of the skull, long bones, and spine were negative.

She was operated upon on May 16, 1939, and cysts were found The pathologic specimen showed an area of dense connective tissue in irregular configuration and a small cellular area containing many blood cells The cells in the cellular area were spindle-shaped small fibroblasts. A single layer of these cells lined the cystic areas. The diagnosis was given as osteitis fibrosa cystica. On May 8, 1939, the calcium was 11 2 mg, the phosphorus, 2 94 mg, and the phosphatase, 2 4. She was discharged from the hospital on June 2, 1939.

She was readmitted on June 25, 1940, hecause the hip was giving her trouble. On June 25 she was operated on by Dr. Kross for the introduction of a vitallium cap. At the operation cysts were noted on the bone. She was discharged on August 4, 1940, much improved.

Case 7—(119906) S D, a white man, aged 21, was admitted to the surgical service of Dr Kross He had had pneumonia at 14 His physical examination was negative except for his jaw. His present illness had begun about seven months before admittance. There was a steadily growing swelling of the face under the left eye with loosening of the teeth.

On examination n large, firm growth was seen along the upper gum on the lateral margin of the left side. A blopsy was done in the outpatient department and the diagnosis was guant-cell tumor of the bone, opulis typo

He was operated upon on March 29, 1943 The pathologic report of the specimen from the operation was that the most prominent feature was the extraordinary number of giant cells iying in a moderately cellular fibrillary network. It was moderately vascularized. Abundant foci of hemosiderin were present. The diagnoss was epulis. He was discharged on April 7, 1943

The 4 cares of bone cyst have little to show that the parathyroid was at fault, yet because the bone pathology in each case was identical with the changes found in proved cases of idenoma of the parathyroid it is possible that some form of parathyroid dysfunction might have been present.

The next case was diagnosed in 1929, from the x-ray studies, as esteogenesis imperfects with many pathologic fractures and epilepsy Because the patient was under observation from 1929 to 1936, a period that preceded the advances in our knowledge of parathyroid dysfunction, we should come to our own conclusions from the evidence at hand

Case 8—(60695) Howard W was admitted to the neurologic service of Dr L. Vosburgh on December 13 1929, with n history of softening of the bones and fits He was normal until the age of 3 when he fractured n leg. Since then he has suffered twelve fractures. He had fits with aura and biting of the tongue.

He was a dwarfed boy with an enormous head and scoliosis. He was pigeon breasted and potbellied and there was anterior curving of the tibias. He was given an entrance diagnosis of dwarfism osteogenesis imperfects, and opilepsy

In the hospital he had several sensures. On December 21, 1929, x rays of the tibias and fibulas showed marked decalcification and deformity roentgenologist thought it was osteogenesis imporfeeta. On December 28 1929, x rays of the pelvis and lower extremities showed marked decalcifica-On February 21, 1931, an x-ray of the left humerus showed osteogenesis imperfecta. On April 11, 1931, the blood sorum contained 7 8 mg of calclum and 3.8 mg of phosphorus. On April 16, 1931, the volume of the urine passed was 5,904 cc. and the total calcium was 0 108 mg, and the phosphorus was 0 77 mg. On January 25 1932, the phosphorus of the blood was 8 mg. and the calcium, 13.5 mg. On July 31, 1926, x rays of the skull were negative for abnormal calcification and the solla turcica showed no changes. He was discharged to a paychonathic hospital on December 24, 1936

The following case has been classified as tetany due to calcium deficiency

Cass 9—(116745) Sophie A was admitted to the medical service of Dr D B. Likely on July 21, 1942 for swelling and pains in the joints. She had been pregnant alx times but miscarried in each case about the fourth month The present illness began about three weeks before admittance with swelling of the ankle, then the left shoulder the right shoulder, and finally the elbow She had a convulsion five weeks before entrance.

She was n white woman, 65 years old with a blood pressure of 170/80 On July 24, 1941, the Mussermann test was negative The blood calcium was 60 mg the uric acld, 2.8 mg and the non-protein nitrogen, 30 mg On July 24 1942, the patient had a fifteen-muste convulsion with spasms of the findal muscles then the arms, and finally the lower extremities. There was also carpopedal spasms.

On July 25, 1942 one ampule of calcium gluconate was given intravenously. On the next day the ampule of calcium gluconate was repeated and 20

grains of calcium lactate and 20 drops of viosterol were added by mouth three times a day. The calcium lactate and the viosterol were continued throughout her stay. On July 28, 1942, x-rays of the pelvis, spine, knees, and left shoulder showed spotty decalcification of the bone in the region of both knees and hips. On August 4, 1942, the blood calcium was 82 mg. On August 8 it was 86 mg. On August 25 the skull x-ray showed a moderate degree of hyperostosis frontalis. The sella was normal

The blood calcium was 9 2 mg on August 25 and the calcium lactate and the viosterol were cut. On August 28 the calcium was 9 2 mg and the phosphorus, 3 6 mg. On August 30 the calcium was 10 mg, the phosphorus, 4 1 mg, and the nonprotein nitrogen, 25 mg. On October 21 the calcium was 9 5 mg, the phosphorus, 4 1 mg, and the phosphatase, 2 1 mg. On October 25 the calcium was 10 mg. She was discharged on November 1, 1942, after signing a release. She had improved markedly since admission.

#### Summary and Conclusions

With 9 cases occurring in 91,000 admissions one could consider abnormalities of the parathyroid-calcium-phosphorus-vitamin D complex, exclusive of infantile rickets, a relatively rare state. As the decade covered in this study spans the years when much of our knowledge about this interrelationship was in the making, it is reasonable to assume that some cases were missed.

As to the types encountered, there were 7 cases in which the bone changes were outstanding, 1 case in which the kidney changes predominated. and 1 in which tetany was the most prominent clinical symptom Two of the 9 had complica-Case 2 developed nephritis after being ten weeks in the hospital and ended up in uremia which was typical of that seen in untreated cases of parathyroid adenoma ' Case 8 gave a history of epilepsy with frequent seizures before entrance but only "several" were recorded during the seven years he was in the City Hospital ing by the two blood calcium determinations reported his blood calcium was very labile, sometimes in hypocalcemic and sometimes in hypercalcemic ranges Such values give considerable weight to the belief that the seizures were not collepsy but hypocalcemic attacks

It will be noted that not even the 3 cases with proved adenoma gave any evidence of tumefaction of the neck from a physical examination

There were 3 cases with marked hypercalcemia (those with proved adenoma), 1 with mild hypercalcemia (119), 1 with high normal (11.2), 1 with both hypocalcemia and hypercalcemia, 1 with normal values, 1 with marked hypocalcemia, and 1 not taken Except for the second patient, who developed hyperphosphatemia and died in uremic coma, the blood phosphorus stayed within normal bounds. The phosphatase

reports were quite meager In cases 1 and 2, in which considerable tests were made, there was marked evidence of bone disorder

Removal of a parathyroid adenoma was successful in stabilizing the blood calcium in 3 cases In the second patient, the one who died of uremia, the kidney failure may well have been due to the excessive stimulation by the parathyroid adenoma, and might have been avoided or lessened by earlier removal of the tumor The first 2 patients developed tetany about the fifth postoperative day This is a commonly reported happening and leads to death unless active treatment is instituted Fortunately, large doses of calcium with parathyroid extract or large doses of vitamin D handle the situation It would seem a suitable procedure to fortify the patient shortly after the operation with adequate calcium and vitamin D

The 4 cases of bone cysts were successfully handled by local surgery The laboratory studies were incomplete, but those reported gave little evidence of a systemic calcium-phosphorus-phosphatase upset We may be criticized in introducing solitary bone cysts into this group, but as we have stated earlier, the pathology in the cyst is indentical with that found in the generalized form associated with hyperparathyroidism and thereby seems to us a related condition According to Geschieter and Copeland there seems to be a growing tendency to consider both giant-cell tumors of the bone and osterus fibrosa as pathologically related They brought out that in cases of multiple cysts in von Recklinghausen's disease associated with parathyroid adenoma, both giant-cell tumors and typical cysts may be found in the same patient, impressing one that the two lesions are different patterns of the same pathologic process

The eighth case in this series, with pathologic fractures, bone changes, and positive changes in the calcium levels of the blood, points strongly to a parathyroid adenoma and might have been better diagnosed with our present-day methods. The ninth case presents a rare type of spontaneous tetany in an elderly person with bone but no kidney changes. It could very well have been a lack of vitamin D, as it responded to the usual rickets treatment.

The Sulkewitz test for calcium in the urine was employed only once and that time gave evidence of hypercalciuma. While this test is crude and is influenced by the calcium in the diet, it can serve a useful purpose. The regular determination of calcium in the urine is beyond the average laboratory, and no case in this category should go without some estimation of the urinary calcium excretion.

Geschieter, C F, and Copeland, M M Am J Cancer, 1936

#### THE DIAGNOSIS OF LOEFFLER'S SYNDROME

Transient Lung Infiltration with Eosinophilia

ELVIN E GOTTDIENER, CAPT (MC), AUS, Poughkeepsie, New York

(From the Roentgenologic Service, Lovell General Hospital, Fort Devens, Massachusetts)

BETWEEN 1932 and 1936, Loefflert reported 51 cases of fleeting lung infiltration which occurred predominantly in the infraclavicular portions of the lungs, associated with a high blood cosmophilia. In no instance was there more subjectly o evidence of illness than a slight malaise or a slight nonproductive cough Sixty per cent had no fever, the remainder not over 99.5 F A few fine, crepitant rales were heard The blood count was slightly elevated, never above 14,000, with a high percentage of cosinophiles.

Loeffler considered this syndrome, which now hears his name, as a reaction of the body and the lungs in particular, to the products of the tuberele bacillus. It has also been seen in cases of infestation with Entameba histolytica, Ascaris, and the trematodes. Engel' has reported 85 cases of transient lung infiltration with cosmophilia which he felt were due to the pollen of the

privet plant

Roentgenologically considered, five main types of shadows have been described. These may be (1) extensive, irregular shadows of varying den sity and homogeneity, (2) uodular shadows, (3) multiple cystic shadows, (4) dense homogeneous shadows of lobar distribution, and (5) small in filtrations resembling the secondary tuberculous infiltrates

These shadows may be discrete or confluent, sharply or poorly defined, small or large often a single lesion, it is not unusual to find multiple and bilateral infiltrations Poculiarly, these infiltrations may come in crops, disappearing entirely, only to reappear in another area. Recurrences are frequent, often preferring the original area. The roentgenologic findings last from three to eight days, occasionally perasting for three weeks. When the infiltration subsides, it usually does so completely, although a fine, strand like shadow amulating a scar may persist. Hennell and Susman' state that a fine, oblique, plate-like shadow, which may be bilateral, is characteristic of these infiltrations and should suggest the correct diagnosis. This has not been seen in our cases. The infiltrations have been of a patchy, fairly dense type, radiating from the hilum, or a slight, interlacing, strand-like shadow similar to that seen in the reinfection phase of tuberculosis of questionable activity, or in atypical pneumonia. The common occurrence of atypical pneumonia makes it one of the first conditions to be considered in the reentgenelogic diagnosis of this type of lung lesion

Pleural effusion has been described most often in Loeffler's syndrome as a small, rapidly alsorbed, basal collection of fluid. The massive, and frequently bilateral, effusions associated with extensive infiltrations are seldom seen in the simple form of the disease. They are associated with the widespread form of vascular allergy with polyserositis, in which the cosmophilic lung lnfiltrations are but one phase of the process

The differential diagnosis of these infiltrations by roentgenologic means is not always possible. A good history is invaluable. Knowledge of long-standing allergy, especially manifested by asthma, but also by hay fever, urticama, eczema, and other evidences of a hypersensitive state, is sometimes extremely helpful Such information is often the lead that one requires to indicate that the pulmonary infiltration may be a mani-

festation of Loeffler's syndrome.

When the infiltration is in the upper third of the lung, particularly when it assumes a fan-like appearance, it is not always possible to differen tiate it from pulmonary tuberculosis Additional evidence of old infiltration or calcuffication characteristic of tuberculosis will influence the diag nosis. However, Loeffler's syndrome may occur in the presence of active or inactive tuberculosis Indeed, in Loeffler's series, some of his cases had active tuberculosis. Fortunately, the disappearance of the lesion within a week may establish the true nature of the process Roentgenographic evidence of persisting or spreading infiltration or the suggestion of cavitation favors the diagnosis of tuberculosis. Clinically, eosmophilm and a persistently negative sputum are significant.

In differentiating the roentgenologic findings in this syndrome from those in pneumonia, the problem is somewhat different. The homogeneous, dense, lobar type of infiltration may suggest a specific pneumonia, and there is little in the rocatgenogram to rule it out. The presence of an accompanying pleural cifusion is only more confusing Here the history is of paramount importance The usually acute, febrile onset of oneumonia, with its productive cough, definite illness, and well marked physical findings should be conclusive. Patients with Löeffler's syndrome are generally in good health. In the atypical pneumonias of probable virus origin, however, the infiltration is so varied, the symptoms often so slight, that even a history may be misleading. There is usually, however, a lack of homogeneity to the shadow in atypical pneumonia that may aid in its differentiation from that of Loeffler's pneumonia. It may subside more slowly. At some time during the course of the illness, fever is noted. The shadow does not disappear suddenly, but fades out gradually, with many interlacing strands, giving what has been aptly described as a "wire-hair" appearance. There is also an absence of the characteristic eosinophilia.

A small pulmonary infarct may show an ill-defined infiltration near the base of one lung, frequently with a small pleural exudate. A more extensive infarct with a pleural effusion may cause a shadow similar to that of eosinophilic lung infiltration. Here again, on first examination, it is very helpful to know that the patient has expectorated blood, or has a thrombosis of the pelvic or femoral veins. As the larger infarct heals it tends to leave a nodular shadow near the pleural surface. A small infarct may heal by leaving a dense, linear shadow which reaches to the pleura, and retracts its surface.

The syndrome of transient pulmonary infiltration with eosinophilia is now considered to be a manifestation of the allergic state 2,5-7 has been observed most frequently in asthmatics, particularly children Supposedly, the lung becomes sensitized or hyperergic, and responds to antigenic stimulation by pulmonary infiltration The presence of eosinophilia is further evidence of an allergic background The mechanism producing the infiltration has been interpreted as "allergic edema," similar to urticaria, only involving the alveoli Loeffler considered it as an internal tuberculid in a person previously sensi-Tuberculin may act as an tized to tuberculin antigen in sensitized lungs, and since most of Loeffler's work was in tuberculous individuals, it may explain why many of the pulmonary infiltrates he described were like those of reinfection tuberculosis They probably represent one type of allergic tissue reaction In asthmatics. however, the reaction may be more extensive, the symptoms more severe, and, as will be indicated later, the outcome may be grave Others 8 have considered the infiltration in the lung to be due to atelectasis, or to a selective reaction of the interstitual tissues, but these hypotheses have not been supported by the pathologic findings

Since the simple form of this syndrome is benign, pathologic reports are few. Von Meyenburg<sup>9</sup> performed autopsies on 4 patients with Loeffler's syndrome. Three were accidental deaths, while the fourth died of tetanus. He found a pneumonic type of exudate in the alveoli,

both lymphocytic and granulocytic, with large numbers of eosinophiles in the alveoli, interstitual tissues, and sputum The pleura showed inflammatory changes

The most recent contribution to elucidate the pathogenesis of eosinophilic lung infiltration has been the work on vascular allergy by Harkavy 6,7 It is a thoroughly comprehensive study of sixteen asthmatics with chronically infected sinuses, four of whom died from the course of the disease He showed that the underlying process is a hyperergic response of the blood vessels and mesodermal tissues to an antigen, such as bacteria, toxin, or virus, in an allergic individual patients showed, in addition to the cardinal symptoms of asthma, typical allergic reactions in the skin, pleura, pericardium, peritoneum, synovia of the joints, and bone marrow eosinophilia was noted in the blood and serous Biopsy in the severe, nonfatal cases exudates showed changes in the blood vessels varying from intimal thickening to necrotizing arteritis, with perivascular eosinophilic infiltration, almost indistinguishable from periarteritis nodosa least one patient, who also developed polyneuritis, periartentis nodosa was definitely pres-The changes in the lungs were those of edema of the interalveolar tissues, eosinophilic infiltration in and about the alveoli and the walls of the bronchioles In the severe cases, infarction due to thrombosis of small arteries was found

Harkavy points out that, in the nonatopic individual, such hypersensitiveness, as manifested by fleeting lung infiltration with eosinophiha, may represent allergic reaction to fundamental infection. It may explain the appearance of this syndrome in 14 out of 580 cases of tuberculosis in Loeffler's series

The work of Harkavy brings out a point of prognostic importance. In asthma due to the usual allergens, the complication of a bacterial hyperergy may cause a disease much less benigh than that usually associated with Loeffler's syndrome. The presence of transient lung infiltration with eosinophilia in such cases may be a warning of a generalized vascular allergy with panarteritis as an eventual outcome. This new significance of what was formerly considered to be an interesting, if not too important, reaction is self-evident. Remedial measures directed at sources of infection, particularly chronically diseased sinuses, become important.

Since the mild form of this syndrome is the most frequently encountered and is the type that will give the greatest difficulty in differential diagnosis, 2 fairly typical cases are reported

#### Case Reports

Case 1—A white man, aged 21, had suffered from asthma since he was 7 years of age He gave no

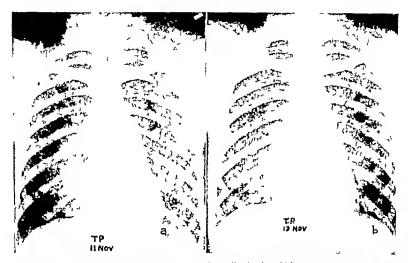

Fig. 1A. There is a dense infiltration along the right cardiac border which closely simulates that seen in atypical pneumonia. B. The infiltration has almost completely subsided two days later

history of hay fever, urtlearia, or akin diseases. During his first year in the Army he managed fairly well, but after six months of overesas training be experienced a return of his asthma, which was reheved by ephedrine. During hospitalization overseas he had an elevation of temperature to 100 6 F for twenty four hours, with some wheezing and coughing Physical examination disclosed a few noisy rhonchi in both lungs. Roentgenographic examination of the chest showed a dense infiltration in the retrocardiac portion of the left lower lobe Laboratory study showed a white blood count of 10,000 75 per cent polymorphonuciear leukocytes with 11 per cent cosinophiles Sedimentation rate was 26 mm in one hour subsiding to 10 mm, in one hour after five days. The infiltration noted reentgenographically subsided in six days

On return to the United States he was studied at Lovell General Hospital. No definite allergens were found. He had frequent sore throats, which were attributed to some necrotic areas in a large left tonsillar tab. This was treated by local measures without surgery. No other foci of infection could be found. He again showed a slight fover this time of 100 4 F, for twenty four hours. No definite Physical findings were elucited. Reenigenographic emmination disclosed a dense infiltration extending from the right hilum to the medial portion of the base of the right lung (Fig. 1B). The white blood count was 0 350 with 8 per cent cosinophiles. The sedimentation rate, which was normal on admission

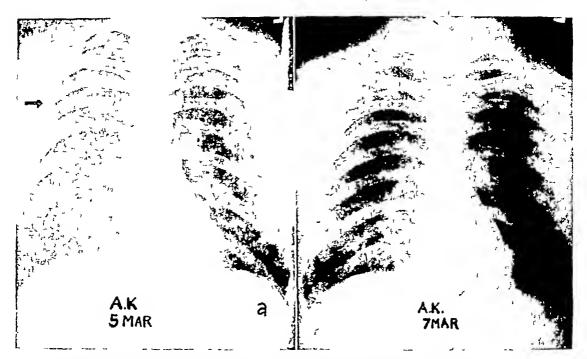

was not taken at this time.

#### Comment

The roentgenographic appearance simulates closely that seen in atypical pneumonia of probable virus origin. The infiltration is fairly homogeneous and follows the bronchovascular distribution to the right lower lobe. However, the history of asthma and rapid disappearance of the shadow makes the diagnosus of Loeffler's syndrome evident. The recurrence in the opposite lung is characteristic. The fact that no definite allergens were found, but that a focus of infection was present, would indicate in the light of recent work, that such a patient bears further study as he becomes older. A generalized vascular allergy may well develop in such a background.

Case 2 A white man, aged 24 had asthma since he reached 16 years of age and hay fever for the past several years. His asthma was most severe at night, but had not been disabling in recent years until he again experienced asthmatic episodes during combat in the Normandy campaign. Ho was heapitalized and then returned to the United States.

On admission to this hospital his history also disclosed that his mother had asthma. Physical findings were wheezing and squeaking rales in both lungs. No fact of infection were found Hose showed a marked sensitivity to dust and to cast and dog epithelia. There was a mild reaction to rag weed and moids. Roontgenographic examination on admission showed a normal chest. About a

There is a fine infiltration in the right second anterior interspace (black arrow) which could easily be considered to be due to a tuberculous infiltrate B Within two days, however, it had completely disappeared

month and a half later, he had an attack of wheezing which required adrenalin for relief Some fine rales were heard in the right lung, but his temperature remained normal. Roentgenographic examination (Fig 2A) showed a small infiltration in the right upper lobe at the level of the second anterior interspace, which subsided in two days (Fig 2B) blood count showed 11,300 white cells with S per cent eosinophiles Sedimentation rate was normal The tuberculin skin test was negative There was no recurrence of the lung infiltration

#### Comment

This case represents the problem of distinguishing Loeffler's syndrome from a tuberculous infiltrate The appearance could easily be considered to be due to an active tuberculous lesion The history suggested the possibility of Loeffler's syndrome, and the course of the illness confirmed it

#### Summary

Loeffler's syndrome of transient lung infiltration with eosinophilia is commonly associated with allergic individuals, especially asthmatics It may also be evidence of a bacterial hyperergic.

state, as in tuberculosis or other chronic infec-Roentgenologically, it offers a problem in differential diagnosis from the commonly seen lung lesions, particularly tuberculosis, virus pneumonia, and pulmonary infarct The history of an allergic state is of distinct value in correctly interpreting the underlying pathologic process as revealed by a rather variable shadow in the roentgenogram

Prognostically, it should be appreciated that, in certain individuals, the syndrome may not be an indication of benign allergy, but evidence of a generalized vascular allergy which may show irreversible changes leading to panarteritis and polyserositis

#### INHIBITION OF DENTAL CARIES BY INGESTION OF FLUORIDE-VITAMIN TABLETS

LYON P STREAM, Ph D , D D S , F A P H A , New York City, and JEAN P BEAUDET, M D , Three Rivers, Quebec

R EPORTS by Dean' and Dean, et al, have shown that the incidence of dental caries in communities supplied by fluorine-containing water was significantly lower than that of neighboring populations with fluorine-free water supplies.

Studies of a similar naturo 44 have supported

tids view

Tho mechanism of caries inhibition by drinking flaorine-containing water is not ontirely clear It is the purpose of this communication to present the results of some clinical studies with a view to shedding more light on this intricate

problem

It is a known fact that children suffering from nckets do not recover by the increased intake of calcium and phosphorus alone Apparently vitamin D is a necessary adjunct. Also in the bealing process of bono fractures vitainins C and D in the presence of an increased intake of calcium and phosphorus bring about a more rapid formation of callus than in the absence of these vitamins.

In view of these facts it appeared important to institute a controlled study to determine whether fluorine alone was responsible for carres inhibition or whether certain vitamins were also

necessary in the mechanism

In a clinical trial of this nature, it is important to select children of a definite age group, kept under similar conditions of diet, housed preferably in the same home, and each child having at least three cavities per mouth as judged by the

Accordingly an orphanage was selected in Three Rivers, Quebec, which is supervised by the Provincial health authorities and maintains physicians and dentists to look after medical and dental needs. In this study 171 children be-These tween the ages of 8 and 13 were selected were divided into three groups of 57 each. The sexes were divided equally for each group expenence lasted for an months and the study was limited to permanent teeth Two types of tablets were prepared

A yellow tablet containing 8 mg of calcum fluoride, 30 mg of ascorbic acid, and 400 units of vitamin D as calciferol

2 A white tablet containing only 3 mg of calcium fluoride

Group A received the yellow tahlet, one per day, which was chowed and swallowed, group B received the white tablet Group C served as the control and did not receive any tablets

The results were as shown in Table 1

On the basis of this experience it will be observed that ordinarily one might expect a 40 per cent increase in the number of cavities in the untreated group When calcium fluoride was given to a similar group the increase in carles was reduced to 27 per cent and when vitamins C and D were combined with the tablet the incidence was reduced further to 24 per cent

It would appear that the determining factor was the calcium fluoride However, it was learned sometime after the experiment was completed that all children received a daily ration of cod-liver oil throughout the experiment. This might explain in part the similarity in caries in-

hibition between groups A and B

A second clinical trial was luitiated in the same territory, but only sixty children could be studied in this institution because only this number could be found between the ages of 8 and 13 having on the average three cavities per mouth. The housing conditions, diet, etc., were similar to those in the previous experiment. In view of the smaller number of children only two groups were studied, that is, thirty children were given one yellow tablet per day and the other group of thirty served as controls and did not receive any tablets at all. This experience lasted for eight months The results were as shown in Table 2

It will be observed that in this institution the untreated children had about twice as many cavities at the end of the experiment as at the beginning, an increase of 95 per cent as compared to 40 per cent in the previous experiment. Even though this experiment ran two months longer than the previous one, a proportionately higher increase in incidence of caries in the treated group might be expected. This was not the The increase dropped to 10 per cent as compared to 25 per cent in the first experiment.

In addition to these two clinical trials, tablets were given to a number of dentists who were to distribute them to selected nationts, that is, to boys or girls between the ages of 8 and 16 in families of two, four, six, or eight children where only half of the members in each family were treated and the other half served as controls The living conditions were uniform for each family but naturally varied from house to house.

Some dentists were given only white tablets,

that is, only calcium fluoride, while the others got the yellow, that is, fluoride-vitamin combination The results were as shown in Table 3

TABLE 3

Group Children Color A 68 Yellow B 73 White C 140	No of Cavities Before Experi- ment 198 207 453	No of Cavities After Eight Months 224 279 748	Inc No 26 72 295	rease Per cent 13 35 65	•
---	---	--	------------------------------	--	---

In this group not all children received supplementary cod-liver oil and therefore a significant difference was observed between the three different groups, particularly between groups A and B

A consolidated table on the three experiments presents the figure in Table 4

#### Discussion

Children between the ages of 8 and 16 not receiving fluorine in their water or food may expect on the average an increase of 40-65 per cent in the incidence of dental caries Fluorine alone in a concentration of 10 parts per million in the water or 3 mg of calcium fluoride in tablet form will show a decrease in the incidence of caries Whether this decrease is due to fluorine alone or whether the treated children were not deficient in vitamins C and D is not clear However. when these vitamins are added (equivalent to the daily requirement) to the optimal amount of fluorine (as calcium fluoride) a significant reduction is noted These results might be explained on the basis of synergism

No toxic effects were noted in any of the treated children, nor, as expected, did mottling of enamel follow the use of either the white or yellow tablets The ingestion of fluorine in concentrations over 18 parts per million does not cause mottling

of the erupted tooth but may do so when high voncentrations are taken in the formative stage of tooth development 6

In 1914 Gautier<sup>7</sup> suggested that fluorine existed in the teeth in the chemical form of "apatite" The fluorapatite molecule is composed of calcium and phosphorus with a fluorine link. This idea has been furthered by McClendon, who observed that dental enamel was harder than simple calcium phosphate

If in bone formation vitamins C and D are required for the proper laying down of calcium phosphate, it is quite conceivable that the same vitamins are necessary for the laying down of fluorapatite. This view is apparently supported by the results of the clinical trials. In those areas where fluorine is found in the water supply no distinction was made between those children who may have been deficient in vitamins C and D and those who were not. Living in areas where citrus fruits and sunshine are abundant would easily satisfy this need.

Fluorapatite can be laid down as such in teeth in the developmental stage of tooth formation. Thus, after eruption such teeth would apparently be relatively immune to caries. If fluorine and vitamins are taken after the enamel has been completely formed and the tooth erupted, it is quite conceivable that fluorapatite may be adsorbed on the surface of the enamel of teeth, due to its presence in the saliva following chewing and ingestion of the tablets.

Studies of Machle and his coworkers show that 90 per cent of ingested fluorides are excreted in the urine Lansbury points out that fluoride may also be excreted by the bowel, and through perspiration. However, some is excreted in the saliva, the teeth are bathed in this fluorapatite-containing saliva, and the latter is swallowed. This mechanism repeats itself throughout the day. In a period of six to eight months, it is

possible that sufficient fluorapatite is adsorbed on the tooth surfaces to inhibit dental caries

It was also noted that teeth sensitive at the gum margin were rendered insensitive to heat and cold several months after treatment with the vitamin fluorido tablet.

Jay<sup>11</sup> has pointed out the rednoton in numerical count of lactobacilli following fluorine ingestion. It is also known that fluorine is ensyme inhibitor, consequently the concentration of lactic acid in the mouth would be markedly reduced Bibby<sup>12</sup> and Knutson and Armstrong<sup>13</sup> have shown a reduction in caries rate following topical application of high concentrations of sodium fluoride.

Apparently caries in teeth can be controlled by various means. In this communication a practical approach to the problem is presented. Fluorinstion of water supplies is not entirely satisfactory, since some children drink one glass of water per day and others six or more. The fluorine would also be found in the cooked foods, such as milk, fruit, and vegetables. Control of fluorine intake is very difficult by this means.

However, with the use of the tablet the daily requirement of vitamins C and D combined with optimal concentrations of fluoride are satisfied

and controlled

If these tablets are dispensed in containers of thirty, there is no fear of toxic effects because 90 grains mg. of calcium fluoride, even if taken at one time, will not impair the life of the child

"Cumulative effect of fluoride has not been noted, since 90 per cent of the material is excreted in the unne. It has been noted that workers in cryclite factories continue to excrete fluorine after transfer to other industries

#### Summary

1 The suggestion is offered that there are other factors apart from fluorine ingestion which aid in the prevention of dental caries

2 These other factors may be vitamins C

and D, acting synergistically with fluorine.

3 Fluorapatite may be adsorbed on the surfaces of tooth enamel and is resistant to bacterial decomposition and lactic-acid digestion

4 Fluorination of water is not very practical, since the water intake varies with individuals.

5 Fluorine combined with vitamins C and D in the form of a tablet or loxenge offers a means which controls the amount of fluorine to be ingested.

#### MECHANICAL HEAD USED TO TEST OVIGEN MARKS

A mechanical bead that breathes and can smoke, a practical device for testing oxygen masks and heated coverings for use at the extreme low temper atures encountered by airplane crows at high altitudes was displayed to a selected group of scientists in New York by the General Electric Company, in whose laboratories at Bridgeport, Connecticut, it was constructed.

This mechanical device has recently been placed in use by the Army Air Technical Service Command at Wright Field, Ohio, where the idea was developed

and specifications prepared.

The mechanical head resembles the buman head in size and shape. A rigid skull of wood maintains the contour of the face, while a layer of "fiesh" made of synthetic rubber spongo simulates the resillency of the human tissues so that the mask fits closely Heating wires are laid on the sponge tissue, and over this is placed a synthetic rubber akin. When electrically heated it simulates the thermal proper ties of the human face. Breathing is simulated by electrically controlled artificial lungs.

When used in testing, the breathing head, equipped with an oxygen mask is placed in a chamber with a temperature as low as 60 degrees below zero Fahrenheit, if desired, and is operated by genote control from an instrument board in a comfortable room. It roplaces human beings formerly used, who often suffered discomfort and danger from the extreme cold. Also it permits testing under conditions much more severe than is possible with humans.—Science News Letter June 10, 1045

### RESULTS IN THE TREATMENT OF SKIN CANCER

LEONARD B GOLDMAN, M D, Jackson Heights, New York

(From the Radiation Therapy Department, Queens General Hospital, Jamaica)

NO OTHER malignant growth responds so favorably to treatment as does skin carcinoma. In most instances permanent arrest of the disease can readily be effected with either irradiation, electrocoagulation, or surgery. Advocates of the various methods claim superiority for one over the others. However, each method has its advantages and its choice often depends upon the technical ability of its employer.

#### Diagnosis

Clinically, skin carcinomas can be divided into two groups (1) the more common basal cell, and (2) the more lethal squamous cell These two varieties may frequently be differentiated on the basis of their macroscopic morphology majority of basal-cell carcinomas are slow growing, superficially ulcerated, relatively soft, and frequently crusted Ewing<sup>1</sup> describes them as lesions whose edges are raised, nodular, indurated, pearly, and constantly hyperemic Squamouscell carcinomas display a more rapid growth, are firmer, more infiltrating, and often are hornified While both types may invade adjacent tissue. basal-cell carcinomas almost never metastasize. whereas squamous-cell carcinomas are not uncommonly associated with regional adenopathy. especially in those cases in which the primary lesion occurs on the extremities Basal-cell carcinomas are found most frequently about the head, especially on the forehead, nasolabial folds. inner canthi, eyelids, and cheeks, less commonly above the hairline or below the neck, and rarely on the extremities Squamous-cell carcinomas are noticed primarily on the mucocutaneous junctions, ears, and extremities

It is important to stress that any ulceration of the skin which persists for more than two weeks should be considered carcinoma until proved otherwise. This proof can be obtained only by biopsy. There is no contraindication to performing biopsy on an ulcerated lesion. The specimen should be taken from the edge of the lesion and need be no larger than 2 to 3 mm. in size.

All skin carcinomas, however, are not represented by ulcerations. A relatively common form of basal-cell carcinoma is the smooth, pale, pearly nodule covered with fine telangiectatic vessels. The counterpart of this lesion in squamous-cell carcinoma is the irregular, exuberant growth

Many basal-cell carcinomas arising from preexisting keratoses appear as superficial ulcerations covered with a crust and not infrequently have a history of renewed growth following trauma

#### Treatment

In the treatment of skin cancer about the face, irradiation is the method of choice. The reasons for its preference are a better cosmetic result, simplicity of application, painless procedure, no incapacity while under treatment, and permanent arrest of the disease. We have obtained almost 100 per cent five-year cures in a total of 267 cases treated from 1936 to 1945 at the Radiation Therapy Department of Queens General Hospital

It is important in irradiation of skin carcinoma that a cancericidal dose be given in the first attempt at therapy, preferably at a single sitting. The divided-dose method of therapy; or protracted radiation may be used in large lesions when the dosage cannot be accurately established at the initial treatment.

There is little difference in the therapeutic result when either radium or roentgen rays are employed. However, with the application of radium a smoother scar is obtained, since there is a shading off of the rays about the lesion, while with roentgen therapy, when the lesion is carefully screened there is an abrupt edge to the irradiated field. In nonambulatory patients, where the modality must be brought to the patient, radium is found to be the only method of treatment.

Radium —Radium or radon may be employed in various applicators

- 1 Radon glass bulbs or seeds
- 2 Radon gold seeds
- 3 Radium or radon tubes
- 4 Radium or radon in molds

Glass radon bulbs, 5 mm in size, or glass radon seeds, 10 mm in length, varying in strength from 10 to 200 millicuries, may be used in the treatment of precursor lesions and small, superficial basal-cell carcinomas. These applicators should be applied directly to the lesion and held in place for three to thirty minutes until a dosage of 300 to 600 millicurie minutes has been administered, depending upon the size and extent of the lesion With this type of applicator it is the caustic beta rays which are responsible for the lethal effect

Gold radon seeds may be applied directly on a lesion with collodion or inserted into its depths. The seeds are advantageously used in small lesions (1 cm or less) on an irregular surface. In a flat lesion (1 cm square) four gold seeds, 1 milli-

Fig. 2. Case 2. A. Woman, 69 admitted on June 17 1937, with an irregular infiltrating ulceration, 2½, by 3½, cm. destroying the inner canthus of the right eye and involving both eyelids. Histology basal-cell cardinoma. Therapy with an eye-shield placed beneath the cyclids 3,500 r of unfiltered radiation administered at one sitting, using 100 kilovolts.

B No evidence of local disease when last seen in May 1945.

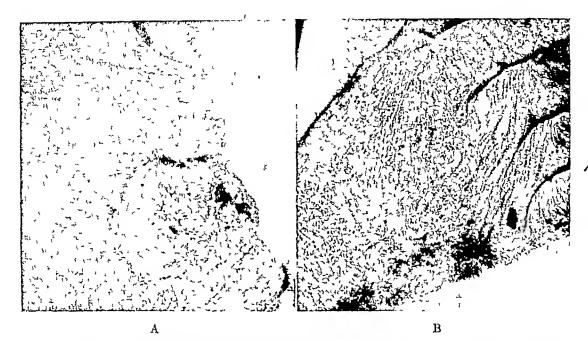

Fig 3 Case 3 A. Man, 82, admitted on November 16, 1938, with a 4 by 7 by 1 cm advanced carcinoma of the skin of the right hand Histology squamous-cell carcinoma Therapy 800 r daily for a dosage of 4,000 r, then 400 r daily for a total dosage of 8,450 r Factors 100 kilovolts, 25 cm focal skin distance, no filtration

On January 15, 1939, seven gold seeds, each 1 millicuric, were inserted under the raised keratotic border for a dosage of 910 millicuric hours

Lesion healed, July, 1945

curie each, may be placed with collodion equidistant about the growing edges of the lesion and remain until 2 3 millicuries have been destroyed, approximately 300 millicure hours In addıtion, the distribution of the radiant energy is more homogeneous in such an arrangement interstitial therapy is utilized, the eradication of a lesion 0.5 cm in diameter may be accomplished by the insertion into the depths of the tumor of one gold seed of 2 millicuries, while a lesion measuring 15 cm warrants the insertion of three gold seeds having a total value of 5 millicuries

A third method of applying radium is in the form of lead or platinum tubes placed directly on the lesson and held in position with adhesive The dosage varies from 150 to 300 milligram hours per square cm If the lesion is bulky (over 5 mm), it is advisable to use radium at 1 cm dis-This is accomplished by applying the tubes over a mold of dental compound distance of 1 cm, using 1 mm platinum filtration, about 1,500 milligram hours are required for a lethal effect If infiltration is marked or there 18 beginning adherence to cartilage or bone, a dosage of approximately 2,000 milligram hours is indicated

X-Ray Therapy—The roentgen ray may be utilized in much the same fashion as radium If a caustic type of radiant energy is desired for superficial lesions, direct contact therapy (Chaul) or unfiltered radiation of 100 kilovoltage may be employed If one follows the principle of using the maximum lethal amount of irradiation that is just compatible with healing, the greatest number of permanent arrests can be effected dosage is accepted to be approximately 4,000 r units delivered at one sitting. The treatment portal should correspond closely to the area of disease and should be blocked off accurately with It is in the bulky forms of lead rubber or foil skin cancer that roentgen rays take a preeminent place In this type of lesion a higher voltage (120 to 140 kilovoltage) and a heavier filtration (2 to 4 mm aluminum) are utilized The dosage when given in a fractionated manner may exceed 5,000 r

Low-voltage therapy is most effective in treating lesions on and about the eyelids After the eyeball has been anesthetized a lead shield is placed beneath the eyelids The skin adjacent to the carcinoma is carefully protected with lead foil and the x-ray beam centered so that it will converge on the lesion and yet be directed away If the above precautions from both eycballs are observed, a dose varying from 3,500 to 4,000 r may be given with safety. With careful screening of the radiant beam, x-ray has a marked advantage over radium when little protection can be offered to sensitive adjacent structures protection egainst gamma-ray activity heavy, impractical thicknesses of lead ere necessary, while with low-voltage therapy lead foil, 0 5 mm thick, absorbs the x-ray beam

Electrocoagulation —If radium or roentgen therapy is not available, small superficial carcnomas can easily be destroyed with electro-The practice of inadequete fulguracoagulation tion followed by sublethal doses of irradiation is often productive of residual or recurrent disease Therefore, it is advisable not to combine two sublethal remedies with the assumption that complete disappearance of the disease may thus be effected. If a lesion is completely destroyed by fulguration, the addition of radiation offers no benefits, producing only a depressed scar

Another important role of electrocoagulation is in the treatment of recurrences following irradiation In these postradiation recurrences, the tumor bed is evascular so that further therapy with radium or x ray is usually not beneficial

Surgical Procedure —Use of the cold knufo is limited mainly to carcinomas of the extremities, due to the notoriously radioresistant character-These lessons are usually bucs of these tumors low-grado squamous-cell carcinomas and may be covered with thick cormined surfaces. The incidence of regional nodal involvement is relatively high and in selected cases meticulous regional block dissection is advisable. In this connection Pack and Livingston's state "The decision to be made concerning prophylactic dissection of regional lymph nodes when there is no clinical evidence of their involvement must be influenced by the fact that 24 per cent of the patients admitted with endermoid carcinomas of the hands and feet and without palpable lymph nodes in axilla and groin subsequently developed nodal motastases while under observation " We have found irradiation to these regional sites to be of dnbious value, but if given at all, it must be continued until a sharp epidermitis appears

Another indication for the use of the scalpel is in cases of postradiation ulceration which have failed to beal under conservative measures there is any doubt as to the entire removal of the local disease, plastic repair should be delayed for nt least ax months lest recurrence occur

#### Summary

 The two varieties of skin cancer, basal and squamous, are presented bere with illustrations before and after treatment.

Any akin ulceration, small as it may be, if persistent, should be suspected of malignancy unless repeated biopsies are negative.

Three methods of treatment, irradiation, electrocoagulation, and surgery, are utilized in skin cancer The results, however, depend not so much upon the choice of a modality as upon its proper use

The common skin lessons should be treated with irradiation rather than with surgery or electrocoagulation.

5 Surgery is indicated in skin carcinomas of the extremitles, with special advantage in ulcerations that do not beal under ordinary care.

#### CHEMICAL FROM MUSHROOMS FOR TREATING POISON IVY

A chemical from mushrooms may in future be-come a remedy for ivy poisoning, Prof Irwin W Siser and Clemens E. Prokesch, of Massachusetts

Institute of Technology, report in Science

The chemical is tyresinare, an ensyme found not only in mushrooms but in other plant and animal tissues. It is the one responsible for darkening of, potatoes and bananas when left exposed to air

One of the better methods of treating skin poison ivy, the scientists point out involves oxidation of the poison with strong oxidants such as for poison with strong oxidants such as ferric chloride and potassium permanganate. Believing that the same results might be obtained with innocuous agents such as enzymes, the scientists tested the effects of tyrosinase

In four of their numerous experiments they put poison ivy plus tyrosinase on the skin of human volunteers for four hours. Another part of the skin was treated in the same way except that the tyrosin ase had first been innetivated by boiling. The area treated with the active ensyme showed much less skin irritation than the control area treated with the inactivated tyrosinase.

"If successful results can be obtained in the future by applying the enzyme some time after the toxicant (poison iv; irritant) has reacted with the akm even after crythems has been produced, the scientists state, 'then a new method of treating poison ivy dermatitis will be available."—Science News Letter, May 26, 1945

### REITER'S DISEASE—REPORT OF A CASE SUCCESSFULLY TREATED

ABRAHAM STRACHSTEIN, MD, New York City

R EITER, in 1916, described a rare syndrome here-tofore unrecognized. This disease, now bearing his name, always manifests itself by an ever-constant triad of symptoms—urethritis, conjunctivitis, and arthritis—Since then there have been reported in the literature about 60 cases

The cause of this disease is as yet not clearly understood Reiter was of the opinion that the causative factor is the Spirochaeta forans, which he claimed to have found in the blood. However, no other investigators were ever able to duplicate his findings

It is a self-limited disease which usually persists from one to five months and in some instances longer. It is found to affect most frequently young men in military service, but men in civilian life are by no means exempt. Besides the symptom triad mentioned above, there is also a persistent low-grade fever uninfluenced by drugs, as well as persistent night sweats.

The urethritis may be the first symptom to appear It is manifested by a purulent discharge which clinically may resemble a Neisserian infection. However, neither repeated microscopic examinations nor cultures ever reveal the presence of any micro-organisms. The urethritis bears no relation to any sexual exposures. This may be further complicated by other lesions, such as periurethral ulcerations, prostatitis, prostatic abscess, cystitis, and vesiculitis. It occasionally produces renal infections of considerable severity.

The conjunctivitis, which may also be purulent in nature, may at times be the first symptom to appear. The smears and cultures from the conjunctivae reveal no different findings than those obtained from the urethra. Complications, such as intis and keratitis, have been reported. The conjunctivitis may gradually subside in a few days or weeks, but may recur later.

The most annoying and troublesome symptom of the triad is the arthritis. In some instances only one joint may become involved, but polyarthritis is not at all uncommon. It is often migratory and extremely painful so that the patient becomes bedridden

The arthritic symptoms persist for a period of one to five months. Remissions and exacerbations may occur. Although no permanent injuries to the joints is the rule, a few cases of permanent joint disability have been reported.

There is moderate leukocytosis, ranging from 10,000 to 20,000 white blood cells. A rapid sedimentation rate is present. Urine and blood cultures reveal no growth.

#### Treatment

Reiter originally used aspirin and neonrsphenamine in moderate doses, to combat the S forans which he cultured from the blood of his patient However, the arsenicals have not proved effective in his hands or in the hands of other investigators. Bauer and Engelman<sup>3</sup> used sulfamilamide in their

cases, but without effect Colby found penicilin and the sulfa drugs to be of no use

The following case, which was successfully treated by us, is herewith reported

#### Case Report

I M, a 38-year-old white married man, came under my observation. After uneventful treatment by his family physician, the patient was admitted to the Wickersham Hospital (No 22368) on December 12, 1944. His chief complaints were urethral discharge, painfully inflamed joints, and conjunctivities

Past History—The patient had had a specific urethritis fifteen years ago which had been successfully treated without any complications. The present illness began on December 1, 1944, twelve days prior to the admission to the hospital. At that time he suffered from a profuse urethral discharge, he had no dysuria. He denied any extramantal exposure. He was treated by his family physician with sulfa drugs and penicillin without any beneficial effects. When referred to us, the picture had not altered much. He still showed the presence of the urethral discharge. Repeated smears failed to reveal any gonococci. He was given 4 Gm of sulfadiazine daily without affecting the discharge in the least. Two days later he complained of pain and swelling in the metatarsophalangeal joints of the right foot. This was followed by conjunctivities of one eye and then the other. The arthritic symptoms became worse and migratory in character. He was running a low-grade fever and complained of profuse night sweats. A diagnosis of Reiter's disease was made.

On admission, the conjunctivitis was still active. The small joints in the right foot were involved so that walking was impossible. Soon the right knee became painfully involved and then the left shoulder joint. A profuse yellowish urethral discharge persisted. Repeated examinations again failed to show the presence of any organisms. A culture of the discharge and blood showed only Staphylococcus albus. The temperature on admission was 100 2 F, white blood count, 8,000, with 91 per cent polymorphonuclears. His general condition was good Physical examination, other than enumerated above, was negative. His blood pressure was 120/70

Physical examination, other than enumerated above, was negative. His blood pressure was 120/70 In discussing this case with Dr Bernard Levine, of Beth Israel Hospital, he related his experience with an unreported case of Reiter's disease. His patient received large doses of sulfadiazine but without effect on the disease. Only after the patient experienced a strong febrile reaction from the drug did the symptoms begin to subside. This induced me to use artificial fever therapy in this case.

The patient was injected gluteally with 10 cc of milk which had been boiled for ten minutes. About four and half hours later he experienced a severe chill and a rise in temperature to 105 F. This continued through most of the night and slowly subsided toward morning to 101 2 F. That same morning it was noticed that the urethral discharge had completely disappeared. His urine cleared up. The arthritis symptoms, although somewhat better in some joints, showed fresh involvement of the right shoulder. He was put on large doses of saheylates.

for ax days but without effect. On December 18 six days after the first injection, he received another one, this time only 6 ec of milk boiled for ten minutes. The patient again experienced a severe chill and a gradual rise in temperature to 104.6 F The next morning the temperature ranged from 99 6 to 100.2 F The patient was ogreeably surprised to find that he was completely free from any arthritic pains. He was discharged from the hospital on December 24, 1044.

He was seen five days later Temperature was normal, urme clear, he was free from arthritic poins, and the conjunctives were clear. This case was followed up for eight months thereafter and was found to be free from any of his previous allmonts.

and was attending to his usual vocation

#### Comment

Dr Levine's patient and my own had both been treated previously by the same methods as were

others, without success. His patient improved only after he bad experienced a febrile reaction. The case herein reported was definitely and dramatically relieved by the induction of fever therapy and has shown no signs of recurrence in eight months. The patient has had no complications or any permanent joint disabilities.

#### INTRASTERNAL ADMINISTRATION OF PENTOTHAL SODIUM

SAMUEL L. LIEBERMAN, CAPT, (MC), Buffalo, New York

DURING the New Georgia campalgn in the central Solomons, a wounded Japanese prisoner was admitted to our collecting station. After several unsuccessful attempts at ventpuncture, a sternal puncture was performed with a 17-gage needle. An infusion of normal saline was started.

Shortly thereafter, pentothal sodium was used for induction and maintenance of surgical anesthesis for thirty minutes. A 3 per cent solution of pentothal was intermittently injected into the sternal bone marrow via the saline infusion previously set

Induction and maintenance of anesthesis was similar in every respect to intravenous administration. The patient became drowsy within one minute of the initial injection of about 70 mg, of pentothal. We noted particularly the time interval. The patient's reaction to each pentothal injection was just as rapid as to an intravenous injection. This was demonstrated repeatedly, and indicated how quickly medication injected into the sternal bone marrow enters the general circulation and reaches the brain. A total of 400 mg, was employed. The patient recovered from the anesthesia in the usual manner, but seemed excessively droway for about four hours after the operation. We attributed this to marked futigue from three days' constant exposure in the field. The intramedullary administration of pentothal in this case was entirely satisfactory

#### CUT THE NOISE

Up to the present time, scant attention has been given to the elimination of unnecessary noise in industry

From the standpoint of the employee's increased efficiency resulting in greater productivity on the one hand and larger profits accruing to employers on the other, more strention should be focused on the elimination of unnecessary polso.

Pre-employment physical examinations, including accurate hearing tests with audiometers, which should be routine in all industrial organizations, are necessary to the proper physical classification of workers in suitable employment. Upon examination, those who are found to have marked hearing defects should be placed in the typo of work where good hearing is not essential to the safety of them selves and others.

There is evidence that extremely loud noises have permanently injured parts of the ear, resulting in hearing impairment. Functional disorders of this central nervous system may also be caused by noise, resulting in irritability and less harmonous in-plant relationships, stomach disorders, and fatigue. In attentivenes, lack of interest in the joh, absentee-ism, and a higher accident rate may also be in fluenced by lond noises.

Undescrible noises can be reduced by isolation, an example of which is the use of damping pads for vibrating machines, insulation to enclose many machinery, the use of sound-absorbing material on walls, cellings, and floors, and good maintenance so that repairs on machines and equipment can be made quickly and efficiently By applying good engineering practices, noise can be reduced with comparative case.

There is need for a much wader application of these methods in industry. This is a matter which should be of vital concern to industrial organizations because there is evidence that noise impairs the health of employees, the result of which is decreased efficiency and output. It is the responsibility of county medical societies and individual physicians to cooperate with industry in these problems —Wisconsin M. J., July, 1045.

Constructive Program for Medical Care, American Medical Association Analysis of the Hill-Burton Bill, prepared by the Bureau of Legal Medicine and Legislation, American Medical Association

Note —Attention is also directed to the testimony made February 28 to the Senate Committee on Education and Labor by Dr. R. L. Sensenich, member of the Board of Trustees of the American Medical Association, and Dr. Victor Johnson, secretary of the Council on Medical Education and Hospitals of the American Medical Association, on Senate Bill 191, which appears in the Journal of the American Medical Association of March 17, 1945

Part I—Report of Preliminary Study by Subcommittee on Laboratory Service and Medical Care\*

The Hospital Forum

To the House of Delegates, Gentlemen

Organization—The House of Delegates, at its annual meeting held in New York City May 8, 1944, recommended that the Planning Committee for Medical Policies set up by the House at its 1943 meeting be continued for the current year

"The Reference Committee recommends the continuation of the Planning Committee for Medical Policies on the same basis as last year"

The organization of the Committee was on the same basis as the preceding year, namely, the President, the President-elect, the Secretary, a member of the Board of Trustees, the Speaker of the House, and six members appointed at large by the Speaker The Speaker, Dr Louis H Bauer, reappointed the same six who had served in 1943. The personnel of the Committee, therefore, was made up as follows when it held its first meeting on Tune 29, 1944 the Speaker's effect of 202 Marketing on the committee of the same six who had served in 1943. June 22, 1944 at the Society's offices at 292 Madison Avenue, New York City Drs. Herbert H Bauckus, Edward R. Cunniffe, Peter Irving, Thomas M Brennan, Louis H Bauer, George W Cottis, J Stanley Kenney, Norman S Moore, Walter W Mott, Leo F Simpson, and Herman G Weiskotten. As was the case lest year Dr. Laurenge D. Red.

As was the case last year, Dr Laurance D Redway, Dr David J Kaliski, Dr Robert R. Hannon, and Mr Dwight Anderson were invited to all the meetings In addition, Dr O W H Mitchell and

\* Parts II and III—available at the office of the Medical Society of the State of New York, for consultation.

Dr F Leslie Sullivan were present at two of the meetings because of their special interest through their own committee studying the problem of These gentleregional centers and diagnostic aid men contributed much valuable information and data which have been of mestimable assistance to the Committee

The Committee lost through death one of its most revered and esteemed members, Dr Peter Irving, in December of 1944, and his place has been taken by our present Secretary, Dr Walter P Anderton Dr Thomas M Brennan resigned after the first meeting, and this vacancy was filled by Dr Albert A Gartner Dr Gartner gave of his experience and talents until his serious illness in January of this talents until his serious illness in January of this year forced his temporary discontinuation of active work. We are happy to report that he has regained his health and is back with us again

Dr Joseph S Lawrence, our former Executive Officer and now serving in a similar capacity for the American Medical Association's Council on Medical Service and Public Relations in its Washington office, attended our first two meetings, and while he was unable to be present at the subsequent ones, he kept us informed, by mail and otherwise, of the progress of legislation and other medical activities in the national capital We gratefully acknowledge our appreciation of his cooperation

At the Committee's first meeting in June, 1944, Dr Louis H Bauer declined re-election as Chairman, but continued to serve on the Committee

Dr J Stanley Kenney was elected Chairman, and

Dr Peter Irving, Recorder

The Committee held five general meetings in all and studied a large range of topics. In addition, your Chairman has held a number of conferences with agencies, other groups, and individuals interested in medical policies and has made two trips upstate in pursuance of these activities. He also attended three meetings in New York City of the Subcommittee on Laborator, Services and Medical Care of the Committee on Public Health and Educa tion, which has been making a survey on the recommendation of the Planning Committee last year, on the need for centers and diagnostic aid to physicians throughout the State of New York.

#### Preamble and General Scope of Studies

The abrupt termination of the war with Japan approximately three months after the cossation of bostilities in the European theatra has again brought into focus the large problems involved in the methods of distribution of medical care Your Planning Committee feels we must evolve at the present time a program as forward-looking and adequate as possible to meet this demand if we truly desire to maintain our system of free enterprise and to preserve the fine tradition of American medical prac-

Powerful sectors of public opinion, particularly those close to government, are highly organized. These pressure groups would force a legislative program of federally sponsored medical care probably compulsory which mediane would have to accept. Such a program we know would be defin itely mimical to the public welfare. To anyone giving serious thought to the subject,

the trends toward national socialism everywhere are clearly evident. Collectivism is on the march both in England and in this country, and the results of the recent political victory of the Labor Party in Great Batain and the National Socialist government which is now set up are bound to have repercustons in this country Organized medicino would seem to be the only integrated and influential would seem to be the only integrated and intuential group that still remains to oppose this dangerous situation, and we must maintain a united frant in order to win this struggle. That forceful and important lattle book, "The Road to Serfdom," by Prof Friedrich A. Hayek, assays these tronds in n masterful fashion. ful fashion

"There is one aspect of the change in moral values brought about hy the advance of collectiviam which provides special food for thought. It is that the virtues which are held less and less in esteem in Britain and America are procusely those on which Anglo-Saxons justly prided themselves and in which they were generally recognized to excel virtues were independence and self-reliance individual initiative and local responsibility, the successful reliance on voluntary activities noninterference with one's neighbor and tolerance of the different, and a healthy suspicion of power and authority

"Almost all the traditions and Institutions which have molded the national character and the whole moral climate of England and America are those which the progress of collectivism and its centralistic tendencies are progressively destroying.

In our own country the Wartime Health and Education Subcommittee of the Committee on Education and Labor of the U.S. Senate has been conducting for a long time studies and hearings covering the whole broad aspect of public health and medical care, and in its Interim Report of

January, 1945 it stresses local initiative and control in achieving a health program

"Health programs should be drawn up hy state planning commissions in cooperation with local authorities. Such commissions consisting of reprecentatives of professional groups and the public could be appointed by governors in states where they do not now exist."

In this state two such commissions have already been established and are, as far as our information goes, nearly ready to report. They are the Health Preparedness Commission, established by the Legislature, of which Mr Lee B Mailier, a hospital superintendent is Chairman, and Governor Dewey's Temporary Commission for the Study and Distribution of Medical Care of which Dr Basil C MacLean, of Rochester, also a hospital adminis-trator, is the Chairman On March 7 1945, shortly before the adjournment of the last Legislature, there was introduced into the Assembly, as a basis for further study toward the goal of enacting a state medical care system into reality, a hill by Assembly-man Irving M Ives which would create a new state health service fund from which eligible persons could draw to pay certain medical expenses, proposed that later this year the Joint Legislative Committee on Industrial and Labor Conditions (Mr Ives, Chairman) hold hearings on this medical care plan with a view to encourage changes and amendments before this measure comes up for consideration at the next annual session of the Legisla ture. Finally, Governor Dewey, in his annual message last January, reiterated the need for "a workable plan for hroadening the availability of medical services and hospitals while at the same time preserving the integrity and freedom of the medical profession."

These are sufficient examples to show why we of the State Medical Society must meet this issue, Your Planning Committee has taken this attitude and is recommending to the House of Delegates as specific a program as possible. It is understandable that no final conclusions can be reached in the present fluid state of all planning, and such conclusions as are reached now may require considerable modification as further knowledge and trends develop At the time of the writing of this report the programs of the state agencies committed to hring in recom mendations to the administration are rapidly developing. In the light of these facts perhaps it would be best if the deliberations and conclusions of your Planning Committee were submitted as an

Intenm Report.

This would be a propltious time to re-emphasize the fact that in our opinion the principal function of Government in medicine is prevention and to offer nur cooperation with the Government to the fullest extent in providing preventive medical care to the public. In our thinking we have adhered to the premise that it is our desira to see that every one in the State of New York receives adequate medical care of high quality

Many suppostions for changes in our present sys-tom of medical care have resulted from the tendency among certain groups to stress the need for medical carn among the lower income groups, and that this lack is the primary cause of the inadequate economie situation of these people, and they advance this as an argument for the overthrow of the American system of practice. We would referate that it is the economie situation which needs to be remedied rather than our medical system, and the removal of such economic barriers, as has been stated again and

again by competent medical authorities, should be an end in itself and not used as an argument for a dif-This is an evidence ferent system of medical care of the failure of Government and not of the failure of

medical care

So formidable is the list of subjects to which your Committee has given consideration and study that it is manifestly impossible to report on all of them During our deliberations this year we have devoted the major portion of our time to, first, the contro-versial and confused problems involved in the proposals for state-wide diagnostic clinics, health centers, and group health plans, second, consideration of the relations of hospitals to the practice of medicine, third, medicine's attitude toward the nursing situation, and fourth, the integration in any general plan that may evolve of the programs being studied by special committees for rehabilitation and reallocation of returning physicians Following the pattern of last year's study, we have also given considerable attention to such questions as medical education and licensure, nursing, industrial medicine, expansion of medical care insurance, the Baruch Committee's report on physical medicine, and, of course, that favorite old prescription, the current Wagner-Murray-Dingell Bill These topics will now be dealt with more specifically

Diagnostic Aids and Health Centers -Any discussion of this subject must be prefaced with the assumption that the Government has in mind a comprehensive and ambitious program to control the care of the sick One must distinguish between improvement in the care of the sick-a wider and more complete distribution of the care for the sickon the one hand, and on the other, the control of the

The social planners originally started to control the care of the sick, but are definitely slowing up, and if continuous constructive pressure is maintained by the medical profession, this slowing up process will continue As a result of this pressure by the American Medical Association and others, it is apparent that the various committees that are considering this matter in Congress and State agencies are beginning to realize that an attempt to control the care of the sick is an entirely different matter than the control of business. It requires too much specialized knowledge, out of their control, and it is such a personal matter with the voters that it could easily become political dynamite Witness the recent expose of the veterans' hospitals Compulsory insurance is not so glibly talked about, and increased taxes are shied away from The Hill-Burton Bill, S 191, with its provisions for aids to states and for investigation of needs, seems to be a symptom of a change of heart, or even, perhaps, a sign of greater knowledge in Washington liminary survey of the Subcommittee on Laboratory Service and Mcdical Care which has just been made available (see Appendix C) provides us with more specific knowledge of what our needs are in this state to give better care to the sick, and we should be in a position to add one more pressure against more expensive and useless mechanisms set up by lay groups This type of pressure seems to be multi-plying throughout the country against central, bureaucratic control of medicine, and it is becoming ever more effective.

We must present plans that are frugal, practical, and in the interest of the sick. They must also show that the medical profession should have direct charge and responsibility for the care of the sick. It is not too much to hope that the Government will at last

realize that, even though it may give money to help, there is only one way to care for the sick, and that is

by doctors Your Planning Committee has given extensive study and review to numerous proposals and proaccted plans, some actively in operation in local areas of the State, and others representing the combined thinking of medical groups We have also given careful consideration to the project set up by the Bingham Associates in New England in 1931 This plan has been operating successfully and with increasing satisfaction to all groups concerned—the public, the hospitals, and the physicians—throughout northeastern New England, chiefly Maine and parts of New Hampshire, radiating from Boston as the center Dr Samuel Proger, who is the medical director of the Joseph H. Pratt Diagnostic Hospital, in Boston, a unit of the New England Medical Center, and director of this project, appeared before the Planning Committee, and gave us a most interesting and informative outline of how their plan has functioned We are deeply impressed with the has functioned We are deeply impressed with the practicability of this plan and the cooperation it has attracted to itself If any are sufficiently interested to know how the plan works, Dr Proger's detailed description is in the minutes of the January, 1945 meeting of the Planning Committee, on file in the offices of the State Society in New York City

Your Planning Committee also examined the comprehensive report, "W K Kellogg Foundation, the First Eleven Years" (1930-1941) We also secured all the available reprints, brochures, and other literature covering the establishment and workings of the rural hospital system and centers that have grown up in seven counties in Michigan as a result of local community effort and support, This, too, aided by grants from the Foundation has been a very interesting and constructive experiment which in most counties where it was started has now become self-sustaining Both of these projects are outstanding examples of what can be accomplished in bringing better and more adequate medical care to rural communities by voluntary methods and by creating a forward-looking public spirit in the communities requiring or seeking such

help
The Kellogg Foundation's success was built on
The Kellogg Foundation's success was built on
The Religion Foundation and faith in faith, the emphasis was put on people and faith in people, and not in systems The Trustees of this plan decided to turn their back on systems, either old or new, and to invest in people They found that when a program was not working well the common mistake was to look for the trouble in the sys-tem rather than in the people. The real problem was more often with the individuals than with the This decision brought them face to face with the curious though common belief that adults are incapable of further learning Experience failed to bear out this pessimism. They found that local professional and lay people concerned with social conditions had definite ideas as to what their problems were and what they wanted to do about them They were more or less alive to their responsibilities and were equally cognizant of their deficiencies in training to meet their community obligations. The Foundation, therefore, began with the problems which the people recognized rather than with those which the people recognized rather than with those with the people recognized rather than with those which is the people recognized rather than with the people recognized rather than with those which is the people recognized rather than with the people recognized rather than with the people recognized rather than with the people recognized rather than the people rec that someone else thought they ought to see meant education, and there was elaborated a definite method by which these people could study their problems, exchange experience, talk with others who had solved similar problems successfully, and find their own answers through cooperative community

This resulted in an adult education program for all of the people in the community who had anything to do with health, education, recreation, or

welfare.

While this undertaking was primarily and essentally developed as an effort on a community basis to advance and improve all major factors affecting child health and welfare, the Michigan Community Health Project, as it is now known, has determined to what degree local leadership can be stimulated to achieve the potentials offered by the American democratic cooperative way of life, and has developed really effective methods to meet community needs.

Your Planning Committee also invited Dr Basil C. MacLean and Dr Paul A Lembeke, the Chairman and the Director of Study, respectively, of Governor Dewey's Temporary Commission to Study the Adequate Distribution of Medical Care, to appear before it. Both gentlemen were present at the January, 1945 meeting of the Committee, and there was general discussion and interchange of ideas Since that time your Chairman has had noe or two personal talks with Dr MacLean and some correspondence with Dr Lembeke. At this writing no commutments nor dofinite program have yet Your committee has offered its further evolved assistance and collaboration to the MacLean Com mission in any way possible, and Dr MacLean on his part expressed his desire to exchange information and to cooperate with us

The Problem of the Care of the Chronically III.-This brings us now to consideration of the problem of the care of the chronically ill This matter has been made the subject of a special investigation by the Health Preparedness Commission of the State Legislature, more popularly known as the Mailler Committee. It was your charman's privilege to sit in as an observer at the meeting on June 15, 1945 of the general advisory committee to this com-Dr O W H Mitchell, Chairman of the Public Health and Education Committee, is a member of this advisory group, and because of his illness on that day he asked me to substitute for

It is a matter of general knowledge that the population is progressively aging and that many more people beyond 45 are living today, and also that in the future it is highly probable that this age group will increase. This will project an urgent need for more prompt and adequate medical care for the chronically III patient. The National Health Survey of several years ago stated that there are approximately 177 chronically Ill per 1,000 population, and that this number is doubled in the in come groups under \$2,000 a year For the purposes of developing a program for the care of this sector of the population, the Mailler Committee classified these ohronically ill into three general groups as follows

Those requiring medical care for diagnosis and treatment

Those requiring skilled nursing care

Those requiring only custodial or attendant's 8.

In keeping with the recommendations of Surgeon General Parran and the Interim Report of the Pepper Committee on Wartines Health and Education, they strongly favor the regional hespitalization idea as the basis for any such care They feel that nurslng homes and institutions for the care of chronic disease can best be provided in a hospital closely allied with a general hospital or a medical teaching center, and perhaps in improved county home infirmaries, under some form of State supervision They believe that such a proposal offers the per sonnel and facilities of a teaching institution and local institutions for custodial care, and that home bedside nursing, the role of the practising physicians, and the outpatient services within the region should be integrated into the plan. They cite the need for a legical master plan for the regionalization of medical services, and feel that all other netivities being planned at present should ultimately be fitted into such a plan. Undoubtedly, there will be need for additional hospitals nursing homes, and convalescent incilities, as well as improvement in the quality of existing facilities.

Conferences with both hospital administrators and welfare directors reveal that such a plan is generally acceptable. The most troublesome cases are the borderline institutional, mental, and semilo cases and those needing long-term nursing care

The Commonwealth Fund has proposed a grant to the city of Rochesier to conduct an experiment and provide a demonstration of the correlation of urban and rural hospitals. The State blood bank and blood derivatives program, anthorized by the Legislature at its last session, and now in the process of development, is another factor to be considered

in any general plan

The American Medical Association has gone on record as favoring the main provisions of S 181, the Hill Burton Bill, and has suggested a number of practical amendments. We on the Planning Committee concur in their opinion. Governor Deway mittee concur in their opinion. Governor Dewry has only recently named the State ogency, the Joint Hespital Board, composed of Dr. Edward S. Godfrey, Jr., Health Commissioner of the State of New York, Dr. Frederich, MacCurdy, Commissioner of New York, State Department of Mental Hygieno. and Mr Robert T Lansdale, Social Welfare Com-missioner of the State. Assemblyman Lee B Mailler has been named as Special Advisor to this Board. This Board is to be the official State agency for negotiations with the Federal authorities in the practical application of the purposes of the Hill Burton Bill in the event Federal monies should be granted to the Sisto for hospital construction or nther diagnostic facilities.

Considerable space and detail has been given to this survey of the background of the Committee a deliberations. It would seem to us that any policy which the State Society may see fit to adopt must give consideration to what Government has in view, and certainly we will have to work more in conjunction with Government in the future in order to get the maximum benefits for the people without destroying any of the free practice of medicane,

Report of Preliminary Survey by the Snhcommit-tee on Laboratory Service and Medical Care (See Appendix C) -The Subcommittee on Laboratory Service and Medical Care of the Committee on Pubhe Health and Education, under the able chairman-ship of Dr F Leshe Sullivan, has just completed a prehumary study as to the need for centers for diagnostic aid to physicians throughout the State of New York. This survey was inaugurated as the result of the action of the House of Delegates in 1944 in response to a recommendation from this Planning Committee. They have done a monumen-tal job. This represents only a preliminary study but it has brought to light many of the actual facts and figures relative to population in towns and viilages of 3,000 and over, and in cities and counties, the number of effective and ineffective physicians, the ratio relative to specialists and general practitioners, location and types of hospitals, laboratories, blood bank facilities, and much other information to which we have never had access The members of this committee have been engaged in a complete survey of each town, village, and city in each county of their district and have carefully recorded the facts We should like to express to Dr Sullivan and the gentlemen on this committee—all doctors and members of our Society-our sincere thanks and great appreciation of the splendid work they have done All our discussion and debate, thorough and broad as that has been, has had to await the findings of Dr Sullivan's Committee before our thoughts could be crystallized, conclusions reached, and recommendations formulated

We have had in mind providing the doctor who is practicing out in the rural districts the facilities for laboratory work, x-ray, basal metabolism, et cetera, which are not available to him, so that he may practice sound and good medicine We also desire to make these rural and outlying areas attractive to our young, highly trained, and skilled physicians, and thus bring to the whole population of our State the high quality of medical care which

prevails in our urban communities

As was anticipated, the report of the Sullivan Committee has shown that the State of New York, by and large, is in a generally satisfactory condition as to ordinary medical care, especially general practitioner services. While this may not be exactly true because of wartime shortages, in normal times this condition holds, and we are on the threshold, we hope, of a quick return to this status port has disclosed certain areas as being definitely deficient in adequate laboratory and other diagnostic facilities, particularly certain portions in the northeast area of the State and the south central region, and in the districts comprised by the Catskill Mountains area In their Summary of Deficiencies, Part III of the Survey, they call attention, county by county, to what, in the opinion of the individual investigator, would seem to be the local needs in that county. In the counties where large. urban centers are located there is unequal distribution of both personnel and facilities so that portions of such counties have need for improvement the time of the writing of this report the Planning Committee as a whole has not had opportunity to review this excellent study and the opinions expressed are largely those of individual reviewers

We are not at all content with the status quo, and we can readily see how in any county there is ever room for improvement It would seem wise, more economical, and more practical to consider plan-ning beyond county lines This will permit of establishing needed facilities in such locations where portions of two or three counties could be readily served, which centers would be convenient to transportation lines and otherwise accessible to the communities requiring the services Rather than embark at this time on a very extensive program of new building, we would recommend prompt improvement and expansion of existing facilities, and, as an experiment, the setting up of one or two centers for

diagnostic aid.

The Sullivan Committee, in the preface to its Survey, behaves that such an area of need exists in the counties of Schuyler, Chenango, and Tioga, and also in the Fourth District, comprising the north and northeastern part of Delaware County, the

southwestern part of Otsego County, and the south-

eastern part of Schohane County

The greatest single difficulty that confronted your Planning Committee was to determine a precise definition of what is meant by regional diagnostic aids to physicians, or in other words, how will we define a diagnostic center? No complete agreement was reached in the Committee on this For the purposes of the Hill-Burton Bill a public health center is defined as follows "a publicly owned facility for the provision of public health services and medical care, including related facilities such as laboratories, clinics, and administrative offices operated in connection with public health centers." Dr Sensenich, speaking for the American Medical Association, in his testimony before the Pepper Committee, took

objection to this and urged clarification
The Planning Committee is in full agreement that laboratory facilities should be furnished used in this report, the term "laboratory facilities" means, in addition to routine chemical, bacteriologic, and serologic examinations and other pathologic work, the related clinical tests, such as x-ray examination, electrocardiograms, basal metabolism tests, and similar clinical procedures Blood transfusions also should be made available, but this facility is being provided by a particular setup now being developed as the result of legislative action at the

last annual session

The primary purpose of these centers is not to furnish a diagnosis but rather to make available to the physician in attendance the results of all such tests, thereby enabling him to make his own diag-No treatment is to be provided No member of the staff of such a center is to be permitted to engage in the private practice of medicine

Pending further development of contemplated State plans and the possible enactment of such legislation as the Hill-Burton Bill in Congress we feel that no sweeping state-wide program should be recommended now, but rather insist on local experiment. Your Committee further believes that such local centers, located in carefully selected areas, can be operated successfully and without danger to our present free and unfettered practice of medi-

With the aids we speak of, and if the medical schools are permitted to graduate the high type of doctor which they have done in the past several years, and if the State will maintain a high standard of education and not permit ill-considered bills which would lower the standard of medical care to go through the legislature, the modern physician could adequately care for a large majority of the people, even 85 per cent or more This would leave only a relatively small percentage requiring the high diagnostic skill available only in the large hospitals

The Committee recom-Recommendations —1 mends as an experiment that a center for diagnostic aids to physicians practicing in the rural districts be set up in a selected location in either or both of the following designated areas (a) the counties of Schuyler, Chenango, and Tioga, (b) the north and northeastern part of Delaware County, the southwestern part of Otsego County, and the southeastern part of Schohane County

Insofar as possible, these facilities are to be set up by the local communities and where necessary subsidized by the State if the local community cannot The medically afford to build and operate them indigent and those unable to pay for the use of these Those who are facilities should receive them free able to pay should do so to decrease the amount

which is necessary for the State or local community to contribute. This would make the centers partially self-sustaining. Details of management, of course, will have to be carefully worked out

These laboratories should be supervised by a pathologist. We are cognisant of personnel short-ages but believe that pathologists will be developed Interpretation of such clinical procedures as the electrocardiogram and x ray will require the specially trained physician whose services probably could be obtained on a part-time basis

The Conneil should be authorized to take such action as may be necessary to carry out these recommendstions, including the sponsoring of any neces-sary legislation. A committee should be designated to cooperate with Stato or local agencies and with county societies to insure proper functioning and

supervision of such diagnostic centers.

The Committee also recommends that the State Society, through its proper agency exert its best efforts to secure prompt improvement and expandon of existing facilities for diagnostic ald throughout the State where the need has been

shown to exist.

3 We recommend cooperation and collabora tion with the present State agencies concorned with the planning for the care of the chronically ill

The Committee recommends support of the principles contained in the regional hospitalization idea as described in the Interim Report of the Pupper Committee on Wartime Health and Educa tion and the provisions of the Hill Burton Bill with such amendments as have been suggested to bring it within the scope of the Constructive Program of Medical Care of the American Medical Association.

We are cognizant of the necessity of protecting the public against bureaucratic regimentation of both patients and physicians, and the substitution of an un American system of medicine for our pres-

ent high standards of practice
5 Should the Hill-Burton Bill or similar legisla tion be enacted into law and Federal funds thus become available for new or expanded medical care programs in this State, or should funds be made available by the State of New York for the same purposes, we recommend that an existing or special committee of the Medical Society of the State of New York be designated to confer and cellaborate with the proper Government agencies concerned with such projects this committee to have author ity to present organized medicines views and opinions and to consult with and advise and otherwise guide those formulating such programs.

Group Practice.—In the present stage of our thinking, the subject of group practice represents a profound and controversal profilem We have made no attempt this year to deal with it in detail novertheless, we have discussed it in a general way

There are many sound arguments both for and against lt. It is possible that some of the younger medical men who will soon be discharged from the service would like to re-enter private practice in conjunction with other practitioners as a medical group

We feel that this whole subject should be taken up as a major study by your Planning Committee in the near future, and the time and thought it deserves

be allotted to it.

As far as this State is concerned it is our jude ment that we should await the results of improved medical services as are anticipated from the expanded program for diagnostic services and laboratory facilities which we have recommended in this report.

Since the original draft of this report, comment has appeared, editorially and otherwise, in the lay press on a proposed plan to hring about group prac-tice through Federal legislation. We are referring particularly to an article hy Henry J Kaiser In which he states that at the invitation of the Pepper Committee of the Senate he has drafted n bill to nchieve "competitive health."

"This bill has in mind the inture and the hopes of the half million voterans of war who are going to come home—not only doctors but nurses, pharma cists, and battalion aid men. It would empower the Federal Housing Agency, which has financed the ownership of nearly a million American homes, to guarantee 90 per cent of local bank loans to build This financing would be made and equip hospitals available to groups that undertake to provide pre-paid medical care"

Ho ndds "Under this hill they could invest the funds set up for them by the GI Bill of Rights in their own group practice clinics at home Together, ten of them could make up a pool of \$25,000 and get a loan for

\$250,000 to set up much needed medical facilities. "I can see little Mayo Clinics springing up all over the nation founded on the sound economics of prepaid medicine. These clinics would operate as going husiness enterprises competing to reduce their cost, improve the quality, and expand the scope of their service to the public

This Kaiser Pepper plan needs further study, and your Committee is not prepared to comment on it at the present time, except to stato (1) that it is not yet known what percentage of the population would benefit from group practice and (2) that Maye Clinics do not spring up in the manner suggested,

nor do they have any relation to prepaid medicine.

Another influential sector within the ranks of medicine letelf, is expanding the idea of group practice out of hospitals. The five county medical so-ceties of metropolitan New York, through their Coordinating Council, at present have a subcom-mittee working to set up standards for group prac-tice to which all contemplated groups would have These few examples of current think to conform. ing are cited to emphasize the importance of this problem.

Compulsory Sickness Insurance. This was the subject of an extensivo review in the Planning Committee report of 1944 and a thorough analysis of the Wagner Mnrray-Dingell Bill Introduced into the Seventy-Eighth Congress was published in that section of the report. Senator Wagner, for himself and Senator Murray had introduced into the Senato on May 24 1945 the latest version of this Bill, and shortly before that, a companion measure was sponsored in the House by Representative John D Ding. II

In Introducing his Bill, Senator Wagner and, 'but health insurance is not socialized medicine, it is not State medicine," and "I believe in the American system of free enterprise."

It is a fact however that under the proposals the Surgeon General of the Public Health Service, working under the Administrator of the Social Security Board, becomes the dispenser of all health care and the final arbiter of the mental and physical well-being of the nation. If such a core of collective ist control is ever established in this country apply ing to the most sacred and vital wants of every human being, it would require a miracle for free enterprise in any of its forms to survive the impact

The Wagner-Murray-Dingell health services are

in reality State Medicine They are instrumentalities of the collectivist state. If we are to preserve our freedom of enterprise system, we dare not enact

these proposals into law

Dr Wilson G Smillie, professor of public health and preventive medicine at Cornell University Medical College, New York City, has contributed a most thought-provoking article entitled "Certain Defects of a Nation-wide Plan for Provision of Adequate Medical Care "This article appears in the August 4, 1945 number of the Journal of the American Medical Association It is one of the best statements of principles that has yet appeared In simple, plain, homely language, understandable to anyone who reads, he has struck upon the crux of the whole The article should be "must" reading, problem and public relations officers of county and state societies could well afford to give this wide lay distribution

We would like to quote the concluding paragraphs

of this unusual paper

"This, in my opinion, is an interpretation of the feeling of the average thoughtful American in relation to provision of adequate medical care for the

family and the community
"He is quite willing to promote any plan which will be of real benefit to the health and welfare of his family and his community, but is quite unwilling to accept a revolutionary, nation-wide program of social betterment that has not gone through the fire of long, extensive, careful test under a great variety of conditions

"Most important of all, he is unwilling to sur-render the principle of local community autonomy and to delegate authority to the Federal Government for the control and administration of such a personal and intimate matter as medical care of hunself and his family "

Extensive analyses of this new bill either have appeared already or will in the near future resolution was unanimously adopted by the Council on Medical Service and Public Relations of the American Medical Association instructing the Director of the Bureau of Legal Medicine and Legislation and the Secretary to prepare a statement on the present Wagner-Murray-Dingell Bill The Public Relations office of our own State Society has also prepared a preliminary analysis

The Wagner-Murray-Dingell 1945 bill varies in some particulars from the previous bill It takes over the proposals of the Hill-Burton bill for hospital and health center construction, which was approved in principle by the American Medical Association and by this Society, and makes it a ten-year program at ten times the cost The Advisory Board with authority proposed by the Hill-Burton Bill is replaced by a National Advisory Hospital Construction Council without authority except to review applications and make recommendations

Section 9 of the bill establishes a national sickness There are some differences from insurance system the provisions of the preceding bill While the word "compulsory" is nowhere used in the bill, the bill, nevertheless, is compulsory in every sense of the word There is still tremendous authority placed in the hands of the Surgeon General of the Public Health Service While Senator Wagner lays stress on the fact that the Surgeon General is a doctor. there is nothing in the present law that requires the Surgeon General to be a doctor Furthermore, he is subject to the control of the Social Security Board, a totally lay organization

The National Council provided in the previous

bill now becomes the National Advisory Medical Policy Council While the new bill specifies that there must be medical representation on the Council, and the previous bill only inferred it, the Council

remains purely advisory and without authority

The Social Security tax has been reduced from
that proposed in the previous bill from 6 per cent to 4 per cent each on both employer and employee, but the upper limit has been increased from \$3,000 In the case of the self-employed, the to \$3,600 rate is now 5 per cent up to \$3,600 instead of 7 per cent up to \$3,000

There are other minor changes in the sickness insurance part of the bill, but taken as a whole it is fully as permicious as the previous bill and should not receive the support of the medical profession

Your Planning Committee reaffirms the Society's previous stand against compulsory sickness insurance in general, and disapproval of the Wagner-Murray-Dingell Bill. We feel that the progressive evolution of the voluntary hospital and medical expense insurance plans, with proper direction and support, plus the equable distribution of adequate diagnostic facilities, will meet the needs of the pub-lic and at the same time expand the quantity and

preserve the high quality of medical care

Addendum—The July 21 issue of the Journal of the American Medical Association carries a special article entitled, "Health Insurance-An Inquiry Into Some of the Factors and Forces Underlying the Demand for a Compulsory System" We recom-mend the reading of this article and call attention to the editorial on it appearing in the same issue

Voluntary Medical Expense Insurance -State Medical Society has set up a Bureau of Medical Care Insurance with a full-time director and the necessary personnel To this Bureau have been assigned the numerous duties entailed in stimulating these plans, facilitating their expansion, seeking to secure ultimately a single, state-wide plan and to exercise supervision over the whole program Mr George P Farrell is the Director of this Bureau.

Perhaps no single activity of the State Medical Society is more significant or more deserving of As all matters pertaining to this united support subject are now the special function of this office, the Planning Committee is making no specific recom-

mendations

With reference to the use of the insurance principle in the case of welfare patients we would reaffirm our stand of last year, namely, "that the Council suggest to the Welfare Department that it consider the possibility of the use of the insurance principle rather than the present system" We quote also Section 5 of the "Constructive Program for Medical Care" of the American Medical Association, adopted June 22, 1945

"The provision of hospitalization and medical care to the indigent by local authorities under volun-

tary hospital and sickness insurance plans "

In furtherance of this statement, we would recommend that this whole subject be referred for study and action to the Bureau of Medical Care Insurance of the Society

Relationship of the Hospitals and the Practice of Medicine.—Following the generalization and statement of principles on this subject as enunciated by the House of Delegates of the American Medical Association which were quoted in the 1944 Planning Committee report, the President, Dr Herbert H Bauckus, appointed a special committee to confer with a similar committee of the Hospital Association

of New York State Dr Carlton E Wortz, of Buffalo, is Chairman, and the other two members are Dr Walter W Mott and Dr J Stanley Kenney Both Dr Mott and Dr Lenney are members of the

Planning Committee.

The Joint Committee held three meetings during January, February and March of 1945 and as a result of these conferences the following agreement, which is subject to ratification by the governing bodies of both the State Society and the Hospital Association of Now York State, was arrived at

That roentgenology, pathology anesthesiology, and phymotherapy constitute the practice of medicine and the rendering of these services is in

fact the practice of medicine.

That these specialties are so recognized and that the directors of the departments rendering these services should have full recognition in the

constitution of the hospital staff

That an equitable arrangement can be made between the individual hospitals and the doctors who practice these four specialties recognizing the above principle, wherehy the hospital may bill for these services in the name of the person rendering the service (This can be done by inserting the name on the regular hospital billhead, i.e. Instead
of x ray, indicate "Professional Services of Dr

— Roentgenologist.")

4. Until such time as a Medical Service Plan is

available, there is no objection to inclusion of these medical services in the hospital service plan contract as long as the principle of recognition and proper remuneration to these epecialists is corried out.

It was further understood that the Amociated Hospital Service has agreed in principle to this, and when the medical expense indemnity plans are ex-panded and have sufficient sale and distribution, these four services will be transferred to the medical service contract. Hand when that becomes feasible and practical it should once and for all end the argu ment about the hospitals practicing medicine.

As a temporary stopgap, the Associated Hospital Service in New York City expressed its willingness to allocate certain portions of the hospital bill to the payment of these services separately instead of including it all in the hospital bill until such time as the sale of medical expense plans approximates the distribution of the Bine Cross plans to a sufficient extent to take care of these services

We want to hring out this point, namely, that we have for the first time developed n real spirit of cooperation between the organized hospital and medical associations of this State. Wa believe it can now be said that we have a working organization with

the hospitals which augurs well for the future We recommend that the House of Delegates approve this agreement and also the continuance of this Committee to further the constructive work

that has been started.

We would call your attention to the reprint from the "Hospital Forum" included in Appendix D, and urge careful reading of this attement of Mr John McCormack, Superintendent of the Presbyterlan Hospital, in New York City, and President of tha Hospital Association of New York State

The Nursing Problem.—The following report on the relationship of medicine and the nursing pro-lession was adopted at the February 21, 1945 meet-

ing of the Planning Committee
In 1944 this committee recommended the establishment of a joint committee representing nursing, medicine, and hospital administration to con-

sider mutual problems. A short time thereafter, and quite independent of this recommendation, the New York State Nursing Association created n coordinating committee and asked for representatives from New York State Hospital Association and the Medical Society of the State of New York, committee has mot twice, but little more has been accomplished than to recognize that a conflict in the family of medicine exists.

"During the past year, because of wartime necessity, more progress has been made in bringing these groups together than by past voluntary effort. Local Civilian Defense Committees, usually chairmanned by laymen, have brought together for the welfare of the community these three groups classification and procurement of nurses for the armed forces have involved hospitals and physicians and forced them to make a concerted effort toward cooperation as never before. It is no credit to any of these groups that the urgency of war forced this cooperation when for years the destiny of each group has been more or less dependent upon the other

"To put new life into the study of these issues the Chairman of the Coordinating Committee of the New York State Nursing Association recently sug gested that an independent coordinating board, not sponsored by a particular group, be established to replace the present committee sponsored by nurses.

'It is the opinion of this Committee that the above suggestion is in line with the recommendation made last year. Therefore, it recommends the establishment of an independent coordinating board repre-senting nursing, hespital administration, and medi-cine, the delegates bong authorized, subject to the governing body of each representative group to outline broad policies of cooperation and to study and recommand answers to the following questions in order that nursing in the postwar period may meet the demands of the medical profession, hospital administrations, and the public

"1. When planning for medical and health work in the future, what role should nurses play? Should their role be determined by traditional concepts of the nurse and nursing service or should these concepts be challenged and a re-definition made of the functions and preparation of nurses in terms of the needs of somety?

"2. To what extent should we uttempt to dif ferentiate further the personnel engaged in nursing service and the areas and levels at which they function? What changes in the present system of nursing education would such a revision of boundaries and functions necessitate?

"3. Should all nursing schools on all levels be established as real schools, that is, institutions that exist primarily for educational purposes and which are provided with the necessary resources and facilities to perform their educational func-tions effectively? What changes in the present system would be necessary in order to make nursing schools real schools and put them on a sound economic basis? To what extent ahould the government be responsible for maintaining such schools?

4 By what formula should it be determined how many nurses should be prepared in the different categories required for adequate service to the population as a whole?

"b To what extent should the immediate

service needs of the hospitals in which students receive their clinical experience determine the number of nurses to be prepared?

"6 How should the problem of security for

the nurse be met? Should hospitals adopt the annuity retirement system generally accepted in educational institutions, or should this important problem be solved by other means?

"The solution of all these problems is not an easy one Resources beyond those of nursing, medicine, and hospitals must be drawn upon Sufficient funds must be available to insure mobilization of information if an earnest attempt for coordination is made"

Before formal adoption of this report a very extended discussion took place in which much of the background of the confused state of affairs existing in the nursing field was carefully scrutinized frankly pessimistic view prevailed as to what jointly might be accomplished within the family of medi-We use that expression (family of medicine) to mean physicians, nurses, and hospital administrators The Committee on Nursing Education of the Council rendered a report which has helped to clarify this problem Due consideration was given to the work and function of the area nursing centers set up by the Education Department, of which Cayuga College is a good example In substance, academic training is given over a period of six months and then the student nurses are sent to hospitals and lectures in the areas for their practical work under proper supervision, where time and effort will not be wasted. They will give good service to the hospital and also, under supervision, learn through practice The Education Department, we believe, would like to see that idea extended not only in the small, nonacademic hospitals, but also to the large hospitals in metropolitan areas

Quoting from the above report, it recommends the "establishment of an independent coordinating board representing nursing, hospital administration, and medicine, the delegates being authorized, subject to the governing bodies of each representative group, to outline broad policies of cooperation and to study and recommend answers to the following questions in order that nursing in the postwar period may meet the demands of the medical profession, hospital administrations, and the public (Note the Sections 1 to 6 in the above report)

We feel that only through a concerted effort of medicine, hospitals, and nursing, each one with equal authorization and equal representation, can any solution of this difficult situation be attained. To this end we recommend to the House of Delegates that the Committee on Nursing Education of the Council be given the authority and expanded if necessary to confer with similar groups from the official hospital and nursing organizations

Medical Education and Licensure—We quote the first paragraph of the section on Medical Education and Licensure of the Planning Committee's report of 1944

"The Committee recognizes that the future health and medical care of the American public depend primarily upon the nature and quality of programs of medical education maintained for the training and preparation of physicians who must assume responsibilities in this field"

The constantly changing picture as to the possible source of well-prepared applicants for medical school and the accelerated program now operating are the cause of much unhappiness and discontent to our medical educators. While this subject would appear to be more of a national than a State problem, we felt that some statement from this Planning Committee might serve to reinforce the efforts to

bring about a return to our former high standards of medical education. The following statement is

respectively submitted

Although it is recognized that the accelerated program of medical education now being conducted by the medical schools of the country may be advantageously followed by a few students, it is the consensus of opinion of most of the medical educators that continuance of the present accelerated program beyond the war needs would be detrimental to the best interests of medical education. The Planning Committee concurs in this opinion. Later experience may demonstrate that some acceleration beyond the normal prewar schedules of medical schools, or more efficient cducational use of the long vacation periods, is feasible and desirable

There are many indications that there will be an increased demand for physicians for at least a number of years following the end of the war. However, the discontinuance of the Army program of assigning trainees to medical schools, together with the present Selective Service regulations which do not provide for the deferment of students accepted by medical schools, threaten not alone a great reduction in medical school enrollments but a poorer qual-

ity of applicants

On February 26 Senator Allen J Ellender, of Louisiana, introduced Senate Bill 637 This bill was planned to provide an adequate number of qualified students for admission to the medical schools of the country Up to May II no action had been taken on the bill The Planning Committee recommended endorsement of the Ellender Bill by the Council of the State Medical Society

It is the belief of the Planning Committee that all restrictions should be removed from medical schools and both premedical and medical students at the earliest possible moment, in order that the responsibility for programs in medical education may be placed entirely upon the medical schools of this country to continue the remarkable progress of the prewar years

On the question of medical licensure the Planning Committee offers no comment. The Council has created a special committee for review and study of possible changes in the Medical Practice Act, the Basic Science law, and the problem of the "cults," and this whole question will be considered by that committee

Industrial Medicine —The Committee again this year has devoted much time to the consideration of the important subject of industrial medicine. At the outset we would restate that the American Medical Association, through its Council on Industrial Health, has done a tremendous amount of work on this subject. This Council has set up in great detail the scheme of organization of committees within component county societies which would include representatives from the Medical Society, from labor, from industry, and from the public, such committees to study the different problems that affect industrial medicine today and will in the future.

Labor has very definite ideas as to how it would like to work with Medicine, industry has ideas, and they are not always generous toward Medicine. The profession has its ideas as to how it would like to retain control. In most of the present arrangements the influence of the medical department of an industry is never very great. It rarely reaches into the higher brackets, nor does it have a voice in the

policy making It is just this state of affairs which has prompted the American Medical Association to bring together all these groups for free discussion and to let Industry and Labor know that Medicine has something to offer and that it should be necepted as a major factor in formulating policies con cerning industrial health and medicine. Unless we want to mitiate such a plan as the American Medi cal Association has so carefully worked out, we are relatively helpless because both Industry and Labor feel that we are not interested

The future would seem to portend the larger role that big employers are going to have in questions having to do with medical care. We feel that organized medicine should be very ective on this subject We have all the information we need has all been worked out very carefully by able men throughout the United States, and is very plain and

The fact should be brought home to the individual medical practitioner himself that he is potentially an industrial physician. He does not seem to understand that. If he realized this he would un doubtedly have considerably more interest in tho study of the whole problem concerning the different

diseases peculiar to industry
Part of this lack of interest harks back to his
undergraduate medical education. This would seem to be a weak spot, and we trust that the subject of industrial health can soon be given the time and attention in the curricula of our medical schools it

deserves.

There is the question, too, of how far we want to go with the full-time salaried man versus the care of these patients by men in private practice. All these schemes beve to deal with a large number of people and offer an opportunity to put in salaried physicians. Considerable thought must be given to this phase of the question so that we may avoid going the wrong way as far as the average doctor's idea of the private practice of medicine is concerned

The Subcommittee on Industrial Health has done an excellent joh m furnishing lodustrial health programs to various county society end district branch This is largely postgraduate instruction, and while it is most important, it does not fill the entire hill. There is a gap which must be hridged. We would again suggest that there should be in

cinded on the Subcommittee on Iodustrial Health of the State Society a physician who makes in-dustrial medicine his career, and who also has the ideals and othics of organized medicine at heart. Such a physician perhaps might serve as chairman of such a special study group

Cooversations with doctors to the Department

of Labor have revealed the fect that they were ready and willing to go before the various county societies and give them the benefit of their experience but their complaint has been that they have received very bittle eocouragement or responsa-

Your Planning Committee again lovites attention to the industrial medicine program of the American Medical Association for state and county societies, recommendations from which are quoted in last year's Committee report (pages 915 and 916, New York State Journal of Medicine April 15, 1944)

2 We also would recommend to the Postwar

Planning Committees of the state and county socicties that they bring to the attention of physicians returning from military service the facilities offcred in the field of industrial medicine.

We would respectfully suggest to those re-

sponsible for undergraduate medical education that those diseases and efflictions peculiar to industry be given adequate recognition in their teaching programs

The 1944 House of Delegates recommended that the Council bring to the attention of the proper State authorities the suggestion that the medical ataff of the Department of Labor be increased so that members might assist county society committees in coordinating their work with the definite work of the Department It is again arged that the Council give this suggestion ell scrious attention

We urge that the various county societies cooperate in carrying out the above program and set ap such committees in those societies where they are nceded.

#### Miscellaneous

Baruch Committee and Physical Medicine Com mission Reports -- We note with interest the efforts to devolop the field of physical medicine and to provido adequate training for specialists in this field. The reports of these two commissions have been the subject of special review by a Subcommittee, and their findings ere recorded in the minutes of the

Jenuary 1945 meeting of the Planning Committee
War Participation Committee—This Committee offers no comment on this subject other than to refer to the work being done by the War Participation Committee of the Society We would stress the importance of assisting physicians returning from military service in every way possible to re-cetablish thomselves and to give them the training which

many of them are going to require

County Society Plans - The Council referred to the Planning Committee the so-called Dutchess County and Westchester County plans for review The Committee studied the Dutchess County

Plan which is in substance e compulsor, plan for the medically indigent to be under the control of the state and county medical societies The Committee feels that no compulsory plan le necessary, and if adopted would rapidly lead to a compulsory plan for everybody

It is the Committee'e opinion that the so-called Westchester County Plan in essence is another Wagner-Murray-Dingell Bill brought out under medical rather than state or federal control. We do not feel that it is in any way an answer to the prob-lem of medical care and in addition, it would seem to have most of the objectionable features of the

original Wegner-Murray-Dingell Bill

The Committee realizes fully that it has been physically impossible to completely cover the whole field of medical planning. It has offered the foregoing as an earnest effort to press the solution of some of the more urgeot problems. While it has finished two years of etudy, its work is not com-

ploted.

We believe that the life of this Committee should be extended, or if not, some other Committee be designated. In our opinion, the time has definitely arrived for such a Committee to hold conferences from time to time with representatives of Labor, Industry, Public Health, Welfare, and similar groups. We therefore petition the House to authorize the reappointment of this Committee on the same basis as last year

## Constructive Program for Medical Care—American Medical Association

(This platform was adopted by the Council on Medical Service and Public Relations and the Board of Trustees of the American Medical Association on June 22, 1945)

#### Preamble

The physicians of the United States are interested in extending to all people in all communities the best possible medical care. The Constitution of the United States, the Bill of Rights, and the "American Way of Life" are diametrically opposed to regimentation or any form of totalitarianism. According to available evidence in surveys, most of the American people are not interested in testing in the United States experiments in medical care which have already failed in regimented countries

The physicians of the United States, through the American Medical Association, have stressed repeatedly the necessity for extending to all corners of this great country the availability of aids for diagnosis and treatment, so that dependency will be minimized and independence will be stimulated American private enterprise has won and is winning the greatest war in the world's history. Private enterprise and initiative manifested through research may conquer cancer, arthritis, and other as yet unconquered scourges of humankind. Science, as history well demonstrates, prospers best when free and unshackled.

#### Program

The physicians represented by the American Medical Association propose the following constructive program for the extension of improved health and medical care to all the people

1 Sustained production leading to better living conditions with improved housing, nutrition, and sanitation which are fundamental to good health; we support progressive action toward achieving these objectives

2 An extended program of disease prevention with the development or extension of organizations for public health service so that every part of our country will have such service, as rapidly as ade-

quate personnel can be trained

3 Increased hospitalization insurance on a

voluntary basis

4 The development in or extension to all localities of voluntary sickness insurance plans and provision for the extension of these plans to the needy under the principles already established by the American Medical Association

5 The provision of hospitalization and medical care to the indigent by local authorities under voluntary hospital and sickness insurance plans

6 A survey of each state by qualified individuals and agencies to establish the need for additional

medical care

7 Federal and to states where definite need is demonstrated, to be administered by the proper local agencies of the states involved with the help and advice of the medical profession

8 Extension of information on these plans to all the people with recognition that such voluntary programs need not involve increased taxation.

9 A continuous survey of all voluntary plans for hospitalization and illness to determine their adequacy in meeting needs and maintaining continuous improvement in quality of medical service

10 Discharge of physicians from the armed services as rapidly as is consistent with the war effort in order to facilitate redistribution and relocation of physicians in areas needing physicians

11 Increased availability of medical education to young men and women to provide a greater num-

ber of physicians for rural areas

12 Postponement of consideration of revolutionary changes while sixty thousand medical men are in the service voluntarily and while twelve million men and women are in uniform to preserve the American democratic system of government

13 Adoption of federal legislation to provide for adjustments in draft regulation which will permit students to prepare for and continue the study of

medicine

14 Study of postwar medical personnel requirements with special reference to the needs of the veterans' hospitals, the regular army, navy, and United States Public Health Service

#### Appendix B

The Hill-Burton Hospital Construction Bill An Analysis Prepared by the Bureau of Legal Medicine and Legislation, American Medical Association

During the course of the hearings conducted by the Pepper Subcommittee on Wartime Health and Education of the Senate Committee on Education and Labor, the Surgeon General of the United States Public Health Service on July 12, 1944 outlined a broad program for federal participation in the construction of hospitals and related facilities. Subsequently a draft of a bill was prepared and recommended for discussion by the Council on Government Relations of the American Hospital Association to the joint committee of the three national hospital associations the American, the American Protestant, and the Catholic Hospital Associations. The draft was discussed at a meeting of the joint

committee held in Washington November 4, 1944. Represents tives of the American Medical Association, by invitation, participated in the discussion.

A number of changes in the draft were suggested and some of these were embodied in a revision of the draft which was introduced in the Senate, January 10 1945, by Senator Hill, of Alabama, for himself and Senator Burton, of Ohio, as S 191 The bli was referred to the Senate Committee on Education and Labor, of which Senator Murray, of Montana, is the new chairman. It is assumed that this bill will be considered by the recently announced standing subcommittee of nine of the Senator Commuttee on Education and Labor, which has been created to consider proposed legislation on health. Senator Clande Pepper, of Florida will head the new subcommittee. Other members are Senator James M. Tunnell, of Delaware, Senator Elbert D. Thomas, of Utah. Senator Robert M. LaFollette, of Wischan, Senator Laster Hill, of Alabama, Senator James B. Murray, of Montana, Senator Robert A. Taft, of Ohio, and Senator George D. Alken, of Vermont.

Purposes of S. 191.—The declared purposes of the pending bill are twofold (1) to assist the several states to inventory their existing hospitals, as that term is defined in the bill, to survey the need for new construction and to develop programs for construction of such public and other nonprofit hospitals as will, in conjunction with existing facilities, afford the necessary physical facilities for furnishing adquate hospital, clinic and similar services to all people, and (2) to construct public and other non

property, and (4) to construct public and other nonmotit hospitals in accordance with such programs. Definition of Term "Hospitals"—The term "hospital" is broadly defined to include 'public health centers and general, tuberculcess, mental, chronic disease and other types of hospitals and related facilities, such as inboratorics, outpatient departments, nurses' home and training facilities, and central service facilities operated in connection with hospitals." The definition, however, excludes any hospital furnishing primarily domiciliary care.

any hospital furnishing primarily domiciliary care. Creation of Federal Advisory Council.—To assist in administering the provisions of the bill on a federal level, a Federal Advisory Council is proposed The Surgeon General of the Public Health Service will serve as chairman ex office of the council, and the other eight members will be appointed by the administrator of the Federal Security Agency The appointed members will be persons "who are outstanding in fields pertaining to hospital and health activities, and a majority of them shall be authorities in matters relating to the operation of hospitals.' Their terms of office will be staggered. They will be compensated at a rate fixed by the administrator of the Federal Security Agency but not oxceed \$255 a day while serving on husiness of the Council and will be entitled to receive an allowance to cover exponess while serving on husiness of the Council and will be entitled to receive an allowance to cover exponess while serving away from their places of residence. The Council must meet at least once a year but may meet more frequently if the Surgeon General deems it necessary. On the request of three or more members, it is made mandatory that the Surgeon General call a meeting.

Sais Advisory Councils.—Applications that will be submitted to the Surgeon General for approval, proposing surveys of existing facilities and the development of programs for construction, must provide for the designation of state advisory councils to include representatives of "nongovernment organizations or groups, and of state agencies, concerned with the operation, construction, or utiliza-

tion of hospitals, to consult with the state agency in carrying out such purposes."

Federal Appropriations —For the fiscal year ending June 30, 1940, total appropriations of \$110,000—000 are proposed. Of this amount \$5,000,000 will be allotted to the several states for surveys and planning, \$5,000,000 to cover administrative expenses in carrying out plans that have been approved, and \$100,000,000 for the construction of hospitals and related facilities. Thereafter such sums for construction and administrative purposes will be authorized for each fiscal year as Congress may determine to be necessary.

Allotments to States — The sum to be made available for surveys and the development of programs will be allotted by the Surgeon General to the several states on the basis of their respective populations, financial needs, and such other factors as he finds relevant. In connection with these allotments no specific provision appears in the bill for advice from

relevant. In connection with these allotments no specific provision appears in the bill for advice from the Federal Advisory Coundil. From these allotments each state will be entitled to receive after an application has been approved, an amount equal to the "federal percentage, which will be determined in accordance with regulations made by the Surgeon General "Such percentage shall be not less than 25 per centum or more than 75 per centum (presumably of the estimated cost of the survey and the dovelopment of the program) for any state, and within that range such percentage shall be determined for the several states on the basis of their relative financial needs."

The sum to be made available for construction and for administrative expenses will be allotted on the bass of the population and financial needs of the respective states and in the case of allotments for construction of hospitals, the relative need for such construction, or, in the case of allotments for such construction, or, in the case of allotments for such construction, or, in the case of allotments for such construction, or, in the case of allotments for such construction, or, in the case of allotments for such construction, or, in the case of allotments is such an interest of the such consists of the such such consists of the such case of the construction with the state agence designated in the several state plans. Grants to a particular state may be terminated whenever the Surgeon General finds, after affording reasonable notice and opportunity for a hearing, that there has been a failure substantially to comply either with any provision required to be included in the application for funds for surveys and the development of programs

or in any construction plan, or with any regulation promulgated by the Surgeon General. Approval of State Applications and Plans.—In order to obtain any of the federal money made available for surveys and for the development of construction programs, a state must make an applica-tion therefor to the Surgeon General The application must (1) designate a single state agency as the sole agency to supervise the survey and to develop the program, (2) provide for the designation of a state advisory council to include representatives of nongovernmental organizations or groups and of state agencies concerned with the operation construction, or utilization of hospitals, (3) provide for compliance with standards prescribed by the Surgeon General with the approval of the Federal Advisory Council, and (4) provide that the state agency will make such reports, in such form and containing such information as the Surgeon General may from time to time require and comply with such provisions as he may from time to time find necessary to assure the correctness and ventication

of such reports If an application complies with the foregoing requirements, the bill requires the

Surgeon General to approve it

Before a state may participate in any benefit from the distribution of federal money made available for construction programs and for administrative expenses, it must submit a state plan to the Surgeon General for approval A state plan, to be approved, must (1) designate a single state agency as the sole agency for the administration of the plan, or designate such agency as the sole agency for supervising the administration of the plan, (2) contain satisfactory evidence that the state agency designated will have authority to carry out such plan, (3) set forth a hospital construction program which the Surgeon General, on recommendation of the Federal Advisory Council, finds to be in accordance with standards prescribed by him with the approval of the Council, and to be sufficient, in conjunction with existing facilities, to provide the necessary physical facilities for furnishing adequate hospital, clinic, and similar services to all the people of the state, and which, in the case of a state which has developed a construction program after making the required surveys, conforms to the program so developed, (4) set forth relative need, determined in accordance with standards prescribed by the Surgeon General with the approval of the Federal Advisory Council, for the several projects included in the program, and provide for construction, so far as financial resources available therefor and for maintenance and operation make possible, in the order of such relative need, (5) provide such method of administration as the Surgeon General finds necessary for the proper and efficient operation of the plan, including provision for affording to an applicant for a construction project an opportunity for hearing before the state agency, (6) provide that the state agency will make such reports, in such form and containing such information, as the Surgeon General may from time to time require, and comply with such provisions as the Surgeon General may from time to time find necessary to assure the correctness and verification of reports, and (7) provide that the state agency will from time to time review its hospital construction program and submit to the Surgeon General and to the Federal Advisory Council any necessary modifications If a state plan meets these requirements, it must be approved by the Surgeon General

Approval of Projects and Payments for Construction -For each construction project contained in a state plan there must be submitted to the Surgeon General an application by a state or political sub-division or by a public or other nonprofit agency Each application must set forth a description of the site for such project, detailed plans and specifications, reasonable assurance that the title to the site is or will be vested solely in the applicant, and reasonable assurance that adequate financial support will be available for the construction of the project and for its maintenance and operation when No application for a project may be completed approved by the Surgeon General unless its approval has been recommended by the state agency. The has been recommended by the state agency. The bill does not specifically require the Surgeon General to seek the advice of the Federal Advisory Council

in passing on applications for projects

If an application for a project is approved, the Surgeon General will certify to the Secretary of the Treasury an amount equal to the "federal percentage" of the estimated cost of the construction of the project, designate the appropriation from which it

is to be paid, and from time to time certify installments to be paid on account. Certification of installments will be made after such inspections and on such conditions designed to assure satisfactory completion of the project as the Surgeon General shall determine. Such certifications will provide for payments to the state, except that if a state is not authorized by law to make payments to the applicant the certification shall provide for payment to the applicant

In determining whether to approve a project, in determining whether to certify an installment and in any inspection authorized by the bill, the Surgeon General will, as far as practicable, utilize the services and advice of the Federal Works Agency in reviewing the title, working drawings, and specifications of any project, supervising the awarding of contracts and inspecting the performance of the work

and inspecting the performance of the work

Conferences of State Agencies — The Surgeon General will be authorized, in carrying out the provisions of the bill, to invite representatives of as many state agencies to confer with him as he deems necessary or proper A conference of the representatives of all state agencies, however, must be called annually by the Surgeon General If five or more of such agencies request it, the Surgeon General must call a conference of representatives of all state agencies

joining in the request

Promulgation of Regulations —The Surgeon General is authorized to make such regulations and perform such other functions as he finds necessary to carry out the provisions of the bill —All regulations with respect to grants to states for administrative purposes in carrying out plans or for construction projects, however, may be promulgated only on recommendation of the Federal Advisory Council, as before noted, and after consultation with state agencies —The bill provides that, as far as practicable, the Surgeon General shall obtain the agreement of state agencies prior to the promulgation of any such regulations or amendments.

such regulations or amendments

Miscellaneous—A "public health center" within the meaning of this bill means a publicly owned facility for the provision of public health services and medical care, including related facilities such as laboratories, clinics, and administrative offices operated in connection with public health centers. A "nonprofit hospital" is defined to mean any hospital owned and operated by a corporation or association, no part of the net earnings of which invies to the benefit of any private shareholder or individual The money that is allotted to a state for construction purposes may not be expended for the cost of the acquisition of land, except in connection with the construction of public health centers. The bill defines the term "state" to include Alaska, Hawan, Puerto Rico, and the District of Columbia.

Appendix C

Part I—Preface of Report of Preliminary Study by Subcommittee on Laboratory Service and Medical Care of the Committee on Public Health and Education

This Committee was created by the House of Delegates through the recommendations of the Planning Committee for Medical Policies to study the need for centers for diagnostic and to physicians throughout the State of New York

throughout the State of New York

Meeting of House of Delegates, May 8, 1944—

"Regional Centers for Diagnostic Aid—The Committee has made a very comprehensive study of the necessity for the location and the supervision

[Continued from page 2204]

of the centers in rural areas They beheve they can be created and operated in carefully selected areas with no damage to free and unfettered prac-Since no specific recommendatice of medicine tions are made at this time, we will not go into de-tails of their report. They do, however, recommend that a special committee or subcommittee be appointed by the President to make a survey of New York State to determine the need for such a The sugprogram and the areas to be cared for gested methods of operation are, of course, tentative, and if the survey indicates the desirability of estab lishing such diagnostic centers, then the details of management would have to be worked out care-Your Reference Committee recommends the appointment of such a committee by the President "

It is a Subcommittee of the Council Committee

on Pubho Health and Education.

The assignment of the study by your Chairman has been made by districts and the Committeemen

First District—Dr A. A Eggston, Dr S R Monteith, Dr S L Smith

Third District—Dr Kenneth Bott Fourth District—Dr Dan Mellen Fifth District—Dr George A. Marsden Sixth District—Dr I N Peterson Seventh District—Dr Walter Thomas Eighth District—Dr Peter DiNatale Chairman—Dr F Leslie Sullivan

These men have been engaged in a complete survey of each town, village, and city in each county of their district, and have carefully recorded these facts

1 Mapping the areas with town and county lines

Denoting the nearest exact figure of population in towns and villages of 3,000 or over, in cities and counties

Locating on these maps and in narration the number of effective and ineffective physicians, and the ratio relative to specialists and general practi-

tioners Locating all legally incorporated hospitals with specification as to type of hospitalization, proportionate number of beds, and remarks as to type of service, and as to whether it has sufficient service capacity for the community served Notation of x-ray, metabolic, electrocardiographic, and labora-tory service, and blood bank facilities

5 The location of all laboratories assisting in

diagnosis of any type Specification as to type, approved or unapproved, whether they are associated with or independent of a hospital, and the variety and scope of work done, that is, bacteriology, serology, pathology, tassue section, hematology,

milk and water examination, and so forth

It has been charged from time to time, as stated at the November 9, 1944 meeting of the Council, that several areas, particularly in the northern part of the State, are not amply covered by doctors or that the facilities for doctors to practice are not modern, thus the creation of this Committee to clarify to what extent diagnostic aid is lacking and We will have at hand, when the fundamentals are known, information and material so that discussion may be instituted relative to medical care in any region of New York State, with the exception of the City of New York and Long Island

It was the understanding of the Committee, as moved by Dr. Louis H Bauer, that this was a pre-

liminary study and later, if the need arose, a special committee or field worker might be hired to in-tensify the survey The primary purpose is to study the need for increased facilities for diagnostic aid in rural areas, and if such aid is found to be necessary, to determine where these Diagnostic Aid Centers should be located

The Committee has met regularly since its inception, the first meeting being held on December 9, 1944, and monthly to date We have consulted with the New York State Department of Health, Division of Laboratories, Procurement and Assignment Service, the Health Preparedness Commission, as well as the Planning Committee and the Committee on Public Health and Education of the Medical Society of the State of New York

It is not the duty or interest of this Committee to theorize on the socialistic trends in medical care, nor is it its duty to suggest plans of any type for the alteration of discovered difficulties or ills These remedies for poor quality care, lack of facilities, or personnel will be studied and suggested by the Planning Committee of the Medical Society of the State of New York, under the chairmanship of Dr John Stanley Kenney

This Committee might state, however, that if so desired, an experimental clinic for diagnostic aid might be set up in the counties of Schuyler, Chenango, and Tioga, or one station set up in the Fourth District to take care of the north and northeastern part of Delaware County, the southwestern part of Oswego County, and the southeastern part

of Schohame County

We are grateful for the assistance of the following people who so kindly gave of their time and advice Dr Gilbert Dalldorf, Director of Divisional Labora-tories, New York State Department of Health, Dr Edward S Rogers, Assistant Commissioner (Medical Administration) New York State Department of Health ment of Health, Dr Ruth Gilbert, Director of Diagnostic Laboratories, New York State Department of Health, Dr O W H Mitchell, Chairman, Committee on Public Health and Education, Medical Society of the State of New York, Dr Charles Post, Dr George Bachr, Dr Morris Maslon, Dr R L Yeager, Dr Leo Simpson, Dr Thomas Goodfellow, Assemblyman Lee B Mailler, Chairman, New York State Health Preparedness Commission, Dr Joe R Clemmons and Comdr William Burns, New York State Procurement and Assignment Service for Physicians, Dr Basil MacLean, Chairman, New York State Temporary Commission for Medical Care, and Dr Morton Levin, Assistant Director, Division of Cancer Control, New York State Department of Health

The composite report will be filed with the Secre-

F L SULLIVAN, M D, Chairman Subcommittee on Laboratory Service and Medical Care

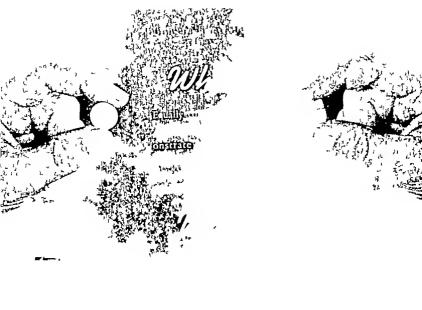

July 18, 1945

Appendix D The Hospital Forum

Agreement With Doctors Reached By State Executive Committee

Agreement in specific terms with representatives of the State Medical Society on the vexed question of the status of certain specialists in the hospitals was arrived at by the Executive Committee of the

[Continued on page 2208]

[Continued from page 2206]

State Association at the special meeting with the physicians' committee held in New York on February 17 This agreement, which is, of course, subject to the action of the governing bodies of the two organizations, is as follows

(a) It is agreed that pathology, anesthesiology, roentgenology, and physical therapy are medical services and the practice of medicine

(b) That these specialties are so recognized

(c) That an equitable arrangement can be made between the individual hospitals and the doctors who practice these four specialties, recognizing the above principle, whereby the hospital may bill for these services in the name of the person rendering the service (This can be done by inserting the name on the regular hospital billhead, i.e. Instead of x-ray, indicate "Professional Services of Dr., Roentgenologist")

(d) Until such time as a Medical Service Plan is available, there is no objection to inclusion of these medical services in the hospital service plan contract as long as the principle of recognition and proper remuneration to these specialists is carried out

Opportunity—The fate of the voluntary nonprofit hospitals is inextricably bound up with that of medicine, problems of either are problems of both, separate and unrelated consideration of those problems cannot produce correct solutions, therefore, hospitals and doctors must act in concert if care of the sick is to be conducted in a humane way and further progress is to be made in medical education and research

To the doctor is entrusted the solemn duty of protecting, preserving, and restoring health, but the fruits of the knowledge, skill, and experience of the physician cannot be given in full measure to humanity without abundant use of the many and complex facilities of the modern hospital. The doctor and the hospital are natural allies in the never-ending war against sickness, injury, and disease, they must

work together

It is in the light of these premises that the Medical Society of the State of New York and the Hospital Association of New York State have formed a Joint Committee to act as a medium through which it is hoped to achieve wider collaboration of efforts and closer coordination of activities between the groups, to develop a joint policy for guidance in dealing with other agencies which directly or indirectly influence the practice of medicine or the care of the sick and to recommend appropriate joint action in matters of mutual interest and concern to the hospitals and

Important matters have already engaged the

doctors of New York State

attention of the Joint Committee Steps have been taken to solve a problem that has long perplexed both groups For some reason the professional status of the specialties of rocitizenology, pathology, anesthesiology, and physical therapy has been clouded with misunderstanding and confusion. The hospital members of the Joint Committee agree with the doctors that the practice of those specialties constitute the practice of medicine and that the specialists should be accorded full professional recognition as doctors of medicine and should receive just remuneration for their services After lengthy discussion the Joint Committee has agreed on Amendments to the Workmen's Compensation Law and the Education Law that secm to meet the requirements of both groups They will be spon-The hospitals are giving full support sored jointly to the Medical Society in opposition to the chiropractic bill Here, then, is strong evidence of the need of a Joint Committee and its value to beth organizations

A good beginning has been made, but much mere remains to be done For one thing, the Joint Committee must be given the loyal and wholehearted

support of the parent bodies

Today the war-torn world knows well the tragic consequences of the evil policy of "divide and rule" It has brought civilization to the brink of destruction, yet through the years hospitals and the medical profession have unwitingly followed the precepts of this permicious doctrine. Outside groups are now invading the field of health but instead of meeting them by determined and coordinated action, medicine and the hospitals passively go their separate ways. Who amongst us will knowingly contribute to the continuation of such a policy? Who is willing to accept the responsibility for prolonging a condition that may have a far-reaching and deleterious effect on public health?

The efforts of the Joint Committee must not be allowed to fail Opportunity knocks loudly—let the doors be thrown open wide to admit goodwill, understanding, unity, and ecoperation by the hospitals and the medical profession. This is the true way to advance the cause of good health, the free practice of medicine, and the development of the voluntary nonprofit hospital system. Now is the time to benefit by the wisdom of the old adage, "in union there is strength"—tomorrow may be too

lato

Doctors and hospitals, close ranks! With mutual respect, confidence, and determination, let us go forward together to bring health in full measure to the people of New York

### BETTER PROTECTION

In the human nutritional economy each vitamin performs an important protective function. Together they offer more complete protection—first, because the occurrence of a single vitamin deficiency is a rare clinical finding; and secondly, because the different vitamins supplement each other in their protective actions.

NU-KAPS provide optimal amounts of those vita mins recognized as required in the great majority of avitaminoses, plus Calcium Pontothenate, Nicotinamide and natural Tocopherols.

NU-KAPS are specially processed hard gelatin matrix capsules which present their ingredients in emulsified form to facilitate absorption and assimilation

DOSAGE: One ar two capsules, 3 times a day, or as directed by physician

Emulsified Poly-Vitamin Capsules

Supplied in bottles containing 100 capsules

# Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the JOURNAL The members of the committee ore Oliver W H Mitchell, M D, Chairman (428 Greenwood Place, Syracuse), George Baehr, M D, and Charles D Post, M D

### Teaching Day in Poughkeepsie

DSYCHOTHERAPY in general medicine was the subject of a regional teaching day at Hudson River State Hospital, in Poughkeepsie, on October 10 Presented under the auspices of the Dutchess County Medical Society and the Medical Society of the State of New York, the afternoon program began at 4 00 pm at the Pavillion at the State Hospital, with the meeting called to order by Dr. Donald Malven, president of the Dutchess County Medical Society.

The speakers at this session were Dr Leslio A Osborn, assistant professor of psychiatry, University of Buffalo, School of Medicine, who spoke on "The Recognition and Management of Psychiatric Problems in General Practice", and Dr James H Wall, assistant medical director, New York Hospital, Westchester Division, White Plains, whose subject was "The Psychiatric Aspects of Obstetrics and

Gynccology"

13

Dr George J Jennings, chairman of the Program Committee of the Dutchess County Medical Society, was chairman of this meeting

Dr Foster Kennedy, professor of clinical medicine (neurology), Cornell University Medical College, gave the evening lecture at 8 30 pm on "The Neuroses Related to the Manic-Depressive Constitution."

This meeting was held under the chairmanship of Dr Scott Lord Smith, chairman of the Public Relations and Public Health Committee of the Dutchess

County Medical Soiety

Dinner was served at 7 00 p m at the Pavillion of the Hudson River State Hospital Physicians attending the meeting were the guests of the Dutchess County Medical Society The committee on arrangements included Dr George J Jennings, chairman, and Drs Chfford A Crispell, William E Garlick, Gilbert C MacKenzie, and James J Toomey

### Cardiac Emergencies

THE St Lawrence County Medical Society will hear Dr Edward C Reifenstein, Sr, speak on October 18 at 8 00 PM at the Potsdam Club, in Potsdam

Dr Reifenstein is professor of medicine at

Syracuse University, College of Medicine His subject will be "Cardiac Emergencies"

This postgraduate instruction has been arranged by the Council Committee on Public Health and Education of the State Medical Society

#### ROLLIER AND SUNLIGHT

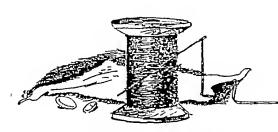

A few months ago the seventieth birthday of Prof Auguste Rollier was celebrated in a French-language Swiss medical journal <sup>1</sup> Rollier's name is known throughout the world for the sun treatment of nonpulmonary tuberculosis He began his work at Leysin in 1903 at a time when operative treatment had for some years been the rule for cases of so-called "surgical" tuberculosis—of bone and joint, of glands, and of the kidneys The results of operation, more especially in bone and joint cases, were unsatisfactory, miliary tuberculosis and sinuses were common sequels At Leysin Rollier showed that properly graduated exposure to the sun built up the resistance of his patients to their disease, healed their sinuses, and arrested their lesions The results he achieved led to the erroneous view that heliotherapy is a specific cure for nonpulmonary tuber-culosis, it is merely an adjuvant treatment, though a most valuable one, and must be combined with suitable orthopedic apparatus for immobilizing the affected bone or joint. Rollier always recognized this and combined heliotherapy with conservative methods of treatment—methods which had been

1 Rev med, Suisse Romi, June, 1944

employed at Berck-sur-Mer for about twenty years

before he began work at Leysin

Rollier's method has been described as the "cure of altitude and exposure to the sun", and the Swiss mountains have the advantage both of a clear atmosphere and of many hours of sunshine But there is some divergence of opinion about the type of climate best suited to the tuberculous patient. The climate best suited to the tuberculous patient late Sir Henry Gauvain, a pioneer of heliotherapy in this country and always an admirer of Rollier and his work, thought the English climate in spring and summer was ideal for sun-treatment owing to the Gauvain shared contrasts of light and shade. Rollier's enthusiasm for the use of the sun's rays for his patients with nonpulmonary tuberculosis, the treatment being given only to those who could respond with pigmentation. Interest soon spread from natural to artificial sunlight, and after a period of uncritical enthusiasm the latter was finally accepted as a substitute which had a place in the treat-Rollier has ment of nonpulmonary tuberculous won a place in the history of therapeutics, and we join with our Swiss colleagues in the tribute paid to him —Brit M J, April 14, 1945

## International College of Surgeons to Meet in December

THE International College of Surgeons will hold its tenth annual convention and convocation on December 7 and 8, 1945, at the Mayflower Hotel, Washington, DC At this time approximately two

hundred men will receive their Fellowship scientific program is planned for both days Convocation exercises will be held Friday evening, December 7, in the Mayflower Auditorium

## Dr. Kress Appointed Director of State Cancer Institute

DR. Louis C Kness, former director of the Division of Cancer Control, assumed on September 1 the duties of director of the New York State Insti-tute for the Study of Malignant Diseases, Buffalo The appointment was made by Dr Edward S Godfrey, Jr, state commissioner of health, and has received the approval of the Board of Visitors as required by law

Dr Kress was graduated from the University of Buffalo School of Medicine in 1918 and did postgraduate work on bone tumors at Johns Hopkins University and in surgical technic at Printy's Chine, Chicago He became a Fellow of the American Col-

lege of Surgeons in 1932

He brings to the directorship a broad experience in cancer control acquired through his long association with the Institute and his work as diagnostician, surgeon, research investigator, and administrator connection with the Institute dates back to 1919, when he was appointed on the staff as voluntary as-During the ensuing twenty years he performed duties in all departments including surgery pathology, therapeutic and diagnostic radiology, and

In 1932 Dr Kress was appointed assistant director of the newly created Division of Cancer Control, serving simultaneously as chief surgeon at the Insti-tute As director of the Division since 1939 he has heen responsible for shaping the state program and policies A notable feature of his administration has been the development of a successful system of cancer morbidity reporting which has made available, for the first time, accurate information concerning the occurrence of cancer in the State Fourteen new tumor clinics have been established in upstate New York, bringing the total to thirty-nine, and a new organization, the Tumor Clinic Association of the State of New York, has been formed Postgraduate courses in cancer have been opened to members of every country medical society in the State

In a comprehensive campaign of cancer education, Dr Kress has utilized practically every channel of publicity including radio, motion pictures, lectures, exhibits, and the distribution of thousands of leaflets and other literature addressed to the public ing the past decade he has given hundreds of talks

before professional and lay audiences and for two successive years delivered a scries of radio talks, consisting of sixteen lectures each, over Station WEBR, He has spoken before medical groups Buffalo throughout New York State and has presented original papers before such organizations as the Buffalo Academy of Mcdicine, Canadian Medical Association, American Radium Society, Radiological and Orthopedic Societies of Boston, and the American College of Osteopathic Surgeons

Dr Kress has done extensive research on malignant tumors, which is recorded in numerous contributions to the scientific literature on bone tumors, radiation therapy, and the various clinical forms of cancer as well as the public-health aspects of cancer

control

In the role of teacher, he has contributed further to the advancement of education in neoplastic dis-

He is associate in surgery on the faculty of the University of Buffalo School of Medicine and has lectured at Albany Medical School, the University of Syracuse School of Mcdicine, and Ohio State Uni-

Dr Kress is consultant in cancer to the United States Public Health Service, the Hospital of the Sisters of Charity and the Mercy Hospital, Buffalo, and the Gowanda State Hospital He is consultant in oncology at the E J Meyer Memorial Hospital and attending physician, cancer service, at Deaconess Hospital, Buffalo

He has participated actively in the work of state and national cancer organizations He is chairman of the Executive Committee and Board of Managers, New York State Branch of the American Cancer Society, councilor, Tumor Clinic Association of the State of New York, member of the Subcommittee on Diseases of the Chest, Medical Society of the State of New York, and member of the Executive Committee of the American Public Health Cancer Asso-He is affiliated with many other medical and research groups including the American Cancer Research Society, American College of Surgeons, American Radium Society, North American Radiological Society, and the Buffalo Academy of Medi-

### Fellowships in Public Health Available

THE New York State Department of Health has available a limited number of fellowships for physicians desirous of equipping themselves with the necessary field and academic experience for the practice of civilian public health on a full-time basis six to twelve months of orientation and field work are provided under the guidance of experienced district state health officers followed by an academic year at a postgraduate school of public health where the master's degree in public health is earned. Fel-

lowship provisions are generous and include tuition Those completing the training are professionally qualified for appointment on the staff of most local and state health departments

Applicants must possess certain basic qualifica-tions among which are United States citizenship, graduation from a medical school approved by the American Medical Association, internship of at least one year's duration in a general hospital approved

for internship by the American Medical Association, and licensure to practice medicine in New York State or eligibility to take the examination to obtain such license The upper age limit is 35 years Physicians interested in making application for a fellowship should write to the State Department of Health, Albany 1, New York.

### Educational Program of the Oklahoma State Medical Association

UPON the recommendation of the president, Dr V C Tisdal, the following educational program has been adopted by the Oklahoma State Medical Association

Public education through the press, radio,

motion pictures, and a speaker's bureau

Postgraduate programs to the doctors of the state, refresher courses from the State Medical School, residencies, cooperation with the State Medical School in added facilities, including research facilities, for returning servicemen and civilian doctors

3 Postwar planning for the placement of doctors

now in the armed services

Intimate contact between the State Associa-(Details of this tion and county medical societies program are presented in the May Journal of the Oklahoma State Medical Association.)

The program was initiated by a series of meetings in the various Councilor Districts All but two of the ten districts have been covered, and these meetings will be held in September Members of the Speaker's Bureau have spoken on the following subjects cancer, tuberculosis, obstetrics, pediatrics, medical programs of educational work to the profession and the public, the Blue Cross, prepaid surgical and obstetric plan, regimented medicine, and the responsibility of the profession to the public. In two of the meetings there were special programs for The attendance and reception of the the public program were most gratifying

Speakers included, in addition to the officials of the State Medical Association, the Dean of the School of Medicine, the President of the newly organized State Board of Health, the State Commissioner of Health, members of the faculty of the Medical School, and other outstanding men of the profession The Governor, heads of educational institutions, outstanding educators, and other publicspirited citizens have volunteered to participate in educational programs

A Speaker's Bureau has been organized, consisting of more than two hundred members of the medical profession Sixty-two outstanding laymen, including the Governor, the president of the University, and the president of Oklahoma A and M College, have agreed to participate

In addition to the above, short movie trailers on medical subjects will be available to the movie theaters of the state These subjects will include cancer, tuberculosis, immunization, sanitation,

These trailers are to be censored by representatives of the American Medical Association, as well as the State Medical Association Of course, an attempt will be made to have them presented in a way that they will be of educational value to all the people. The key to this program is the fact that for every soldier killed in the service, seventeen people die in this country from preventable causes

Members of the Speaker's Bureau will contact civic clubs, high schools, colleges, churches, chambers of commerce, women's clubs The trailers will reach the audiences of most of the movie houses press will be furnished with well-edited information on public health and preventive medicine. It is hoped to use the radio to the best possible advantage, not only through donated time, but by the use of commercial spot programs.

From the above you will see that Oklahoma has an energetic practical program of education. It is felt that such a program is the best method of meeting the efforts of the socialistic groups to enter the field

of medicine

## County News

Albany County

Dr Alton J Spencer, resident in obstetrics at Brady Maternity Hospital, Albany, since 1943, has resigned to establish a private practice in Amsterdam. No successor has yet been named.\*

Dr Robert R. Faust heads a group of physicians from Albany and the Capital district who have formed an informal study group under the name of the Albany Society for the Advancement of Psychosomatic Medicine

The organization's objective is stated as "the advancement of medical science through the development of deeper appreciation of the importance of psychologic force in connection with somatic conditions, and the translation of such concepts into a more complete and rational therapy"

Dr Alva Gwin is secretary and Dr Clinton P McCord consultant to the group The executive committee consists of Dr Otto A. Faust, chairman, Dr Paul B Brooks, Dr Newton J T Bigelow, Dr

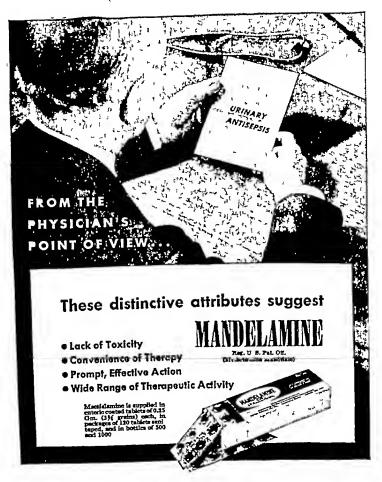

\* Asterisk indicates that item is from a local newspaper

Tiffany Lawyer, Dr William Kaufmann, Dr Elizabeth Palmer, Dr Marjone F Murray, Dr Carl R Comstock, Dr Morton L Levin, Dr Hazel Curry, Dr George K Butterfield, Dr Irving R. Justter, and Dr Harold G Haskell.

The regular meeting of the county society was held in the auditorium of the Albany College of Pharmacy on September 26 at 8 30 p m The scientufic session consisted of an address by the vice-president, Dr Raymond G Leddy, on "The Acute Abdomen in the Child."

Dr Arthur J Wallingford, professor of gynecology at Albany Medical College, will be among the speakers at a physicians' conference in Albany October 18, sponsored by the county society and the State Health Department The meeting is one of a series on cancer planned in upstate cities by the department and local medical societies.\*

Colonel Campbell received his medical degree from Johns Hopkins University and holds a bachelor's degree from Oxford University He entered service in June, 1942, and went overseas in July,

1943 \*

#### Erre County

Appointment of Dr Gene Hofmeister Clarke, of Buffalo, as a physician in the division of child hygiene has been announced by Health Commissioner Francis E Fronczak He will substitute for Dr Arthur F Glaeser, now on leave of absence to serve as diagnostician in the division of communicable diseases \*

#### Greater New York

Confirming the intention of the physicians of Greater New York to support the new "all-coverage" plan of medical care insurance, as announced on September 4 by United Medical Service, Ine, the following statement was issued by Dr William B Rawls, Chairman of the Coordinating Council of the Five County Medical Societies of Greater New York, and by the presidents of each of the societies Dr Kirby Dwight, of New York County, Dr Frank LaGattuta, of the Bronx, Dr Joseph Tenopyr, of Kings, Dr Edward C Veprovsky, of Queens, and Dr Milton S Lloyd, of Richmond County

"When United Medical Service was introduced to the people of New York City last January, the Chairman of the Coordinating Council of the Five County Medical Societies promised on behalf of the doctors that an effort would be made soon to introduce a comprehensive medical eare insurance plan Now—much sooner than many had thought pos-

sible—this promise is being fulfilled

"The all-coverage plan of United Medical Service is truly a pioneering venture in medical insurance. It is broader than any other community program now in effect in the eastern United States. The medical profession of New York City strongly supports the principle of voluntary medical insurance and welcomes this plan as a major step in the profession's effort to make good medical care available to all the people through voluntary insurance plans. The physicians are glad to take part in this initial undertaking of a general coverage contract with every hope that through the combined efforts of the United Medical Service, the public, and the medical profession, this plan may prove successful and be extended in the near future to all the people who may want to avail themselves of it"

The new plan, as outlined in a statement by Rowland H George, president of United Medical Service, comprises a group plan for the provision of medical, surgical, and materinty care, including aftercare, in the home and doctor's office, as well as in the bospital Specified payments will be made also toward the services of qualified specialists

The expanded service will be limited to a maximum enrollment of twenty-five thousand persons "until further expansion is justified on the basis of actual experience" Full coverage will be provided

to families with incomes up to \$2,500 or individuals earning up to \$1,800 annually. Subscribers whose incomes exceed these limits are entitled to partial payments against medical expenses incurred.

United Medical Service now has some one hundred and thirty-seven thousand subscribers covered by more limited plans of medical or surgical care More than eight thousand physicians have agreed to participate in the United Medical Service program

#### Jefferson County

Dr L Otis Fox, Brownville, practicing physician in that village for the past ten years, opened offices in Watertown, on September 4.

Dr Fox will continue to make his residence in Brownville and also continue his evening practice

there \*

#### Monroe County

Dr Charles M Carpenter, associate professor of bacteriology and public bealth, University of Rochester School of Medicine and Dentistry, Rochester, has been sent to the Philippine Islands on a special medical mission by the Office of Scientific Research and Development In cooperation with the medical corps of the Army, Dr Carpenter will make an investigation of venereal diseases, on which be is a special consultant for the U S Public Health Service

Ending eighteen years in the Rochester Health Bureau, Dr Norris G Orchard, deputy health officer, has retired, as of October 15 He will move to Cape Cod to resume private practice in pediatrics

Dr Orchard, who was appointed city health physician in 1927, assumed his present post February 16, 1942, as successor to Dr Joseph Roby, who retired

in the previous September

He has been in charge of venereal disease work for the city and has worked in the same field for the

State Department of Health

A graduate of Johns Hopkins, Dr Orchard first went to Rochester in 1907 to intern at the former City Hospital, now the Rochester General Hospital, of which he later became a staff member He is also on the staff of Strong Memorial Hospital and has lectured on pediatrics at the University of Rochester School of Medicine During World War I he served with the medical corps at General Hospital No 1 in New York City \*

#### Nassau County

Four members of the county society bave returned from the armed services and are now engaged in

private practice

Dr John H Maurer, former Rockville Centre physician, has returned to general practice in Hempstead in the office of the late Dr William T Chamberlain Dr Maurer saw service in European theaters and held the commission of captain in the U S Army

Dr Louis J Gelber, former major in the U S Army, has resumed the private practice of radiology

at Rockville Centre

Dr Edward Held, former heutenant commander in the Navy, has returned to general practice in Hempstead, and Dr Arthur Frucht, who beld the rank of captain in the U S Army, is limiting his practice to radiology at his office in Hempstead

[Continued on page 2218]

## As the Carbohydrate Content of the National Diet Increases

The changes which have occurred in the national dietary during the war period, especially the increased consumption of carbohydrates, lend new importance to dietary supplementation with B vitamins. To assure better utilization of a diet high in carbohydrates, and to prevent or correct deficiencies of vitamin B complex factors, NOVI PLIX provides a rational, adequately potent formula

Because it contains the entire B complex, as obtained from high potency yeast concentrate, in ad dition to crystalline factors in approximately the proportion required by the human organism, NOVIPLEX supplies all of the natural B vitamins, including choline, inositol, and biotin.

## NOVIPLEX

#### Each capsule of Noviplex contains

Thiamine hydrochloride (B<sub>1</sub>) 1 mg Riboflavin (B<sub>1</sub> G) 1 mg Nicotnamide (nacinamide) 8 mg Pyridoxine hydrochloride (B<sub>2</sub>) 0 5 mg. Calcium pantothenate 1 ms

Plus all other factors naturally occurring in yeast concentrate Noviplex is supplied in bottles of 100, 500 and 1000 capsules.

Dr I Norwich, assistant superintendent, Johannesburg Hospital, Johannesburg, South Africa, will fill one of the first S S Goldwater fellowships in hospital administration at Mount Sinai Hospital, according to the *Modern Hospital* The fellowship permits one year of study and observation at Mount Sinai Dr Norwich, who is to arrive in the fall, is a native of Johannesburg and has done graduate medical study in England Another fellowship has been granted to Marguerite M Ducker, research assistant in the program in hospital administration at Northwestern University, Chicago On completion of the fellowship, Miss Ducker is expected to return to the teaching staff in hospital administration at Northwestern

The Association for the Advancement of Psychoanalysis held its first regular meeting for 1945–1946 at the New York Academy of Medicine on September 26 Dr Karen Horney presented a paper entitled "The Role of Imagination in Neurosis" The discussion was opened by Dr Harold Kelman

The Bellevue Hospital Unit, serving in Paris as the Army First General Hospital in the European theater, was commended for "outstanding service" by Maj Gen Paul R. Hawley, chief surgeon of the area, in a letter made public on September 20 by Dr Edward M Bernecker, Commissioner of Hospitals

The commendation was the second such received by the unit, the first having been made by Surgeon General of the Army Norman T Kirk in September, 1944, after he had completed an inspection tour of

the European battlefront

Stating that Bellevue Hospital "can be very proud of the unit," Major General Hawley wrote "I find myself at loss for words to describe the superb quality of medical personnel that came with this unit "

The outfit, with a personnel of over six hundred, was made up in 1942 of sixty-seven doctors, all formerly associated with the hospital, one hundred and twenty nurses, either on military leave from Bellevue or trained at the institution, and five hundred enlisted corpsmen, technicians, and orderlies of the enlisted personnel was trained at the hospital It is headed by Dr Currier McEwen, chief medical officer, and Dr John H. Mulholland, chief surgical officer, dean and assistant dean, respectively, of the College of Medicine of New York University, and Miss Thelma Ryan, head of the Nursing Division, who was a member of Bellevue's faculty

The unit was sent to Mimms, near London, in December, 1943, and operated in Nissen huts and tents to care for casualties injured by Nazi flying bombs In October, 1944, it was moved to head-quarters near Pans where Major General Hawley wrote that it became necessary to draw heavily on its personnel to strengthen weaker units "They have always had an equally good man to

replace ones that I had to take away from them," he wrote "Those who still remained with the unit maintained the same high standards of professional care that characterized this unit in the early days"

Still in France, the outfit is expected to be re-

turned to the United States late this year

The following physicians successfully passed the written examination for fellowship in the American College of Chest Physicians held in June, 1945, and will be awarded their Fellowship Certificates at the next convocation of the College Dr Herman 8 Cutler, of Staten Island, Dr Norman Diamond, of the Bronx, and Dr Henry Young, of New York

The convocations are held in conjunction with the annual meetings of the College, which will again be

resumed in 1946

The weekly Gastroenterologic Conferences at Bellevue Hospital were resumed on October 1, 1945, at 3 00 PM They are conducted in the G6 amphitheater, and as in previous years consist of a presentation of the clinical and radiologic findings of those current abdominal cases that have come to operation or autopsy

A series of practical in-service training and observation courses in the diagnosis and treatment of the venereal diseases started on October 1 under the auspices of the Bureau of Social Hygiene of the New

York City Department of Health

Each course will last for two weeks, and sessions will be held daily from 9 00 a.m to 12 00 noon in the Central Social Hygiene Clinic of the Health Department The daily conferences will present opportunities for observation of all clinical and laboratory procedures in the diagnosis and treatment of the venereal diseases Didactic discussions will be kept to a minimum No fee is required

The first course started Monday, October 1, and new courses will begin every two weeks thereafter Advance registration is necessary, since attendance at each course will be limited to six physicians Interested applicants should register with the Director, Bureau of Social Hygiene, Department of Health, 125 Worth Street, New York 13, New York

Practitioners who have recently returned from service in the armed forces will find this course a practical means of bringing themselves up to date on

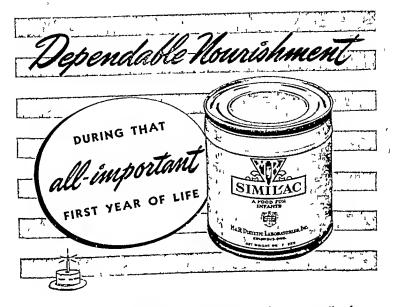

modern venereal disease control.

This clinical observation course supplements the regular weekly Saturday morning lecture series at the Health Department which started on September 22

Onondaga County

Dr George H Stephens, veteran Syracuse physician, is the new surgeon for the fire and police departments Dr Stephens has been on the job since September 1 \*

The thirteenth meeting of the Western New York and Ontario Urological Society of the Central Section of the American Urological Association was held in the Hotel Syracuse, Syracuse, on September 20 and 21 The September 20 session began at 9 00 AM with registration, which was followed by two lectures, "The Failures of Penicilhn," by Dr Edgar Slotkin, of Buffalo, and "A Study of the Regeneration of the Epithelium of the Prostatic Urethra Foltion of the Epithenium of the Prostatic Cretifia Pol-lowing Resection, "illustrated with lantern shdes, by Dr N E Berry, of Kingston, Ontario Following lunch at 12 45 Dr R H. Flocks, Iowa City, Iowa, spoke on "The Prophylactic Treatment of Recur-rent Renal Calcul," with discussion by Dr David R. Mitchell, of Toronto Following this was a symposium on carcinoma on the bladder, consisting of [Continued on page 2220]

Carlisle, of Rahway, New Jersey, spoke on "Streptomycin and Its Future Use in Urology," followed by
discussion by Dr James C McClelland, of Toronto
Dr Clyde L Deming, of New Haven, Connecticut, then spoke on "Prognosis and Problems in Renal Tumors," with discussion led by Drs Frederick J Parmenter, of Buffalo, and Elmer Hess, of Erie, Pennsylvania

#### Orange County

Navy Licutenant John C Brady, former Newburgh doctor serving with the 4th Marine Division, was awarded the Bronze Star for meritorious achievement on Iwo Jima, where he braved a heavy enemy barrage to care for the wounded of a hard-hit infantry battalion

#### Queens County

A Silver Star for gallantry was announced by the Army on August 27 for a prewar Flushing Hospital intern who distinguished himself by volunteering to aid casualties under such murderous fire in France that a tank had to be used to reach them

The exploit He is Capt Walter E Marchand that won the doctor recognition for outstanding courage took place June 22, 1944, according to the citation presented recently at the Assembly Area Command at Camp New Orleans, near Chalons, a redeployment center \*

Cmdr James L McCartney, formerly an Albany physician, has been released from active service after forty months in the Naval Reserve, and has resumed private practice at Garden City

Commander McCartney was in charge of the neuropsychopathic department of the Base Hospital at Timan in the Marianas Islands

Previously he had served at Pearl Harbor and in

the Marshalls and Gilberts

An Army veteran of the first World War, Commander McCartney practiced for a number of years in Cluna, and for several years was director of classification in the New York State Department of Correction \*

## Necrology

John A Belch, M D, of Syracuso, died on August 18 of a heart attack. He was 81 years old native of Kingston, Ontario, Dr Belch had practiced in Syracuse for more than fifty years. He received his medical degree in 1889 from the Royal College of Physicians and Surgeons, Kingston, Canada He was formerly obstetrician at Crouse-Irving Hospital, in Syracuse, and was a member of the Medical Society of the State of New York, Onondaga County Medical Society, and the American Medical Association

Harry S Borowick, M D, of Brooklyn, died on September 20 at the age of 53 He was graduated from the New York University and Bellevue Medical College in 1924, and was on the staff of the Israel

Zion Hospital in Brooklyn

Milton A Gershel, MD, of New York City, died on September 7 at the age of 70 Dr Gershel was among the first medical men to isolate organisms from the blood of patients suffering from bacterial endocarditis He received his medical degree from the College of Physicians and Surgeons, Columbia University, in 1900 He served as house physician at Mount Sinai Hospital and was later resident physician for the Sheltering Guardian So-

ciety Orphan Asylum

Abraham L Greenberg, MD, of Brooklyn, died on July 15 at the age of 50 He was graduated from Fordham University Medical School in 1919, and was a diplomate of the American Board of Urology, fellow of the American College of Surgeons, and a member of the American Urologic Association, the Medical Society of the State of New York, Kings County Medical Society, and the American Medical Association He was associate attending urologist at Beth-El Hospital, assistant attending urologist at Brooklyn Jewish Hospital, and attending urologist in the outpatient department of Beth-El Hospital in Brooklyn

William Avery Groat, M D, of Syracuse, president of the Medical Society of the State of New York from 1938 to 1939, died on September 9 at the He was a member of the faculty of the Syracuse University College of Medicine for forty years until his retirement in 1943 After graduation from Syracuse University College of Medicine in 1900 he joined the staff of the College as instructor in chemistry, and was later named professor of chinical pathology. He was director of laboratories at St Joseph's Hospital, Syracuse, and in 1938 was chief of the Syracuse Memorial Hospital medical department. A follow of the American College of department A fellow of the American College of Physicians, a fellow of the American Chinical Pathological Society, the American Society for the Study of Goiter, a member of the State and county medical societies and the American Medical Association, he also served on the management committee of The New York State Journal of MEDICINE and was a contributor to many other medical publications

Stanton Hendrick, M.D., of Oneonta, died no

[Continued on page 2222]

[Continued from page 2220]

2222

August 10 at the age of 80 Dr Hendrick was graduated from Albany Medical College in 1892, and in 1944 the college presented him with a gold decoration in recognition of fifty years of meritorious service to humanity He was on the staff of the Fox Memorial Hospital in Oaeonta, and was a member of of the State medical society, Otsego County Medical Society, and the American Medical Association.

Charles Gilmore Kerley, M.D., of New York City, died on September 7 after an illness of a few days He was 82 years old Dr Kerley retired in 1943 after devoting half a century to the treatment of diseases of children He had been president of the American Pediatric Society and the New York County Medical Society, a licentiate of the American Board of Pediatrics, a fellow of the Academy of Medicine and the American Academy of Pediatrics, as well as a member of the State and County medical societies and the American Medical Associa-He received his medical degree in 1888 from New York University College of Medicine, and for the next four years was resident physician at the Mt Vernon Infant Asylum, later becoming a professor at the New York Polyelinic Medical School His subsequent hospital appointments included consultant pediatrician for the Babies Hospital and the Hospital for Joint Discases, St John's Hospital, in Yonkers, Tarrytown Hospital, Methodist Hospital, in Brooklyn, Greenwich Hospital, Connecticut, Vassar Hospital, and Sharon Hospital, which is now building a children's wing in his honory with the most winder. which is now building a children's wing in his honor. He was the author of six books, the most widely known among laymen being Short Talks with Young Mothers, published in 1902, and revised several times. His textbook, Practice of Pedatrics, is widely used in medical schools throughout the world. In 1892 he served as assistant and resident physician at the Bavarian Women's Clinic, in Minish and also did nectored ducto week in Minish. Munich, and also did postgraduate work in Munich He returned to this country in 1893 and Vienna to specialize in pediatrics, and became a well-known child psychologist

Elmer Lee, MD, of New York City, died on June 13 at the age of 89 Dr Lee received his medical degree from Washington University, in

St Louis, in 1882
William Maloney, M.D., of Cape Vincent, died on September 5. A graduate of the New York University and Bellevue Medical College, class of 1898, Dr. Maloney was associate physician on the staff of the House of the Good Samaritan, Water-town, and the Mercy Hospital, in Watertown He is a member of the Jefferson County Medical Society, the Medical Society of the State of New York, and the American Medical Association

Edward F Marsh, M D, of White Plains, died on September 4 at the age of 86 He was graduated in 1882 from Albany Medical College and practiced in Brooklyn for forty years before his retirement in 1933 Dr Marsh was a member of the Kings County Medical Society, the State medical society, and the American Medical Association.

charles McDowell, MD, of Brooklyn, for more than fifty years professor of physiology and hygiene at New York Medical College, and professor emeritus for the last ten years, died on August 31 after an illness of over a year He was 87 years old He received his medical degree in 1878 from the New York Homeopathic Medical College, and studied at Leipzig, Paris, Vienna, and London before returning to New York to enter general practice Formerly director of the department of

physiology at New York Medical College and professor of public health, he was a member of the American Institute of Homeopathy, the Homeopathy pathic Medical Society of New York State, the Homeopathic Medical Society of New York County, and the American Public Health Association

Blasius A. Pinnola, M D, of Brooklyn, died on March 10, 1944 at the age of 48 Dr Pinnola re-ceived his medical degree from Georgetown Uni-

versity Medical College in 1925

Joseph Chauncey Gerard Regan, MD, of Brooklyn, died on August 15 at the age of 52 Dr Regan was a licentiate of the American Board of Pediatrics, and a member of the American Academy of Pediatrics, the Brooklyn Pediatric Society, the Kings County Medical Society, of which he was chairman of the milk commission, the Medical Society of the State of New York, and the American Medical Association He was graduated in 1972 for the New York and Bellowing 1913 from the New York University and Bellevue Medical College, served his internship at St Mary's Hospital, in Brooklyn, and was later pediatrician at St Catherine's Hospital, in Brooklyn, consulting pediatrician to St Mary's and St Charles, in Brooklyn and Port Jefferson, Holy Name Hospital, in Teaneck, New Jersey, and the nursery school of St John's College for Women He was also formerly lecturer, associate professor, and clinical professor at the Long Island College of Medicine, and author of many papers dealing with acute infectious diseases of children

Daniel Lee Rogers, M.D., of Bolton Landing, died on September 11 at the age of 84 Hc was graduated from the University of Vermont with a medical degree in 1886, and was on the staff of the Glens Falls Hospital Coroner of Warren County for the last thirty-two years, he was a member of the State and County medical societies, and the

American Medical Association

Bradford Wyckoff Sherwood, M D, of Syracuse, died on August 29 at the age of 86 Previous to his retirement in 1943 he had practiced in Syracuse for fifty-five years and was on the staff of the Syracuse General and University hospitals Ho was graduated from Hahnemann Medical College, Philadel phia, in 1890, and was a member of the American Institute of Homeopathy, the State Homeopathic Society, and Syracuse Academy of Medicine

Bruce T Smith, Capt., (MC), of Fort Covington, died in Belgium on September 19, 1944. Captain Smith was serving with the 389th Eng G S Regment at the time of his death Previous to his each previous trance into service he had been physician on the staff of the Alice Hyde Memorial Hospital, in Malone He received his medical degree in 1925 from McGill Medical College, in Canada, and served his internship at the Montreal General Hospital He was a member of the Franklin County Medical Secrety, the State medical secrety. County Medical Society, the State medical society, and the American Medical Association

James Watt, MD, of Now York City, died on August 17 at the age of 68 Dr Watt was medical director for the New York offices of the Union Carbide and Carbon Corporation and the General Foods Corporation He received his medical de-gree in 1900 from the Long Island College of Medicine, and was on the staffs of the College, and the Flower and Fifth Avenue and Midtown hospitals He was a fellow of the American Collego of Surgeons and a member of the Brooklyn Surgical Society, the Brooklyn Pathological Society, the medi-

V Hugh Williams, M D, of Owego, died suddenly at his home on August 27 He was 43 years old He was graduated from the Syracuse University College of Medicine in 1927, served his internship at Binghamton City Hospital, and was a member of the hospital staff until 1929, when he went to Owego

Hc was a member of the Tioga County Mcdical Society, the Medical Society of the State of New York, and the American Medical Associa-

#### WHY GRADUATES AVOID RURAL AREAS

It has long been a source of concern to those interested in the Nation's health that the number of physicians seeking locations in rural communities has diminished to such an extent that certain areas have suffered for want of necessar, medical service Dr I H. Manning, of Chapel Hill, North Carolina, comments on this situation in an article appearing in the October (1944) issue of the North Carolina Medical Journal

"Let us accept as a fact that the rural population as a whole is not receiving adequate medical care The usual explanation given is the scarcity of doctors in the rural sections. In many counties, however, wherein there are adequate hospital facilities and several if not many doctors, this explanation will not hold water With the good roads throughout these counties the transportation time from any part of the county to a hospital is not more than an hour, and except in a small percentage of cases the immediate need is not so great that this time is a

factor
"If, therefore, the rural population in such counties
adapted medical service the explanation is not the scarcity of doctors, but is largely,

if not wholly, economic

"In counties where adequate hospital facilities are not available and where there is an actual scarcity of doctors, the problem is again largely economic Doctors cannot be expected to locate in any sec-For this tion in which they cannot make a living situation the only remedy is the subsidy

are, however, other factors
"The graduates of medical schools are thoroughly instructed and trained in the practice of scientific medicine which requires laboratory and hospital facilities, although not necessarily hospital accommodations A section in which none of these essentials are available will not attract a young doctor who has had such training and who has some ambition, and it is safe to predict that few of our graduates will locate in rural sections under such The problem is to improve the condiconditions tions "

The Duke Foundation has been building hospitals in various counties of North Carolina for the purpose of attracting doctors to rural areas hospitals are maintained by the community except that the Foundation pays one dollar a day toward the care of charity patients However, it appears that, despite the generosity of the Foundation, cconomic conditions have been such in some parts

of the state as not to justify the erection of a hospital Under such conditions, Dr Manning makes the

following suggestions

"An alternative and less costly means of making practice in the rural sections more attractive is the establishment of a 'diagnostic laboratory,' which has been successfully tried out in Michigan as a project of the Kellogg Foundation The laboraproject of the Kellogg Foundation tories are equipped to furnish at low cost such laboratory information as the doctor may desire. According to the published reports, such a laboratory may become self-supporting within eighteen months Eventually it may become the nucleus of a hospital or at least a clinic A laboratory may be set up in connection with the County Health Department for this purpose

"The clinic seems to offer the most promising solution of the problem of making the rural sections

more attractive to the doctors

Dr Manning points out that there are a number of such chinics operating in North Carolina, all of them privately owned and limiting their services to "Such minor surgical operations and obstetrics climes, if adequately equipped," Dr Manning continues, "will answer the purposes of a general practitioner in a rural community Unfortunately the young doctor, fresh from a hospital training and perhaps in debt for his education, cannot afford a clinic, but if such a clinic is made available some of the recent graduates who prefer an independent practice and the opportunity to get quickly on their feet financially will accept the chance of a rural practice and later may take over the clinic as a private enterprise.

"To make this suggestion operative there is need for a revolving fund to finance the venture a chance for some foundation to render a real service

to the rural population

"As the clinic does not provide for major surgical operations, and should not attempt to do so, the rural population must depend upon some hospital in near-by towns or cities, or upon a state-supported general hospital, as suggested by the Governor, where such work can be done safely For these major hazards insurance is the only solution, and this can be brought within reach of the rural population through voluntary health insurance associations, which are designed for the protection of the low-income groups and furnish the service at the lowest possible cost consistent with sound business"\_\_\_ M Ann, District of Columbia, January, 1945

## A Notable Production Achievement

NO less impressive than the remarkable performance of Pentcillin itself is the record of Penicilia manufacturers in our mounting numerous obstacles to achieve large-scale production.

In this notable production achievement Merck & Co. Joc. has been privileged to play a ploneering and progressively in portant rôle. Basio discoveries made by Merck Mercobiologists, and shared with other Penseillin producers, contributed vastly to the successful development of Penseillin manufacture. By applying chemical engineering technics to the manufacture of this difficultiy produced antibiotio agent. Merck independently succeeded in devising and perfecting a practical method of large-scale production based on the mass fermentetion principle.

Penicillin Merck meets the recognized high standard of quality established for all products bearing the Merck label.

# PENICILLIN MERCK

a record of performance

1940 Merck research on antibiotics concentrated on Penicillia

1941 Merck helped apur production through a British American reciprocal arrangement

1942 Merck supplied Pealsillin for first case of basterlemia successfully treated with Pealcillin in America.

1942 Merck Penicillin rushed to Boston for Coccessit Grove fire

1943 Merek Pealeillin flows to Bogland for U. S. Army Medical Corps

1943 Large-scale production of Penicillin was established by Merok to meet Government requirements

1944 Merck Canadian plant produced first commercial Pealeillia by deep-fermentation process in Brit ish Empire

1945 Merck supplies large quantities of Penicillin for civilian use as well as for Armed Forces

## Hospital News

### New Plan Offered to Aid Handicapped

R ECOMMENDATIONS for regional rehabilitation hospitals that eventually would form a nation-wide system were advanced on September 8 at the close of a two-day conference of the National Committee of the Severely Handicapped, at the In-

stitute for the Crippled and Disabled

Based broadly on a tentative blueprint issued recently by the Baruch Committee on Physical Medicine, a proposal for a comprehensive program was presented by the committee for study Col Howard A Rusk, chief of the convalescent division of the Office of the Air Surgeon, United States Army, presided

The national committee received favorably a plan submitted by Dr W T Sanger, president of the Medical College of Virginia, in Richmond It was concerned specifically with an ambitious plan for a rehabilitation center at that institution, which may become a demonstration center for six other smilar

setups in key cities
Michael J Shortley, director of the United States
Office of Vocational Rehabilitation and a member of the Baruoh subcommittee, indicated an urgent need of such centers in widely scattered communities "The end product of any rehabilitation project is

employment," he said

Asserting that the country needs a "highthouse founded on sound research," Dr Sanger envisaged a demonstration center of physical medicine and rehabilitation "so impressive, so authoritative, so challenging to current indifference and even opposition at points, as will advance this field with rapid and deserved tempo"\_\_\_\_

His colleague, Dr Frances A Hellebrandt, professor of physical medicine, exhibited blueprints and architects' drawings of the proposed center in Richmond and described rehabilitation work currently

being carried on at the Baruch Center of Physical Medicine at the Medical College of Virginia Using this center as a starting point, she said, it could be be "a lighthouse of influence throughout the country"

The center was opened on July 1, 1944, as a gift from Bernard M Barueh, adviser to presidents, who made similar grants to Columbia and New York

A survey of existing facilities resulted in a threefold program, Dr Hellebrandt said, including education, research, and services to the sick. More adequate facilities for Negroes are included, she added especially in the fields of physical and occupational therapy The plan carried recommendations for integration and expansion, accompanied by floor plans, and emphasized that the modern concept of rehabilitation should be interpreted to be a function of physical medicine

Mr Shortley pointed out that the program con-templates restoration of the severely handicapped

individual "physically, mentally, socially, vocationally, and economically"

Col John N Smith, Jr, director of the Institute for Crippled and Disabled, which has pioneered rehabilitation work since 1917, defined rehabilitation as the restoration of a handwarped person in terms as the restoration of a handicapped person in terms of his total situation to the fullest physical, montal, social, vocational, and economic functioning of which he is capable

He observed that Galen, a Greek philosopher, wrote seventeen centuries ago, "Employment is nature's best physician and essential to human hap-piness" In its broader sense, he acknowledged, rehabilitation was "a social problem with a medical

tion with the hospital ophthalmologist, makes it possible for Rhoads to provide patients with custom-

made artificial eyes in no more than six days from the date they first report to the laboratory

When a patient reports to the laboratory he is examined by Captain Brandt and is fitted with an

aspect '

#### Improvements

One of the four Berman metal locators thus far released by the government for civilian use has been donated to the House of the Good Samaritan, Watertown, by a Watertown donor The locator, operated on the radar principal, is adept at locating foreign metal objects which accidentally enter a patient's body

The Berman locator, credited with aiding physicians with treating 960 patients by nightfall December 7, 1941, at Honolulu Hospital, has been used four times already at the House of the Good Samaritan \*

The opening of a new artificial plastic eye laboratory at Rhoads General Hospital was announced on

August 30 by Col A J Canning, commanding officer.
Capt Sidney Brandt, DC, of Newark, New
Jersey, is in charge of the laboratory He will be assisted by Cpl Royden Scott, Buffalo, and Pfe Philip Goldstein, Brooklyn

The laboratory, operated under the direction of the dental service, is the third to be established by the Army in the Second Service Command and one of thirty in the country

The new facility, which operates in close conjunc-

iris disc is carefully painted by the captain, who has been carefully trained for this specialized type of work The painting is done with oil colors and a brush and the tint of the patient's good eye is reproduced

acrylic form in order to shape the socket Next the

almost exactly Next the patient is fitted with a wax form by Capt. Brandt, who pays particular attention to see that the contours of the eyelids are the same as the good eye The iris is then placed in the wax form and centered

From there the eye is invested in a dental mold processed in a sclerol-shade acrylic To give the eye a natural appearance, blood vessels are simulated by tiny rayon threads Finally, a thin layer of clear plastic is processed over the whole eye

These new plastic eyes have several advantages over the glass type They are unbreakable and their color and shape may be altered or changed after the

eye is completed \*

The Board of Trustees of Mount Vernon Hospital announced on August 22 "with deep regret," resignation of Arthur L Zerbey as president of the hospital He will continue to serve as a member of the board, however Harold B Storms, senior vice-president of the

hospital, will serve as president until a successor to

Mr Zerbey is appointed \*

William C Langley, head of the investment banking firm of W C Langley & Co, has accepted chairmanship of the campaign for \$2,750,000 to erect a modern 200-bed building for the recently combined Beekman-Downtown Hospital, it was announced on September 10 by Elisha Walker, chairman of the hospital's board

The new institution will serve Manhattan south of Canal Street, comprising the Wall Street financial district and the insurance, shipping, textile, wholesale, and City Hall and State building centers \*

Dr Edward R Baldwin was elected honorary president of the Board of Trustees of Trudeau Sanatorium at a meeting of the group held on August 25

in the recreation hall at Trudeau

This is the first time that an honorary president has been named by the trustees This office was selected for Dr Baldwin in recognition of his outstanding services and experience in the field of medicine

Dr Baldwin has been chairman of the executive committee of the sanatorium since the death of Dr Edward L Trudeau in 1915 Since that time Trudeau has marked its greatest expansion

In 1915 there was a capacity of approximately 115

and it has now grown to about 200 \*

### Newsy Notes

Charles F Kettering, vice-president in charge of research of the General Motors Corporation, was the principal speaker at the opening dinner of the sixtyseventh annual campaign of the United Hospital Fund of New York, at the Hotel Commodore on

The campaign this year seeks to raise \$1,661,255 needed by New York's eighty-six voluntary hospitals and homes which are members of the United Hospital Fund This figure represents the difference between the income and the operational costs of the

member institutions during 1944

Plans are under way for the construction of an additional 400-bed building for the Jéwish Samitarium and Hospital for Chronic Diseases, at a cost of \$1,000,000, Isaac Albert, president, announced on August 23 With the new building, the hospital, located in Brooklyn, will become one of the largest of its type in the country, Mr Albert said \*

The first step toward construction of a seven-story addition to New Rochelle Hospital has been taken as workmen began digging in the basement for a new

elevator pit, next to the present elevator shaft Immediately after Labor Day, the actual con-struction on the building began The seven stories will be constructed above the present administration offices Next year, it is expected that a new wing will be erected to take care of rapidly increasing

hospital needs

When figures were last compiled there was a total of \$360,000 in cash and pledges towards the \$750,000 goal needed for both construction jobs more than the estimated \$260,000 will be needed for the job under instant consideration which includes the elevator and the seven stones \*

The Benedictine Hospital, Kingston, expansion plans are ready and headquarters for a general drive for funds have been opened

It is planned to build a new wing in the form of a "T" extending south and east of the present structure, and this addition will have five floor levels

The basement will house a laundry, workshops, and boiler room The ground floor will be used for a new modern kitchen and dining rooms for nurses, medical staff, and general personnel On the first floor additional administrative offices and the pediatric department together with private, semiprivate, and isolation rooms will be located General medical and surgical rooms and a central supply department will be housed on the second floor of the new wing and the third floor will contain a new maternity section and nursery which will be a "hospital within a hospital" The new addition will add 65 beds to the Benedictine \*

Each of three Yonkers hospitals will receive \$7,500 from the Empire Racing Association, according to former County Executive William F Bleakley, the association's counsel

Payments will be made to St John's Riverside Hospital, St Joseph's Hospital, and Yonkers General Hospital, he explained, from proceeds of the

Empire City Charity Day on August 4

Other payments from the association to the Yonkers Community and War Chest, he added, will be determined upon after a Charity Week program ın November \*

Construction of a 350-bed general veterans' hospital in Saratoga Springs has been set for 1947, according to plans announced on August 21 by the Veterans Administration The number of beds has been increased from the originally planned number of 250

On the basis of \$7,000 a bed, this will increase tho cost of the hospital from \$1,750,000 to \$2,450,000

The campaign for the proposed new St Clare's Hospital, Schenectady, officially closed on August 31—the deadline set for the goal of \$1,200,000 with results in excess of the goal, and with the hope that surplus funds might provide for early expansion and living quarters for the Sisters and nurses who will staff the hospital \*

#### SHOES AS THERAPEUTIC AGENTS

No doctor can ignore that shoe therapy is a major factor in the treatment of many foot disorders. In some cases, however, when further medical or surgical treatment is required, the shoes must be adjusted to conform to any changes such treatments make in the shape or size of the feet

Pediforme shoes are prepared through experienced craftsmen to make the necessary adjustments as prescribed by the orthopedic surgeon or physician in these cases

With purchases restricted it is readily apparent that substantial shoes, capable of reconstruction or easy adjustment, should be prescribed. For all practical purposes, Pediforme footwear may well be considered in shoe therapy

#### Licensed Physiotherapists

The following letter from the New York State . Society of Physiotherapists, Inc., is published for the

information of practicing physicians

To the Editor—In the past year a considerable number of persons have been apprehended for practicing physiotherapy without a license. The majority of these persons have stated their patients were referred to them by medical doctors, either by written prescription or verbally

The masseur, masseuse, nurse, and technician are not licensed to practice physiotherapy. They are limited to direct supervision of a physician in either his office or an institution, but have no right under the laws of New York State to practice independ-

ently or make calls at the patient's home

Possession of a diploma or a certificate from some short-cut course in physiotherapy does not grant them the right to practice. The only college recognized by the New York State Department of Education that meets the statutory requirements, which is a four-year course in physiotherapy, is Ithaca College, Ithaca, New York.

The licensed and registered physiotherapist is

The licensed and registered physiotherapist is recognized by law and is the one who has been educated and trained to fill physicians' prescriptions Just as you would not permit your drug prescriptions to be filled by an unlicensed pharmacist, you should exercise the same precaution in not having your physiotherapy prescriptions filled by any other than a licensed physiotherapist

Our Society is the representative organization for licensed and registered physiotherapists in New York State, and is cooperating with the state authorities to stamp out the illegal practice of physiotherapy. We know that no physician would willfully aid and abet any person to break the education or medical laws, but we also have become aware of the fact that not all physicians know there is a licensed and registered physiotherapist to whom they can refer their patients

We are inviting your aid and cooperation in helping us to eradicate the illegal practice of physiotherapy. We know this will constitute the most effective means of safeguarding the public with assurance of maintenance of a high standard of conduct,

skill, and ethical practice

SOLOMON RATNER, President

718 St Marks Avenue Brooklyn, New York

#### THE CASE AGAINST FRIED FOODS

As long ago as February, 1944, Dr Frank Howard Richardson<sup>1</sup> published in the *Journal of Pediatrics* the results of his ardent researches into the digestibility of fried foods. Up to that time it had been assumed, and in those quarters unacquainted with his conclusions it still is assumed, that fried foods are harmful, especially for children. With wartime shortages particularly in mind, Dr Richardson thought that the soundness of our dietary beliefs

should be investigated

Three sources of authority were open—published records of research, current books and bulletins, and the opinions of living experts in the fields of nutrition and pediatries. Surprisingly, only one piece of published research was revealed, and that nearly seventeen years older than the present study in 1927, Boggess and Ivy² had investigated, on dogs and human beings, the digestibility of potatoes prepared after various culinary patterns. According to their conclusions, the starch of the pan-fried potato is more easily digested than that of the French-fried more easily than that of the boiled specimen. Fat, it was found, actually facilitated the rate of digestion, determined by fluoroscopic observations.

Dr Richardson found that authoritative text-

books on nutrition, federal and state health hulletins, pamphlets on child care, and so forth almost universally condemned all foods prepared after the fashion that made famous, if not popular, the sixth day of the week. No scientific proof was presented for these pontifical opinions fat may be an excellent food principle, but not the foods that are cooked in it. So far as these tribunals are concerned, the only edible part of the doughnut is the hole. "In frying," according to one of these witnesses, "decomposition products are formed, which are irritating to the digestive tract." And that was that

Various specialists were then consulted—eleven nutritionists, hiochemists, and physiologists, seven pediatricians of national reputation, two pediatricians high in the Children's Bureau, two gastroenterologists, one nutrition director of the American Red Cross, two medical editors, and two research-bureau heads. Not one of these authorities let the investigator down. The cruelest indictment of fried foods was that overindulgence might be universely a differentiation was also made of fried foods properly cooked and those that were simply soaked in hot fat

And so at last comes vindication, permanent we trust, for the fried spud, the flapjack, and the doughnut, the crisp egg—sunny side up or, in the vernacular, "one eye open"—and the Sunday-morning fishball—New England J Med, May 24, 1945

#### REVIEWED

Familial Susceptibility to Tuberculosis Its Importance as a Public Health Problem. By Ruth Rice Puffer, D.P.H. Octavo of 106 pages, illustrated Cambridge, Harvard University Press, 1944. Cloth, \$2 00

Despite the tremendous decrease in tuberculosis mortality in this country during the past half century, the battle against this disease is far from ended. Especially during wartime and for a period of years thereafter, the problem of tuberculosis control becomes of even greater significance It is at times like the present that tuberculosis incidence and mortality may be expected to show a rise Dr Puffer's monograph points a way to more effective control by paying special attention to "susceptible families" Statistics, culled from varying sources, are presented in this monograph to support the thesis that a genetic factor influences resistance to the development of tuberculous disease. To the phthisiologist and to the public-health worker, this interesting monograph is more than welcome. However, the statistics on development of manifest tuberculosis in "susceptible famil-1es" must be fitted into the larger framework of economic environment and of intensity of exposure

to the tubercle bacıllus The monograph should be provocative of thought and discussion.

MILTON R. LOURIA

Trichinosis By Sylvester E Gould, M D Octavo of 356 pages, illustrated. Springfield, Ill Charles C Thomas, 1945 Cloth, \$5 00

This is an excellent monograph, beautifully organized and written, which makes available in a small volume a great store of information about one of the most widespread and important of the nematode infections of man occurring in this country An admirable balance is maintained in the discussion of the parasite itself and of the pathology and manifestations of the disease it causes Nearly twenty pages are devoted to case histories illustrative of the various manifestations of trichinosis Epidemiology, diagnosis, and treatment are thoroughly discussed The book is profusely illustrated with excellent drawings and photographs, there is an extensive bibliography and a good index. This is one of the best medical monographs the reviewer has seen

E J TIFFANY

BOOKS

A Manual of Otology, Rhinology and Laryngology By Howard Charles Ballenger, M D Second edition Octavo of 334 pages, illustrated Philadel phia, Lea & Fehiger, 1943 Cloth, \$4.00

The second edition of A Manual of Olology Rhinology and Laryngology by Ballenger is an even finer manual for the general practitioner than the first. Clinical anotomy and physiology are brufly hut very clearly set forth, and thereafter, couses symptoms, diagnosis, and treatment. The doctor may apply much of the thorney himself or he may gain thorough information as to what treatment is adequate. He may also better understand what the specialist is doing for his potent, and why in the more serious diseases with which he is little equanted. The book is small, is easy reading, well indexed and well illustrated. Many otoloryngologists could conveniently use it as a guide.

CHAS. R. WELTH

Clinical Heart Disease By Samuel A Levine M D Third edition revised Octave of 462 pages illustrated. Philadelphia, W B Saundors Co , 1945 Cloth, 88 00

The fact that this book has reached its third edition in such a short space of time is sufficient test meay to its value. In this edition minor changes have been made in order to hring it up to date while other sections have been elaborated Additions have been made, also. The result has been to maintain its high standerd and make it a most valuable hook for the practitioner who has not time to study in great detail the recent advances which have been made in cardiology. The views expressed ure the result of the euthor's experience in this field and his onalysis of the work of others. They demonstrate critical judgment and in general would represent the opinion of the vast majority of cardiologists.

The book admirably serves the purpose for which it was written and merits continued wide popularity

J HAMILTON CRAWTORD

Pye's Surgical Handleraft. A Manual of Surgical Manipulations, Minor Surgery, and Other Matters Connected with the Work of Surgical Dressers, House Surgeons and Practitioners. Edited by Hamdton Balley, F.R.C.S. Eng. Fourteenth edition revised Octavo of 628 pages, illustrated. Baltimore Williams & Wilkins Co., 1944 Cloth, \$6.00

Within the covers of this book there is a wealth of information which makes interesting reading to the resident, general practitioner and even to the specialist. To this reviewer the illustrations and legends are so clear and descriptive as to make this volume an outstanding contribution to the modical arts. The chapters on prooperative preparation and the inter-relationship of the various hospital departments are well written. The authors of the various chapters are outstanding specialists in their fields.

ALFRED H IASON

Clinical Roentgenology of the Digestive Tract. By Maunee Feldman, M D Second edition Octavo of 769 pages, Illustrated Baltimore, Williams & Wilkins Co., 1045 Cloth, \$700

The second edition of this work presents with great clarity the numerous conditions, involving the digestive tract that are met with and radiologically discoverable. Beautifully illustrated and well

bibliographized, the book provides an oxcellent reference volume for x ray studies of the digostive organs. It would appear, however that the "clinical" portion of the text fails to fulfill the promise expected from the trile of the book

BENJAMIN M BERNSTEIN

Symptoms of Visceral Disease A Study of the Vegetative Nervous System in Its Relationship to Clinical Medicine By Francis Marion Pottenger, M D Sixth edition. Octavo of 442 pages, illustrated St. Louis, C V Mosby Co , 1944. Cloth, \$5.00

This is the sixth edition of a book written by a man who though primarily interested in internel medicine and especially in pulmonary tuberculous, has nevertheless, devoted a good deal of his time and attention to the study of the vegetative nervous system and its disorders. The book is primarily written for the purpose of interpreting as far as may be possible in terms of visceral neurology, the symptoms that cannot be explained on any other hasis. It deals extensively with the anatomic and physiologic facts and the clinical manifestations of the pathologic disorders of the vegetative nervous system. It is profusely illustrated and contains numerous references to appropriate contributions on the subject. It is a good book that will find fever with many dectors.

IRVING J SANDS

The March of Medicine The New York Academy of Medicine Lectures to the Laity, 1944 Octavo of 121 pages New York, Columbia University Press, 1945 Cloth, \$1.75

Press, 1946 Cioth, \$176

The six lectures in this volume, delivered by Strecker, King MacLeod Fitz Campbell, and Muckie, have been e means whereby intolligout laymen have been enabled to learn, in proper perspective, of the recent edvences in medicine. They are models of what such lectures should be. We should like to end with only laudatory commonts, but the Aendemy's sanction (not the lecturers') in this volume of the word "preventative has to be pointed out. Preventive medicine ought to be able to prevent its use which we dare say would puzzle the intelligent laymen them selves, were they to see or hear it.

A. C JACOBSON

Modern Methods of Amputation By Edmundo Vasconcelos. Translated from the Portuguese by Walter Ratto With an introductory survey of the development of amputation by Maj Gen Norman T Kirk (MC) Surg Gen, U.S Army Quarto of 253 pages illustrated. New York, Philosophical Library, 1945 Cloth, \$10

This book is an excellent up-to-date piece of work. It is good for both the general practitioner and the general surgeon. The operations are described thoroughly, illustrated step by step with original drawings, and only those methods used at the present are described.

MICHAPL BURGHARDT

The Practice of Medicine. By Brig Gen Jona than Campbell Meakings, M.D., (MC), Roval Canadian Army Fourth edition. Quarto of 1,444 pages, illustrated St. Louis, C. V. Moshy Co., 1944. Cloth, \$10.

This is the fourth edition of an outstanding text

hook which, since 1936, has received high com-

The well-known author repeatedly reflects his rich physiologic training, and in this edition has gone on to emphasize psychosomatic concepts, but always with judgment and balance

In every way the volume is ahreast of presentday medicine. It carries many excellent illustrations (517 in all). Treatment is uniformly sound. The newer applications of the sulfonamides and penicillin are cited.

The work in its earlier editions quickly achieved a high place in the regard of internists, and this position is well maintained by this edition. The book can again be highly recommended

FRANK BETHEL CROSS

Synopsis of Clinical Laboratory Methods. By W E Brav, M D Third edition Duodecimo of 528 pages, illustrated St Louis, C V Moshy Co , 1944 Cloth, \$5~00

This third edition of the now well-known and enthusiastically received small volume, first published in 1936, retains the compactness of recent information and most frequently used clinical laboratory methods which has won for it its carly popularity. The new edition also includes numerous recent advances in science and therapy. It stresses the clinical significance of laboratory findings, making it an extremely helpful guide in diagnosis for the internist and medical student. The selection and hrevity of description of methods and their arrangement in the text also makes this book one of choice for the supervisor of medical technicians.

Among the more important new additions to the text may he mentioned the Rh factor and its relationship to erythrohlastosis fetalis, the classification of the streptococcus in relation to sulfonamide therapy, insect parasites, and histoplasma capsulatum. Of the subjects in which the previous text has been enlarged, those worthy of special mention here are hematology, including blood transfusion with its related problems of subgroup incompatibilities, blood chemistry, and bacteriology

S H POLAYES

Massage and Remedial Exercises In Medical and Surgical Conditions. By Noël M Tidy Sixth edition Octavo of 480 pages, illustrated Baltimore, Wilhams & Wilkins Co., 1944 Cloth, 86 00

This book is a superficial coverage of many medical and surgical conditions, instead of what its title implies. It is written primarily as a texthook for senior students or recent graduates (nurses). There is considerable repetition in parts, and in other parts not sufficient detail to make it clear to the uninitiate.

It is recommended with reservations, as outlined

JOHN J HAUFF

Patients Have Families By Henry B Richardson, M D Octavo of 408 pages New York, The Commonwealth Fund, 1945 Cloth, \$3 00

It should be said at once that this is an important book and should he read by everyone practicing medicine or its ancillary professions

The psychosomatic aspects of disease have by now been generally recognized Richardson assumes that his readers take this for granted and goes a step further, pointing out the fact that the "family Is the unit of illness, because it is the unit of living "He demonstrates the importance of a plan of treatment which recognizes the family equilibrium and uses medical attention in combination with other community resources for health and family welfare. "The broader diagnostic function of the physician is to evaluate all the complaints as parts of the total personality of the patient, without minimizing any of them he should he able to tell the patient

what is the matter with him, not merely whether

or not something is wrong with one of his organs. An abbreviated edition of Patients Have Families, shortened by the omission of some of the case histories, might well be required reading in medical schools. It should certainly be required reading in schools for social work, where it will prohably become a standard text. Every social-service worker should read the case of Mrs. L. and the extremely humane and sensible summary given on page 54. Richardson's style is literate and distinguished.

MILTON PLOTZ

Medical Uses of Soap A Symposium. Edited hy Morris Fishbein, M D Octavo of 182 pages, illustrated Philadelphia, J B Lippincott Co 1945 Cloth, \$3.00

The first announcement of this hook proclaimed it as the only work ever undertaken on the subject of its title A glance at the list of the contributors to the symposium was sufficient to assure any medical man of its value and indispensability. Of the ten scientific men named in the list, seven are well-known dermatologists of the first rank, and the remaining collaborationists, aside from the editor, Dr Fishbein, are leaders in chemistry in the industrial field. For several months the publication of this splendid book was delayed until it was announced that the entire first edition had been purchased by the firm of Procter and Gamble and that a copy would be presented to every dermatologist in the country No doubt it must be possible that copies of the work may he accessible to other members of the profession because the information which it holds should be familiar to anyone who, in the ordinary practice of medicine today, is certain to he consulted for relief from the ever-present forms of dermatitis occurring in the home, the workshops, and the great industrial organizations Most of us know too little of soap, its uses and abuses, its manufacture, and the newer substitutes which science has now given as This book is ındıspensahle

NATHAN THOMAS BEERS

A Textbook on Pathology of Labor, the Puerperium, and the Newborn By Charles O McCormick, M.D. Octavo of 399 pages, illustrated St Louis, C V Mosby Co, 1944 Cloth, \$750

This book is just what its title implies, a discussion of the abnormal. Though written essentially in outline form, it is a surprisingly complete coverage of a wide variety of subject matter. It is up to date in suggestions for treatment, particularly in sulfonamide and penicilin therapy, and contains a large number of clear-cut illustrations, with concise comments at appropriate points. Intended primarily for students, it can be surveyed to advantage by practitioners as well

# DOCTOR of the Purple Heart.

The Purple Heart-awarded to persons wounded in action against the enemy

HE GUNS are silent once more For the men with the guns, the war is L over But for the thousands of medical men in the service, the war still goes-their war in white in behalf of the wounded, the wearers of the Purple Heart. Doctors that they are, of medicine and morale, they well know how much a cigarette can mean to an in

valid soldier. And servicemen that they are, as well, these doctors know what a big favorite Camels have been, and are,

with men in all the services

BENZESTROL

2.4 de la hydrosynbenyl. 3-ethyl heranel

Schieffelin & Co.

Pharmaceutical and Research Laboratories
20 COOPER SQUARE • NEW YORK 3 N Y

• A non-stilbene compound developed in the Research Laboratories of Schieffelin & Co, BENZESTROL enables the patient to make the chimacteric transition smoothly, without the requirement of indefinite treatment.

Schieffelin BENZESTROL affords rapid alleviation of the symptoms of waning ovarian activity with a minimum of cost to the patient and with a low incidence of side reactions

In addition to its use in the control of the menopause, Schieffelin BENZESTROL has been successfully used in all conditions in which estrogen therapy is indicated, and is available for oral, parenteral and local administration

Schieffelin BENZESTROL Tablets

Potencies of 0.5, 10, 20 and 50 mg Bottles of 50, 100 and 1000

Schieffelin BENZESTROL Solution

Potency of 50 mg per cc in 10 cc rubber capped multiple dose vials

Schieffelin BENZESTROL Vaginal Tablets

Potency of 0.5 mg Bottles of 100

LENIGALLOL

Council Accepted

(triacetylpyrogallol)

Allays itching Reduces hyperemia Promotes formation of normal skin For the usual case of eczema, prescribe Lenigallol 6% in an ointment base, with or without zinc oxide. Stronger applications may be required for more resistant eczema and athletes' foot. . .

BILHUBER-KNOLL CORP. - ~ ORANGE, NEW JERSEY

Rational management of anemia during pregnancy and the prevention of potential anemia in the child takes cognizance of these important facts:

- The incidence of hypochromic anemia among females of child bearing age is steadily locreas ing Nutritional deficiencies rank foremost among the causes
- 2 Anemia of pregnancy is generally of the hypochronic type: alimit invariably it can be referred in autrilinal deficiency engendered by dietary loadequacy by insufficient food absorption, or the increased requirements
- 3 Children of anemie mothers-though not

anemic at hirth—are born with low stores of iron and are unduly apt in become anemic

Heptuna by virtue of its contained vitamins (A, D and B complex) is designed to recuse the frequently encountered deficiency of these nutrients, in exert a favorable influence na appenie and gastrointestinal function and to contribute in optimal absorption of the contained bivalent iron.

Hiptuna rapidly entrects existing hypochromic anemia and when administered routinely throughout pregnancy and inctation, prevents necurrence of anemia in the muther as well as in the child

# HE LEARNS TO EAT BY WATCHING OTHERS

The new technic of eating which presents itself around the time of weaning poses a real problem for even the most patient of mothers

As a means of overcoming some of the difficulty, it is suggested that the weaning infant should eat with the family and so learn by watching his elders

A further aid to smoothing over this period of feeding transition is provided in the use of Horlick's Mixed with milk, the delicious malty flavor finds eager acceptance Full food values of basic, body-building nutrients are also available in a liquid food that imposes minimum strain on digestion

# Effective, safe, LOCAL chemothera

High Local Concentration One pleasantly flavored Sulfathiazole Gum tablet chewed for one-half to one hour promptly provides a high concentration of locally active sulfathiazole (average 70 mg per cent) that is maintained throughout the chewing period

Low (negligible) Systemic Absorption Blood levels of the drug, even when maximal dosage is employed, are almost negligible—rarely reaching 0.5 to 1 mg per cent

A product of TAIFE LADORNOUTE DISTRIBLE pharmaceutic

# in oropharyngeal infections

HIGH and PROLONGED salivary concentration of sulfathuazole is brought directly to the site of oral and pharyngeal infections following the use of—

# Territica SULFATHIAZOLE/GUM

Even a single tablet of White's Sulfathiazole Gum chewed for one-half to one hour provides a high concentration of locally active sulfathiazole. The medication is brought into immediate and prolonged contact with originary negatives which are not similarly reactived by ordinary measures of topical chemotherapy. Moreover, resulting blood levels of the drug, even with maximal desage are so low that systemic toxic reactions are virtually obviated.

INDICATIONS: Local treatment of sulfonamide-sus centible infections of orophary ngeal areas

- a acute tonsillitis and pharyngitis;
- b. septic sore throat;
- c. Infectious ginglvitis and stomatitie
- d. Vincent s disease

Also indicated in the prevention of local infection see orders to oral and pharvingeal surgery

DOSAGE: One tablet chewed for one half to one hour at intervals of one to four hours depending upon the severity of the condition

Available in packages of 24 tablets, samtaped, in shpsleeve prescription boxes

Whater Gum

manufacturers

MEDIEN DELL'ENTENDERN

IMPORTANT: Please note that your p flent requires your prescription to oble this product from the pharmacies

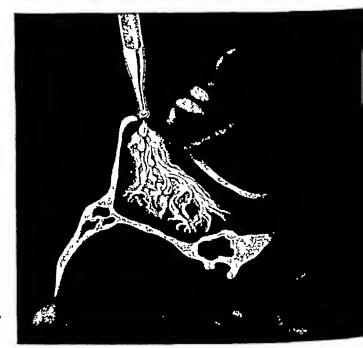

## HOW YOUR PATIENT CAN OBTAIN

IN NASAL AND SINUS INFECTIONS

#### WRONG

When the patient instills nasal medication in an upright position, it runs along the floor of the nose, and does not reach many of the engorged areas where it is most needed

#### RIGHT

But when the patient assumes a dependent, head-low posture, Paredrine-Sulfathiazole Suspension spreads rapidly and evenly, effecting prompt vasoconstriction and prolonged bacteriostasis precisely where they are needed most

# PAREDRINE-SULFATH

VASOCONSTRICTION

IN

**MINUTES** 

BACTERIOSTASIS

FOR

HOURS

IN SORE THROAT

So that Paredrine Sulfathiazole

Suspension will remain on infected areas hour after hour, and thus main tain its maximum bacteriostatic action, the sore throat patient should be advised (1) to instill the Suspension intranasally after eating and just before retiring, (2) to refrain from drinking fluids as long as possible after each instillation, and (3) to reduce nose blowing and throat clearing to a minimum Smith, Kline & French Laboratories, Philadelphia, Pa

## IAZOLE SUSPENSION

# A POTENT

# IIEMOSTATI

FOR LOCAL USE

surgeons, highly purified thrombin, natures own hemostatic, is now available in sufficient quantity to permit us to introduce

# THROMBIN TOPICAL

Acting directly on the fibrinogen of the blood, virtually independent of other clotting factors, such as calcium ions, thromboplastin, prothrombin, and vitamin K. THROMBIN, TOPICAL (bovine origin) produces themostasis in a matter of seconds in the control of capillary bleeding it is applied in solution in isotonic saline, sprayed or flooded over the bleeding surface

As its name indicates, THROMBIN, TOPICAL must not be injected

Parke, Davis & Company
DETROIT 32, MICHIGAN

A specially processed, co-precipitated complex of molybdenum oxide

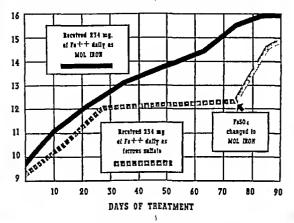

(3 mg) and ferrous sulfate (195 mg), White's Mol-Iron is a new, highly effective, hemopoietic agent that has unique therapeutic advantages in iron-deficiency anemias.

Available clinical evidence indicates that Mol-Iron effects approximately

- 1. 100% GREATER THERAPEUTIC UTILIZATION OF IRON, and
- 2. 100% MORE RAPID REGENERATION of hemoglobin than does ferrous sulfate, with
- 3 NOTABLE ABSENCE OF GASTRO-INTESTINAL REACTIONS—even among patients exhibiting such untoward symptoms during administration of other commonly used iron preparations

#### TYPICAL HEMOGLOBIN RESPONSE TO MOL-IRON AND TO FERROUS SULFATE IN PREGNANT WOMEN WITH IRON-DEFICIENCY ANEMIAS

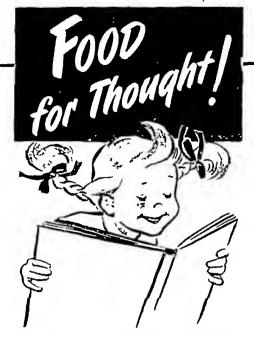

The therapeutically superior effect of Mol Iron in human beings is well demonstrated in the accompanying graph which illustrates the rate of hemoglobin regeneration in females during the last half of pregnancy and having approximately the same degree of iron-deficiency anemia. Results in this series of cases are typical of those observed in an evaluation\* of Mol Iron in a series of pregnant women with hypochromic anemia.

May we suggest that you make a comparable evaluation of Mol Iron with your presently preferred therapeutic iron compound

DOSAGE: One to two tablets three times daily after meals. SUPPLIED: in bottles of 100

Neary E. R., Preliminary Ev lastice of Molyhdenum Iron Complex in Hypochromic Anemias of Pregnancy to be published.

Alert minds and well-nourished bodies go together—a fact that Doctors impress on mothers when they recommend a hotcereal breakfast for their children. But appetite appeal is essential to a child's acceptance of food. Most youngsters love Maltex Cereal for its nut like, deliciously different flavor, and delicate, natural sweetness Maltex, a unique two-grain cereal naturally rich in Vitamin B<sub>1</sub>, is a combination of Wheat, appetizingly toasted, and Barley, malted to bring out its delicious flavor

# CHLOROPHYLL

# THERAPY The new biologic

approach to healing
with CHLORESIUM natural nontoxic
chlorophyll preparations

Working under an independent grant Smith and Livingston' studied a series of 1372 experimentally induced wounds and hurns in animals treated by the water-soluble derivatives of chlorophyll 'a (C<sub>18</sub>H<sub>18</sub>O<sub>1</sub>N<sub>4</sub>Mg) and by many of the standard preparations in clinical use today. In their conclusions they state "Of these agents only the chlorophyll preparations consistently shoreed ony statistically significant effect in occelerating the healing of both traumatic and thermal wounds"

#### HEALING AND DEODORIZATION

During the past four years numerous investigators have tested the water-soluble derivatives of chicrophyll in laboratory and clinic in the topical treatment of wounds battle injuries, burns, uleers and Bala, LW and Dispose, A. L.—"Chimphyl As suprimental stop of its week."

#### Chloresium is ethically promoted Available at all leading druggists.

Chloresium Solution (Plain) Chloresium Ointment Chloresium Nasal Solution

NOW

2 os. and 8 oz. bottles 1 oz. inhes and 1 oz. jan-% oz. dropper bottles and 2 oz. and 8 oz. bottles

Both Chleresions Salation (Pid.) and Chloresium Outment cont in the par lied, therapeutically article variet soluble derivatives of Chlorus III "("Cally Joy Naly). The year manufaced to rigid feedermed and ph. used standards and are pharmaceutically adjected to a low surface tersion as in any practically.

Chlorosium N. sal Sol. 1000 constains the purified, therapeutically active to resoluble deri if on all hierophyll." "(Laslingh)NaNa) is an include to know and inoutically before for most institutions, lastical for ynapsesses as elic! and for acceleration of heading of seast chronic infilamentary conduitions of the upper respire to yet are

aimilar lessons, especially those of the chronic, indolent and resistant type. They have demonstrated that these natural nontoxic chlorophyll preparations produce a definite, measurable acceleration of lessing and reduction of sear tissue. In addition, they report prompt chimination of the almost unbearable odors found regularly in chronic suppurative lesions of lone and other thoses.

#### NOW CENTRALLY AVAILABLE

After exhaustive clinical investigation these thera peutic chlorophyll preparations are now offered to the medical profession by the Rystan Company under the name Chlorestum

The topical use of Chloresium Solution (Plain) and Chloresium Ointment is indicated in a wide range of acute and chronic lesions especially in the treatment of wounds, burns, ulners akin diseases, and malodorous lesions.

Easily calculated Quickly pre pared I fl oz. Biolac to 14 fl oz. water per pound of body weight.

A familiar statement by physicians prescribing Biolec for infants deprived of human milk. The protein level of Biolac assures an adequate supply for growth and health, with small, soft curds. The adjusted milk fat facilitates digestion and assimilation with greater freedom from fat upsets", and the ample lactose content assures a soft natural stool formation. The adequate proportions of lactose, iron, and vitamins A. B., Br and D eliminate the need for timeconsuming calculations of extra formula ingredients Indeed, Biolac (supplemented with vita min C) provides completely for infant nutritional requirements throughout the bottle period Borden Prescription Products Division 350 MADISON AVENUE . NEW YORK, 17 N Y

Biolae is a liquid modified milk, prepared ex clusively from Board of Health inspected whole and skim milk, with added lactose, and forti fied with vitamin B; concentrate of vitaminis A and D from cod liver oil, and iron. Evaporated, homogenied, and sterilized, vitamin C supplementation only is necessary

Biolac "BABY TALK" FOR A GOOD SQUARE MEAL

Notable is the fact that all of the reports on the use of this systemic type of therapy in sizable groups of chronic arthritics specify Ertron

The results of these clinical investigations are results obtained with Ertron, and there is no identical product which may be substituted for it

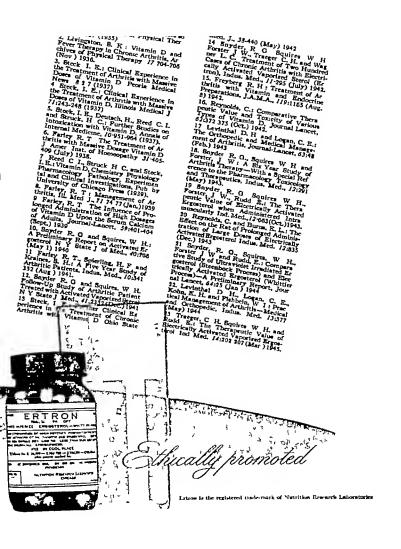

The following bibliographic references apply only to Ertron in the systemic treatment of arthritis

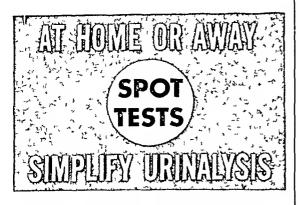

## ERTRONIZE THE ARTHRITIC

Ertronize Means Employ Ertron in an adequate daily dosage over a sufficiently long period to produce optimal results. Gradually increase the dosage to that recommended or to the toleration level. Maintain this dosage until maximum improvement occurs. Ertron alone—and no other product—contains electrically activated vaporized ergosterol (Whittier Process).

Supplied in bottles of 50, 100 and 500 capsules
Parenteral for supplementary intramuscular injection

## NO TEST TUBES . NO MEASURING NO BOILING

Diabetics welcome "Spot Tests" (ready to use dry reagents), because of the ease and simplicity in using No test tubes, no boiling, no measuring, just a little powder, a little urine—color reaction occurs at once if sugar or acctone is present

## **Galatest**

FOR DETECTION OF SUGAR IN THE URINE

## Acetone Test (DENCO)

FOR DETECTION OF ACETONE IN THE URINE

## SAME SIMPLE TECHNIQUE FOR BOTH

2. A LITTLE URINE

#### COLOR REACTION IMMEDIATELY

A carrying case containing one vial of Acetone Test (Denco) and one vial of Galatest is now available. This is very convenient for the medical bag or for the diabetic patient. The case also contains a medicine dropper and a Galatest color chart. This handy kit or refills of Acetone Test (Denco) and Galatest are obtainable at all prescription pharmacies and surgical supply bouses.

Accepted for advertising in the Journal of the A M A.

# Announcing... PENICILLIN OINTMENT SCHENLEY

Lt is possible by topical application to reach local levels of penicillin activity far in excess of the highest ranges main tained by intravenous and intramuscular administration

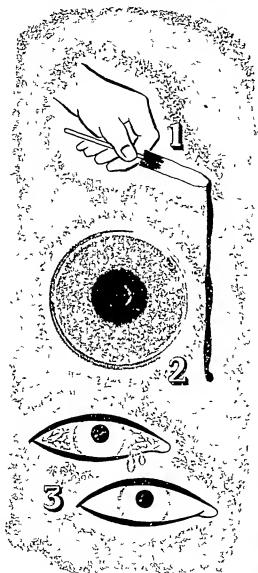

Penicillin Ointment Schenley is indicated in the treatment of superficial infections of the skin caused by penicillinsensitive organisms. In deep scated pyogenic infections with penicillin-sensitive organisms, the ointment may be used as an adjunct to systemic penicillin therapy and other measures.

When you specify Penicillin Ointmont Schenley, you are assured of the highest standard of excellence, because Schenley Laboratories maintains the same rigid program of control for this ointment as it has always maintained for Penicillin Schenley

## SCHENLEY LABORATORIES, INC

Executive Offices 350 Fifth Avenue New York City

## 3 TREATMENTS IN ONE ... ARGYROL

## in mucous membrane infection

In treating mucous membrane infection today the physician can achieve by use of this one medication ARGYROL three important results

For, in addition to being contra-infective and contracongestive, ARGYROL is stimulating to the membrane's own inherent and natural defense function

DECONGESTIVE—ARGYROL'S decongestive effect in the membrane is the result of its demulcent, osmotic action. The withdrawal of ARGYROL tampons from the post-nasal cavities frequently brings forth a long ropy mucous discharge measuring as much as two feet or more.

BACTERIOSTATIC—Although proved to be definitely bacteriostatic, ARGYROL is non-toxic to tissue. In nearly a half century of wide medical use of ARGYROL, no case of toxicity, irritation, injury to cilia or pul monary complication in human beings has ever been reported.

STIMULATING—Soothing to nerve ends in the membrane and stimulating to glands, ARGYROL'S action is more than surface action. For it acts synergetically with the membrane's own deep seated, defense mechanism

## NEVER DUPLICATED CHEMICALLY OR IN CLINICAL ACCEPTANCE

Solutions of mild silver protein similar in appearance to ARGYROL are chemically different. Different in degree of colloidal dispersion, in size of particles and in Brownian movement viewed under the ultra microscope. In ARGYROL unlike other mild silver proteins, and regardless of the concentration of the solution employed, the pH remains constant and the pAg is properly correlated. Unlike most

mild silver proteins, ARGYROL remains equally bland and non initiating in all concentrations from 1 per cent to 50 per cent To in sure the results which you expect from genuine ARGYROL it is important that you insist on original package ARGYROL

## **ARGYROL**

THE PHYSIOLOGIC ANTISEPTIC WITH SYNERGETIC ACTION ...

## Sacroiliac or Lumbosacral Disturbances

Relieved and Averted by

## **Spencer Support**

Instability to sacroiliac and lumbosacral areas is effectively checked by a Spencer Support designed to grip pelvis, and provide coordinated abdominal and back support. Thus posture is improved.

Pelsic Band Aids in Inhibiting Morement A simple pelvic band is locorporated to the support. The band encircles the pel vic girdle susids the support and is lo stantly adjustable from autiside the support to any degree of snugness required When the coodition subsides, the band may be removed and the remainder of the support worn as a safeguard against recurrence of acute symptoms

Spencer Supports designed for a man and a woman are pictured at left. The small insert shows the band which ecorcies the pelvic girdle. At ceoter froot of the closed supports cao be seen the tapes and slides by which pelvic band may be adjusted without disturbing the support.

Why Spenier Supports Are So Effective Each Spenier Support is individually designed, cut and made at our New Haven Plant after a description of the patient's body and posture has been recorded—and 15 or more measurements have been taken. This assures the doctor that each patient will receive the proper design to aid his treatment; that the support will improve body mechanics and will fit with the precision and comfort necessary. Yet a Spencer costs little or no more than an ordinary support.

## SPENCER INDIVIDUALLY SUPPORTS

For Abdomen. Back and Breasts

One wish has been fulfilled Won by 31/2 years of deadly struggle With God's help, we have prevailed.

Now we have a chance to make another wish come true. For most of us, the outlook is a bright one. If we will simply use the brains, the will, the energy, the enterprise . . the materials and resources with which we won our war, we can't fail to win the peace and to make this the richest, happiest land the world has known.

Your wishes have been wrapped in that bright outlook Your wish for a cottage by a lake. For your boy's col-

lege education For a trip you long to take For a "cushion" against emergencies and unforeseen needs

You can make those wishes come true by buying bonds today, .. buying them regularly and holding on to them in spite of all temptation.

There's no safer, surer investment in the world. You can count on getting back \$4 for every \$3 you put in E Bonds—as surely as you can count on being a day older tomorrow.

So why not be patriotic and smart

# FULFILL YOUR WISH—BUY EXTRA BONDS IN THE GREAT VICTORY LOAN!

In the common cold the primary objective of early treatment is to supply moisture to the nose and to stimulate ciliary activity \*

During the prodromal stage of the common cold, injection of Iodolake S, due to the effect of sodium iodide, is followed by increased nasal secretion. The protective mucus film, which is missing at this stage of the cold, thus is restored. In cases where the cold has reached the subacute stage the secretolytic effect of sodium iodide promptly produces liquefaction of viscal mucus. This action in contrast to that of many topical applications, aids ciliary streaming in the sinuses and nasal passages. The more watery mucus is easily discharged by the struggling cilia. Frequently the period of discomfort in common cold is shortened by these improvements in the first line of defense

At the same time, through the action of foreign protein Iodolake-S in duces an improvement in the second line of defense. Injection of Iodolake-S induces prompt leucocytosis and mobilization of immune bodies without occasioning side effects. Invading bacteria are met by heightened activity in the natural defense mechanism of the blood.

Iodolake S is an aqueous solution of sodium iodide and an iodinated foreign protein for subcutaneous or intramuscular injection.

A review of the clinical use of lodolake 5 together with a clinical sample will be sent upon request

## **IODOLAKE-S**

# In the Maintenance of the Hemoglobin Level

In the continuous process of destruction and regeneration of erythrocytes by which the oxygen-carrying capacity of the blood is maintained, the extent of hemoglobin synthesis depends largely on the protein supplied to the organism

Protein is an essential "raw material" for the formation of the hemoglobin molecule. Unless the protein made available to the organism is adequate in quantity and quality, anemia supervenes

The only source of the protein required for maintenance of the hemoglobin level is the protein derived from the foods eaten

Among the protein foods of man meat ranks high—not only because of the percentage of protein contained, but principally because the protein of meat is of high biologic quality—able to satisfy every protein need

AMES COMPANY, Inc., Elkhart, Indiana

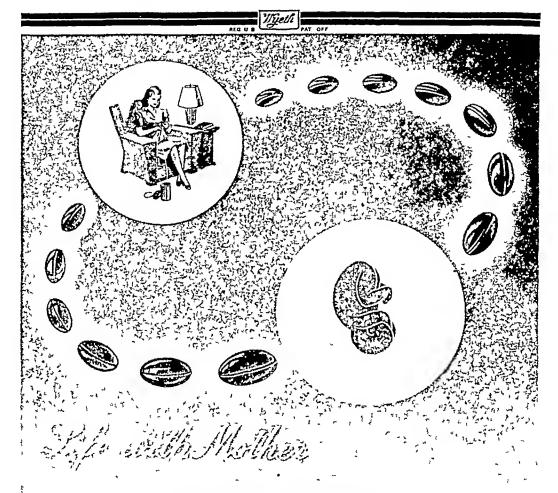

The potentiation of the central action of phenobarbital by the belladonna alkaloids (Friedberg, Arch f exp P & P CLX, 276) renders possible attainment of desired effects with relatively small doses, thus avoiding hang over and other unpleasant side-actions. In contrast to galenical preparations of belladonna, such as the tincture, Belbarb has always the same proportion of the alkaloids.

Indications Neuroses, migraine, functional digestive and circulatory disturbances, vomiting of pregnancy, menopausal disturbances, hypertension, etc

Formula: Each tablet contains 1/2 grain phenobarbital and the three chief alkaloids, equivalent approximately to 8 minims of tineture of belladonna

Belbarb No 2 has the same alkaloidal content but 1/2 grain phenobarbital per tablet.

CAROTENE SAFEGUARDS BOTH MOTHER AND CHILD

## Vitules\*

The Only Multivitamin Capsule Containing CAROTENE

FOR MOTHER—a generous supply of all essential vitomins, well above the minimum daily requirements

FOR BABY—an odequote supply of CAROTENE, the important source of vitomin A for the fetus, as well as substantial amounts of other essential vitomins.

### Antianimal Experimentation Legislation

Speaking at the Third District Branch Meeting, September 20, 1945, at Albany, New York, Dr Edward Cunniffe, President of the Medical Society of the State of New York, spoke of legislation against so-called vivisection in the state Remarking that previous bills on this subject had been introduced in former years, he said he thought that further attempts would be made to have such legislation passed.

He said, in part, that "The term vivisection is a misnomer Actually 90 per cent of the experiments are not and cannot be classified as vivisection or 'the dissection of or operation on a living animal'. This is so generally recognized that the term vivisection has long since given way to the more accurate 'animal experimentation.' But whether animal experimentation includes actual vivisection, the harmless prick with a hypodermic needlo, or a painful procedure on a nervo tissue, the fact is that

it is essential to medical science and to veterinary medicine. Intensive study and extensive theorizing cannot substitute for experimentation. For generations this has been the stumbling block in the physical science of volcanic action. Those pressing for antivivisection legislation, or more accurately, antianimal experimentation legislation, must of necessity arrive at one of two equally unsatisfactory conclusions, test a hypothesis directly on the human irrespective of results, or halt scientific progress as long as animals, especially dogs, must be used for experimentation

"The antivivisectionists have been indulging in campaigns of propaganda by distortion of facts, exaggerations, and generalities, attempting to make it appear that there exists no other aspect to the ques-

"Unfortunately, the medical organizations and the research institutes concerned with

the advancement of medical science have made little effort to outline their position. It has been their idea that the public, benefiting daily by discoveries made through animal experimentation, required no detailed explanation. However, the reception by the public of the lurid accounts of degenerate cruelty to trusting animals on the one side and the cold presentation of scientific facts on the other was evidenced clearly in the mass support of the Antivivisection Bill last year

"The organizations and individuals sponsoring and supporting the legislation offer as justification that there is no moral right for man to experiment on animals, that vivisection injures the moral character of the operator, that the achievements credited to animal experimentation depended rather on other factors, that the animals used, especially dogs, are of the loyal, trusting genus and it is inhumane to victimize them

"The first reason is so fundamentally fallacious that it hardly merits consideration. Without resorting to philosophic references on the subject, it might be simply stated that however an individual or a nation might regard the golden calf, the holy cow, or Ghandi's goat, man violates no moral law in using the lower animals for his advancement. Furthermore, the lower animal kingdom has benefited immeasurably by these experiments, especially in epizootic diseases.

The second reason, were it taken seriously, might be good cause for discontinuing many pursuits presently regarded as essential to the health, safety, and welfare of mankind. Fortunately our animal trappers and slaughterers have managed to live normal lives in spite of their occupations, and more fortunately our preservers of the peace at home and our soldiers on the battlefield have not degenerated in the performance of their duties.

"The whole history of the advance in physiologic knowledge so refutes the third reason that an impersonal observer might well question the sincerity of the exponent Advancement in practically every field of redicine and chemistry is attributable to animal experimentation. These have included circulation, the nervous sytem, res-

piration, the endocrines, serum and vitamin therapy A reading of Lister, Hunter, Pasteur, and Flexner (of the Rockefeller Research Institute) would prove most enlightening

"The fourth reason, although based solely on sentiment, is understandable and the only one of the four worthy of recognition Owners of domestic pets, be they cats, dogs, white mice, or rabbits, come to regard them with tender affection, and justifiably so

"Yet would one of those pet owners refuse to tender it to science if possibly, and only possibly, the use of it might mitigate the pain or save the life of a loved one? How would parents of a diabetic child react to the "cruel" fact that the removal of the pancreas in dogs led to the observation of the isolation of insulin, how would they regard Lister's achievements on suppuration and wound infections and the later developments of his successors in the field of asepsis. gained by experimentation on animals, and finally, are they not familiar with the list of invaluable drugs perfected by animal experimentation which providentially cut out casualty lists in this and in other wars?

"The present proposed legislation concerns itself with removing dogs from the animals experimented on and in substituting in their place monkeys. Aside from the fact that monkeys do not always respond to certain types of experimentation and it would require experienced animal trainers to handle them, the use of them instead of dogs is one of those ad infinitum proposals. What is to prevent monkey lovers, mice lovers, cat lovers, or bird lovers from seeking amendments to the law once it is on the statute books that animal experimentation is cruel to dogs?

"Too common is the false belief—a law disobeyed, change the law, a regulation ignored, make a law. Even admitting that there may have been instances of undue cruelty, the remedy is to replace the offending employees, not to close the door to science by outlawing its most valuable experimental source. In 1910 a committee of the American Medical Association promulgated rules governing the treatment of animals used for research and these were

adopted by most institutions engaged in research. If these have not been followed,

revive them, if they require amondment, amend them"

### Shortage of Civilian Doctors

An appeal for the early release of medical officers from military service so that they may return to essential civilian duties was made here September 18, 1945 by Dr Edward R. Cunniffo, president of the Medical Society of the State of New York. He spoke before the Fifth District Branch of the Society at the Ells' Club in Oneids.

"Now that the war is concluded there certainly can be no reason for retaining medical officers other than those needed to accompany the army occupation and a comparative few who are needed to continue their service in the military hospitals," Dr Cunnife said

Of less than one hundred and twenty thousand physicians actively practicing in the United States before Pearl Harbor, more than ninety thousand were processed and sixty-two thousand were inducted into the military forces, according to figures cited by the speaker

"There has been some talk of delaving release of members of the military forces due to the danger of unemployment. This objection does not apply to medical officers. Their prompt release not only will not disturb the economic attaction in any way, but is necessary if they are to rehabilitate themselves.

"Many doctors returning to private practice must find new offices, buy new equipment, and sometimes even find new locations in which to settle. All of these are time-consuming tasks Many other physicians leaving military life will need refresher courses if they are to serve their patients well, others entered the army or navy after only a nine months' internship and must continue their medical training.

"However, the most important reason for the prompt discharge of medical officers is the great need for them in the community, more so now that millions of young men are being returned from the armed forces to civilian life

"Conditions in the hospitals," Dr Cunnife suid, "are such that many doctors are needed at once, institutions are so lacking in medical personnel that operations are deferred, patients refused admission, and even whole floors or wards closed due to the inability to provide service. The most urgent need of doctors is in the dispensaries. Certainly with conditions in the eight occurring the community as they are, no physician should be held in military service a day longer than the interest of the nation requires."

We feel certain that the Services and the War Department are doing all they can to expedite the release of physicians. It is a slow process at best, since it is obvious that even though hostilities have caused, the wounded will require continuing treatment.

But that the War Department is retaining an overage of medical officers there seems little doubt in view of the numerous letters from medical men who complain that they have little to do on their stations and are hard put to it to keep their time occupied

It is to be hoped that as facilities improve for the separation of medical officers from the services, that no avoidable delay will prevent their immediate return to their communities

## Current Editorial Comment

#### Of This and That

The very excellent and practical etudy entitled "The Medical Officer Returns to Practice" by Lt Col Harold C Lueth, (MC) AVS, deserves the highest commendation of the medical profession. The conclusions reached are of exceptional interest

A study was made of twenty-one thousand and twenty-nine questionnaires returned by medical officers on duty with the armed forces

Nmety-two per cent of all officers had a

license to practice medicine

- There were one thousand, five hundred and ninety medical officers who did not have About 70 per cent of the officers without a license had graduated from medical school between 1941 and 1943 More than 20 per cent of unlicensed men were graduates of 1938-1940, and the remainder were graduated earlier Many of the older medical graduates were formerly engaged in work that did not require a license and would be likely to return to their former activities after the war
- There were twelve thousand, five hundred and eight medical officers who indicated the size of community in which they were engaged in practice before the war About 39 per cent came from cities of more than 250,000, nearly 32 per cent from cities of 25,000 to 250,000, almost 23 per cent from cities of 2,500 to 25,000, and less than 6 per cent from communities of less than 2,500 population

The ratio of medical officers that came from a given-sized city to the total number of officers in the graduation group was about the same for all graduation groups Smaller communities seemed, however, to have attracted a few more younger graduates and larger cities a few more older graduates

Forty-seven per cent, or nine thousand, six hundred and forty-nine medical officers, indicated that they wished to return to practice in the

former community after the war

"7. More than 21 per cent, or four thousand, three hundred and ten medical officers, signified that they did not intend to re-engage in practice in their former communities Less than half of the group, or one thousand, eight hundred and forty-one, gave a definite locality in which they would like to practice after the war merely left the question as to location of practice unanswered

"8 There were eight thousand, three hundred and seventy-nine medical officers who gave no answer as to where they would like to practice More than four-fifths of them were graduates of groups 1 and 2 and consequently had probably never had an established practice of medicine "

From such data which indicate the scope of the national problem, state and county societies are enabled to prepare well in advance to meet the particular problems of

their areas

In this State the special committee on War Participation under the chairmanship of Dr Louis H Bauer has already polled many of the physicians in military service 2

"So far over seven hundred questionnaires have been returned and tabulated with interesting results.

.Most physicians (five hundred and eighteen) who replied want to practice in the same location from which they came

About half of those replying want postgraduate refresher courses when they return

- A comparatively small number (one hundred and ninety three) think they will want or need financial assistance to resume practice on their return
- A striking feature was the response to the question whether they planned to remain in the Army, Navy, Public Health Service, or Veterans Administration after the war There was an overwhelming chorus of emphatic NO's indicated in heavy black ink and capital Only 45 out of the 710 returns tabulated (roughly 6 per cent) replied that they planned to stay in government service of any kınd
- A considerable interest was shown in such matters as opportunities in industrial medicine, available office space, and living quarters

"Now action is being taken to find out how the needs of veterans as revealed by answers to questionnaires can be met The War Participation Committee has sent letters to

Deans of medical schools in New York State asking what postgraduate refresher courses they are planning to provide at limited cost for returning doctors

Physicians at home to determine what assistantships will be available to returning

colleagues

Hospital'executives requesting information as to internships and residencies that will be available in the future

Secretaries of county societies asking that committees be set up to work with the War Participation Committee in extending effective assistance to the returning doctor

"There is no doubt about the valuable morale effect of the letter and questionnaire that went out to these members in service Many wrote their appreciation in marginal notes and others wrote separate letters of appreciation commending the State Society for its thought of absent members "

News Letter, Med Soc State of New York, Vol 1, No. 2, April 24, 1945

<sup>1</sup> J A.M.A. 127: 1030 (April 21) 1945

In its January, 1945, issue the Pennsylvania Medical Journal presents a most commendable and praetical enterprise undertaken by the Council on Medical Service and Public Relations,1 under the title "Medicine's Message to Labor"

The Council met with seven representatives of labor organizations to discuss the Wagner-Murray-Dingell Bill Represented were the Pennsylvania Federation of Labor, United Steel Workers of America, Pennsylvania Industrial Union Council, Brotherlicod of Railroad Trainmen, United Mine This, in our opinion, is a proce-Workers dure which might well be followed by other state medical societies in the interest of better mutual understanding of problems and policies, both present and future.

The general discussion was based on the prepared statements submitted by Mr Earl Bohr, secretary-treasurer of the Pennsylvania Federation of Labor, and by Mr John A Phillips, president of the Pennsylvania Industrial Union Council The latter quoted US Senator Wagner at some

length, and Mr Bohr said in part

"Science and medicine have made tramendous advances in recent years Our American workers know this They know, too, how those advances are going to enrich and prolong life for mankind everywhere

Now they want to share in and benefit by these vast new methods and devices which you, of the medical world, have discovered They are beginning to think, more and more intently, about their future in terms of better health, hospitalisation, disability care, maternity benefits, and the like. And speaking for these workers, the leaders of the labor movement are determined to make these things a reality for the masses of Americons."

#### Mr Phillips' statement begins as follows

"Under present-day conditions, any discussion of the subject of public bealth and medical care inevitably revolves around the proposed Wagner-Murray-Dingell Bill (S 1161-H R 2861) now pending in the Congress of the United States, which seeks to amend the Social Security Act of 1935"

The Council then proceeded to discuss, for the benefit of the representatives of labor. medicine's objections to such legislation as is represented by the Wagner-Murray-Dingell

Bill and the application of democratic processes to its full and proper discussion by members of the armed forces We quote in full what the Council has to say on the subject of "one-way democracy"

"We have been hearing a great deal about 'democratic processes' of late. However, there is a glaring inconsistency in the application of democratio processes Our soldiers, quite rightly and justly, have been granted the right and privilego to vote on political issues, but for some un explained reason medical students in uniform and medical officers have been forhidden to express themselves on the Wagner-Murray-Dingell Bill because 'military personnel will not engage in any political activity while in the military service. The Wagner-Muraay-Dingell Bill was named in the order, characterizing it as 'political activity' We challenge the democratic justice of forbidding more than 60,000 citizens in the armed forces the right to express their views as to their own professional future, while at the same time the medical officers employed by the U.S Puhlio Health Service are permitted to travel around in their uniforms and speak for this, we quote again, 'political activity' Are the proponents afraid of the expression of opinion from the medical staffs of the Army and Navy?

"Mr Dingell, one of the coauthors of the bill, recently stated that the opposition came from 'an ill-willed, or misinformed, misguided, renetionary minority in the medical fraternity ' Note particularly that word 'minority,' and then take

a look at the record

"There are two hundred and ninety-five practicing physicians in Congressman Dingell's home district in Detroit They were polled with this result ten were in favor, nine were undecided, and two hundred and axty five were against the hill

"In Montana, Senator Murray's state, every county medical society but one voted unanimously against it. In the one exception four voted for the bill, mxty four against it Authoritative sources from New York report an overwhelming opposition to the bill from the medical profession of Senator Wegner's state. These are the sentiments of majorities, not minorities, and are representative of the views of the physicians of Pennsylvania.

"Congressman Dingell, m a press release, said 'As sponsor of the bill, I hold that medical provisions and terms generally contained in the Act will have to coincide with the sound practice and expenence of the Association (meaning the American Medical Association) and that the ectual administration of this feature of the Act would have to be of necessity entrusted to the

<sup>&</sup>lt;sup>1</sup> Conneil of the Pennsylvania State Medical Society <sup>2</sup> August 18, 1944.

expertness of medical men To disregard these fundamentals would be to invite disaster'

"It is unfortunate that the Senators and the Congressman did not observe these fundamentals when they were writing the bill Had they taken advice from a responsible medical source, they might not have made so many mistakes know they have said they had medical advice, but there are one hundred and eighty thousand doctors of medicine in this country, and Dr Boas, spokesman for the Physicians Forum, representing about two hundred of the thousands of doctors in New York State, and Dr John Peters, one of Senator Murray's admitted advisers and spokesman for the committee of four hundred and thirty (four hundred and thirty from one hundred and eighty thousand doctors of this nation, of whom sixty thousand are in the armed services), do not speak for the medical Some of the committee of four profession hundred and thirty do not have medical degrees, many do not practice medicine Without practical knowledge, they can only theorize as to how it should be done. We, as practicing physicians, contend that Dr Peters, Dr Boas, et al, are not representative of the family doctors of America "

It is regrettable that we cannot reproduce the detailed discussion of the bill section by It is clear, factual, and complete It strips away all pretence and shows up the bill for what it is, a scheme for the political domination of medical practice in this country It is doubtful, in our view, that organized labor could afford to support such legislation or that its leadership would be hoodwinked by the scheme that has failed so miserably in Europe It is possible, of course, that labor leadership in the United States is not sufficiently strong to persuade its membership against legislative pitfalls of Presumably those leaders want the highest possible quality of medical care When the Council on for their members Medical Service and Public Relations of the Medical Society of the State of Pennsylvania, in the capacity of expert, not political, advisers on medical care, presents the following for labor's consideration, the leadership of the nation's workers would do well to heed it Medical care is the doctor's business

"We (the people of the United States) are spending hundreds of billions of dollars to win a war so that we may retain freedom. The inevitable tax burden will test the will and resourcefulness of many generations. If, in addition to the cost of the war, we thoughtlessly add

more billions of expenditures in an attempt to buy a socialized Utopia, it might well be the final straw needed to break the financial solvency of the country. In that event, we would have destroyed all hope of security, along with freedom. We would indeed have taken an irrevocable step.

"We, therefore, submit for your thoughtful

consideration

"1 The practicing physician (your family doctor) has only one responsibility—your health and the health of your family

"2 To make him the pawn of a huge political bureaucracy is to invite the downfall of good

medical service

- "3 To regiment the doctor is to regiment the home This is not democracy, but totalitarianism
- "4 We ask that you join hands with us in working out the economic problems of medical service and health in an orderly fashion that will insure—
- (a) Freedom of relationship between patient and doctor
- (b) Continued improvement in medical service
- (c) A medical profession that will continue to attract to it men worthy of the finest American medical tradition and worthy of your confidence A politically dominated profession will not be attractive to men of highest integrity "

Nurses At least sixty-nine thousand public-health nurses, more than triple the prewar number of such personnel, will be needed if complete health services are to be available after the war, according to the National Organization for Public Health To aid nurses returning from mili-Nursing tary duty in choosing the field of civilian nursing in which their skills may be used to the best advantage and in which they are most needed, the NOPHN has issued a new leaflet entitled "Your Postwar Job" It will be distributed to professional and nonprofessional organizations for use in vocational-guidance programs for nurseveterans

Copies may be obtained without charge from the National Organization for Public Health Nursing, 1790 Broadway, New York

19, New York

#### WAR NEUROSIS AS IT IS RELATED TO PSYCHOSOMATIC MEDICINE\*

FOSTER KENNEDT, M D, New York City

(Professor of Clinical Medicine (Neurology) Cornell University Medical College)

"THE word "psychosomatic" has swung across L our vision quite lately It is not a very rec-It is easy enough to say Mindondite word Body in Greek and call it English. Really, Psychosomatic means just that-Mind-Body But men do not live by bread alone. They live sometimes by catch words and a new word represents something important to the person who hears it and realizes he has never before grasped its idea. The introduction of a new word means that there is a new wind hiowing, it means that the profession of medicine has somehow or other gotton on to the fact that man is Mind Body Body-Mind For us to grasp that idea is new

I don't mean it is new in the history of the profession of medicine. I mean it is new as regards the last fifty years of medicine. In the last fifty years of medicine, in the last fifty years of medicine we have been hinded by the microscope. Microscopes allow us to see so well that we have lost the ability to believe in anything we cannot see. Our ancestors did not have that disadvantage. So they did not so quickly coin words like "functional"—something not to be believed in, "imaginary"—to be cuffed, and "organic"—something to be seen, "red-blooded," to be cured. Our grandfathers did not do that, but our fathers did, and all of my lifetime that which was not seen was not true, or phoney

And yet the commonest fact by which we live is that if I have something in my hand and drop it, it falls And whoever saw gravity? Whoever saw the tremendous force that pulls all the oceans of the world one way and then pulls another way? Whoever saw the force in us that controls our heartbeat at 72 per minute, our respiratory rate at 18, our temperature at a fixed place, despite environmental states? Our di gestion, thank Heaven, is usually below con-SCIOUSINGS Who knows anything consciously of the tremendous drive of energy that keeps the muscle tone perfect all the time? We say it is a disturbance when the digestive tract gets hurt. and so goes through various fluctuations who feels or is at all aware of the forces in the organisms that control vegetative rhythm? As a matter of fact, the less we know about those forces which ought not to rise to consciousness the healthier we are

\* Presented May 18, 1914 at a seminar Medical Society of the District of Columbia, Washington D C. and read in part at a meeting of the Fifth District Branch, September 18, 1948.

We live, each one of us, in a state of unstable equilibrium. everything in what we call the sympathetic nervous system stimulates Every impulse, every discharge of energy through our sympathetic systems accelerates, and is balanced by our brakes in the parasympathetic. It is by the balance between our sympathetic and parasympathetic systems that we live in normal nervous health. Those forces are never completely steady, are always fluctuating, due to a fluctuation in rhythm Every hving thing in the universe lives on rhythm There is no such thing as a straight line. There is a dip and a rise and a dip and a rise, throughout the entire uni verse systole lives by diastole. Nothing exists in the universe except by reason of its opposite. there would be no such thing as light, were there no dark, no such thing as a height if there were not a hollow And thus is also true in a living organism Thus it is, that this balance of forces constitutes our nervous health or our nervous unhealth It is also an unbalance of these forces that produces what we call the manic-depressive constitution. The manic-depressive constitution is too often only recognized by the doctor when the symptoms grow so severe that they reach consciousness or when they so influence behavior that the individual comes under recard.

The rest of us stable people also live by diastole and systole. We do not regard ourselves, if we are healthy, overmuch. But if we study ourselves very carefully we must be aware that we get out of bed on the wrong side some mornings and feel grumpy, not anxious to do our work, or we do our work rather slowly, we procrastinate, we leave out the harder job and take on the easier This situation perhaps goes on for two, three, or four weeks, according to our individual tempo, during which time we are not anxious to do or able to do any new work, any new thing On the whole we live rather well on our conditioned reflexes. But to get a new thought in a period of slight depression is extraordinariiy unlikely And then one morning the tun shines We find a glint again on the gingerbread, we whistle in the shower, and begin again to do a job of work and Leep at the joh on a new and higher tempo. That is the ordinary manicdepressive situation. When the dip is deeper, when the rise is higher, people are then called diagnosable as manie-depressives, in such condi tions the individual is either much better than his normal or much lower than his normal The best work in the world is done by the manicdepressive. Not when he is down. When he is up, he does the best work in the world, but he has to pay personally for the excellence of which he is

capable

My own belief is that this stimulation of the diastole, of the emotions, of the dynamic part, is implemented through the hypothalamus, a small area of great antiquity, much older in our evolutionary growing than what we call our new brain with which we have been supposed to think I am quite sure that the control exercised over the organism by the "old" brain is a much more secure, a much more beautifully integrated mechanism, than our thoughts can produce in our conduct, judging by the kind of things we do Were the control of our organisms left to us, that is, to our conscious selves, what a mess we would make of it! We wouldn't live more than a few minutes if we had to run the show personally The show is run for us by the hypothalamus, under whose control comes, for instance, the strange rhythm of sleep, under whose control comes, too, the rhythm of woman's menses. Under the control of the hypothalamus comes the mechanism most imperfectly understood, by which carbohydrate metabolism is ordered so that weight balance is steady too, we have temperature control, and control of water balance There are many other refinements in balances subserved, perhaps, by the hypothalamus, the hypothalamus is the pacemaker of our emotional lives, and of our energy drive also

It is important to consider the microscope again to oppose the tyranny under which we doctors have labored We have been educated through our schools to believe only what we see If we were educated in London, Calcutta, or Paris, we were taught to come from Missouri, and unless it can be shown in a slide, "it ain't there" That has been the narrow, indeed the vulgar, attitude of our profession as a whole for something like fifty years. In the light of the new physics there is no such thing as a solid A solid only differs from gravity or electricity or from a thought by reason of a different geometric pattern of energy molecules man is a geometric pattern of energy molecules capable of being seen and even touched and hurt only in terms of our senses That which can be seen and felt is only one aspect of the force pattern

It might have happened that we would quickly read each other's minds and only deduce each other's faces. A most lamentable situation that would have been. Man is a collection, enormously complex, of energy molecules which dis-

till primitive energy into other forms of energy The nervous system is a distilling apparatus designed to take the energy collected from the universe into ourselves and distill it, according to the quality of our distilling apparatus, into abstract thought and even compassion. The thing of which we ultimately become conscious is but the end product of the process We kid ourselves that we are running the show, but as a matter of fact, we are like icebergs-one-seventh above water, the rest below The tip of the iceberg shows And for the man on sea-level that is the iceberg, but there is seven times as much iceberg below water! So we have to implement what has been the "pathology of fiber" by investigation into the "pathology of forces" We have to learn, we doctors, that the forces in the body are just as real as the fibers on which some of the forces travel I say some of the forces, for undoubtedly thought does not travel at the rate of nerve impulse. The rate at which the impulse travels along nerve tissue is very slow, but thought can be as quick as lightning

And where does "sleep" come from? Nobody in the whole world knows what sleep is We can tell you a lot about blood pressure in sleeping, metabolism in sleeping, but nobody knows what sleep is We just say it is hypnosis or suggestion We explain one unknown by something else more

unknown—and call it a day

For myself, I think these phenomena of sleep, of the hypnotic trance, of sudden loss of function in hysteria will be explained in some such familiar radio term as "blocking a beam", we know that we can put another radio beam across a beam carrying messages, and block the message is commonplace in physics, in electronics, in But no one has thought of applying it to the human instrument. At least, I haven't heard of it But I believe we can lay down a sort of radio curtain to block impulses coming from the environment, when the curtain is adequate we have "sleep" We can lay down a curtain—physical, if you like, purely physical to prevent any sensation coming to the conscious organism from a part of the body in hysteria, and the curtain can be lifted as quickly as any other electrical curtain

And we are now getting a better microscope, an electronic microscope which will let us see tissue without staining it, to see tissue, vital and living, but we are going to have to go even further, and learn not only to trust our own senses but have more trust in our own thoughts

The psychosomatic aspect we want to put before you is that a man is an immaterial thing—his body, his thought, his conscious mind, and the energy which is below consciousness. Also he has the power of distillation. Out of the primitive con-

scrousness of a cell he can distill abstract thoughts. This makes him infinitely the greatest of all living things. It is that distilling power which has made him, so far, the anxious lord of the earth. If all humankind were to be contented, however, nobody would do any work.

Once years ago I was asked in a meeting if we doctors had learned the place in the brain that governed the emotions So, rather pertly, I said "Yes" Dr Michael Pupin said, "Oh, I didn't know that. Where is that place?" I said, "It is the hypothalamus." That was more of a guesa fifteen years ago than it is now and, "But have you learned to pull the switch?" I said, "No, but I'd like to guess what will hap-And we may All the governpen when we do ments on the earth will appoint a switching day and all humanity will queue up to be ewitched into contentment. But there will be about one man in every million, or perhaps every ten million, who will hang back, and "he will be hanged if he will be switched" All the unswitched ones, all those doubting Thomases, in six months will find that they are the lords of the earth, and six months after they have become the governors of the world they will have found that there is no world worth governing, so to make mankind again discontented and therefore ambitious and willing to do a lick of work, the governors will load all the doctors into scows and tow them into the middle of the Atlantic and sink

Humanity is bound to be discontented. The balance in the unstable equilibrium in which we live keeps us valid as organisms. In our downdrops energy rises to consciousness as discontentment, and that discontentment when energy rises again has power, then energy to change the discontentment occurs, so that mankind works and strives and struggles and dies, but leaves work behind him. And in this merry-go-round, we go on living and gather roses on our wny and when we may

Some men go into battle with an innate instability, which any of us may have. There is no such thing as "screening" an Army so that the men in the Army will be imparvious to breakdowns. Anybody who has seen war knows perfeetly well that if a man gets enough wer-say enough chelling-for long enough, in one place, he will crack-unless he be an insensate fool he be a fool he may not have enough intelligence to be frightened The man who says he is never frightened by war is either a fool or a knave He is more likely to be a knave saying he is impervious. Such a man, if he is buried by debris and has to be dug out-may be only muscularly hurt, but he is apt to be deeply termfied. He emerges from that confinement with a huge adrenalmization, with his pulse going 150, with his hair, as I have seen it in the last war, en brosse, as the French say-like a brush, up, his hair standing on end, and he can hardly Usually such a person cannot speak. He speak tries to speak and, as the Bible says, "His tongue clove to the roof of his mouth," and he cannot make a sound Then he is sure he is dving he may have numbed his arm and not be able to feel anything in it. If then a medical officer asks him, "Can you move your hand?," and he truthfully says, "No, sir," the medical officer says, to some extent to protect himself, "Injury to reflexes of the arm," and sends him down the line to a safer place The suggestion of physical injury is so complete, and has been so accepted by that man, that he has temporarily lost the ability to unite his conscious self to that arm. That radio curtain I spoke of has been laid down, and he cannot feel in that arm, or he cannot speak when spoken to II that situation be allowed to continue for long, it may last a lifetime

But it can be cured It can be cured by the doctor, by the medical officer, who knows his business. Now here is something I would like to point out to you—that the quack is born, not made The doctor is usually made, not born The quack is a quack because he feels in himself the power to cure That is why he is a quack And he says, with assurance, "Speak." Or he says, with assurance, "Raise your arm" And if the man is hurt in a ctructural why the quack, not being a ccientific person, does not notice his failure but goes on to another success, so never has his confidence been mutilated The doctor, however, is hrought up through the schools

Most of the medical men whose neurologic attachment is not perhaps entirely as they would like it to be, at the bedside of a patient who cannot walk, look at the man, examine his reflexes, and "think" this is a hysterical situation. They say, "My dear sir, don't you think you could get up and walk?" And the patient, realising that the doctor has no iron in his soul and no convictions, says, "I certainly cannot." The only way the doctor can get the power to successfully say, "Get up, walk" is by his certain technical knowledge that the patient hasn't a structural lesion in the spinal cord. The doctor has to reach that self-assurance through a scientific technic

He has to exclude all other possibilities and be sure of the exclusion then he gets the power to heal.

I remember being asked to come to see a man who had a through-and through machine-gun bullet in his deltoid. The soldier had been examined by a very competent medical officer—a major. This medical officer said, "I rather think this fellow is hysterical, he says he cannot move his right arm "

When we got to the place I looked at the man quite carefully His reflexes were certainly normal in that arm, but he certainly could not move it nor could be feel anything in it at all. You could stick pins through it and he wouldn't You could draw blood and he didn't feel it In about ten minutes after I was sure of the diagnosis, I told him that I knew I could cure him and I said, "Let us begin with this finger and work on it You can do that" And he was surprised, and soon the arm was working, and very soon he was cured Also, as soon as he was cured, he could feel And don't let anybody use the silly words, "Oh, he imagined he could not feel" Nobody can so imagine—if you cannot feel a needle put under the quick of the nail enough to draw blood, then you don't feel You cannot get out of an explanation by calling it "imagination" The soldier did not feel, and ten minutes later he did As we went out this medical officer said to me, "Why couldn't I do that? I knew that man was hysterical" I said, "I am hanged if you knew he was hysterical. You thought he might be "

For one cannot cure these conditions that occur under emotional strain and fear, in the subjunctive mood The indicative and sometimes the imperative are needed for cure The subjunctive is no good. It is common in war for a man to lose his voice under emotional stress, and if he be allowed to continue to substitute for his ordinary voice a very low whisper, he may contimue to do so for years or for life I used to use a group therapy for phonetic cases in France would make a man stand at the end of a hut and try to speak to me in full view of the ward in which there were all kinds of cases but in which there were perhaps a half dozen soldiers who could not speak and had not spoken for either one day or twenty Then I would take him out of the ward to another place Very often I didn't use any instrument but suggestion, sometimes, however, I did use a very short stimulation of the throat mucous membrane, which made him say "uh" As soon as he heard himself say "uh," I was able to make him say "uh, e, i, o, u" When he had mastered the vowels he very quickly mastered the consonants, and in fifteen or twenty minutes I could bring that soldier back to the same ward, stand him in the same place, and make him address me down the hall of the The result was that every other phonetic was cured They were half cured before they were ever treated

This is what we call "suggestion"—the word "suggestion" is bandled about a great deal and nobody much tries to see exactly what suggestion

is I have described suggestion as the uncritical acceptance of an idea—of an idea which is in consonance, in harmony, with an already established emotional trend. If a man is in a certain mood to believe an idea, he will uncritically accept it as true. That is the reason why, if we are democratic, we buy democratic newspapers to save us a quarrel with ourselves and with the newspaper at breakfast.

The suggestion of blindness, the suggestion of loss of speech, the suggestion of paralysis, come easily when men are tired, when men have been blown up unwounded, and then blown up again, knocked over again, and are again unwounded, or perhaps hit by a piece of flying earth. Perhaps when they throw themselves down and a shell comes close to them its windage tosses them and its flash blinds them, even with their eyes shut And perhaps its flame may singe their hair, so that when they open their eyes they cannot see If anybody says, "Are you hurt, wounded?" the answer is, "I cannot see"

Then somebody is put in charge and the soldier is brought to the rear. If that man's loss of vision is accepted as organic by the medical officer, if he doesn't know enough about reflexes to be able to be sure that it is a reversible situation and not an irreversible situation, the hysterical blindness may last for years and not be recovered from even under the auspices of psychoanalysis

In the last war a journalistic word was allowed to run rampant through the world. This word was "shell shock" It was made by journalists and had such alliterative and dramatic qualities that everybody heard, remembered, and used it. The man who was shell shocked returned to his native town rather more a hero to his girl than the man who had been drilled through the chest by a machine-gun built. The fellow whose chest had been drilled had nothing much to show for it, and he made very unpleasant wheezy sounds, while the shell-shocked man "must have been in a terrible battle to have been shell shocked." The title itself inhibited cure, and satisfied the owner with his ailment.

I am not sure that our modern word of combat fatigue is very much better. What you call a thing is really just as important as the thing itself. Because what you call a thing may cease to be what it truly is, the tool or symbol of the thing, and it may be elevated into a god, or it may dwindle into a mere term of abuse. If you want to say the worst you can say about a mental condition you call it schizophrenic. One cannot discern a divided personality in ten minutes, and yet it is being constantly done, possibly not in ten minutes, but the idea is being formed in ten minutes, and it is written down on a sheet of paper in ten days. Such words go twisting

through the atmosphere merely as terms of abuse and not diagnosis

We had a term more or less officially squashed hy the Medical Research Council a few years ago -a term that raised its head as a danger It was called "destroyer etomach" It meant the indigestion that came to sailors who were on light craft, light service eraft, often in heavy weather They got chucked about, and it was supposedand quite properly supposed—that a train of digestive disturbance came from being chucked about from one side of the ship to the other This was labeled "destroyer stomach." There came to be quite an epidemie of destroyer stomach But if it had been called stomach inflammation. there would have been fewer complaints "I was just discharged from the Navy because of stomach trouble"-that does not sound well "destroyer stomach"-that is something else Fatigue un't a good thing to tell your girl aboutthat you have been discharged from the Army for fatigue But you can tell her with very good face that you have been discharged because of "combat fatigue" The inference is that you have been doing more actual combat than most The same for the term "flying strain" It is the adjective in all of these half lay words for the neuroses that does the harm, it is the adjective that satisfies the owner of the condition with his state and inhibits his cure

I made a suggestion like this at an address at the Inter-Allied Medical Conference in Paris in 1918 I talked about what was then called "ehell shock." I inveighed against the word "shell shock," and asked my betters futilely to use instead the simple word "nervousness." told them I had never seen a man suffering from a generalized psychoneurosis who at the same time had a severe physical wound, for the very good reason that a man with a physical wound does not need the psychoneurosis to solve his problem of what to do with the war

Everybody has the problem of what to do with the war At the end of four years of the last war, it seemed a long war We hardly were fighting the Germans, we were fighting "the war" The war had a stature like a genie out of a bottle, and we were fighting "the war," a situation in which all of us were The enemy became simply a symbolic thing which had to be dealt with in order to get rid of the genie threatening to extanguish you

I suggested then and I still think the idea isn't bad, that we should call people with this ailment by a term perfectly understandable to every man Not hysteria, because hysteria means a different thing to each The layman and the doctor have an entirely different idea of what hysteria is would diagnose that condition as "nervousness"

and, according to how he got that way, I would mark him "nervousness, sick," or "nervousness, wounded" That is to say, it has to do with-in the last war-wound etripes It has to do with Purple Hearts It has to do with all the little alogans men live hy So if a man breaks down under heavy shell fire and then takes to his heels. as good men do, he should be marked "nervousness, wounded", and if he breaks down when he is awaiting transportation overseas, he is natu rally "nervousness, sick." But the word "nervousness" is a perfectly simple English word, it carries with it no self-delusion. It is incapable of being rationalised away, and will act as a salutary instrument toward cure Of course, this unstable, equilibrated set of forces, which I said at the beginning is a man, can easily be made in-

A man has come through a succession of emotional stratifications You realize that at 4, 5, 6, and 7 years of age, a child is a witch doctor with obsessions, he is a superstitione poet We call it being a child We expect a little child to say there is a tiger at the foot of the garden pect a little boy of five to say that God is having a party with firecrackers when there is a thunder storm So does the red Indian Only we say that is what the red Indian thinks

A human being recapitulates in his anatomy all the cycles through which the race has passed We recapitulate cycles through which our hodies have passed through the ages We do the same with our emotions And at 5 we have an aboriginal culture Any boy of 10 will certainly not wear a tie different from every other boy of 10 He wants to be entirely uniform with his gang, with his group He rather likes secret societies in which there are no secrets He likes to join a gang, and be is very cruel if he thinks the other gang is a little weaker than his. I think the box of 10 has a primitive form of culture which we see in adult life as a Nazi The ordinary person continues through, and becomes civilized later

When we are desperately unhappy, when we are in an internal depression of the manicdepressive type, or when we have been struck hy shellfire into a numb state in which we hardly know our own names, we dip down to other strata of culture which we have long ago left, and wo become obsessional It is natural for the boy of 5, and there must be lets of adults who remember when they were children, that they had to touch the third bar of the railing which they passed every day when they went to school, or they had to jump over the cracks in the pavement or they had to step on the cracks of the pavement. We have all done that, and it is natural to the child

It is a very great sickness that affects the adult to any driving compulsion But when we are

depressed and suffer from the terrors of war we dip down to the stratum of magic, just exactly the same way as when we have a frontal tumor, we produce forced grasping in the opposite hand It is natural for the baby, the child, to have forced grasping, but it is not natural for the normal When he is a sick man, there is a return to the child pattern When we are sick emotionally we dip down into the realm of magic for help These depressions which overwhelm so many in civil life and which are imposed on soldiers in warfare are not just things of the mind—the conscious mind being the little bit of the iceberg, as you remember, above the surface They are influences, they are the impingement on the mind of a deep disturbance of the forces of the organisms, a deep We have had no instrument with unbalance which to balance these forces except the philosophy of the Greek words—regimentation, direction, suggestion And these are very madequate I don't think they do anything curative to the deep depressions at all

Then the instrument for what we most improperly call electric shock treatment was introduced—it should be called electric sleep treatment because that is the only thing the patient feels—he feels no shock or pain, he is aware of nothing but the fact that he has been asleep. No one has, by will, the power to balance unbalanced forces

Electric shock does something to the hypo-It brings the opposed forces into thalamus normal balance so that people with deep depression, filled with obsessions, compulsion obsession, or deep jealousy, unreasoning jealousy, complete insomnia, or, of course, the depression of the menses, become perfectly normal in a matter of eight to ten treatments In my hands the same people I had cared for fifteen years ago, perhaps for three years' time, have come to me now with a recurrence of their depressions, and they leave my care in less than three weeks this is a miracle—one of the greatest miracles that has happened in modern medicine reason why so many people don't say it is a miracle is that it is so miraculous that they cannot think about it. They can think about penicillin, they can think about sulfa drugs, because all of their thinking the past twenty-five years has been along the lines of getting something to kill something else. We are accustomed to the idea of getting a magic instrument which, put into a body, kills the invader, but this other is an entirely new order of thought. It is an entirely new aspect of vision. Therefore, one cannot think about it easily

We stand today in relation to the treatment of diseases of what we have called "the mind," which is no different than the body—it is just another expression of the body. We stand in regard to the treatment of mental disease exactly where Lister stood in regard to surgery when he made his first carbolic spray. There is a new wind blowing

There lately came to me for treatment, brought by his parents, and helped into the room, a loutishlooking fellow with a face completely drained of any emotion or intelligence. He had good features, but he drooled at the mouth He had complete thought block-well, not complete, but he had such thought block that we had to catch him every five minutes to get a word in reply to a simple question of perhaps his name or what he thought was wrong with him When I did get him to talk, during the second or third interview, he told me his legs were off—that doctors had cut off his legs And then, after five minutes silence, "They are in a bucket" He had gross somatic, bodily delusions He was incontinent of his urine as he stood in the middle of the room had been discharged from the Army, most properly, as a schizophrenic, and the medical officer had, off the record, told his parents that he thought the case was hopeless I gave that young man thirty-two electrical treatments, and for the last five months he has been perfectly well—gentle, humorous, well mannered, working every day at his father's business We must use this treatment freely, not only for the men in the armed forces, but also in rehabilitation

## PHYSICIAN-ARTISTS' PRIZE CONTEST

The American Physicians Art Association, with the cooperation of Mend Johnson and Company, is offering \$34,000 in War (Savings) Bonds as prizes to physicians in the armed services of the United States and Canada, and also physicians in civilian practice for their best artistic works depicting the medical profession's "skill and courage and devotion

beyond the call of duty "

For full details, write to the Association's Secretary, Dr F H. Redewill, Flood Building, San Francisco, California, or Mead Johnson and Co, Evansville 21, Indiana Also pass this information on to your physician-artist friends, both civilian and military

#### TROPICAL DISEASES IN RETURNING SOLDIERS\*

GEORGE CHEEVER SHATTUCK, M.D., Boston, Massachusetts

(Clinical Professor of Tropical Medicine Department of Comparative Pathology and Tropical Medicine, Schools of Medicine and Public Health, Harvard University)

#### I Malaria

Most of the tropical diseases in returned soldiers which are seen in the United States of America are of chronic or recurring nature. Foremost among these is malaria. There are today four recognized species of the malaria parasite Plasmodium vivax, the cause of benign tertian malaria, P falciparum, which produces malignant tertian (estivoautumnal) malaria, P malariae, cause of quartan malaria, and P ovale. The last is a rare parasite producing a mild form of tertian fever. Few cases of this disease have as yet been recognized anywhere. The quartan form of malaria is relatively uncommon but an occasional case may be met with

The form of malaria most dangerous to life is that caused by P faluparum, but few cases have developed in soldiers who have returned to the United States. In this form of malaria cerebral or other alarming symptoms may develop rapidly without warning. Recognition of this species of the parasite and prompt treatment is, therefore,

Important.

Nearly all of the attacks of malarial fever in returning soldiers are caused by P vivax. The particular variety of vivax infection contracted in the Islands of the Pacific shows a striking tendency to relapse again and again at intervals of about a month. A noteworthy proportion of these patients have twenty or more relapses in spite of repeated courses of treatment. Many who have had numerous relapses are nevertheless in good general condition. Alarming symptoms rarely occur and deaths are few. Ultimate recovery in from one to three years is to be expected even in the most obstunate instances of vivax infection if reinfection is prevented.

Why are faleparum infections infrequent in returning soldiers? The answer is that P faleparum is far more amenable to medicinal treatment that is P vivax. An attack of fever caused by either of these parasites can be quickly controlled by medication, but faleiparum infections are more early cured by treatment than are vivax infections. Another reason for the comparative scarcity of falciparum malaria is traceable to the response of the parasites to protective doces of atahine. In the desage commonly employed for prophylaxis, namely, 0.1 Gm daily, atahine

will nearly always destroy P falciparum. A latent vivax infection, on the other hand, may break through" and cause an attack of fever even when ntahmne is being taken continuously in the desage above mentioned, and a vivax infection is almost certain to cause fever after use of the drug has been discontinued

Most nuthorities now consider that atabrine (quincine, U.S.P.), on the whole, has some advantages over quinine when treatment can be given under medical supervision Quinine appears still to be the drug of choice for self-medication, but significant toxic effects of atabrine are not common. Both quinme and atabrine are absorbed quickly from the gastrointestinal tract except in very severe cases of malaria in which the gastrointestinal functions are seriously disturbed In average dosage, quinine takes effect more quickly than does atabrine reason for this is that quinine quickly attains the therapeutic level of concentration in the blood, whereas atabrine in average dosage attains the necessary concentration more slowly This disadvantage can be overcome by stepping up tho doesge of atabrine during the first twenty-four

Malanal relapses should ordinarily be treated promptly with quinine or atabrane. When relapses occur again and again, it may be advantageous to switch from one drug to the other and back again Prolonged courses of treatment with quinine are not usually recommended today because the drug tends to cause debility and because a rather short course seems to be as offective as a longer course. In most cases, ten days' treatment with quinine or seven days' treatment with atabrine is sufficient. In order to increase so far as possible the natural resistance of the natient and to favor the development of immune responses in his body, it is important to hulld up the general condition of the patient in every possible way Iron should be administered to combat anemia. An occasional dose of araphenamine may have a beneficial effect in a case of vivax malaria when there is anemia and debility, but otherwise arsenic has no special value in Arsenic is ineffective against P falcimalaria There is no drug which can be recommended at the present time as being superior to quimme or atabrino

Blood examination should always be made for diagnosis and to determine the species of the para-

71 ,

<sup>\*</sup> Read at the Thirty-ninth Annual Meeting of the Third District Branch of the Medical Society of the State of New York held at Albany on September 20, 1948.

site, because falciparum infections are dangerous Fatalities are not common with vivax malaria, but its manifestations may be severe and may be indistinguishable from those caused by falciparum infections Among the clinical types of malaria which may cause difficulty in diagnosis are those associated with severe abdominal pain and sensitiveness Mistaken diagnosis may lead to needless laparotomy When abdominal pain is of malarial origin, one does not expect to find typical reflex spasm of the abdominal muscles Moreover, in malaria the white count is ordinarily normal On the other hand, malaria confers no immunity to appendi-Gastrointestinal symptoms in malaria may resemble those of acute bacıllary dysentery or even of cholera The neurologic manifestations of malaria may simulate those of almost any disease of the nervous system, including mania and epileptiform attacks Coma of malarial origin may be mistaken for heat stroke, or vice versa, for cerebral hemorrhage, or for Finally, there are cases in which migraine, arthralgia, or pains in the muscles are of malarial origin even when little or no fever is pres-It is an excellent rule to suspect the presence of malaria whenever exposure to this infection might have occurred

## II Amebiasis

The term amebiasis as I shall use it today includes all forms of human infection with Endamoeba histolytica. This is the only pathogenic species of ameba found in the intestinal tract of man

The geographic distribution of E histolytica is world-wide The parasite is very prevalent in the tropics, less abundant in the subtropics, and common in the temperate zone. It has caused disease even within the Arctic Circle In the United States of America as a whole, the percentage of infection with E histolytica has been variously estimated at from 10 to 20 per cent of the entire population Our knowledge of the prevalence of E histolytica is based for the most part upon surveys in which a single fecal specimen from each individual has been examined when it was no longer fresh Such specimens are unsuitable for the finding of motile forms of the ameba Most of the positive findings have been based, therefore, upon the demonstration of Only about 50 per cent of cases of infection are recognized on the first examination therefore, a survey based on the examination of single specimens from each individual reveals infection in 10 per cent, the true proportion of infection is probably about 20 per cent in the United States from various localities have shown low rates for the northeastern states and

much higher rates in the southern states percentages of infected persons shown in these surveys has varied from nil, in a small town in New Hampshire, to considerably more than 20 These facts serve to emphasize the point that amebiasis is common throughout the United States The importance of amebiasis as a cause of disease in the United States was strikingly brought out by the considerable mortality which occurred a few years ago among persons who became infected in Chicago at the time of the Century of Progress Exhibition Persons infected at that time returned to their homes in all parts of the United States and some of them died because the nature of their symptoms was not recognized in time A number of fatal cases were correctly diagnosed only at autopsy The severer forms of amebiasis, characterized by dysentery, liver abscess, severe intestinal hemorrhage or perforation, are not common in the temperate zone, but typical cases of amebic dysentery have developed in Nova Scotia, and such a case may occur anywhere In tropical practice, amebic dysentery and the severer complications of amebiasis are common

It is important to recognize the fact that amebiasis can appear in various forms There are, for example, the cases of diarrhea without blood or mucus in the stools The diarrhea may be transient and, between the attacks, the patient may be constipated In another group of cases there are vague digestive symptoms, usually associated with debility and with complaints which might be interpreted as of neurasthenic Amebic ulceration in the cecum or in the appendix frequently causes symptoms like those of ordinary appendicutes Such cases, when not recognized, frequently lead to needless ap-The surgical results are likely to pendectomy be unsatisfactory Still other patients appear to be in excellent health and consider themselves to be so, but careful questioning may reveal the existence of symptoms of a mild type

From what has been said thus far, it is clear that there is no symptomatology which is characteristic of amebiasis The diagnosis, therefore, must rest upon suspicion confirmed by demonstration of the presence of the parasite Even when the ameba is present, the symptoms in a particular case may be caused by some coincidental disease, and not by the ameba amebae (trophozoites) occur in the stools only in the presence of diarrhea or dysentery As a rule, only cysts are found in relatively mactive or symptomless cases of amebiasis For the purpose of ascertaining the cause of symptoms, the presence of trophozoites or of E histolytica is more significant, therefore, than the finding of cysts Proctoscopy or sigmoidoscopy are useful aids to

diagnosis, and the roentgenologist may be the first to suggest the true nature of the case

I want to emphasize the fact that examinations of the feces are of comparatively little value unless performed by an experienced protozoologast or by a technician who has been trained in the recognition of the various intestinal amebao and of their cysts

Sources of error are numerous when stool examinations are performed by inexperienced persons. For example, cysts of nonpathogenic amebae may be mistaken for those of E histolytica, or a common fungus, Blastocystis homins, may be mistaken for an amebio cyst. The trophozoito, or motile phase of E histolytica, must be distinguished from that of the various nonpathogenic numebae and also from endotholial phagocytes which may show more or less motility and which may contain red blood cells

In my privato work, I refer all ambulators patients to an experienced protozoologist appointment is made at a time when the patient thinks he can provide a specimen He is handed a cardboard hox to collect it in and the examination is made forthwith. The equipment used is first rate If trophozoites or cysts are seen, the direct examination is followed by the staining of specimens Cultures are taken in overy case Unfortunately, few of our hospitals can provide comparable diagnostic service Members of the medical and nursing staffs of hospitals should understand that the way in which a specimen is collected is extremely important, because rehable reports from the laboratory cannot be based upon the examination of unsatisfactory specimens. In the first place, when motile amebae are to be looked for, the specimen should be carried directly from the ward to the laboratory and examined immediately. It is essential that the bedpan in which the specimen is collected should not contain an antiseptic Admixture of the specimen with urine or with enema material other than salt solution may destroy the motile forms of the ameba The presence of hismuth, barrum, or oil in the stool interferes seriously with the examina

The complement fixation test is of limited value for diagnosis because of the difficulty of obtaining a satisfactory antigen

#### III Bancroftian Filariasis

Formerly known as Filana bancrofti, the hancroftian filana is now classified in the genus Wuchereria In some of the Pacific islands, high percentages of natures are infected with this parasite. The parasite is transmissible to man by various kinds of mosquitoes. The worm reaches maturity, as a rule in elymphatic gland. Hore the larval microfilariae are born. These find

their way to the bloodstream, in which they may be found in enormous numbers

Apparently, most of the infected natives of the islands are free from symptoms. Elephantiasis of the legs or great enlargement of the scrotom occurs in a small percentage of these natives These distressing lesions are believed to be caused directly or indirectly by the filana. Attacks of iymphangitis or of eryapelatoid inflammation are likely to appear from time to time in connection with elephantiasis, or they may precedo its development. In years past, few white persons have developed elephantiasis evon after years of residence in a place where filamasis is highly endemic. Little was known of the lesser manifestations of filarial infection until after large numbers of our troops had been sent to Samon and to some of the other islands where filariasis is very prevalent. A few months later. many of these soldiers began to have transient, localized swellings on the limbs, funiculitis, epididymits, or scrotal edema. Persistent enlargement of epitrochlear or inguinal glands was found in many of these cases. The transient swellings were more or less painful and there was slight fever in some of the cases Signs of lymphangitis were frequently observed in connection with the These swellings have been thought to be allergic in origin and they have been attributed to the presence of filamae

Many of the afflicted soldiers had already seen elephantisals in its severer forms among the natives and had been told that elephantiasis was caused by filariasis No wonder, then, that these men became alarmed when their symptoms were attributed to filamens. They feared stemlity and they believed that they would ultimately develop elephantiasis Symptoms which were transient, and not in themselves very distressing, consequently assumed great significance in their minds and the resulting psychic trauma had serious consequences Hundreds of such patients were promptly sent back to the United States for observation and treatment end to remove them from the chance of further infection the attacks of swelling have diminished in frequency and intensity until they have censed to reappear Some of the men were in normal health after a few months In other cases, the attacks have recurred for periods of n year or Comparatively small numbers of men are still under observation.

Microfilariae have very rarely been found in the peripheral blood of these patients. The diagnosis of filarial infection has been confirmed in a small number of the cases in which hiopsy was performed, but routice use of this method of diagnosis is considered inadvisable. In most of these cases, the diagnosis rested upon symptoma-

Skin tests are of doubtful value tology alone for diagnosis

The physician who sees a case of alleged filariasis from the Pacific can render the patient an important service by reassuring him He may tell the patient that the number of adult filamae does not increase in the body if reinfection is prevented, that they die off gradually, that ultimately he will be free from them unless again exposed to reinfection in an endemic area, that natives of the islands who develop elephantiasis as a result of filamasis have been infected repeatedly since early childhood, whereas the soldier cannot have been exposed to infection for more than a few months, that most men who had similar symptoms have recovered, that some of them have married and become fathers, and that it is extremely unlikely that he will suffer serious consequences of any kind No form of treatment known will eradicate the filama from the body, but one should attempt to eradicate the fear of the filaria from the mind of the patient

#### RITUAL DEHYDRATION

"A Wine Cooper fell into a Dropsy which re-sted all the usual Methods Thus Man was sisted all the usual Methods prodigiously swell'd, Belly, Back, Sides, Thighs, and Legs Being past all Hopes and having on him an mextinguishable Thirst, he was permitted to drink 14 Quarts of Water in about 10 hours and in all that Time made not one drop of Urine. Soon after he began to piss, and he drank on, 4 or 5 Quarts daily, and so recovered That Water should expell Water is a Miracle beyond any of St. Winifred's Now no man in his Senses would have prescribed such a Water course to cure a Dropsy, which shows how little we know of Nature and the great Un-certainty of our Art."\*

The orthodox treatment of edema is by restriction of the intake of water and salt. The thirsty patient usually gets used to it and is supported and sustained by his physician's belief that a waterlogged patient can hardly need still more water This ritual practice gains further support when it is seen that edema sometimes increases when more water is Usually salt is restricted, because if salt is absorbed more water can be retained in the body The logical conclusion of this practice seems to be that the waterlogged patient should be given no water at all. A kindly compromise is usual, however, and the patient is allowed one or two pints daily or else enough to minimize suffering from thirst Edema fluid, like normal interstitial fluid, may tend to become concentrated by evaporation of water from the body surfaces when intake is restricted. Normally, the changes being reflected in the blood stream, the kidneys work powerfully to preserve the electrolyte pattern, so that if water evaporates they excrete a stronger salt solution and the internal environment is repaired. The kidneys can perform this work only if they obtain an adequate supply of water When edema fluid contains too much sodium salts the tissue cells become de-

hydrated and "thirsty" and the patient wants If he gets it the water naturally goes to make the cell environment again isotonic and to rehydrate the tissue cells which were "brinelogged" This beneficial rehydration may thus be attended by an increase of the edema enough to make the faint-hearted falter When the "thirsty" cells and edema fluid are satisfied the kidneys can then proceed to the repair of the electrolyte pattern and the

excretion of edema fluid.

F R. Schemm, reasoning on these grounds, has treated a large number of edematous patients by giving them enough fluid to supply the necessary surplus for adequate renal function. To promote further the elimination of surplus sodium he restricted sodium intake and gave a diet designed to produce neutral or acid end-products It was common, in his regime, to give several liters daily to patients with edema associated with cardiac failure or in nephrotic syndrome supposedly due to lowering of plasma proteins Cases of edema with congestive cardiac failure seemed to tolerate five or six liters of fluid daily by mouth or supplemented by intravenous 5 per cent dextrose, the edema sometimes disappeared and the patient improved on the regime after rest, digitalis, mercurial diuretics, and water restriction had proved ineffective. Benefit has been claimed in nephrotic syndrome, in pulmonary edema with left ventricular failure, and in stubborn anasarca with chronic rheumatic card-

Even with these large fluid exchanges it was found that needed sodium chloride was conserved by the

kidneys, and only the surplus was excreted.
Schemm's results are impressive and demand critical consideration. He recommends a modest and careful trial for the timid, and persuades the conservative with apt quotations to show that tradition favors the quenching of thirst, even in dropsy "That Water should expell Water is a Miracle beyond any of St Wimfred's which shows how little we know of Nature and the great Uncertainty of our Art."—Brit M J, June 28,

<sup>\*</sup> This quotation is from Sir Thomas Witherley, President of the Royal College of Physicians, 1684-7 methods," besides purges and vomits include besides purges and vomits included the use of calomel, mineral acids, and the murate of ammonia, but not a free use of water, even from St. Winifred's Well

## RECENT TRENDS IN UROLOGY AND THEIR APPLICATION TO GENERAL PRACTICE\*

ALBERT M CRANCE, MD, FACS, Geneva, New York

EVER since the days of Hippocrates, the art and science of medicine have made an almost continuous progress. The read has been n long one, and we are far from the end of that read

Medicine odvances slowly but surely, year by year yet the pace set the past few years would tend to make one think, for the moment that this progress has been more rapid than it has been in former centuries The dawn of the sulfa druga, penicillin, and other discoveries would give one this impression. We forget the progress made in other years except such specific discoveries as of germs, the radical changes in surgical technic, ure of quinine for malaria, araphenamine, mercury, and loter bismuth for syphilis, and many other items down through history ment in general has been slow and gradual, because doctors on the whole, are cautious creatures, and rightfully so They enjoy watching the progress made in our scientific laboratories. but only accept such progress after it has thoroughly proved its real value

All of this is true in general medicine, and in the special branches of medicine and surgery as well This paper, however, is a briof review of recent trends in the specialty of urology, and how they apply to general medicine. Let us begin, therefore, with the subject of carcinoma of the prostate Seven years ago, or until the work of Charles Huggins was introduced, we had little or nothing to offer the patient with carcinoma of the prostate Today, in some 60 to 80 per cent of these cases, a comfortable existence for them is possible, lasting in some cases five years and longer Huggins, in discovering that acid phospliatuse, recreted by the testes, feeds the carcinoma and keeps it growing proved at the same time that a regression of the malignancy follows the removal of the testes. The most striking feature of this phenomenon is the improvement noted in bony metastasis, nine to fifteen months after the operation Today, in the majority of cases of carcinoma of the prostate, we do not consider surgery upon the prostate, hut rather the removal of the testes, and the all-important administration of 15 to 20 mg of stilbestrol daily Stilbestrol, which still further counteracts the influence of the male hormone and its enzymes, is indeed most essential More failures follow when this drug is omitted, and it should therefore always be included in this regimen of therapy

The writer again wishes to emphasize the statement that in carcinoma of the prostate we do not today think first of surgical interference with the presente. Even in cases of total obstruction, and there are few it is not by any means always necessary to plan a resection or cystotomy to relieve the obstruction Often the use of an indwelling catheter for a week or two following orchiectomy. and stilbestrol, will find the patient voiding enturely satisfactorily, and in the writer's opinion much less trauma will be done to the malignant prostate The writer has 2 patients, both of whom had total urmary obstruction, who are now apparently chowing a complete recession of their carcinomas, and voiding normally some two years after orchiectomy. In leaving this subject it should be emphasized that in most cases of prostatic cancer few, if any, symptoms occur in the unnary tract until the disease is well advanced Rectal examinations are, and should always be, an important part of a physical examination. One patient seen recently, who had been given a so-called "clean bill of health" some two months before, had an advanced carcinoma of his prostate, but upon questioning he said there had been no previous rectal examination made Rectal examinations are certainly not a recent trend. It has been preached and stressed for years and years The trend should be to make them and stop preaching because every doctor knows the story, and he is depriving the nationt of his talents when he neglects it.

And what is the trend regarding adenoma of the prostate? Transurethral resection during the past ten years, has become an important nddition to our methods of surgical treatment. Some men are continuing it while others who followed it religously are returning to the open method Let it not be forgotten that there are three mothods, all of which hold an important place namely, suprapuble prostatectomy, perlneal prostatectomy, and electrosurgical transurethral resection Mortality rates, in either case seem to vary from 1 to 6 per cent. The writer happens to be one in the group favoring the suprapuble route, sometimes in one stage after preliminary catheter drainage, and in the really old patient with poorer renal function, using a two-stage procedure. It is not the purpose of this paper to argue for any one method. The trend is swinging back, with but few exceptions,

<sup>\*</sup> Read at the Thirty-ninth Annual Meeting of the Seventh District Branch of the Medical Society of the State of New York, held at Ciliton Springs, New York, September 27 1945.

to the open operation The suprapubic technic, which offers improved methods in exposure, the removal of all of the adenoma without resultant damage to the sphincters, the control of bleeding, etc., yields a satisfactory result, healing usually in ten to fourteen days postoperatively. The patient has a good forceful stream free of bleeding, burning, and discomfort. He is also free of incontinence, and not inclined to be continuously bothering his doctor for relief. So much for the prostate

Another trend, well worth mentioning, is the closer cooperation of the urologist and the gynecologist, regarding the subject of sterility Let me mention a woman seen a year ago, one who seriously wanted children. She had had three surgical operations and still did not become pregnant When asked if her husband had been examined, the reply was, "No" In brief, he had no spermatozoa in his seminal fluid fact that she had had even one operation is certainly poor medicine, but how she could have had three is a dark reflection on our profession should not forget that it takes two to make a bargain Another trend, in so far as gynecology goes, is the importance, especially in the large uterine fibroids, in which hysterectomy is being planned, of using the safety measure of catheterizing the ureters just prior to operation Occasionally patients in whom the ureter has been severed or ligated during hysterectomy are seen by urologists, and the picture is indeed a sad one when it occurs A catheter in the ureter makes such a catastrophe practically impossible

Urology, in the past few years, also has had something to offer to general medicine in so far as hypertension is concerned Unfortunately, however, this applies to a minority of hypertensive patients, a decided decrease from what was supposed to be the case when this work was first reported However, in the obscure cases of essential hypertension, it is well to study the urinary tract before deciding upon the hopelessness of the issue The fact is established that the patient who has a small, contracted, nonfunctioning kidney which has undergone atrophic pyelonephritis and who exhibits a high blood pressure, is greatly benefited and the blood pressure frequently returns to normal following nephrec-The blood-pressure substance, namely, renin, which forms in these atrophic kidneys, is thrown into the blood stream and hypertension is the result With the source of this substance removed, recovery often follows The one great difficulty which the urologist meets in these cases is the fact that so few of these are unilateral, making the percentage in which surgical interference is indicated rather discouraging No urologist has yet had a large series of these cases to report and consequently the literature involves only a few cases here and there. We should be most conservative in advising nephrectomy in such cases unless we have a very definite unilateral pathologic picture. In the cases of unexplained hypertension it is very little to ask of the patient to at least have intravenous pyelographic studies made. If one kidney is found to show no dye as the result of nonfunction, then a retrograde pyelogram should be made. If such a pyelogram exhibits a decidedly pathologic kidney, these, and only these, are the patients in whom to consider nephrectomy

And now, what about urmary infections? Is the trend to give all patients with pyuria a sulfa drug, penicillin treatment, or what? Are we forgetting that tuberculosis of the kidney and bladder still exist? Are we going to culture the urne in the beginning or treat blindly, putting the cart before the horse, as it were? The trend, as far as good medicine is concerned, is to know with what organism we are dealing. Even a sterile culture in pyuria is presumptive evidence of tuberculosis Possibly the new drug, streptomycin, will do much for urmary tract tuberculosis That remains to be seen But, as far as tuberculosis is concerned, when it is proved even though only in one kidney, the trend today is not to do an immediate nephrectomy, but rather to give the patient at least a year of institutional treatment, and then decide upon the advisability or nonadvisability of a nephrectomy

However, of all of the infections of the kidney and bladder, the colon bacillus is the most common, and unfortunately, penicillin has no effect upon it. Here we must rely on the sulfonamides and, when these fail, the older methods, such as acidification and ketogenic diet, must again be resorted to. It also might be well to recall the fact that any urinary infection showing a persistence of the staphylococcus albus demands careful study by x-ray and cystoscopy, because this organism is so frequently associated with stone in the urinary tract. The infection may exist long before the stone has given any obstructive symptoms.

There is another subject which seems to be exhibiting considerable interest in the field of urology, as well as in general medicine, and this paper would not be considered complete without mentioning the male climacteric. It is, of course, too complicated a subject to discuss at any length in a paper of this kind. It may be stated, however, that the male climacteric is today considered a definite climical entity, and once the diagnosis is accurately established, the specific treatment with properly administered dosage of testosterone yields, in most cases, astonishing results. Look for it in men anywhere between

the ages of 50 and 70. The predominating symptom is nervousness, then come sleepless or worrsome nights. A feeling of tremor very often accompanies these symptoms. Forgetfulness and inability to concentrate, mental depression, crying easily, a fear of impending danger, and even typical hot flashes, such as occur in the femala as a part of the menopausal picture—all or any one or two of these symptoms should suggest this malady.

When one considers that this condition has even been recognized at all for only the past few years, it is no wondor that many of these patients went through their periods of the climneteric with little or no relief It has, in fact, only recently been necepted by our own American Medical Association as being a distinct clinical entity The alert physican will be doing his patient n great and unforgettable favor when he recognizes it and treats it specifically have been n number of articles on this subject in the various journals, one of the most enlightening of which appeared in the March 24, 1945, 183110 of the Journal of the American Medical Association by Werner, of St Louis It is well worth reading. The writer is inclined to disagree with some nuthors regarding the frequency of administering testosterone Excellent results seem to be obtainable when 25 mg are given twice i week for two weeks, then once i week for the next few weeks, and gradually lengthening the interval between injections Not infrequently are the results so striking that the patient returns three or four days after the first injection stating that he feels very much improved often so much so that both physician and patient may nopear to wonder how it could be possible

The writer would like to close this paper with a few remarks regarding the ever increasing use of penicillin in gonorrheal wrethritis in the male and gonorrhea in the female Unfortunately, that war era has brought an increase in this discase,

which had been supposed to be on the decline Pelouze told us we would have the greatest epidemic the country has known as the result of "false cures" with the sulfonamides excellent advice And let us take heed that the same does not occur with penicillin, by its wrong management Possibly 100,000 units will eradicato the disease in most males, but 200,000 units usually eliminates that stage of wondering Since the trend toward giving penicilin at the office has become routine, one must not attempt it unless he can devote the necessary frequent visits to the office in cooperation with the patient Two hundred thousand units can be given nicely in six doses, by mixing each 100,000 units with 0 cc of normal salino solution, giving 1/2 or 3 cc at each dose, for example, at 9 00 AM, 11 00 AM, 100 PM, 300 PM, 500 PM, and 700 P.M It is most important, too, to have at least three follow-up smears and cultures before discharging the patient. In women it has been found more advisable to give 200,000 to 300,000 units, combined with 3 Gm of sulfathiazole dnily. continuing the latter for ten days. The resultant amears and cultures apparently yield a higher percentage of negatives. This is the method used by the writer It has yielded, on the whole, gratifying results, although there are many other methods in voguo The strees should be on the result, and unless we follow the patient through to the finish in a ecientific determination of a cure we had best forget the whole problem To leave a patient believing he or she is oured of gonorrhea only ands in one thing-the spread of the disease to another individual

In summarising, therefore, attention has been given to some of the recent trends in urology, at least the more important ones. Such changes are taking place in all fields of medicine. New methods given us by ecience are for ns, as physicians, to use

525 South Main Street

#### VITAMIN A CONSUMPTION SHOULD BE INCREASED

Increasing the family's vitamin A consumption is good for young and old, it appears from studies of rats reported by Dr H C. Sherman and Dr H L. Campbell, of Columbia University
Liberal intakes of this vitamin, found in such

Liberal intakes of this vitamin, found in such foods as butter liver egg volk, carrols, and green leafy vegetables tends to postpone aging and increase length of life Dr Sherman and colleagues have previously reported

Now they find that the offspring in rat families on

the liberal vitamin A intale grow somewhat more rapidly and with less individual variability. This indicates, the scientists point out that liberal vitamin A has both a favorable and a stabilizing influence on growth.

This favorable stabilizing effect on rat growth was observed with vitamin A intakes two and four times higher than the intake considered fully enough to meet the rat a mitritional needs.—Science News Letter, July 28, 1945

## PSYCHOSOMATIC ASPECTS OF GYNECOLOGY AND OBSTETRICS\*

GEORGE W KOSMAK, M.D., FACS, New York City

HE important position which the sexual L characteristics of a woman play in her life must make it almost a foregone conclusion that a close connection is present between the psychic and physical phases and that disturbances in either field can be handled more effectively if this fact is recognized and adequate attention given it by her attending physician The importance of the "psyche" in woman has been admitted from early historic periods and the old conception of "nervousness" as the basis for many of woman's complaints has long held the middle of the stage As a matter of fact, if this is assumed to be the only explanation, many real illnesses, especially in the genital sphere, may be overlooked It is essential, therefore, to inquire deeply into all of her complaints even if they appear trivial but not to ascribe them to purely psychic disturbances until a pathologic basis can be ruled out

The field is a vast one and I will refer merely to those topics, gynecologically classified, as it were, in which it may be possible to develop a definite relationship between the somatic and psychic phases of a disturbance or actual illness. These may be considered as follows

- 1 Menstrual disturbances
- 2 Pregnancy and certain associated conditions, such as hyperemesis, fear, etc
  - 3 The menopause

In the symptomatic treatment of certain groups of gynecologic patients the combination of physical therapy with psychiatric procedures is of twofold value For hydrotherapy, douches, hot applications, properly devised bodily exercises, dietary regulations, sojourn in fresh air and sunshine, and other directives, in addition to their specific remedial effects, have a definite influence on a patient's mind The physical benefits must be impressed on the patients, the secondary mental influence often follows quite natu-Women readily become worned and fearful by disturbances in their genital sphere, such as irregular or painful periods, vaginal discharges, persistent backaches, and many other conditions. which may be tremendously improved by a combination of physical and psychic measures simple direction to do this or that is insufficient, the doctor must be insistent and impressive and describe in detail what he wants to accomplish He must above all be sympathetic, he must recog-

nize the fact that what seems unreal to him may be very real to the patient A comparatively slight deviation from the normal or what, from lack of knowledge by a patient, becomes a major disorder in her mind, may lead progressively from an initial worry or fear to an actual obsession and finally to a serious psychic disturbance view of the complexity of the problem it is important that the gynecologist, and likewise the obstetrician, be aware of his responsibility but that he not be misled in attempting to cure, by either physical or psychic measure, what may require a realistic combination of both nary to whatever may be done, history taking is most important Unfortunately, there is often a conflict at this point—the gynecologist is more direct, he keeps in the back of his mind the idea that there is an anatomic or pathologic basis for the complaints and findings in his patient psychotherapist, on the other hand, delves more deeply into the obscurities of her past life, personality, heredity, childhood impressions, parental relations, etc., often eliciting by suggestion thoughts previously unconscious but now made All of this, it seems to me, therefore conscious calls for a much clearer appreciation by both classes of practitioners of what each is capable and of a better understanding of their limitations I shall have occasion to repeat these sentiments later on

It is my purpose to discuss rather briefly in turn the three topics already enumerated, namely, (1) menstruation and dyspareunia, (2) pregnancy abnormalities as concerned with psychic disturbances, and (3) the menopause In connection with these, references to other allied conditions will be made

#### Menstruation

Menstruation is a natural function, the purposes of which need not be discussed further in this connection Most girls begin, however, without a knowledge of what it means, especially What is more when the onset is unexpected important for a mother than to be prepared to explain menstruation to a young daughter, and not interpret it merely as a burden to be borne, an affliction from which the normal female cannot escape, an annoyance, rather than an essential physiologic factor in a woman's life? This brings up the problem of early sex education, which is beyond the scope of this paper, but there is need for instruction somewhere and the lack of proper knowledge is often productive of trouble

<sup>\*</sup> Presented at a seminar on psychosomatic medicine, Medical Society of the District of Columbia, Washington, D.C., May 29, 1944.

later on At the onset of menstruation, tha periods may not be regular as to intervals and amount, but there will be no ovident disturbances. It is well, however, for some one to keep a record and for the girl to be made aware or warned of possible disturbances and to report them.

Among the distressing accompaniments of the menstrual function is pain in varying degree, especially as adolescence is approached not of universal occurrence, it is common enough to test the diagnostic and therapoutle resources of the physician who may be consulted handling of the primary type comes into closer relation with psychic measures than does the secondary Formerly the idea prevailed of attributing menstrual pain to a variety of anatomic causes, including uterine displacements, infantile genitalia, defective inusculature, or some inherent disturbance of the pelvic nerve supply More recently, experimental evidence has shown that there is little burns for most of these assumptions and that the operative procedures so largely employed for relief are generally unsatisfactory and unnecessary The process of ovulation can be regarded as the underlying cause for the pains, which are essentially uterine contractions initiated by the passage of accumulating blood A sound passed into the uterus often produces a similar complaint Some women naturally are more sensitive than others The suppression of ovulation by estrogens, if it can be made effective, prevents the development of a secretory endometrium It is mostly of experimental interest but questionable as a cure, as is instrumental dilatation of a rigid cervical canal or cervical incisions and stem pessaries The direct action of radium and x-rays on the ovaries themselves has been employed, by putting an end for a time to menstruation, but thus is an indesirable procedure because of the risk of a permanent amenorrhea. especially in younger women. The more recent suggestion to resect the presacral group of nerves cannot be accepted without reservations, although good results are claimed for what essen tially is a major surgical procedure. In many enses of primary dysmenorrhen relief follows childbirth to a greater or less extent, as the parous corvix permits a freer discharge of menstrual blood

I have referred to these various factors in detail because a knowledge of what we seem to know or do not know about this condition is essential to its proper handling. In the belief of many gynecologists it is an error to treat this type of dysmenorrhen on the principle that it is due to organic disease or an endocrine dysfunction. An unfortunate impression is made on the mind of the patient by making her believe that there is an underlying organic cause and that relief will follow operative interference Naturally, one must be careful to exclude intrinsic organic factors in judging the individual case but, by and large, these are infrequent. It is, therefore, of distinct importance to assure the patient that she has nothing to worry about in this connection and that simple remedial measures will be effective This attitude must be supported naturally by proper sedativo measures. Drugs which have no cumulative aftereffects are to be preferred to the oputes, which should be resorted to only in extreme cases and then only temporarily various, much-advertised, proprietary remedies are dangerous because of possible habit-forming or secondary effects The milder barbiturates and some of the newer synthetic analgenes give good results, as do certain atropine derivatives. A point should be made of when and how often they are to be taken, beginning with the onset or even before the pain starts Physical measures including heat and rest often are helpful and I do not agree with the advice often given, "to forget it" Most of these women are impressionable and must be made to believe that something can be done for them.

A form of psychosomatic treatment by hypnosis of functional dysmenorrhea which fails to respond to symptomatic measures has been suggested Kroger and Fried reported recently that in 7 out of 9 cases of the patients thus handled, the results were favorable. With the patient in a deep somnainbulistic state, the suggestion is made that the next period will be normal and free from pain. Naturally the induction of a hypnosis for this purpose can only be carried out by an experienced practitioner, tho method is entirely without the province of the clinical gynecologist. In reastant cases cooperation between the two, however, may prove a valuable procedure

In considering the pain attendant upon menstruction, the suggestion has been made that dysmenorrheic patients manifest a lowered pain threshold as compared with normal women Experimental evidence on this point has been presented recently by J O Hamon, who found by sensometer testing that the average pain threshold in 100 dysmenorrheio patients was lower than in equal control groups of nondysmenorrheics, postmenopausal women, and men Moreover, those suffering from the primary type showed a higher sensitivity than those afflicted with the secondary type It may be concluded that there apparently exists in the constitution of the patient with painful menstruation an intrinsic factor which renders her more susceptible to pain sensations. The foregoing must be taken into account in the bandling of these patients and

places certain limitations on their psychiatric treatment

The increasing employment of women in industry has necessitated greater attention to this now widespread cause for work stoppage, which constitutes a serious problem especially in factory Even among the semimilary employment forces the incidence of dysmenorihea is reported The difficulties of a psyto be considerable chiatric approach necessarily must be evident under such circumstances and resort must be made to the more direct methods from this, the desirability of a more scientific approach to the problem of the woman with painful periods must remain paramount even if this means setting aside some of our preconceived no-Psychotherapy may play an important role in the handling of dysmenorrheic patients, but to be adequate it must be intelligently employed and with due recognition of the susceptibility of the individual

I cannot quite agree with theories advanced by some that if pain is associated with monstruction in a patient, it is a reminder of some disturbance in her past, largely emotional, and that unconsciously she is prevented from realizing this Furthermore, there is the behef, unproved in my estimation, that menstruction, a phenomenon of great importance in a woman's life, must involve her mental sphere claim follows that a neurotic individual in particular is incapable of correcting this misconception by experience To some extent this may be true, but in many cases it is not borne out by clinical experience Questioning these patients fails to elicit any facts pointing to such possibilities, although in an impressionable young woman these suggestions often bring forth the desired answer The majority of women suffering from dysmenorihea are otherwise well both mentally and physically and, if they can be reheved by sedative measures, are quite contented In my own belief it is better to attack the situation by direct medical and other physical therapeutic measures, before resorting to the more involved and time-consuming method of psycho-If there is a psychologic component, so called, naturally this must be eliminated if possible, but I believe it can be done with better success without the ordinarily extensive psychic analysis to which these impressionable women are so often subjected

## Pregnancy

(a) The Fear of Pregnancy—Many years' experience in obstetric practice have indicated to me the need of a more satisfactory approach by the practitioner to this subject. In order to evaluate the basis of this fear it is necessary to

consider both the real and the groundless causes In addition, we must also pay heed to what must be regarded as the selfish point of view toward childbearing which has become so prevalent owing to various propaganda movements centered around "birth control" and perhaps to the irresponsibility developed in so many women who regard their careers, either social or materialistic, as the more important

The fear of pregnancy may be very real in those women afflicted with previous crippling illnesses, with former difficult labors, with families of small children, where conception occurs after a long interval of childlessness, or where the third decade of life has been passed Each of these must be given detailed consideration and evaluations arrived at as presented by the individual But with a better knowledge of what can be done with adequate prenatal care and proper methods of dehvery and aftertreatment, much of the uncertainty can be eliminated means, above all, the establishment of a satisfactory relationship between patient and doctor, including mutual confidence, and here is where psychiatric methods, if we may call them so, constitute the keynote of success

Let us consider specific instances A patient with heart disease or pulmonary tuberculosis has been warned in various ways that she cannot become pregnant without danger to her life has been instructed in the use of contraceptives and on occasion these have failed Her general condition is good but she is possessed with fear She goes to her doctor and he either fails or does not convince her She is discouraged and usually demands an abortion, for she becomes obsessed with the fear of a fatal ending to her pregnancy The husband and family are of little help therapeutic abortion follows by a legitimate physician or even a hospital clinic, often with insufficient indications More often, especially if the interview with the physician is unconvincing, there is a resort to an abortiomst, who counsels One cannot deny that in some but one solution cases there are definite reasons for the interruption of pregnancy, but on the whole there prevails an unnecessary sacrifice of fetal life because psychiatric procedures are not employed as they The approach to the problem must should be be individual, a careful history is essential, together with an adequate general physical exami-When this is satisfactory, then a reassuring attitude must be developed with due attention to the handling of intercurrent symp-Then the physician can pursue through frequent visits in these earlier months of pregnancy a method of instruction and reassurance by which his moral influence may overcome the patient's fears Statistical studies have shown

that cardiac, nephritic, tubercular, and other cases can be guided safely to a successful termination, although it may mean the exercise of much skill and patience by the physician and cooperation by the family

May I quote, in this connection, the experiences of certain well-known obstetrio clinics. For example, Cosgrove, of the Hague Maternity Clinic, in Jersey City, claims that in 98 per cent of cardiac cases, good management will avoid heart failure and in only grave cases is abortion Deaths from heart disease in this, as well as in other clinics, frequently account for 10 per cent of the total fatalities but these are made up principally of women admitted in cardiac decompensation following inadequate management. Pulmonary tuberculosis complicated by pregnancy has developed raging controversies as to method of treatment, yet it is now generally admitted that pregnancy can go on if the tuberculous process is properly treated, especially hy the newer surgical methods Fixed hypertension with our accepted involvement of the kidneys is probably the most serious condition demanding an interruption of pregnancy, but here careful individualization is essential. A mere rise of blood pressure without complicating cardiac or renal disease constitutes an insufficient criterion.

Women become greatly worned if they have a knowledge of high blood pressure, but worry it-Much of the soself is a contributing factor called essential hypertension about which we hear so frequently today does not, in my belief, constitute a contraindication in a properly watched pregnancy, and the doctor's reassurances may prove very helpful I do not mean, however, that psychotherapy should be the guide, adequate physical diagnosis still remains the

deciding factor

In considering the fear complex of pregnancy attention also must be directed to the movement so widely discussed in recent years namely, tho voluntary restriction in childbearing by contraceptive devices. Women have been led to assume hy propaganda groups that these are universally efficacious and, if distilusioned by their failure or oven pretended failure, a period of worry and anxiety follows which, in a susceptible individual, the physician finds it difficult to overcome. The happiness, which is so widely heralded by those who are spreading propaganda of "birth control" and advocating their contracentive devices to secure it, is not as widespread as these sponsors would lead one to believe Many women are worried by the fear that they won't work and sometimes this becomes an ob-As a matter of fact I wonder wbether a resulting neurous may not be as serious in the individual who employs contraceptives as in the

one who does not, insofar as the possible occurrence of a pregnancy is concerned

In prescribing contraceptives insufficient attention has been accorded to the mental makeup of the applicant or care taken to evaluate the medical, social, or other indications. From my own experience I feel that many cases of neurosis in women, for want of a better term, are dependent upon this factor and that resulting frustrations have a direct bearing on the production of certain pelvio disorders

(b) Hyperemens -One of the most usual accompaniments in the early months of pregnancy is the so-called "morning sickness," which may vary from mere manifestations of nausea to continuous and distressing vomiting, resulting in a well-marked toxic state which, expecially in former years, frequently called for an abortion Whether these phenomena can be explained adequately on either a purely psychic or an organic basis still remains undecided, but unquestionably in many cases the unsatisfactory designation of a neurosus as a basis plays an important role and relief from symptoms may follow suggestive pro-However, a combination of both forms of therapy will afford better relief in many cases rather than adhering to either The type of patient must be recognized. As in other illnesses the high-strung, unbalanced, or so-called nourotic patient suffers more and is more difficult to manage than one of the placed type Successful management of "morning sickness" in a first often eliminates, but not invariably, this symptom in subsequent pregnancies Therefore, it is important to achieve success in treatment the first time

We must consider in each case whether we are dealing with a neurous, a vitamin or other food deficiency, an endocrine imbalance, or some definite organic disturbance, although one or all of these factors may be at fault. Sometimes a procedure by the trial and error method must be followed The chinical pathologist and the chemist have given little aid, the findings in persistent vomiting cases usually are the result rather than the cause of the disturbance Therefore, certain measures of a general character must be used, including correction of abnormalities such as uterme displacements, constipation, dictetic errors, etc. In many instances, a fat-free dict, alkalis, and sedatives are sufficient. Whether endocrine administration is rational has by no means been proved, but insulin is of value perhaps in connection with the carbohydrate diet so frequently found effective.

Recently the use of large doses of vitamin Bi. administered parentally, with sedatives, seems to have given good results, but the procedure requires further confirmation

Where circumstances permit and no response attends simpler methods, the institution of what used to be called the Weir Mitchell treatment is of value and importance. This means absolute bed rest, restriction of visitors, and a firm but instent talk by the physician, which must be sympathetic and encouraging. A carefully chosen attitude will inspire confidence and may bring about rehef; if it is resented, little will be accomplished.

There is one factor in treating cases of severe hyperemesis which must be borne in mind, namely, the resultant dehydration Fluids by rectum and hypodermoclysis are essential in these cases and then purpose must be made evident to the patient As I have already stated, "morning sickness" which becomes severe, unless it can be effectively treated, often inspires a condition of fear in subsequent pregnancies which it may be difficult to overcome For some reason or other, the incidence of severe hyperemesis has declined markedly in recent years. No satisfactory explanation is at hand, but one may be grateful that an accepted cause for therapeutic abortion has been reduced to a marked degree However, if hypereniesis does occur the moral effects of suggestive measures are paramount elements in the satisfactory handling of this unfortunate accompaniment of pregnancy

If ne regard hyperemesis as a nervous mainfestation, there is perhaps no field in obstetric practice in which psychic disturbances may bring about such marked secondary somatic changes The continuous and often apparently uncontrollable vomiting, by its direct effect on the nervous system and nutrition, reduces the patient's bodily resources to a degree almost unbelievable and yet if it can be checked, recovery is astonishingly rapid, provided the actual damage has not gone too far One important item in the aftercare of these women is to assure them that their distressing complaint has no effect on the development of the fetus They are sometimes likely to feel that their baby will be malformed or poorly nourished, which then constitutes another cause for anxiety

For a certain time not so many years ago, hyperenesis was regarded as inerely an earlier manifestation of the tovenia which in later months developed into eclanipsia. That view is not widely held at the present time, but we must appreciate the extent of a neurotic basis in any given case and watch carefully for signs and symptoms which point to a beginning of an acute yellow atrophy. The latter is a rare complication of pregnancy at the present time, and whether one type can develop into the other remains a question to be home in mind. It is always a matter of gratification how psychic, combined with

medical therapy, will accomplish results in many of these cases of ordinary or even aggravated pregnancy vomiting

(c) Scrual Frigidity, Dyspareuma —The family physician, and perhaps less often the gynecologist, may learn of the existence of a sexually frigid state in taking a lustory in complaints of pelvic disturbances It may be stated with considerable certainty that only in rare instances is there a sometic basis for the complaint of frigidity which, of course, must be differentiated from impotence Frigidity may occur in apparently normal individuals in whom no pathologic pelvic lesions can be found, yet there often is a resort to surgical procedures in an attempt to relieve the condi-An underlying psychologic factor may be difficult to elicit and requires perhaps repeated auestioning Mental depression due to a variety of causes may reduce or abolish sexual desire, but usually this is temporary and subsides with the climination of the cause But marital maladjustments may have an important bearing and often are difficult to overcome The mistake is often made in ascribing frigidity to an endocrine imbalance or, as is now so fashionable, to a vitamin deficiency However, there are many conscious or unconscious factors, mostly psychic in character, which, in my experience at least, are difficult to eliminate by a third person women go through life without attaining sexual satisfaction, yet in most respects they maintain a fairly happy existence It is an error to make such individuals feel that they are inferior by too insistent efforts on the part of the physician to help them Time alone often solves their prob-

lems On the other hand, when dyspareuma is present and can be traced to a definite pathologic cause, this should be eliminated. For dyspareunia is a deterrent to normal sexual life, contributing both to frigidity and impotence. There are so many angles in the picture that it would be futile to attempt a solution within the limits of thus presentation The psychotherapist may be justified in his efforts to improve the condition of these patients, but the effort can only succeed if the approach is not resented. In the purely psychic case, not complicated by any somatic elements, a lack of response may even bring about a greater mental disturbance and degree of unhappiness than had previously existed. A retarded emotional development is present in many How far this may be improved by psychotherapy I do not feel qualified to state, but I do believe that a closer association between the gynecologist and the psychotherapist may ultimately be helpful My own experience leads me to believe that the gynecologist alone, unless he is qualified in this field, can accomplish very

lettle, for he is still too mechanistio in his aims and ideals. In any patient with dyspareuma, pathologic leanors must be eliminated whether by surgical or medical measures, before undertaking any psychotherapeutic procedures. The latter may then prove much more successful

#### The Menopause, the Climacteric

These two terms have been used indiscriminately and interchangeably by both the profession and the laity Medical dictionaries define menopause (a combination of the Greek men, month, and paussis, cessation) as the permanent cessation of the menses and the termination of meatrual life. The climacteric, or climacter, is a supposedly critical period of life, after adolescence, occurring in both men and in women, but especially with the menopause in women. Going a bit further, the grand climacteric is the axtythird year, the ninth of the seven-year periods each of which, from the third on, is regarded by many as a critical period.

This implication of a critical period in a woman's life in particular serves in many instances to develop a sort of anxiety neurosis The transition from a regular menstrual flow to irregularities of time interval and volume induces, often from lack of personal knowledge or imperfectly gained knowledge, a state of mind which may have serious reactions in a patient Perhaps at no time in a woman's life is proper mental guidance more essential But women have been led to accept these changes as natural and unavoidable and have failed to distinguish between the normal or usual, and the abnormal. Aside from purely functional or anatomic features of the menopause there are psychic disturbances which may vary from the mild to the serious. The latter, of course, may be merely coincident but are frequently ascribed to this period both hy the lasty and the physician

From the definitions previously quoted, it would appear desirable to drop the common use of the word "climacterie" from ordinary medical parlance, for it always conveys the thought of n critical period and thus magnifies a phenomenon fairly normal in most cases. Whether a menonause which runs the usual course may aggravate n previously existing psychosis or serve as a causative factor in a new one, I am not prepared, as a gynecologist, to make a satisfactory answer In cases which have come to my attention, I felt that there was little or no connection complication does arise, I believe it is without the province of the gynecologist and its handling should not be attempted through the medium of mere catrogen medication generally employed The latter essentially is substitution therapy and if employed other possible ondocrino disturbances should be borne in mind, such as of the thyroid or pituitary

The approach to the menopause is heralded by several clinical symptoms, including changes in tune and volume of the menstrual flow which may or mny not be accompanied by "flashes" or "flushes," indefinite sensations or chilliness, muscular and joint changes, and other more or less indefinite complaints. Most women accept these, others are disturbed mentally to a greater or lesser degree. If a response is secured by the administration of estrogenic substances, the nervous tension is relaxed but there frequently dovelops a phobia of one kind or another Among the common ones is the fear of cancer, and there is always a risk attached to a physician's assurances that this is not present, unless n careful and conscientious examination has been made to exclude lt. A mere dismissal of the possibility. with a continuance of symptoms, drives the patient from one clinic or doctor to another Under such circumstances the attendant worry may be difficult to overcome. On the other hand, a psychiatric approach alone, and the actual condition unconfirmed by a thorough gynecologic examination, may lead to an unfortunate outcome.

All of this calls for more intimate cooperation between the two classes of practitioners involved. I do not believe that a psychiatrist should undertake to handle a case of psychic disturbance associated with the menopause unless any and all possible pathologic complications have been definitely eliminated

There is another phobia which may develop at this time, namely, the fear of pregnancy We must assume that as long as periods are present, no matter how long the interval between them. ovulation is possible. A patient is unable to observe menstrual dates at this time or is careless in the matter After missing soveral periods. the thought enters her mind that she may be pregnant and the attendant suggestions actually bring on subjective signs, including anorexia. breast fullness, etc., and often a feeling of abdominal enlargement. A pelvie examination may be inconclusive in the doctor's mind but fear of childbearing so late in life develops in these women a state of fear which drives them to the professional abortionist. In such cases assurance must be supplemented by a pregnancy test. Should this be positive the mental effect is even worse, and I often wonder if it is justifiable for a woman at this period of ber life to continue with a pregnancy which will constitute a severe strain both mentally and physically, especially in the presence of a family of older children. Some women, of course, do not seem to mind, others become mentally unbalanced. An adjustment

to whatever condition is found will call forth the best efforts on the part of the physician

#### The Principles of Psychotherapy

Gynecologists, as I have stated previously, have been trained largely in mechanistic methods They look for results based upon these in combination with accepted physical and medical prescriptions The newer knowledge of the endocrines, however, has already developed what may be designated as a competitive point of view in the treatment of a large number of gynecologic conditions But psychotherapy in the handling of the latter has made comparatively little progress in the hands of gynccologists, and for several In the disorders of menstrual life, for example, it is not as simple in its application as the writing of a prescription for standardized medicinal products, even if their application is confirmed perhaps by biopsy studies Psychotherapy honestly employed requires special training, a detailed history of emotional and other less easily determined factors, prolonged and often numerous personal interviews, and the establishment of a personal relationship between patient and physician which is dependent upon the exercise of much tact and patience To those who would attempt to employ this approach to the treatment of what may prove finally to be emotional disturbances in women patients, there is recommended the careful and studied reading of the general principles of psychotherapy in the outstanding textbook of Drs Edward Weiss and O Spurgeon English Such reading should reveal to a physician whether he is competent to proceed with a case after he has determined whether he is dealing with a pathologic or an emotional disturbance The simpler cases may not require more than the exercise of judgment and assurance, but beyond this there is an element of danger and uncertainty

Speaking as a gynecologist, I fear that I may appear pessimistic in stating my views so bluntly, but I feel that progress will not develop until the

possible values of psychotherapy are more widely recognized and until its principles are more definitely presented and taught to our medical students

#### Summary and Conclusions

Within the limits of this presentation I have failed, undoubtedly, to include references to many topics that may well have been included, for there are numerous situations in gynecologic practice in which there exists a close relation between psychic and actual pathologic conditions It is the duty of the physician to ferret them out and to recognize the limitations of each form of therapy in so far as they lie within his ability to Unfortunately for a properly organized appreciation of the problem, the manner of approach is entirely different The gynecologist is accustomed to deal with anatomic abnormalities, his concepts of the nervous and emotional factors which may be involved have not been matured by previous education and training in either medical school or clinic. If we are to accept the theory that the mind can influence the progress of a disease process and likewise the opposite of this—and there is evidence to confirm it, of course with limitations—it will mean a revolution in the thinking of many doctors There is one phase of the problem of treatment as it pertains to women and that is the conflict in their minds between reason and emotion If a physician can strike the proper balance he may be successful in overcoming at least some of the evident and patent hurdles. But the fact remains that it is difficult to instill reason where elemental knowledge of anatomy and physiology frequently is missing and where prudery guides so much of what a woman is permitted to know Perhaps in the course of time a more rational attitude will prevail in sex education and in the preparations for motherhood If this can be accomplished there may be less of a conflict between reason and emotion

#### "BEDSIDE MANNERS" OF M D 'S

The art of talking as well as the art of healing is being taught Western Reserve University medical students this year for the first time. The school said that "the young physician should realize that the patient has a right to know what is happening to him with respect to his illness" The "how-to-speak-to-patients" course is given by Dr Bruno Gezhard

Dr Gezhard is director of the Cleveland Health Museum—NY Times, Aug 17, 1945

#### PUERPERAL INVERSION OF THE UTERUS

#### A Report of Three Cases

CLARA BENSON, M D, Albany, New York

(From the Department of Gynecology of the Albany Hospital and the Department of Obstetrics and Gynecology of the Albany Medical College)

A S HAS been so frequently stated, puorperal in version of the uterus is rare. Statistics concerning its incidence vary widely Figures often quoted range from 1 in 18,240 deliveries in Philadelphia to 1 in 23 137 deliveries in American hospitals and 1 in 27,992 deliveries in British hospitals.1 On the other hand, a hospital exclusively devoted to obstetrics would appear to encounter this abnormality more frequently, i.e., 1 in 7,837 delivenes at the Boston Lying-In Hospital, 2 and 1 in 4 337 deliveries at the Margaret Hague Maternity Hospital 2 Dr John A Sampson of Alhany states that he can remember only 2 cases in his experience. Harer and Sharkoy reported 21 collected cases from Phila delphia occurring during the period from 1931 to 1938 and later added 4 more cases ' Phaneuf reported 5 cases personally treated during a period of fifteen years. Cosgrove reported on 9 cases seen at the Margaret Hague Maternity Hospital, and DoLoo added his experience of 9 cases Other individual reports vary from single case reports to very few

The purpose of this report is to record 3 cases of puerperal inversion of the uterus seen by members of the staff of a single hospital within a period of slightly more than three months, 2 cases having

occurred within one month.

#### Case Reports

Case I — (Courtesy of Dr A. J Wallingford)
The patient was a 28-year-old white woman, para Blio was delivered after a full term pregnancy on October 10, 1044, at 2 30 PM in another hospital Following delivery of the baby the placents was delivered but the membranes "stuck to the uterus." On attempting to remove the membranes the uterus inverted and massive hemorrhago followed. The vaginal vault was packed and the patient was given 2 units of plasma. She was sent to the Albany Hospital by ambulance. On entry the pulse was 80 per minute, the temperature, 99 F and the blood pressure was 90/50 Tho hemoglobin was 8 5 Cm per 100 cc. and the rod cell count was 2 600 000

Four hours after delivery, at 0.30 PM, under general anesthesis, the vaginal packing was re-moved. The cervix was found to be widely dilated and the fundus of the uterus was noted in the vagina. By means of manual manipulation the uterus was replaced. Bloeding was not great. The patient received intravenous gincose during the procedure and a 500 cc transfusion at 0.45 r.m after the operation. The patient was discharged, well

on Octobor 27 1914

Case 2—(Courtery of Dr A. W Wright.) The patient, a 20-year-old white woman para I was delivered at another bespital of a normal healthy child at about 4 30 r.m on July 10 1944 The details of the actual delivery in the way of amount of labor placental delivery, and blood loss were not available

The patient went into a condition of shock and died about 10 30 PM. An autopsy was performed

soventy two hours after death.

The postmortem report of the genitalia was as follows "The entire pelvis was removed en masse After removal the vagina was incised on its anterior surface. It was found to be tremendously distended by about 200 to 300 cc. of clotted blood which, when removed, disclosed a large bulky mass which proved to be the endometrial surface of the uterus, which had become turned completely inside out. The endometrial surface was, in general, smooth, dark red, and bloody Over one large area, which was undoubtedly the site of the placental attachment the surface was rough, sharry, and irregular, with a considerable amount of clotted blood. The presence of the clotted blood on the endometrial surfaces as well as in the distended vagina indicated that considerable bleeding occurred from the site of the placental attachment and the adjoining endometrum. Since the fundus of the uterus was now inverted and actually projected well down into the vagina, having passed through the dilated external co, which was readily recognized, the supporting ligaments of the organ, as well as the overres and the Fallopian tubes, were drawn down into a deep de-pression which was present on the seroeal surface." (Figs. 1 and 2)

Case 5—(Courtesy of Dr E. P. McDonald)
A 39-year-old white housevife, para III, entered the
Albany Hospital on August 9, 1944, with a chief
complaint of severe postpartum bleeding. She had a spontaneous delivery on May 2, 1944, at another hospital On the fourth postpartum day she had a temperature of 104 F, and a diagnosis of endo-metritis of puerperal origin was made. Her response to sulfa therapy was unsatisfactory. She responded to pencillin. Her Jane menstrual period was normal. On August 1 1944 she started her second menstrual period, at which time she hied

considerably

This patient was originally referred to the Medical Service where the admission impression was "carcinoma of the cervix, secondary anemia, with a question of benign curvical growth and pyometria. A gynecologic consultation on August 10 1914 revealed inversion of the uterus and the presence of a submucous fibroid, more than three months after the delivery Following three transfusions the hemoglobin rose from 2.5 Cm. to 6 Gm per 100 ec., and the red cell count rose from 1 000 000 to 3,000,000 On August 14 1914 under general anesthous, the abdomen was opened, revealing the inverted uterus. The right tube and ovary were preserved. The specimen removed con sisted of a completely inverted uterus covered by a decoly congested, glistening, smooth endometrium. In the region of one of the cornun of the fundus was an irregular nodular structure of coarse granular tissuo covered by a continuation of the endo-metrium. Protruding from the dilated cervix was tho left fallopian tube with pale edematous fimbrise, and a soft fluctuant ovary with super-

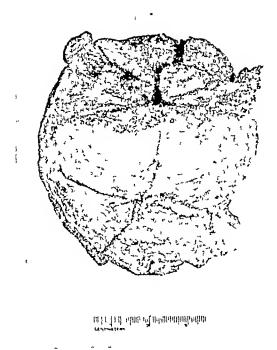

Fig 1 Specimen described in Case 2, tipped slightly anteriorly, illustrating the deep depression caused by the complete inversion of the uterus Projecting from this depression are the Fallopian tubes and overies

Fig 3 The completely inverted uterus described in Case 3, with the left tube and ovary projecting from the cervix. A submucous fibroid is

seen in the region of the left cornu

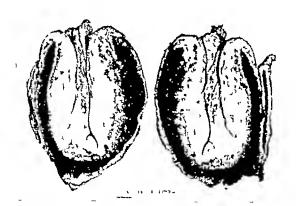

Fig 2 Specimen described in Case 2 after making a complete saggital incision. The uterus is seen turned completely inside out and projecting into the distended vagina.

Fig. 4 Saggital section of the inverted uterus described in Case 3

ficial hemorrhagic cysts (Figs 3 and 4) The patient was discharged in good condition on August 30, 1944.

#### Discussion

Case 1 is an example of the situation in which recognition of the condition was prompt, with conse-

quent initial treatment of the shock, control of the hemorrhage by vaginal packing, and manual replacement four hours later. In 9 cases reported by Cosgrove in which the diagnosis was immediately made there was one death from shock. In the scries reported by Harer and Sharkey, 13 were replaced immediately and there were two deaths. Burwig,

who reported 4 cases, and McLennan and McKelvey, who discussed 3 cases, advocated replacing the uterus one week to several weeks later

Case 2 is an unfortunate example of acute puerperal inversion, which may not be so rare as has been bolleved, in which the condition was not recog nized, the shock was not treated, the hemorrhage was not controlled, and the patient died six hours after delivery. Autopsy disclosed the cause of death.

Case 3 is an example of chronic inversion of the uterus which was not recognized for more than three months after delivery. The excessive bleeding from the uterus at the time of the expected mensitual flow and the resultant secondary anemia steered the patient initially toward medical treatment. Early gynecologic consultation rovealed the inverted uterus. Norton's roported in case treated acres treated seventy-eight days after delivery

#### Summery

Three cases of puerperal inversion of the uterus are reported and discussed. They were seen by members of the staff of a single hospital within a period of alightly more than three mouths, 2 cases having occurred within one month.

#### INTRA-ABDOMINAL HERNIA WITH ACUTE INTESTINAL OBSTRUCTION

LEONARD K STALKER, M D, M S in Surgery, Rochester, New York

INTRA ABDOMINAL or internal hermas include all of those protrusions of the contents of the abdomen through intrapentoneal pouches or openings of congenital or traumatic origin. That the incidence of such hermas treated surgically is extremely low was shown in a review by Mayo Stalker, and Miller! We found only 39 instances of such a condition from 1910 to 1939 at the Mayo Clinic. The occurrence of this condition, although rare, is much greater than the figure would slow for the majority of intra-abdominal hernias exist without producing symptoms and are discovered only at postmortem examination.

The 39 hernias in this series were classified either anatomically or on the basis of an associated causative factor as 8 cases of hernis through the transverse mesocolon, following gastroenterostomy, 7 of paradocodmal hernia, 4 of mesonteric hernia, 7 of mardocodmal hernia, 4 of mesonteric hernia, 1 of matrotation of the colon, 3 of hernia through the hroad ligaments, 2 of retrocecal hernia, 1 of hernia through the foramen of Winalow, and 1 caused by fibrous bands. Twenty-five patients had symptoms referable to the hernia, but these were vague and not disgnostic. Twenty-three had some degree nf obstruction of the small intestine. In 20 instances the hernia developed subsequent to the perform ance of some surpical procedure

It is the purpose of this paper to report n case in which an internal hernia developed in the left hroad ligament following uterine suspension and in which case the presence of this hernia was manifested by the development of acute intestinal obstruction Masson and Atkinson<sup>a</sup> reviewed the subject of hernias into the hroad ligament in 1934 and found a total of 15 cases in the literature and added one case

of their own. In 8 instances the hernia was through the hroad ligament, in 6 it was between the layers of the broad ligament, and in 2 the type was unknown. At least 2 of the patients developed intestinal obstruction by hermation of the loop of bowel through an opening made in the hroad ligament durling the course of a Baldy Wabsier operation for retroversion. There had been no previous surgery in the majority, but no secondary embryologic explanation of the formation of the hernia was offered. It was felt that rupture of the peritoneum covering the hroad ligament during gestation or et the time of delivery probably accounts for most cases.

#### Case Report

A white woman, 33 years of age, had had an uterne suspension and appendectomy performed elsowhere approximataly nine months prior to admusion. Five days before her admission she consulted
har family physican because of a severe sore throat
She was given sulfethiaxole and in twenty-four
hours she developed nausea, vomiting, and cramplike lower addominal pans. She thought that the
medicane was producing this trouble and its use was
discontinued. The symptoms persisted and in
creased in severity for the next three days, at which
time I was asked to see the patient
The patient appeared critically ill and, in a toxic

The patient appeared critically ill and in a toxic condition. She had a marked acute follicular ton sullitis and was menstrusting. Her temperature was sullits and was menstrusting. Her temperature was sullits and the sum of the sum

hours previously had given considerable relief and was draining much muddy bile-stained fluid both pelvic and rectal examination I could feel a large distended loop of intestine in the cul de sac This was exquisitely tender to palpation A roentgenogram of the abdomen revealed gaseous distention of several loops of small intestine of acute intestinal obstruction, probably secondary to previous pelvic surgery, was made Operation The greater was performed under spinal anesthesia part of the small intestine was found to be dilated to two to three times its normal size. The uterus to two to three times its normal size had been previously suspended by attaching the round ligaments to the anterior abdominal wall after the method described by Olshausen A loop of terminal ileum was herniated through an aperture in the left broad ligament The hernial opening was located just below the junction of the round ligament and the uterus and above the tube and ovary very close to the site of attachment to the anterior abdominal wall The opening was approximately 3 cm in diameter The loop of strangulated ileum passed between the tube and the left round ligament from behind forward It was cyanotic but was still viable The hernia was easily reduced

In view of the patient's critical condition the minimal amount of surgery was advisable, and to prevent recurrence of the trouble, the uppermost portion of the hernial opening, which consisted chiefly of round ligament, was divided between ligatures. With the addition of supportive measures —penicilin, blood transfusions, Wangensteen continuous suction, and intravenous fluids—the patient made an uneventful convalescence and was dismissed from the hospital on her fourteenth post-

operative day

#### Comment

Following an operation for retroversion, some error in technic may occasionally be the cause of the formation of a potential internal hernia This type of herma has occurred most frequently following performance of the Baldy-Webster type of operation, during which suturing of the broad ligament to the round ligament at the points of perforation of the broad ligament was either overlooked or had secon-

darily broken down It is reasonable to assume that the hernia in this case was the direct result of the previous Olshausen uterine suspension rent in the broad ligament, produced when the round ligament was attached to the abdominal wall, might easily have been overlooked, or, on the other hand, subsequent tension may have produced a rupture of the broad ligament It is significant to note that at the point of herniation the broad ligament is very thin, there being practically no supporting tissue between the two folds of peritoneum and consequently a poor blood supply Herniation of this type can be prevented in many cases if all points of perforation in the broad ligament are closed at the The condition can be suspected time of operation when the symptoms of acute intestinal obstruction develop in a patient following performance of operative suspension for fixation of the uterus

The treatment of such a case is obviously surgical, and as soon as the diagnosis of obstruction is made the abdomen should be explored, the obstruction relieved, and the necessary procedures taken to prevent recurrence of the obstruction. In this case, the most conservative procedure possible under the existing circumstances was employed, namely, the round ligament which forms the upper portion of the hermal ring was divided between ligatures rally, some of the uterine support was destroyed by this procedure, but the critical condition of the pa-

tient made such treatment necessary

#### Summary

Discussion of a few of the problems associated with intra-abdominal hernias has been made. A case in which acute intestinal obstruction occurred subsequent to hermation of the ileum through the left broad ligament is reported

#### MEDICAL BOOKS NEEDED IN ITALY

The Medical and Surgical Relief Committee of America has received an appeal for medical books from Dr Severinghaus, a member of the Medical Nutrition Mission in Italy The Mission has been set up in a hospital called the Polychnica which is part of the University of Naples The books are for the use of the Mission Later it is intended to donate them to the Pediatrie Clinic library

The list of books requested is as follows

1 R P Strong Stitt's Diagnosis, Prevention, and Treatment of Tropical Diseases—Seventh edi-Two volumes, Blakiston tion

Conant, Martin, et al Manual of Chincal

Mycology, Saunders 3 Saxl Pediatr Pediatric Dietetics, 1937, Lea and Febiger

4 Brennerman's Loose Leaf Pediatrics, Nelson, four volumes

Best and Taylor Physiological Basis of Medi-

cal Practice, Williams and Wilkins
6 McLester Clinical Nutrition and Dieto-

therapy, Saunders
7 Miller Oral Diagnosis, Blakiston
8 Peters and Van Slyke Quantitative Clinical
Chemistry, Williams and Wilkins Two volumes

As a result of the war and German occupation, the European scientific world is at a tremendous disadvantage, not only because such an appallingly large amount of equipment has been destroyed or stolen, but also because it has been impossible for professional men to continue their normal pursuits of research, teaching, writing, or studying Progress in any direction has been impossible Therefore, what-Progress in ever Americans can do to help scientific knowledge in France, Italy, and other countries to reach and keep abreast of the level attained in the United States will be of mestimable value. It is for these reasons that an appeal is being made to American physicians

#### CONFERENCES ON THERAPY

DEPARTMENTS OF PHARMACOLOGY AND MEDICINE, CORNELL UNIVERSITY MEDICAL COLLEGE AND THE NEW YORK HOSPITAL

THESE are stenographic reports slightly edited of conferences by the members of the Departments of Pharmacology and of Medicine of Cornell University Medical College and the New York Hospital, with collaboration of other departments and institutions. The questions and discussions involve participation by members of the staff of the college and hospital, students, and visitors. The next report will appear in the December 1 issue and will concern "The Surgical Treatment of Hypertension.

#### The Treatment of Some Tropical Diseases

DR HARRY GOLD Dr Almy will open the discussion of the treatment of some of the more

important tropical diseases

DR THOMAS ALMY Since tropical medicine is a field of great interest to the armed forces, it is intural that the recent advances in this field should be largely along military lines. It is to be expected, then, that they would have to do mainly with the prevention, and in particular with the control of the transmission of parasitic diseases common to the tropics. It is also to be expected that the most important of these would be withheld from the general public and even from the medical profession, so we cannot hope to be completely up to date today.

I should like first to bring up to date those matters pertaining to diagnosis and treatment of the more common tropical diseases which we are likely to encounter among travelors returning

to this part of the world

Clearly, the first and the most important of these is malaria. This will be common, not alone because the incubation period of this disease is such that it may be acquired in India, in West Africa, or in South America and yet the clinical course may begin in New York City, but also because it is a relapsing disease, and we are already seeing the eighth and minth relapses of malaria in people discharged from the Army and wandering into our emergency paython

Naturally, the consideration of this diagnosis whenever in individual, who has recently been in a malarious district, complains of fever I should like to emphasize that that symptom, in a person recently in the tropics, is all that is necessary for one to be profoundly sus-

picious of this diagnosis

Nuturally, we will not expect, in the first twenty four or forty-eight hours of the disease, when the diagnosis should be made, that there will already be a pattern of intermittent fever, or an anemia, or splenomegaly, which are the clinical cuterns given in the textbooks. The diagnosis must therefore be made on the basis of a blood

smear, and it behooves us to know when to take it and bow to take it

If n patient is already having paroxysms of fever at forty-eight hour intervals, most of us would take a blood smear during the chill. This is precisely the time when n blood smear should not be taken, because it is during this period that the parasites will be outside of the red cells and relntively difficult to find on examination of the smear. It is during the fever free interval, at any time except from two hours before the expected ohill until six hours afterwards, that the parasites will be found.

Then it is important that we have a method which will enable us to find small numbers of malarial parasites The ordinary Wright-stained blood smear will reveal parasitemia if the infection is heavy, but not when it is light should, therefore, be acquainted with some technic for preparation of a thick smear Most of these technics are long enough and complicated enough to discourage us from using them on the sporadio cases which we are likely to encounter in this part of the world, but a rapid and simple technic for the preparation of thick smears has been described by J W Field, in the Transactions of the Royal Society of Tropical Medicins and Hygrene for August, 1940 This is also described in the Bulletin of the U.S Army Medical Department for July, 1943 A thick smear about the size of a dime and thin enough so that newsprint can be read through it is mounted on the end of the elide It is dipped twice in methylene hlue. washed off gently in tap water, dipped twice in eosin, and washed off in tap water. It is allowed to dry and examined under the microscope This type of procedure is essential for the early diagnosis of malaria hy blood smears

It should be pointed out, however, that the nbeence of malarial parasites, even from two or three smears, may be compatible with a serious condition of the patient. It may indicate that phase of falciparum malaria in which the patient

is dangerously ill

After the diagnosis is made, I would recommend that, in the average case, treatment proceed according to the lines laid down by the Surgeon General of the Army one year ago, that is, to give atabrine, 02 Gm by mouth every six hours for After twenty-four hours 1 Gm of atabrine will have been given, and this is followed by 0.1 Gm three times a day for six days Serious gastric irritation may result if this drug is given alone on an empty stomach, so each dose of 02 Gm should be preceded by a glass of fruit juice or milk, and accompanied by about 1 Gm of sodium bicarbonate For the same reason, the 01 Gm doses should be given after meals, but the bicarbonate may then be omitted standard method of oral therapy cannot be employed if the patient is comatose, vomiting, or Therapy is then begun by the dangerously ill parenteral route In these cases it is recommended that atabrine be given in doses of 0.2 Gm in the muscles of each buttock (total dose 0 4 Gm) and that this dose be repeated at intervals of six to eight hours during the first twenty-four hours This, of course, will no longer be necessary when the patient can take oral medication and proceed with the standard atabrine treatment

Occasionally there is an even more serious emergency, in which cerebral malaria is developing, and then it is advisable that quinine be administered by vein Quinine dihydrocliloride is given in doses of 06 Gm to 10 Gm intravenously, diluted in 200 to 500 cc of physiologic saline and delivered as an infusion over a period of at least one hour The rate of administration is extremely important, and should be determined by the intensity of the symptoms of cinchonism which develop in all of these patients, and by the pulse and the blood pressure A sudden fall of the blood pressure or sudden rise of pulse should be a signal to halt the infusion It should be pointed out that in published studies the highest rate of relapse with any form of treatment of malaria is with atabrine alone

It has been said that the administration of plasmochin in doses well within the accepted maxima is worth the amount of toxic reaction which they cause, in that they have been known to reduce considerably the frequency of relapses This is a matter of debate at the present time

If relapses occur it is advised that they be treated exactly as an initial attack In particular, the patient should be cautioned not to fall into the trap of taking quinine or atabrine just long enough to rid himself of fever and uncomfortable symptoms It seems probable that that type of procedure increases the chance that malaria will relapse, in that it suppresses the immune responses of the body

The second important problem which we are

having in patients returning from the tropics is diarrhea or dysentery, and this in fully threequarters of the cases in tropical practice is the result of bacillary dysentery, or shigellosis. In about 15 to 20 per cent it is due to Endamoeba lustolytica Except in severe cases, there is no reliable way of differentiating these entities other than by laboratory tests Therefore, any patient with diarrhea or dysentery should be examined for both of these parasites. In the case of the Shigella this is done by stool culture or preferably by what we designate as the rectal culture tube, first described by Hardy and Watt in 1942 This culture tube is prepared with a swab encased m a short length of rubber tubing. It is coated with lubricating jelly and inserted two inches into the rectum, whereupon the rubber tube is withdrawn, exposing the swab rotating motion the inside of the rectum is swabbed and the swab withdrawn It is plated in the laboratory, preferably within ten or fifteen minutes from the time that it is taken. By this method Hardy and Watt and others of the US Public Health Service have gotten a much higher percentage of positive results than by the examination of stool cultures If one or two stool cultures are negative, it would be wise to examine the patient for amebae There has been no recent change in these methods of examination of the stools for amebae I would merely like to point out that statistical studies have shown that one direct microscopic examination of the stool reveals only 10 to 30 per cent of cases of amebiasis It takes at least three examinations of ordinary stool specimens, plus a proctoscopy, plus a warm stool examination, to diagnose 80 to 90 per cent of the cases

If the dysentery or diarrhea is evidently due to a Shigella organism, the patient is treated with a sulfonamide It can be any sulfonamide, but we think sulfadiazine preferable. The extensive use of sulfaguanidine and succinylsulfathiazole by the armed forces in the tropics is probably based on the fact that these do not result in high blood levels, and have a very low renal toxicity in the face of the abnormally low urmary volumes which are common among troops in the tropics But in the temperate zone, and elsewhere when we can maintain adequate urmary volume, an ordinary course of sulfadiazine such as one would

give for pneumonia is indicated

The treatment of amebiasis has not changed much in the last year The growing impressiveness of the results of therapy with diodoquin should be emphasized It is now recommended that any patient with amebiasis should receive a full course of diodoquin of 3 tablets (0 63 Gm) three times a day for twenty days If the patient has ever had blood in his stools as the result of

amebiasis, if he has had more than one distinct attack of diarrhea, or if the single attack now continuing has lasted two months or more, he should receive, in addition, emetine. This should be given for five days concomitant with the first five days of the course of diodoquin. It is important not to exceed 1 mg per kg, or a total of 60 mg of emetine per day

The other problems that we are likely to encounter are going to be relatively infrequent, are going to see a lot of intestinal worms hookworm, Ascaris, Trichocephalus, etc., but we will usually encounter them in subclinical densities. I would like merely to emphasize Dr Smillie's ctatement that if it is necessary to concentrate the stool to find hookworm eggs it is not a significant infection

oc a aignificate infection

A number of servicemen are returning to this area with filarnasis. In them the diagnosis has been made for the most part only by the typical syndrome of fever and inguinal lymphadenits. The only promising laboratory procedure for diagnosis in such cases is a skin test done with an antigen extracted from the heartworm of the dog, the Dirofilaria immitis. This has been positive, in a recently recorded series, in some 90 per cent of the cases.

The treatment of this condition has recently been advanced, we think, by the work of Dr Harold W Brown with a substance called anthiomaline. This is lithium antimony thiomalate. It is given intramuscularly in doess which cause a certain and considerable frequency of toxic This substance has been the first to reduce for long periods the count of microfilaria in peripheral blood in heavily infected natives of the Virgin Islands. There have been many antimony compounds before this that have temporarily reduced the microfilaria count, that is, for a period of two to three weeks, but with anthomaline, after a aix months' follow-up, the latest we have heard about, there has been a continued effect of this drug, and it seems likely that the adult worms have been affected for the first time

I would like, before I get through, to hring to your attention an article in Clinics for December, 1943, by Dr Harry Moet, which I regard as the best recent reference on the subject of intestinal helminths and other worms, and their treatment.

Then, an important article on falciparum malaria was published in the January 8, 1944, issue of the Journal of the American Medical Association, by Dr. Harry Most and Dr. Henry Meleney, pointing out the clinical features of falciparum malaria.

DR. Gold This subject is now open for discussion Are there any questions?

Dr. C H. Wherler I am a hit confused about the problem of atabrine versus quinine.

I gathered from a recent report in the Journal of the American Medical Association that atalirine was superior in every way to quinine, yet one constantly hears a statement like the one which you just made—if the atabine does not work, then use quinine, if they relapse then use quinine, and so on

DR. ALMY You can be sure that the publicity and the statements about atabrine are dictated in part hy necessity. Great efforts have been made to discourage the routine use of quinine for the reason that it is scarce. Besides, atabrine is entirely satisfactory for the treatment of the acute attack. Until a couple of years ago it was thought that atahrino had a much clower effect on the fever and other symptoms and on the parasitemia when given to a patient with malaria initially, hut now that the heavy initial dose, I Gm in the first twenty-four hours, has been established, the effect has proved to be just as rapid as that of the ordinary doses of quinine.

Dr. Weeeler Are there any situations in which atabrine is actually superior to quinine?

Dr. Alary I don't know of any in which it is clearly superior. In many studies on therapy there have been elight quantitative differences, and there have been some reports that atabrine is actually effective in preventing the development of feleparum malaria in large bodies of troops, which I believe cannot be done nearly as well with quinne

INTERN What is the incidence of myocarditis with emetine and when would you expect to find it?

Dr. Alait I do not know that it occurs, that is, clinical myocarditis. However, work done at Vanderhilt a year or two ago indicates that there is a very high incidence of minor electrocardiographic changes, even with the recognized doses of emetine.

DR. JANET TRAVELL Can the schedule you outlined be given to ambulatory patients?

Dr. Aller I don't think it should be If emetine is given the patient should be hrought into the hospital That is certainly not the practice in the tropics They usually come in for emetine and go home, but it is better for the patient to be in the hospital

Dr. Gold In a patient with amebrasis who never had symptoms you would not use emetine?

DR. ALMY By no means

Dn. Gold You would use diodoquin?

DR. ALMY Yes.

Dr. Gold You would not use carbarsone?

DR Amay That is not so widely used at present. I believe it is the general opinion that it is more toxic than any of the iodine compounds and that if one uses emetine when the disease is severe the combination of diodoquin and emetine

is even more effective than the carbarsone and less toxic

STUDENT What is the standing of thiobismol in the treatment of malaria?

DR ALMY In the naturally occurring case it has little application. Its precise effect is to kill half-grown trophozoites, so there is a time in the course of some cases of therapeutic malaria when it would be advisable to knock out one generation of trophozoites, or perhaps to hasten the end of fever by knocking out the half-grown organisms which are unlikely to be affected by atabrine Under those circumstances it is indicated and useful

DR McKeen CATTELL What is the purpose of sodium bicarbonate given with atabrine?

DR ALMY Empirically, it seems to allay the gastric irritation

DR CATTELL Is it given at the same time?

Dr Almy Yes

DR WHEELER Dr Gold, I would like to ask you whether any untoward cardiac effects are to be expected from the intravenous administration of quinine in the amounts used in the urgent treatment of malaria

DR GOLD The system of treatment in which patients receive 0 6 to 1 Gm of quinine hydrochloride in a pint of fluid, injected over a period of an hour, is not likely to injure the heart. The cardiac acceleration which is often seen under those conditions is due to vagal blocking. If the person is unduly sensitive to quinine, prolongation of intraventricular conduction may result from direct action on the heart muscle. After large doses in animals, the heart develops ventricular tachycardia and ventricular fibrillation, but I doubt that such effects can be obtained with the small doses here recommended

DR WHEELER Are there important qualitative differences between the effects of quinidine and quinine on the heart?

DR GOLD I don't believe there are any qualitative differences From the quantitative standpoint, Lewis and his coworkers stated that quinidine is five to ten times as potent as quinine That doesn't accord with exon the heart perience, which indicates that the difference in dosage for the same effect is not great for the two Their inference is incorrect, for they did not establish the dosage-response curve When a dose of quinidine slowed the fibrillating rate of the auricles five times as much as a similar dose of quinine, they deduced that one was five times as powerful as the other That isn't sound, for in the steep part of a dosage-response curve, a 10 per cent increase in dose could cause a tenfold increase in effect

I would like to ask Dr Almy a question How does the matter of the cure of malaria stand at

the present time? Do we, in the light of the present knowledge, cure malaria with anything we use?

Dr. Almy One dose of quinine or atabrine has been known to terminate one of our therapeutic malaria cases, and such patients have not suffered To extend that, let me say that we have studied about 200 cases of therapeutic malaria, injected intravenously with malarial blood, treated them with quinine or atabrine, and have had no relapses, which is not seen with naturally inoculated malaria Falciparum malama, mosquito-inoculated is noted for its low rate of relapse, even when it terminates spontane-It seems likely that with the ordinary therapeutic procedures that disease is actually exterminated from the patient Vivax and malariae malaria probably never completely die out, although it would be impossible to be sure

The most interesting evidence to me is that we have had a number of cases of malaria acquired by transfusion coming to light in New York City in the last year or two. The last possible exposure of the donor to malaria in those instances has been in each case more than twenty-five years ago, and the last clinical malarial episode in each of those individuals was nearly as long ago.

DR GOLD You think that malaria in some forms may very well be cured?

DR ALMY If it is the malignant tertian (falciparum) variety it may be

STUDENT Have there ever been observed effects such as blackwater fever or other hypersensitive manifestations attributed to atabrine?

DR ALMY No Certainly not blackwater fever The toxic manifestations of atabrine have been for the most part infrequent, if you will except gastric irritation, nausea or vomiting, even under conditions as described, may occur after atabrine in 1 to 6 per cent of individuals. It has been thought that in rare instances various forms of acute psychoses can be attributed to atabrine The cause has not been proved in any instance, and the number recorded is small. A great many individuals are disturbed by the yellow coloration of the skin and mucous membranes, which is atabrine itself and not jaundice

STUDENT What is the present status of the diphenyl sulfones in the treatment of malaria?

DR ALMY Those have not been extensively tried, to my knowledge, and certainly have had very little published about them. They are not recommended for general use. If the ordinary antimalarial drugs are not available, it is advised in an emergency to use sulfadiazine, which has a limited effect.

INTERN Is tartar emetic still being used intravenously to stop relapses? It was used but the results were not good

Dr. ALMY It has been ahandoned

Dr. Wheelen There was a time when araphenamne administration was advised in the treatment of malaria. Are there any circumstances in which that should be used?

DR. ALAST If you don't have ntabrine, quanine, or sulfadiazine, the next thing to use is necessive parameter.

Dr. Gold Plasmochin was put in the last edition of the Pharmacopoeia and has just been dropped. Is that what should have been done?

Dr. Alary My experience with it is limited to about a dozen cases. The only recorded experience I have been able to find with a good deal of delving in our bbrary is to the effect that plasmochin definitely reduced the relapse rate after treatment with atahrine. I have heard of a good deal of unpublished experience to the contrary, i.e., that it does not reduce the relapse rete, but I have not seen the data on which these conclusions are based.

INTERN How real is the danger of tode effects from using one of those immediately or soon after the other to obtain the effect of both

together?

Dr. Almy The advice from all quarters is never to use atabrase and plasmochia together. Much to our horror, in some parts of the world a tablet is available containing both drugs, but they are present in very small amounts and toxicity is probably avoided in that manner. There seems to be no unusual hazard from the administration of plasmochian the day after atahrine is terminated.

DR. JOHN E DETERICK I saw one man who took both smultaneously He was pretty well dehydrated When we saw him here he had not taken anything hy mouth and he was jaundleed with an interic index well over 20 He was definitely jaundleed and not just stained from the atabrine The atabrine pigment is in the skin

DR. ALAST That is right.

DR. DETRICK This chap was advised to take both drugs to get over the malaria. He had the history of having done it once before and it had made him ill

DR. Amer That is typical advice in certain

parts of the world

Dr. Cattell. As things stand at the present time, the relapse rate seems to be a most important consideration in relation to the efficacy of these various compounds. How can we get some notion of the relative permanence of the treatments?

DR. ALMY Work has been done in two directions, Dr Cattell A great deal has been done on the complement-fixation reaction in malarla, including that of Dr Michael Herdelberger in New York City The procedure has been simplified and it has been tried out extensively. There is some promise of its value in indicating when the patient is through relapsing, but it does not appear to have value as a routine diagnostic measure. Then a number of workers in England and China have found the malarial parasite in the sternal bone marrow when absent from peripheral blood. Both of these methods are being investigated.

DR. DETTRICK There is n point which might be raised with reference to Dr. Heldelberger's work. After the war, when drawing hlood for transfusion it will be difficult to decide from whom to take the hlood because, as Dr. Almy said, blood taken even twenty years after an attack of malaria may transmit the disease. I think Dr. Heldelberger hoped that it might be possible to avoid this danger by excluding subjects with a positive complement-fixation reaction.

DR. WHEELER Why is it that therapeutic malaria should be so easy to terminate and the bits of the mosquito should produce malaria which is entirely different in its behavior?

DR. ALARY There is an interesting theoretic basis for that Therapeutic malaria is produced by an injection of trophozoites. It is thought that these parasites enter directly into the crythrocytes and multiply largely in the circulating blood. They presumably never or almost never invade the trasues, and it is known to be much easier to clear the blood of malarial parasites than to kill parasites in the tissues. Naturally contracted malaria is thought always to pass through a cycle in the tissues before entering the droulatine blood.

DR. CATTELL Does moculated malaria ever go through a stage in which there is tissue invasion?

Dr. Almy. The answer to that question depends on which theory you hold regarding the maturation of malarial parasites. It seems to me that our experience here with 200 cases without a relapse would be as good evidence as any indicating that the tissues are not involved.

Dr. CATTELL What would happen to those cases that receive no treatment?

Dr. ALMY Very likely they would terminate spontaneously and never have a relapse

Dr. Derraicx Can the therapoutically induced malaria be transmitted by the mosquito? I have never seen a good, clear-cut experiment on that.

I think Dr Moore said in his textbook that it was not necessary to screen the patients who had malaria inoculata. Are there any reports of the transmission of inoculated malaria by mosquites?

Dr. ALMY I do not know of any

STUDENT What is the prophylactic drug of choice?

DR ALMY First let me say that except for falciparum malaria, in which the evidence is growing that you can prevent the disease by atabrine, there is no effective prophylactic drug We use the term "suppressive treatment," which means that during the time a patient is taking the drug he will in all probability not show clinical evidence of malaria, although he may be infected The drug of choice for suppression at present is atabrine Whether it will be the drug of choice after we get Java back I don't know. Quimne was an effective drug for suppressive treatment prior to the war

DR GOLD Are there any other tropical diseases which can be prevented by the prophylactic use of any drug?

DR ALMY I don't know how clear cut the experience is in this field. Dr Gold, but for some time Bayer 205 has been used in the prevention of trypanosomiasis among people traveling in Africa The results, at least on the clinical level, have been quite satisfactory Whether their tissues actually are never invaded by trypanosomes I do not know, but they do not develop sleeping sickness

Dr Gold How about persons traveling in areas known to be infested with Endameba histolytica taking diodoquin daily for its prevention?

Dr Almy That was suggested by Colonel Craig some time ago, but I do not know of any It seems a logical procedure reports on it

DR WHEELER Have not some of the insecticides reached the degree of perfection where they are almost universally effective in prevention?

DR ALMY I was thinking merely of chemoprophylaxis Of course, the insecticides are the real news in the field of tropical medicine

STUDENT Do all the soldiers returning from areas in which malana is prevalent routinely receive the course of atabrine which you described?

DR ALMY No Most of these men will have received suppressive treatment during the entire period of their service in the tropics. At varying intervals after they return from an endemic area they are taken off suppressive treatment, and a considerable proportion of those from the worst areas develop clinical malaria. Then they may be treated with atabrine just as if they never had it previously

STUDENT Could you not avoid that by continuing prophylactic treatment?

DR ALMY Yes, that is possible, but you would be treating people indefinitely

VISITOR What are the chances of malaria being introduced by Anopheles mosquitoes into areas of the United States where it has not existed before?

Dr Almy It seems likely

VISITOR Have there been any cases reported of men coming back from overseas to areas where Anopheles is present and malaria has been transmitted to others in the community?

DR. ALMY I have not seen any reports that were clearly traceable to people back from the tropics The fact that it can occur in far northern latitudes in the summer was suggested not long ago by an outbreak of falciparum malaria near Camden, New Jersey, undoubtedly seeded by an individual returned from the tropics, although the source was not found

STUDENT What is malaria inoculata? Which form is that?

DR ALMY, Strictly speaking, I think that should refer to malaria induced for therapeutic purposes by the injection of malarial blood In other words, it implies the use of malarial blood rather than of the mosquito

STUDENT Can it be either vivax or malariae? DR ALMY You can use any species you wish In Florida, where there are many people who have had the other kinds, they even use falu-

DR GOLD Does the experience with lithium antimony thiomalate in the treatment of filariasis apply to some of the other parasites for which antimony has been used in the past? I was wondering whether we shall now scuttle fuadin, antimony thioglycollamide, and antimony sodium thioglycollate

DR ALMY I don't believe so The only other disease that I know it has been tried on is the blinding filarial disease, the onchocerciasis of Central America, and the results of that are not known as yet

STUDENT I would like to know the frequency of hypersensitivity reactions from anthomaline used in filariasis, from the products of degeneration of the worms being thrown into the blood

DR ALMY I believe that in Dr Brown's experience that has almost never occurred

DR GOLD We have time for perhaps one more question This is a very large subject

STUDENT Would it be worth while to discuss

the toxicity of antimony and bismuth?

DR ALMY I am not very familiar with the toric reactions, but they were thoroughly discussed by Dr Brown in his article on filariasis in the Journal of the American Medical Association about a year ago

#### Summary

CATTELL The two most important Dπ problems which may be encountered in patients

[Continued on page 2316]

ITCHING

Calamine zinc oxide and bemocaine in a specially developed greaseless creum base.

RELIEVES ITCHING PROMPTLY

PROTECTS AIDS HEALING

Use in prurious ani, vulves and scroti — externa — insertigo — chafing — diaper rash — rashes of examhems — plant dermatitis — and other irritative skin conditions

In 2 or, tubes and 1 lb jars.
Literature and sample from Crookes Laboratories,
Inc., 305 East 45th Street, N Y 17, N Y

#### [Continued from page 2314]

recently returned from the tropics are malaria Reliable procedures for the and dysentery specific diagnosis of these conditions have been outlined, recognized methods of treatment have been presented, and practical points regarding their management have been discussed in detail

In suspected malaria a definite diagnosis is made by the finding of the parasites in the red blood cells For this purpose a thick blood smear is prepared during the fever-free interval cause of its greater availability, at the present time quinactine (atabrine) is generally employed in the treatment of all types of malaria. In the average case 0 2 Gm is given by mouth every six hours for five doses, followed by 01 Gm three times a day for six days To minimize gastric irritation quinacrine is administered after meals, and in the case of the 0.2 Gm dose it should be given with 1 Gm of bicarbonate Except for falciparum and therapeutic malaria, which may be permanently cured, the procedures described are to be regarded as suppressive treatment, and relapses are to be expected when therapy is discontinued

As yet there has been no clear-cut demonstra-

tion of the superiority of quinacrine over quinine Other agents occasionally used in malaria, in the order of their effectiveness, are sulfadiazine and Thiobismol is useful in killing neoarsphenamine the half-grown trophozoites of inoculation malaria

In treating dysentery a specific diagnosis by demonstration of the parasite is essential, since the causative organism may be Shigella (about 75 per cent of cases contracted in the tropics) or Endamoeba histolytica (15 to 20 per cent)

If the dysentery is due to organisms of the Shigella group the patient is treated with one of the sulfonamides, preferably sulfadiazine Provided an adequate urinary volume can be maintained, sulfathiazole is preferred to succinyl sulfathiazole or sulfaguanidine

It is now recommended that patients with amebiasis receive diodoquin, 0 63 Gm three times a day for twenty days This treatment has superseded emetine and carbarsone However, in recurrent or long-continuing attacks of diarrhea due to amebiasis, emetine, not to exceed 60 mg per day, is given concomitantly with the first five days of the course of diodoguin tient should preferably be treated in a hospital

#### SEARCH URGED FOR EFFECTIVE DRUGS IN ELECTRIC-SHOCK TREATMENT

In treatment of electric shock, there is no known substance which immediately will revive the victim's breathing or aid his circulation. Cecil K Drinker, M.D., Boston, reviews in the July 30 issue of the Journal of the American Medical Association the drugs which are known to stimulate breathing He lists what they do and where they fail All can be given by injection into a vein or under the skin

Strychnine sulfate is a drug which exerts a stimulating action on the spinal cord, on the upper part of the spinal cord known as the medulia, and on the brain. The medulia is that part of the nervous system which controls the respiration and circula-

Dr Drinker states that "the fact is that all medical men have so wholesome a respect for strychnine as a poison that such injections as are frequently given are so small as to be both in-effectual and harmless"

Picrotovin also is a strong stimulant to the nervous system, particularly the lower brain and medulla, where respiration originates When enough of this drug has been injected to stimulate breathing, convulsions result

Metrazol, a drug related to camphor, has had extensive use in the treatment of certain types of insanity, since it produces convulsions. This means that it is a strong stimulant of the nervous system, but, Dr Drinker warns, "it has no conspicuous effect on breathing and has no value in respiratory failure from electric shock "

Nikethamide is a relatively new drug and has some promise as a stimulant of a depressed breathing center "This value is, however," the author states, "very uncertain, and nothing so far claimed for it makes the compound worth serious consideration in electric-shock therapy "

Caffeine and sodium benzoate is a compound which, even in enormous dosage, does not seem to have seriously harmful effects. There is no doubt of the general stimulating effect of caffeine on the central nervous system, including the breathing center, and Dr. Drinker believes that "an intravention of the contraction of th ous injection of caffeine and sodium benzoate is not out of place in any sort of respiratory depression, but the injection must be made directly into the blood by vein and not a simple hypodermic (under the skin), since prompt action is imperative

Dr Drinker points out that the most artificial respiration can accomplish is to substitute artificial breathing for absent natural breathing "I believe," he says, "more than this could be done in the direction of finding some direct aid to the respiratory "I believe," center and that in such a direction we shall see our greatest advances in the resuscitation of the most serious electric accidents"

# ON STUDY INDICATES THE

THAT the availability and utilization of iron contained in a

CATHORETEE

effects on h rocytes of anemic rate. At left, spi and homogenized; at right, sphere

strained vegetable should become practically 100% greater as a result of homogenization is a noteworthy revelation

This marked difference was demonstrated in laboratory atudies of the effects of feeding "merely strained" spinsch and "strained and homogenized" apinach to groups of anemic rats. The graph illustrates the response in erythrocyte count and hemoglobin level-twice as great a response in the group fed "strained and homogenized" apinach a Libby product

By releasing the cell-contained iron and dispersing it homogeneously throughout the food substance. Labby a dual proc. essing of balsy foods-first straining and then homogenizingprovides a greater yield of this essential nutrient. The fine

textured "bulk" resulting from Libby a exclu sive mode of processing presents a greater surface area to the action of the digestive juices. Hence digestion is facilitated, utiliza tion is enhanced

These advantages are particularly valuable In the arm to forestall nutritional anemia in the infant. They make possible supplementa-tion of the milk diet as early as in the fifth week of life-before prenatal stores of iron become exhausted

Libby, McNeill & Libby Packers of Quality Foods Since 1868 Chicago 9 Illinois

Libby a process of homogenizing

A. Opens cell capsules, re leases contained nutriment, and disperses it homogeneously throughout.

B. Communutes indigest ible cell membranes and coarse cellulose fibers. C. Exposes the nutriment

to the digestive juices in a considerably increased sur face area, thus facilitating digestion.

D Increases availability of the contained nutrients, thus facil itating utilization.

E\_ Renders cellulose mechan ically bland, without impairing intestinal motility

2 Libby a Homogenized Baby Foods may be fed as early as in the second month providing essential nutrients like from before prenatal stores are exhausted The smoother texture of these foods enables them, when added

to the milk formula to flow freely through normal nipple openings.

# Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the Journal The members of the committee are Oliver W H Mitchell, M D, Chairman (428 Greenwood Place, Syracuse), George Bachr, M D, and Charles D Post, M D

#### Syracuse University Holds Cancer Program

MEMBERS of the medical societies of the countries of Onondaga, Jefferson, Cayuga, Cortland, Madison, Oneida, and Oswego attended a cancer teaching day on October 25 at the Syracuse University College of Medicine The program was sponsored by these societies in cooperation with tho Central New York X-Ray Society, the Medical Society of the State of New York, and the New York State Department of Health, Division of Cancer Control

The meeting was called to order at 2 30 PM by Dr Herman G Weiskotten, dean of the Syracuse Dr Herman G Weiskotten, dean of the Syracuse University College of Medicine, who gave the welcoming address The lectures at this session were given by Dr Clyde L Randall, professor of gynecology, University of Buffalo School of Medicine, and Dr Cushman D Haagensen, professor of surgery, College of Physicians and Surgeons, Columbia University Dr Randall's subject was "Trends in the Treatment of Gynecological Malignancies," and Dr Haagensen spoke on "Carcinoma of the Breast" Dr P K Menzies, president of the Onondaga County Medical Society, was chairman of this meet-

At the evening session held at the Hotel Syracuse, following dinner there at 6 30 PM, Dr Andrew H Dowdy, associate professor of radiology, University of Rochester School of Medicine and Dentistry, gave a lecture on the subject, "Epithelioma of the Skin"

The second talk was "Roentgen Therapy of Cancer," given by Dr Maurice Lenz, professor of climeal radiology, College of Physicians and Surgeons, Columbia University

Dr Lucas S Henry, president of the Central New York X-Ray Society, was chairman of the

evening mecting The local committee on arrangements for the teaching day included Dr Orren D Chapman, chairman of the Public Health Committee, Dr J. Howard Ferguson, chairman of the Cancer Committee, and Drs James G Derr, Lawrence W Ehegartner, Lu-ers S Henry, George S Reed, and Frederick S Wetherell

#### Management of Diabetes

"THE Management of Diabetes with the Newer Forms of Insulin" was discussed by Dr Maynard E Holmes, professor of clinical medicine, Syracuse University College of Medicine, at a meeting of the Broome County Medical Society, Tuesday evening at 8 00 PM, October 9, in the auditorium of the Binghamton City Hospital

Dr Maynard's instruction was arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York

#### Clinical Cancer Day at Oneonta

A CLINICAL cancer teaching day was held in Oneonta on October 3 at the Homer Folks Tuberculosis Hospital under the auspices of the Medical Society of the County of Otsego, the Sixth District Branch of the Medical Society of the State of New York, the Medical Society of the State of New York, and the Division of Cancer Control of the New York State Department of Health.

A clinical demonstration and discussion of caucer patients by Drs William A Milner, Fred W Stewart, Norman Treves, and Gray H Twombly, speakers on the latter part of the program, took place from 2 00 to 4 00 PM The platform discussions. sions after the opening remarks of Dr Paul Van Haeseler, president of the Medical Society of the

County of Otsego, were under the chairmanship of Dr LeRoy S House

"Ovarian Carcinoma" was Dr Twombly's topic He is assistant surgeon at Memorial Hospital, New York City Dr Treves, associate surgeon at the same hospital, spoke on "Cancer of the Breast"
Following dinner, there were two more talks "Careinoma of the Bladder," by Dr William A Milner associate professor of unclease. Albany Medi-

Milner, associate professor of urology, Albany Medical College, and "Biopsy in Tumors," by Dr Fred W Stewart, pathologist, Memorial Hospital, New York City

The local committee on arrangements included Drs John R. Clarke, John M. Constantine, Richard

Kegel, and Charles H Peckham

#### Dr Arnold Discusses Penicillin

D.R. R. C. ARNOLD, surgeon in the United States Public Health Service at the Venereal Disease Research Laboratory of the United States Marine Hospital on Staten Island, spoke at a meeting of the Sullivan County Medical Society, at 8 30 PM on

October 10 at the Lenape Hotel, Liberty sented by the Medical Society of the State of New York in ecoperation with the New York State Department of Health, Dr Arnold discussed penicilin

# Take Advantage

THERAPY

Vitamin B holds a well-recognized place in the treatment of alcoholism. Alcoholic polyneuropathy is said by Jolliffe' to be unquestionably due to vitamin B<sub>1</sub> deficiency. Romano<sup>2</sup> states that both vitamins B<sub>1</sub> and B<sub>2</sub> have definite value in this condition. It is also believed that the addition of nicotinamide hastens recovery of the patient. (Spies, Sydenstricker, Jolliffe)

Vitamin "B" Soluble (Walker) supplies all the factors of the B complex, plus additional fortification of various constituents. Each capsule contains 3 grains brewers yeast concentrate, 1 mgm. Thiamin HCL, 1 mgm. Ribo flavin, 5 mgm. Nicotinamide, 30 mgm. Ascorbic Acid The dosage potency is regulated by the physician according to severity of the symptoms.

The generous use of Vitamin "B" Soluble (Walker) preceding and following indulgence in alcohol, does much to prevent symptoms of depression and nervous irritability that so commonly occur In bottles of 30 and 100 capsules

Liberal samples gladly sent on request

#### WILLIAM F MARTIN, Esq. Counsel to the Medical Society of the State of New York

#### The Statute Regarding Confidential Communications

INQUIRIES are received frequently as to the source of the law relating to the confidential relationship existing between physician and patient We, therefore, publish in toto the section of the Civil Practice Act containing the provision prohibiting the disclosure of information obtained by a physician in attending a patient and which was necessary to enable him to act in that capacity

Sec. 352 Physicians, dentists, and nurses not to disclose professional information. A person duly authorized to practice physic or surgery, or dentistry, or a professional or registered nurse. shall not be allowed to disclose any information which he acquired in attending a patient in a professional capacity, and which was necessary to enable hun to act in that capacity, unless, in cases where the disclosure of the information so acquired by a dentist is necessary for identification purposes, in which case the dentist may be required to testify solely with respect thereto, or, unless, where the patient is a child under the age of sixteen, the information so acquired indicates that the patient has been the victim or subject of a crime, in which case the physician, dentist, or nurses may be required to testify fully in relation thereto upon any examination, trial, or other proceeding in which the commission of such crime is a subject of inquiry "

Section 354 of the same act sets forth the manner in which the privilege may be waived by the patient, or if decreased, his personal representatives. The relevant portions of Section 354 are

Application of sections relating to Sec. 354

confidential communications The last three sections apply to any examination of a person as a witness unless the provisions thereof are ex-pressly waived upon the trial or examination by the person confessing, the patient, or the client But a physician or surgeon or a professional or registered nurse, upon a trial or examination, may disclose any information as to the mental or physical condition of a patient who is deceased, which he acquired in attending such patient professionally, except confidential communications and such facts as would tend to disgrace the memor, of the patient, when the provisions of section three hundred and fifty-two have been expressly waived on such trial or examination by the personal representatives of the deceased patient, or if the validity of the last will and testament of such deceased patient is in question, by the executor or executors named in said will, or the surviving husband, widow, or any heir-at-law or any of the next of kin, of such deceased, or any other party in interest. The waivers or any other party in interest. The waivers herein provided for must be made in open court, on the trial of the action or proceeding, and a paper executed by a party prior to the trial prosuch a waiver But the attorneys for the respective parties, prior to the trial, may stipulate for such waiver, and the same shall be sufficient therefor" viding for such waiver shall be insufficient as

In general, it should be concluded that if a physician is in doubt about the matter in a specific case, the safest rule is the best, i.e., refuse to divulge any information unless advised by competent authority to do so

#### SEES NO CAUSE FOR ALARM THAT VETERANS WILL IMPORT DEADLY PARASITES

An army medical officer, writing in the September 1 issue of the Journal of the American Medical Association, says there is no need for alarm that military and civilian personnel returning to the United States from the tropics will import intestinal para-

sites capable of producing fatal or serious diseases
Harry Most, Maj (MC), AUS, carried out a
study on 144 of the more than 1,000 passengers returned to the United States on the liner Gripsholm in December, 1943, and found that 70 per cent of the passengers examined harbored one or more intestinal parasites

"These parasites, for the most part, are not for-eign to this country," he concluded, "and there is no basis for alarm about the spread of intestinal parasitic diseases in this country "

Major Most, who is on leave from his position as assistant professor of preventive medicine and medicine at the New York University College of Medicine, added, however, that "surveys for in-

testinal infections should be conducted on representative groups returning to this country to detect carriers [those who harbor the parasites but are not ill] so they may be treated Food handlers should receive special attention"

The 144 Gripsholm passengers who cooperated in the study included missionaries with many years' residence in China, Japan, Korea, and the Philippines Some of them had been in Japanese occupied territory and in concentration camps for variable periods of time

The parasitologic studies were conducted in the Tropical Diseases Diagnostic Laboratory of the

New York Health Department

The study showed that 36 persons, or 25 per cent of the entire group examined, were infected with a type of parasite which causes chronic dysentery,

intestinal ulcers, and liver abscesses
"It is interesting to note," Major Most said, "that no infections were found from hook-worms"

# "respiration:-normal"

#### Army to Release 13,000 Doctors

The New York Times reports that a plan for returning thirteen thousand physicians, thirty-five hundred dentists, twenty-five thousand nurses, and a large number of other Army medical officers to civilian life by January 1 was announced on September 14 by Surgeon General Norman T. Kirk

The new plan, based on a liberalization of the requirements of the demobilization system, will make it possible for Army doctors and dentists, not in the regular Army, to be released on these conditions

1 If they entered active service prior to Pearl

Harbor

If they are 48 years of age or older
 If they have 80 points or over

The only exceptions will be in the cases of less than two hundred scarce medical specialists, to whom the pre-Pearl Harbor release stipulation will not apply These specialists, however, will be released if they began active duty before January 1, 1941 Army nurses will be released if they have 35 points, or are 35 years of age or over, or are married, or have dependents under 14

Physical therapists and hospital dictitians will be released if they have 40 points or are 40 years of age,

or married, or have dependents under 14

Veterinary Corps officers are eligible for discharge if they have 80 or more points, or are 42, or if they joined the Army before January 1, 1941

Medical Administrative and Sanitary Corps officers with point scores of 70 or more, or who are 42, or have been in service before Pearl Harbor, will be

General Kirk stated that large numbers of surplus doctors, dentists, and nurses are being returned from overseas by special air and ship priorities. He said that the Army expected "not later than the end of this year," to liberalize the separation provisions even further

By July, 1946, when the entire Army will be reduced to two million, five hundred thousand, the Surgeon General will have released at least thirty thousand doctors, ten thousand dentists, and more than forty thousand nurses, about 70 per cent of the peak strength, as of V-E Day, of these three corps

At present, there still are twenty-five thousand doctors, fifty-seven thousand nurses, fourteen thousand six hundred dentists, and twenty-five thousand two hundred officers in other categories in the Medical Department

#### County News

#### Albany County

Dr Nathan F Fradkin, a major in the Medical Corps and a former instructor at Albany Medical College, has been cited for the Bronze Star Medal for service with the Albany Base Hospital in Italy

service with the Albany Base Hospital in Italy
He was praised for lus work in "developing policies to govern the detection, diagnosis, treatment,
and disposition of peptic ulcer among soldiers in the

Mediterranean Theater of operations

"Through his outstanding professional skill, ability, and devotion to duty," the citation said, "he has reflected great credit upon himself and the Medical Corps"

Major Fradkin practiced in Albany before he

joined the service \*

Promotion of Dr Martin Lasersohn, of Manhattan, to vice-president of Winthrop Chemical Company, and of Dr Justus B Rice, of New York City, to vice-president in charge of medical research, was announced on September 15 by Dr Theodore G Klumpp, president

ing up mines in the days immediately following the war"

"The Russian language was a terrific problem, because there were only two men who spoke it," Major Russell said "Incidentally, discharged Russian patients usually were not anxious to go home Every time we sent a group back to Russia we'd have to look through the woods to find some who were hiding out"

Major Russell, as chief of medicine, was assisted by twelve doctors Recalling his internship ten years ago, when "it was necessary to go out and dig up blood donors," he said the war has proved the importance of having plasma and whole blood available in quantities

Improvements in anesthesia made it possible to save the lives of many men suffering from lung in-

juries, Major Russell explained, adding

"With the aid of forced breathing, shrapnel could be removed from the lung. That isn't new, of course, but it's new to have wide experience in this gained by so many of our surgeons."

Major Russell left with the 174th Regiment in September, 1940, as a first lieutenant Before going overseas in April, he was regimental surgeon with the 174th in this country \*

#### Jefferson County

The regular monthly meeting of the county society was held on October 11, following dinner at 6 30 P M, at the Black River Valley Club, in Watertown Mr George P Farrell, Director of the Bureau of Medical Care Insurance of the Medical Society of the State of New York, spoke on medical care insurance

Dr Charles F Goodnough, of Watertown, who was honorably discharged as a captain in the US Army Medical Corps August 27 at Fort Dix, New Jersey, after four years and four months of active duty, will establish his medical practice in Watertown

Dr Goodnough, the first Watertown physician to return home from the service since the end of World War II, opened an office for the general prac-

tice of medicine on October 1 \*

#### Kings County

Thirty-two Brooklyn leaders in the medical profession have accepted membership on the advisory council of the new Brooklyn cancer committee, Dr S Potter Bartley, chairman, has announced Four of these doctors have been appointed by Dr Joseph Tenopyr, president of the Medical Society of the County of Kings and first vice-chairman of the Brooklyn Cancer Committee, to serve as representatives of the Society on the advisory council These official representatives are Drs Francis W Currin, Pierre A Renaud, Leo S Schwartz, and Irwin E Siris Dr Bartley is chairman of the cancer committee of the Society \*

Maj Charles Stern, of Brooklyn, has been named 9th Armored Division surgeon, it was announced recently by Brigadier General Thomas L. Harrold, Troy, New York, division commander

Major Stern has been executive officer of the 2nd Armored Medical Battalion of the 9th Armored Division for some time He received the Bronze Star Medal for outstanding service in helping to direct the medical forces of the 9th Armored during its varied campaigns

#### Monroe County

The Medical Society of the County of Monroe announced on September 12 that Dr Samuel J Stabins, of Rochester, has returned from service with the armed forces and has resumed practice \*

#### Montgomery County

Dr Alton John Spencer, who has been resident in obstetrics in the Anthony N Brady Maternity Home, in Albany, has located in Amsterdam to specialize in obstetrics He will be associated with Dr J A Dickson

Dr Spencer graduated from the Albany Medical College in 1936 He interned at St Peter's Hospital, in Albany, until 1937, when he established a general practice in Canajoharie, remaining until 1943, when he became resident in obstetrics in the Brady Maternity Home in Albany \*

#### New York County

Dr Dean A Clark, assistant director, public health methods division, senior surgeon, US Public Health Service, has been granted a leave to become medical director of the Health Insurance Plan of Greater New York, the health insurance project sponsored by Mayor Fiorello La Guardia Dr Clark took up his new activities August 1, according to New York Medicine

On September 10 a reception was held at Sherry's to honor Dr Adolf Magnus-Levy on his eightieth birthday Dr Magnus-Levy, who came to the United States from Germany about four years ago, is known for his researches in metabolism and on acidosis Dr Emanuel Libman gave the introductory address, and other speakers included Dr Eugene F Du Bois, professor of physiology, Cornell University Medical College, and Dr Kurt M Grassheim, a pupil of Dr Magnus-Levy Dr Magnus-Levy Joined the staff of Yale University, New Haven, Connecticut, in 1941 as research associate in physiology

Dr Harold J Harris has been released from active naval duty and expects to resume clinical and laboratory research in brucellosis, devoting most of his time to work in New York. An invitation to give a series of lectures on brucellosis at the University of Cordoba, Argentina, awaits approval of the Navy and State Departments.

Details of the plans for the \$30,000,000 New York University-Bellevue Medical Center, to be erected along the Franklin D Roosevelt Drive between Twenty-fifth and Thirty-fourth Streets, were outlined on October 1 by Dr Harry Woodburn Chase, chancellor of the university, who described the project as a "great cooperative adventure in improving the health of the whole New York community"

Dr Chase noted that not only would the university appeal to the public for funds to construct and maintain the new center but that the entire pro-

#### TO PHYSICIANS WHO SMOKE A PIPE:

We suggest an unusually fine new blend-COUNTRY DOCTOR PIPE MIXTURE. Made by the same process as used in the manufacture of Philip Morris Cigarettes. [Continued from page 2324]

gram was designed to help raise the level of public health.

The university will begin soon a drive for \$15,000,-This will cover the cost of erecting and equipping six building units, including a new College of Medicine, a University Clinic, a University Hospital, a residence for medical students, an auditorium, and an Institute of Forensic Medicine, as well as maintenance for the first five years The university buildings will cover the area between Thirtieth and Thirty-fourth Streets from the drive to

Several of the units will be concentrated in one large structure Atop the H-shaped College of Medicine, which will be five stories high, will be the slender, fourteen-story University Hospital on the crossbar of the H Two lower floors of one wing

will house the clime

Moderate-fee facilities will be provided in the bospital for patients of the clinic. Its rooms will accommodate four bundred and eighty beds and will be single, with the exception of several four-bed "wards" There will be virtually no distinc-tion between "private" and "semiprivate" rooms

The clinic also has been planned to meet the medical needs of the middle-income group, subscribers to various prepayment plans, and persons of higher economic levels. It has been designed specifically to develop a medical-care plan pro-

posed by the faculty

Quarters for students unable to live at bome will be in the residence hall, which will contain two bundred and seventy-nine rooms The auditorium will have five hundred seats and will be used "to bring the medical school out of its ivory tower and let the people know what it can do," according to

Dr Donal Sheehan, acting dean of the school
The Institute of Forensic Medicine, first of its
kind in the world, will train a new type of medical examiner to replace the old coroner system in criminal investigation, Dr Sheehan said The institute will be built by the city on land provided by the university and operated by faculty mem-

Dr Sheehan said the school planned to scrap its old curriculum and substitute a new one emphasizing the importance of medicine as a social science This will involve establishment of several new departments, including one dealing with the humani-

ties in relation to medicine
"Our responsibility is great," Dr Sheehan remarked, "because we are educating more doctors for the metropolitan area than any other school and our program is going to affect the public health a great deal We have to train doctors to tackle problems in medical economics as well as in medical care "\*

Pointing out that war-accelerated research has led to notable advancements in medical knowledge and application that would have been impossible in a peacetime period of similar length, Dr. Cornelius P. Rhoads, acting president of the New York Academy of Medicine, urged on October 8 that this newfound tempo of medical advance be continued

Addressing one thousand physicians and surgeons at the start of the eighteenth graduate fortnight of

the academy, Dr Rhoads said

"Let the physician and the public be vocal and demand that the present rate of medical advance be

continued If we cannot bave concurrent research and development under the existing facilities, let the facilities be expanded. If this requires planning and initiation and organization, as was the case during the war, let us have these but in such a way as not to interfere with individual freedom and initiative'

Brig Gen. William C Menninger, director of the Neuropsychiatry Consultants Division of the Office of the Surgeon General, and Dr. Thomas A. C. Rennie, associate professor of psychiatry at Cornell University Medical College, participated in the scientific program that followed Dr Rhoads' ad-Dr Menninger said that war neurosis represented only a small percentage of the total psychiatric problem of the Army \*

The city's first medical center devoted to the training of doctors, nurses, and specialized personnel in the care of infantile paralysis patients has been started at Knickerbocker Hospital, it was announced on October 8

The new center, which will serve as a "model unit" for teaching and research, was announced jointly by Basil O'Connor, president of the National Founda-tion for Infantile Paralysis, George L Shearer, chairman of the foundation's Greater New York Chapter, and A. Robert Munro, president of the hospital.

The teaching and research aspect of the new service will be financed by a grant of \$100,000 from the National Foundation, while \$425,000 from the local chapter will pay for special equipment and

treatment of patients

Pointing out that the new center was not intended to provide care for all paralysis sufferers in the city, but to serve as a training center for professional personnel, Mr Munro said that when the Knickerbocker unit was in full operation, it would draw physicians from all over the country interested in treating the disease

It will give them the opportunity to study care of the disease under ideal conditions, to study the At present there are 19 latest types of treatment

patients, but 35 can be accommodated

The new unit is expected to make it possible to treat infantile paralysis cases in one hospital from the onset of the disease until final disposition instead of having patients attend several institutions at various stages of the disease for different treatment

Philip M Stimson, associate attending Drpediatrician at New York Hospital and associate professor of clinical pediatrics at Cornell University, will direct the new service. He will be assisted by Dr Dorothy Jackson, resident physician at Knickerbocker Hospital and formerly resident physician in poliomyelitis at Willard Parker Hospital

In addition, the staff will include two physicians, five physical therapists, one occupational therapist, eighteen nurses, an executive secretary, and several persons trained in the application of "hot packs"

The new unit will occupy the entire fifth floor of the hospital Phases of treatment will include pediatric care, physiotherapy, rehabilitation and occupational therapy, and orthopedic support and reconstruction \*

No appreciable ciliary inhibition . . .

#### [Continued from page 2326]

Incorporation of a nonprofit organization to make blood and plasma more readily available to patients in civilian hospitals at small cost was announced on October 3 by the New York County Medical Society

The somety disclosed, at the same time, the existence of a cooperative arrangement among one hundred and fifty hospitals in the metropolitan area during the war years, with the object of providing whole blood or plasma of any required type to any patient in any hospital in the metropolitan area whenever needed This arrangement was first organized four years ago as the "Blood and Plasma Exchange Bank of the Medical Society of the County of New York."

It is now being superseded by the nonprofit cor-poration, to be known as the "Blood and Plasma Exchange of New York, Incorporated" The wartime activities were carried on without any public announcement because of a desire to avoid any semblance of competition with the blood procurement program of the American Red Cross for military

The new corporation will have a fivefold pro-

"To coordinate existing facilities and institutions in the New York metropolitan area for the obtaining, processing, typing, matching, transportation and supply of human blood, blood plasma, and re-

lated products
"To reduce the cost and to improve and increase
the supply of human blood, plasma, and related
products for patients in the hospitals in the New

York metropolitan area

"To conduct and support research projects in the operation of human blood banks and the improvement of their procedures

"To finance the training of technical personnel for the operation of human blood banks
"To stimulate and, if desirable, to subsidize the development and operation of additional blood banks in hospitals in various regions of the metropolitan area

The society revealed that the blood plasma exchange has had a "phenomenal" growth in the last three years In 1943, during the first full year of operation, three thousand exchange transactions of blood or plasma were carried on under the plan During the first nine months of 1945 there have been about 20,000 umts of blood or plasma exchanged

The cost of a pint of blood for transfusion was \$41, before the plan was put into effect Under the new arrangement a patient may obtain a unit of processed blood or plasma without any charge, if he arranges through his family or friends to reimburse the hospital bank with two units of unprocessed blood If no blood is replaced, the charge is \$15 for

Grants will be sought from various foundations to permit a program of expansion and improve-ment, it was revealed. One of the purposes to which endowments or grants will be devoted will be establishment of a twenty-four hour a day telephone and delivery service operating through a central office, where an inventory of the supplies of blood of all types, plasma, and blood derivatives will be kept

"The proposed institutional scheme for postwar development in the New York metropolitan area visualizes the development of three specific types of blood banks in hospitals," the Society's announcement said. At the top of the system will be a few

research and teaching institutions An intermediate type of blood bank would be the large supplying and processing bank similar to that now maintained by a number of leading hospitals in New York City The third type would be a blood bank station located, usually, in a smaller hospital and supplied and serviced by the nearest research or supplying institution

The technical policies of the Blood and Plasma Exchange Bank have been determined by a board of governors consisting of the superintendents and transfusionists of the eight supplying hospitals together with representatives of three of the receiving hospitals and the Deputy Commissioner of Health The board of directors of the new corporation will include eventually representatives of the county society, the city's health and hospital departments, the Greater New York Hospital Association, and other agencies \*

Completing fifty-four months of continuous scientific service with the Army Air Forces, Lt Col Charles E Kossmann, (MC), of New York City, has been placed on the mactive list to resume essential teaching and research activities as assistant professor of medicine at New York University College of Medicine, it was announced on September 26 by the AAF School of Aviation Medicine, Randolph Field, Texas

#### Queens County

A stated meeting of the county society was held jointly with the Queensborough Tuberculosis and Health Association on September 25 at 9 00 pm "Teachable Moments for Health, the Physician as Educator," by Jay Bryan Nash, Ph D, chairman of the department of physical education and health, Now York University, was followed by short addresses by Dr Edward M Bernecker, Commissioner of Hospitals of New York City, and Dr Ernest L Stohlins, Commissioner of Health for New York City

The Committee on Graduate Education of the county society presented Dr Frederic Wertham, director of the mental hygiene clinic, Queens General Hospital, and senior psychiatrist of the New York City Department of Hospitals, giving a lecture entitled "The Human Constitution and Its Significance in Physical and Mental Disease," in the County Society Building on October 5 at 4 30

#### Rensselaer County

Dr Leo S Weinstein, Troy, who had served as a captain in the Army Medical Corps since July 29, 1942, has received his discharge from the service and

has resumed his practice in Troy

Dr Weinstein, formerly secretary of the county society for five years, was commissioned June 18, 1942, and entered active service July 29 of that year He served from July 30, 1942, to May 29, 1943, in the orthopedic service at the Station Hospital, Fort Knox, Kentucky, and was then transferred to Billings General Hospital at Fort Bonjamin Harrison, Indiana, where he served on the orthopedic service until his retirement from active duty, being chief of the service from January 9 to April 9 of this year

At the Billings General Hospital, an orthopedic specialty center treating practically all cases of returned comhat wounded veterans, he worked with other members of the staff on the development of a new method of treatment of osteomyelitis which me with success in clearing up the infection in as short a time as two to three weeks and converting open hone cases to closed cases, thereby shortening the period of recovery from what sometimes was a mat-

ter of years, to one of months \*

Dr Julien A Hebert, veteran of five invasions with the airhorne forces, who has been given his honorable discharge from the Army Medical Corps and resumed his practice in Troy, has received a letter from Gen Jacob L Devers, Headquarters of the Army Ground Forces, commending him for his services

Dr Hebert took part in the invasions of Africa, Sicily, Italy, Normandy, and Holland, often landing beyond the enemy lines to establish a hospital unit, then open a corridor through to our advancing forces. He was wounded on June 6, 1944, D-Day in Normandy, and received the Purple Heart He also has the Presidential Unit Citation with Oak Leaf Cluster His European theater ribhon has four hattle stars for major campaigns He qualified as a glider service officer

The letter from General Devers was addressed to

him under his rank of captain and reads

"I wish to express to you my real appreciation for the important part you have played in this war. The nation, the Army, and the Army ground forces share your just pride in your contribution to making our arms victorious. Without you and others who, like you, unselfishly gave up orvihan pursuits to defend the civilization we cherish, our brilliant and complete victory in Europe could never have been achieved.

"Your military organization and the friendships you have formed will be a source of great satis-

faction to you for many years to come

"I am sure you will resume your duties as a citizen with the same loyalty, leadership, and devotion that have marked your service as an officer. You go to your home with my wishes for your good fortune in the future."

Dr Hebert volunteered for the airborne infantry service and served with glider field artillery units, the 101st and 82nd Airhorne Most of his work was surgery

Dr Hehert flew in gliders right into enemy lines where our airborne troops formed a circle, in the old Indian style of fighting, then spread out until

ceived his medical degree in 1901 from the Gross

Medical College in Denver, Colorado LeRoy Thomas Geer, M D, of Syracuse, died on September 1 Dr Geer, a graduate of the Medical College of the University of Pennsylvania in 1901, was one of the founders of the Onondaga General Hospital in Syracuse, heading its surgical staff for four years. He was a member of the Syracuse Academy of Medicine, and had been a physician in

Syracuse for forty-three years
William R. Knabe, M.D., formerly of Schenectady, died on September 10 in Orleans, Massachusetts He was 66 years old Dr Knabe received his medical degree from the University of Leipzig in 1903, and came to this country in 1923 He was employed in the medical department of the General Electric Company from that year until his retirement last year He was a member of the Schenectady County Medical Society, the State medical society, and the American Medical Asaoctation

Samuel Leventhal, M.D., of Brooklyn, died on July 10 at the age of 48 He was graduated from the Long Island College of Medicine in 1923 and was associate physician at the Bushwick Hospital in Brooklyn He was a member of the Kings County Medical Society, the Medical Society of the State of New York, and the American Medical Association

Fredric Lewis, M.D., of New York City, died on October 3 at the age of 35 He was graduated from the Long Island College of Medicine in 1936 and served on the staffs of Harlem Hospital, and French Hospital During the war he was an officer in the Army Medical Corps, and at one time served as flight surgeon with the 6th Air Force in Panama. At the time of his death he was on inactive reserve He was a member of the medical societies of New York County and State, and the American Medical Association

George Trecise Polk, M.D., formerly of Brooklyn, died on September 6 at the age of 52 Poughkeepsie, Dr Polk was graduated from the Albany Medical College in 1917, practiced in Brooklyn for several years, and then opened offices in Pittsburgh, where he had been for the past five He was formerly assistant surgeon at the

Brooklyn Eye and Ear Hospital

Walter J Werfelmann, Sr, MD, of Syracuse, who had practiced medicine in that city for more than fifty years, died on September 2 Dr Werfelmann was one of the three surviving members of the class of 1890 of the Syracuse University College of Medicine. He was a member of the Onondaga County Medical Society, the State medical so-ciety, the Syracuse Academy of Medicine, and the

American Medical Association He was 77 years old William J Wagner, Lt.,(MC),USN, of New York City, was killed on September 17 in a Navy plane crash at Port Arthur, Texas He was 32 years old, and had taken part in amphibious actions at Casablanca, Sicily, and Salerno He received his medical degree from Jefferson Medical College in 1939, and served as an intern at Roosevelt and St. Vincent's hospitals before being commissioned in At the time of his death he was attached to the Naval Training Base, Corpus Christi, Texas.

#### AMPUTATIONS AVOIDED WITH PENICILLIN INJECTIONS INTO ARTERY

Amputations may be avoided and severe infections of hands, feet, arms, or legs cleared up when penicillin is given by injection into an artery instead of by other methods

Success with this method in 24 cases, believed the first treated in this way, is reported by Dr S Thomas Glasser, Dr John Herrlin, Jr, and Dr Boris Pollock, of New York Medical College and the Flower-Fifth Avenue and Metropolitan Hospitals, in the Journal of the American Medical Association (July 14)

One injection may cure cases of infection and inflammation without pus formation and discharge and without death of tissues, the doctors report.

Pain is often greatly relieved following the first injection. When amputation is necessary, it may be frequently possible to save more of the leg or arm, hand, or foot than would otherwise be saved

Infection complicating diabetes and arteriosclerosis, which often results in gangrene requiring extensive amputation, is a condition for which the artery injections of penicillin are particularly recommended. The doctors believe it would also be particularly helpful in war wounds of the extremities.

Less penicillin is needed when given by injection

directly into an artery than when given by injection into a vein or muscle or by mouth or local application

Instead of giving injections every three hours round the clock, as is often necessary, only one injection was given on any day in the 24 cases reported.

Injecting the drug into the artery is believed a most efficient way of concentrating it in the part of

the body where the infection is located

Very impressive to the doctors was the case of a 70-year-old man who had necrotic ulcers of his right foot, hardening of the arteries, diabetes, and infection Such a condition "is always regarded with alarm," they point out This man was given two artery injections, four days apart, of 50,000 units of penicillin each.

"Improvement was prompt and granulations appeared at the ulcer sites within one week," the Commenting further on this case, doctors report

they state

"Penicilin prevented extension of infection and we are impressed by the rate of healing which, although delayed by arteriosclerosis, is nevertheless far more rapid than we have ever observed under any other method of treatment."-Science News Letter, July 21, 1945

## Hospital News

#### **Improvements**

Miss Catherine A Bross, business manager of Rensselaer County's Pawling Sanitarium, has announced the installation of new x-ray darkroom equipment

The installation of this equipment, says Miss Bross, is the most important of the many improvements made in the county institution this year

This equipment includes two thermostatically controlled developing tanks, a large red safety light, a light for reading the x-rays, and a storage bin for undeveloped films. The tanks, in which twenty films can be developed at one time, are contained in a vat of water the temperature of which is kept constantly at a temperature of 65 degrees.

To facilitate the checking in of case data, all films have been centralized in one room. Steel file

drawers accommodate the ten thousand x-rays of the clinic patients, and open wooden cabinets are used for the three thousand chest pictures of the discharged patients. Among the films on file, many are of the old celluloid type. The newer x-ray film now in use is made of a noninflammable substance.

Regular chest clinics are held every Wednesday afternoon at sanitarium and twice weekly at the Health Center in Troy on Wednesday evenings and Friday afternoons. Monthly clinics are held in Rensselaer at Huyck's Mills on the first Thursday of each month, and in Hoosick Falls on the second Thursday of each month. At appointed times throughout the year, clinics are scheduled at various other places in the country. The sanitarium physicians examine at least 2,000 patients annually.\*

#### At the Helm

The appointment of Isabel Cameron as superintendent of Doctors' Hospital, in Port Washington, was announced on August 31 by Dr Morton Stein, head of the medical board

Miss Cameron was formerly superintendent of Albany Memorial Hospital and before that superin-

tendent of Cohoes Hospital, Cohoes

It was announced also that Dr J C De Liso, roentgenologist, recently discharged from the US Army Medical Corps, has been added to the hospital staff \*

After nearly nineteen years at the Sunmount Hospital as head of the tuberculosis department and heart consultant, Dr Charles O Purinton has submitted his resignation from the US Veterans' Administration service \*

Clifford L. Smith, well-known Hudson businessman, W F Salmon, president of the State Bank, Chatham, and Mrs J Sanderson Hand, of Stuyvesant Falls, have been elected to the Board of Trustees of the Hudson City Hospital, Hudson

Under recent action of the Board its membership was increased to fifteen trustees. As the Board is now constituted, all sections of the county are represented in its membership

Other members of the Board and its officers are

William H Graves, Hudson, president, J Wessel Ten Broeck, Greenport, vice-president, James J McEvoy, Hudson, secretary, James E Leath, Kinderhook, Dr Philip Freinberg, Hudson, Herman F Zorn, Hudson, Mrs George C Inman, Hudson, L P Hover, Germantown, Albert C Bristol, Copake, Miss Clara N Harder, Philmont, Frederick J Longley, Claverack, and Mrs John S Williams, Old Chatham \*

Miss Helen McAuliffe, of Syracuse, will become assistant superintendent of Memorial Hospital, in Syracuse, it was announced on September 13 by the board of directors. A graduate of Memorial Hospital, she has been administrative assistant in charge of admissions for three years.

She will replace Mrs Cordelia King, who will leave to become administrator of Little Falls Hospital Mrs King has been assistant to Miss Miriam

Curtis, superintendent, since July, 1943 \*

Reappointment of Joseph J Lovas, of Buffalo, to the board of managers of the Meyer Memorial Hospital was announced on September 13 by Mayor Joseph J Kelly

Lovas, who has served on the hospital board since it was reorganized a year ago, was renamed for a full five-year term Members of the hospital board

serve without compensation \*

#### [Continued from page 2336]

Poughkeepsie, it was said on September 8 though no details of building and fund-raising plans have yet been made public, spokesmen for both institutions said new buildings would definitely be added to present facilities

St Francis' plans to "double the capacity of the hospital in all departments," according to Dr James J Toomey, chief of staff This includes not only the hospital itself, but the nurses' home, living quarters, laundry, and central heating system

Foundations for a new building were dug before the war, and Dr Toomey said a master plan for the entire hospital is now being drawn up "We are definitely going to build," he declared Dr Toomey did not disclose how the hospital

planned to raise the necessary funds, but acknowledged that "some will have to be raised through public subscription "

Robert Hoe, president of the board of trustees at Vassar Brothers Hospital, said "nothing has been settled as yet," but "plans for a new hospital are being drawn up now"

Mr Hoe pointed out that increased demand on the facilities of the hospital makes it necessary to increase the facilities of the hospital itself and to ex-

pand nurses' living quarters

Extent of building will depend on how much money can be raised, by public subscription, Mr "The public will have to provide the Hoe said funds "\*

Contribution of \$25,200 by Weed and Company and associates to the Buffalo General Hospital's \$4,000,000 expansion fund, will make possible six semiprivate rooms in the proposed building, according to Henry W Wendt, chairman of the comon corporation subscriptions, who an-

nounced the gift on September 7
Underwritten by the company's subscription, the unit will comprise half of the south wing on the second floor of the new structure Its twelve beds will supply urgently needed accommodations for an

estimated 300 patients yearly

Under the plan by which a selected part of the proposed building may be established as a memorial upon subscription of the estimated cost of construction and necessary equipment, the section involved will be dedicated by Weed and Company and associates

The United Hospital Fund of New York began its sixty-seventh annual campaign on September 27 in Brooklyn and Queens with a luncheon in the Hotel St George, Brooklyn, and a dinner in the Forest Hills Inn, in Queens A total of \$1,661,255 is being sought throughout the city, of which the Brooklyn quota is \$250,000 and the Queens quota is \$70,000 Funds raised in the campaign will be used to assist eighty-seven member hospitals in greater New York and the Visiting Nurse Association of Brooklyn. Speaking at the luncheon Adrian Van Sinderen, chairman of the Brooklyn Division, disclosed that one half of the care provided by member hospitals in Brooklyn last year was furnished free or at less than cost '

The Wyckoff Heights Hospital, in Brooklyn, has voted to put into effect plans for a large wing, according to an announcement by Herman Ringe,

president of the board of trustees

The wing will cost about \$500,000 and will occupy a plot adjoining the hospital, it is explained. The new structure will increase the hospital's bed capacity by one hundred and fifty Mr Ringe says that it will be of the most modern construc-tion and will incorporate the latest advances in hospital planning and equipment \*

A total of two thousand, one hundred and sixteen gifts amounting to \$162,884 was announced on October 2 by the Manhattan-Bronx Women's division of the sixty-seventh annual United Hospital Campaign at a meeting in the Hotel Pierre ballroom nouncement brought the total of all gifts to date to \$373,633 The campaign opened on September 24

Dr Barbara B Stimson, assistant attending surgeon at Presbyterian Hospital, who served as a major in the British Royal Army Medical Corps during the war, described hospitals she worked in

from North Africa to England

"It is a shock to come back to America now," Dr Stimson declared "You do not know what is going on We have not been touched here"

The current campaign, with James S Adams as chairman, has as its goal collection of \$1,661,255, representing the difference between income and operational costs of the eighty-seven voluntary nonprofit hospitals and homes in the United Hospital Fund '

The Buffalo Electro-Chemical Company has contributed \$12,600 to the Buffalo General Hospital building fund to build and equip an electrocardio-graphic department, Henry W Wendt, chairman of the committee on corporation subscriptions, announced on September 14.

Presenting the subscription as a memorial in honor of company employees, Charles A Buerk, president of Buffalo Electro-Chemical, said the contribution will "make suitable public acknowledgment of the honor which we feel is due our employees who have served the nation in time of crisis "

Schenectady's campaign to raise \$1,200,000 for the construction of a two-hundred bed Catholic hospital has been oversubscribed, the Very Rev John H. Finn, in charge of the project, has announced.

The two-week campaign was concluded with a fund of \$1,337,181 pledged by Schenectady area

residents for the hospital.

Father Finn said the hospital, to be known as St Clare's, will be operated by the Sisters of the Poor of St. Francis A site for the building has been acquired \*

The first report meeting of the Special Gifts Committee of the Columbia Memorial Hospital building fund was a dinner meeting at the General Worth Hotel, in Hudson, on September 25

Interest in the new hospital is growing daily, as shown by the large number who have volunteered to do the interviewing of nearly a thousand persons throughout the country for special gifts, explained Luther B Fingar, of Germantown \*

# Correspondence

Veterans Administration 215 W 24th St New York 11, New York August 30, 1945

Medical Society of the State of New York 292 Madison Avenue New York, New York

Gentlemen -

The immediate expansion of the Rating Board Section of the Adjudication Division will require the services of twelve doctors to fill positions on the several rating boards The position is designated as rating specialist, medical In the belief that your Society is able and desirous to contribute the valuable assistance that is so vitally necessary to the accomplishment of prompt and satisfactory recruitment in this phase of our program, I am addressing this subject to your attention

The position of rating specialist, medical, is presently classified under the professional and scientific group under Grade P and S-4 The basic entrance salary is \$4,300 per annum, and with the overtime schedule of eight hours presently in operation, the aggregate annual rate is \$5,092 65 per annum

The duties of a rating specialist, medical, relate to determinations made by rating boards regarding the question of service connection of injury or disease, either by direct incurrence in active service with the armed forces or aggravation of a disease or injury which is shown to have pre-existed such service, and, further, to determine the degree of disability resultant upon such disease or injury held to be so incident to service

This employe is a member of a Board consisting of two other members, designated as rating specialist, claims, and rating specialist, occupational, which, under the emergent conditions obtaining, is now administratively complete with either one of the two members last mentioned The work requires no

medical examination of veterans except in those cases wherein a veteran requests opportunity for appearance before the rating board and his disability is of a patent character which may permit determination without recourse to medical appliances nature and degree of disability are ascertained from the medical records furnished by service departments and those provided by Veterans Administration Facilities, or state, county, and municipal hospitals. The employe has standard and routine daily hours of employment. At present, the daily hours are 8 30 AM to 5 00 PM six days weekly (which includes eight hours of overtime), and there is a half-hour lunch period intervening

In view of the increasing rapidity of discharge of members of the armed forces, and the corresponding relative increase in the number of discharged veterans filing claims for benefits due to disability, it is desired to accomplish this expansion with the least possible delay, to the end that sufficient training may be afforded new appointees to insure the rendition of prompt and effective service to meet current de-

mands

In view of our mutual concern for the welfare of the veteran returning to civil life and our consequent desire to render every assistance, it is anticipated that you will be able to render highly effective assistance in establishing contact with a sufficient number of doctors who are so economically situated, physically fitted, and willing to serve in this work as to permit of the filling of our needs without undue delay in a substantial and constructive manner

Arrangement for interview concerning the further particulars relative to the position of rating specialist, medical, may be made with Mr W F Greene, adjudication officer, at this office, by either letter or telephone. The telephone number is Longacre

5-2500, Extension 15

E B DUNKLEBERGER, Manager

## THE "PSYCHONEUROSIS FAD"

A "psychoneurosis fad" based on a mistaken belief that every returning veteran is maladjusted and in need of special training, is "causing returning servicemen some bewilderment and rapidly assuming ridiculous proportions in the United States." according to a recent editorial in the United States Army newspaper Stars and Stripes

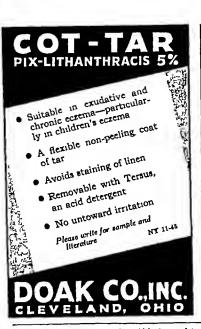

"Honest psychiatry is an established profession," says the GI editor "Its services are badly needed by many fine men who are coming out of the war with mental illness, but," he continues, "every screwball with thick lenses and a long haircut is setting up shop as an expert on the returning veteran."

Emphatic support for this viewpoint comes from Mr Frank H Bowles, Director of Admissions at Columbia University, who declared in a report to Dr Nicholas Murray Butler, retiring President of the University, that the belief that the American fighting men will return from war with warped values and a neurotic personality is "pre-tentious poppycock" Speculative attempts to Speculative attempts to

evaluate the state of mind of the GI were described

as "remote control psychoanalysis"

Likewise, Lt William Best, Jr, in an article in the Saturday Evening Post for April 14, 1945, under the title "They Won't All Be Psychoneurotics," suggests that if the soldiers are paying any attention to what they read in the newspapers they must have a terrific inferiority complex, imaging themselves as "tamed dogs gone wild who must pause on the road back to normalcy in order to be rehabilitated" On the contrary, Lieutenant Best says that "most of the soldiers felt far older and wiser from their experiences" in war and, in fact, "most of them felt it would take a lot to floor them" He reports that "the doctor in charge of one of our largest hospital ships told me that half of the patients classified as psychoneurotic showed amazing improvement the minute it was obvious that their ship was headed for the United States with no danger of turning back Overseas many a boy who suffers from acute homesickness is a psychoneurotic In civihan life he is merely homesick "—N Y Med, July 20, 1945

Discussion of cancer control would be incomplete without mention of the fact that the year 1945 marks the one hundredth anniversary of the birth of Wilhelm Konnad Roentgan (born March 27, 1945) and the lifteth anniversary of his discovery of the x ray, which has proved involuable in the diagnosis and treatment of cancer as well as of many other discusses.

Perhaps the best index of the progress being made in cancer control is the mounting number of cured cases. The American College of Surgeons up through 1943 had registered more than 33,000 per tients who had not had recurring symptoms five years or more after treatment. In line with these results are reports of various investigators on the improved survival of cancer patients. To cito one lastance. In Connecticut, of the hospitalized cancer cases treated for the first time in 1935, 63.6 per

cent were alive at the ond of the calendar year of treatment and 40 7 per cent were alive at the end of the next calendar year for cases first treated in 1942 the respective percentages were 74.5 and 03 1

These lavorable developments must not obscure the fact that cancer is, and for many vears will continue to be one of our major public health problems, especially in view of the increasing proportion of older people in the general population. Ranking numerically second only to heart disease as a cause of death, cancer in 1943 took about 107,000 lives in the United States accounting for about one in every nino deaths. Among white females, the disease is the leading cause of death between ages 30 and 60 years. It is obvious that the conquest of cancer will prove to be difficult and that the battle has only just begun—Statutical Bulletin March, 1948.

## REVIEWED

The Intervertebral Disc. With Special Reference to Rupture of the Annulus Fibrosus with Herniation of the Nucleus Pulposus By F Keith Bradford, M.D., and R. Glen Spurling, M.D. Quarto of 158 pages, illustrated. Springfield, Charles C. Thomas, 1941 Cloth, \$4.00.

This is a 158-page monograph comprising the anatomy, physiology, and pathology of the intervertebral disc. The clinical manifestations produced by posterior protrusion of a part of a disc and the roentgenographic findings following the introduction of a radio-opaque substance into the spinal sub-arachnoid space are both adequately elaborated Treatment and expected results are fairly stated. This monograph is a distinct asset in the evaluation of sciatica.

E JEFFERSON BROWDER

The Anatomy of the Female Pelvis Including a Description of the Placenta and Its Formation and the Foetal Circulation By C F V Smout, M B, M R.C S With sections on The Histology of the Female Reproductive Tract and a chapter on Ovarian Endocrine Function By F Jacoby, M D Octavo of 190 pages, illustrated. Baltimore, Wilhams & Wilkins Co, 1943 Cloth, \$800

This is an excellent treatise on the anatomy of the female pelvis. Its value is greatly enhanced by chapters on the formation of the placenta, fetal circuation, histology of the female reproductive tract,

Medical Care of Merchant Seamen. A Handbook of Ship and Aircraft Sanitation and Emergency Medical Aid. By W L Wheeler, Jr, M D Duodecimo of 212 pages, illustrated New York, Cornell Maritime Press, 1945 Cloth, \$200

Illustrations of Bandaging and First-Aid. Compiled by Lois Oakes, S.R.N., D.N. (Leeds & London) Octavo of 270 pages, illustrated Baltimore, Williams & Wilkins Co., 1944 Cloth, \$2.00

Bone-Grafting in the Treatment of Fractures. By J R Armstrong, M D Octavo of 175 pages, illustrated Edinburgh, E & S Livingstone, Ltd., 1945 (Baltimore, Williams & Wilkins Co) Cloth, S7 00

The Art of Medicine in Relation to the Progress of Thought. By A. E. Clark-Kennedy, M.D. Duodecimo of 48 pages. Cambridge (Eng.), The University Press, 1945 (New York, Macmillan Co.) Paper, 75¢.

and the endocrine function of the ovary and pitui-

tary
The text is very lucid, interjected here and there
with descriptions of particular appeal to the practicing obstetrician and gynecologist.

The book throughout is so profusely illustrated with beautiful colored plates, photographs, and drawings, that it is a veritable atlas of pelvic anatomy, with particular emphasis on obstetrics and gynecology

One hundred and fifty numbered references in the text add still more value to this fine book.

J HALPERIN

Approved Laboratory Technic. Clinical, Pathological, Bacteriological, Mycological, Virological, Parasitological, Serological, Biochemical and Histological By John A Kolmer, M.D., and Fred Boerner, V M D Fourth edition. Octavo of 1,017 pages, illustrated. New York, D Appleton-Century Co, 1945 Cloth, \$10

It is gratifying to see a new edition of this laboratory text which has become by virtue of its inclusiveness a part of the standard equipment of the modern hospital laboratory. It is futile to attempt a detailed review of the revisions of the various older methods as well as the addition of new procedures in such a small compass, however, certain of them seem to call for comment. For example, a new sec-

[Continued from page 2342]

tion has been added on the examination of feces for animal parasites and their products. There is a new section also on the examination of blood and tissues for parasites. The section on mycologic examinations has been rewritten

In the field of bacteriology the addition of data dealing with the cultivation of the anaerobes, the identification of the clostridia, and the methods for identifying organisms of the salmonella group in relation to food infections meet the increasing demand among laboratory workers for information of this type

The format and the new type used in the printing of this edition also deserve comments, as they have resulted in a more compact organization of the book with the addition of new material and without much

increase in its size

THEO J CURPHEY

Body Poise By Walter Truslow, M D Octavo of 312 pages, illustrated Baltimore, Williams & Wilkins Co , 1943 Cloth, \$4 50

The book discusses thoroughly the essentials of good body posture for the normal proper function, not only of the skeletal system, but also of the intra-thoracic organs and the intra-abdominal organs

It is rather elementary for the orthopedic surgeon, but it may be helpful to those engaged in the field of

physical training

It seems to the reviewer that the author puts too much emphasis in the value of exercises in the treatment of scoliosis. The consensus of opinion seems to be that exercises are not of much value in the correction of scoliosis, but are of some slight help in the maintenance of the correction which has been obtained by other mechanical means

J B L'Episcopo

The Doctor's Job By Carl Binger, M D Octavo of 243 pages New York, W W Norton & Co, 1945 Cloth, \$300

This book is important, as it is the first winner of a prize offered for books on medicine for the layman It is more important because it is only when the public understands the doctor that medicine will have nothing to fear from pressure groups which strive to serve their own ends without full consideration of the complexities of the modern problem Sympathetically and engagingly written, this book is worth while

CHARLES A GORDON

A Surgeon's Fight to Rebuild Men An Autobiography by Fred H Albee, M D Octavo of 349 pages New York, E P Dutton & Company, 1943 Cloth, \$3 50

This is the autobiography of Fred Albee It tells a straightforward and interesting story. Inasmuch as Albee's outstanding contribution to surgery is the bone graft, a good deal of the book is devoted to relating experiences about its development and establishment on a sound surgical basis. The author tells of his vast experiences in bone surgery in the last war, and also of his attempts to improve Pan-American relationships

In general, this reviewer found the book very enjoyable

CARMELO C VITALE

A Bibliography of Aviation Medicine Supplement. By Phebe Margaret Hoff, Ebbe Curtis Hoff,

and John Farquhar Fulton, M D Quarto of 109 pages Springfield, Ill, Charles C Thomas, 1944 Cloth, \$2 50 (Yale Medical Library)

This volume brings up to date the bibliography of aviation medicine, published in 1942. There are 2,336 additional entries in this volume. It is highly important for the student of aviation medicine that this bibliography be available and up to date

The form follows the original volume in method of arrangement and division of subtopics Two new subdivisions relating to Survival and Rescue, and to Rehabilitation have been added

L H BAUER

Radiologic Examination of the Small Intestine. By Ross Golden, M D Quarto of 239 pages, illustrated Philadelphia, J B Lippincott Co, 1945 Cloth, \$6 00

Whereas three of the four segments of the alimentary canal-the pharynx-esophagus, the stomach, the colon—are readily visualized by roentgen-ologic methods, the fourth segment, the small intestine, is rather difficult to demonstrate in its entirety. This fact, together with a low morbidity as seen on the autopsy table, accounts for the stepchild position of the small intestine in medical minds One of the pioneer students of the subject, Ross Golden, presents his and the literature's accumulated knowledge about the radiologic evamination of the small intestine in a book that will go a long way toward dragging the small intestine out of comparative obscurity into the place it deserves readers will be surprised to learn that in addition to the better known entities, such as ileus, regional ileitis, tuberculosis, and tumors, there is a great variety of conditions with more or less characteristic changes of the small intestine—nutritional disorders, hypoproteinemia, liver diseases, allergy, parasites,

scleroderma, etc

The book furnishes directions concerning indications of disease and the way of conducting the radiologic examination of the small intestine, including the use of the Miller-Abbott tube. The scientific level of the book is high. It goes into details of physiology and embryology, and it always states with great frankness where our knowledge ends and our ignorance begins. The harassed practitioner may at times get lost in the maze of scientific facts. In future editions it may be feasible to make it easier for him to find what has direct bearing on his daily work by employing a distinguishing type of

print

The illustrations are plentiful, clear, and informative, and the legends are arranged so that the illustrations can be understood without the text

S W WESTING

The Management of Obstetric Difficulties By Paul Titus, M D Third edition Octavo of 1,000 pages, illustrated St Louis, C V Mosby Co, 1945 Cloth, \$10

This discussion of the abnormal in obstetrics has considerable merit. The two previous editions have already found high favor. Much space is devoted to some gynecologic problems, notably sterility. The author proposes a new classification of the toximias, yet it is really no better than the one now in general use. The general practitioner and the resident will like this book, which is handsomely illustrated, conservative, and thoughtful

The Medical Clinics of North America New York Number May, 1944 Octavo, illustrated Philadelphia, W B Saunders Co, 1944 Published bimonthly (six numbers a year) Cloth, \$16 net, paper, \$12 net

The symposium contains a number of separate articles dealing with the various aspects of psychosomatic medicine. All of the articles have been carefully thought out, but some seem to be a little too much concerned with the differentiation between so-called psychologic and medical aspects.

The articles by Dr George E Daniels on "Non-specific Ulcerative Colitis as a Psychosomatic Disease" and Dr Milton H Erickson on "Hypnosis in Medicine" are perhaps the best balanced and most

miormative

In general the symposium gives an excellent picture of what is perhaps the best in psychosomatic medicine today

ARTHUR SHAPIRO

Child Care and Training By Marion L Faegre and John E Anderson Sixth edition, revised Duodecimo of 314 pages, illustrated Minneapolis, University of Minnesota Press, 1943 Cloth, \$2.50

This book is another addition to the large list of books on child care. The authors are connected with the Institute of Child Welfare at the University of Minnesota. The subject matter includes advice on physical growth and development, learning, habit development, and social adaptation. There is also a list of reference books on the training of children.

The book may be recommended by physicians for the use of parents

STANLEY S LAIM

Life Overflows An Original Scrapbook Arrangement of Soothing Philosophical Thoughts By Carl Leonard Thenebe, M D Octavo of 116 pages Boston, Bruce Humphries, Inc., 1944 Board, \$2 50

Dr Thenebe has written something that is really original. Little scraps of thought are jotted down that are pearls of wisdom and gems of expression. It requires no effort to read. There is no plot or sequence to follow. Instead of chapters the book 1: divided into Pauses. It is intended as a mental refreshment between each pause.

This book can be safely placed on the bedside table of every patient

THOMAS B WOOD

The New-Born Infant. A Manual of Obstetrical Pediatrics. By Emerson L Stone, M D Third edition Duodecimo of 314 pages Philadelphia, Lea & Febiger, 1945 Cloth, \$3 25

This excellent little volume, in its third edition, is unique in that its author is an obstetrician, and it is the more valuable for that reason. There are many places in this country where the training of pediatricians has not included supervision of an obstetric nursery. And there are many obstetricians whose knowledge of the newborn is limited. The author has covered the neonatal field carefully and well. This book is highly recommended.

CHARLES A GORDON

Bronchial Asthma. By Leon Unger, M D Octavo of 724 pages, illustrated Springfield, Ill, Charles C Thomas, 1945 Cloth, \$900

This volume of 730 pages, on the subject of bronchial asthma, is divided into three sections The major portion of the text is devoted to the clinical aspects of bronchial asthma, including history, pathology, cause, diagnosis, and treatment. Theoretic considerations have been kept at a minimum throughout the book. An excellent up-to-date chapter on the military aspects of bronchial asthma is included. A laboratory section, dealing mainly with the preparation of extracts, and an appendix containing allergen sources and various types of instructions for patients, complete the volume An extensive bibliography may be found at the end of each chapter

This book can be used profitably by the student, practitioner, and specialist MAX HARTEN

Mass Radiography of the Chest. By Herman E Hilleboe, M D, and Russell H Morgan, M D Duodecimo of 288 pages, illustrated Chicago, Year Book Publishers, Inc., 1945 Cloth, \$350

The routine x-ray examination of the chest in private practice and industry is so universally practiced today that one welcomes the publication of any procedure that renders this type of study more practicable. To this end the authors have described, at great length, the development and practical application of modern photofluorographic apparatus of today as manufactured by the leading x-ray equipment manufacturers. The apparatus available for mass radiography—energizing units, fluoroscopic screens, phototimers, and automatic cameras—are thoroughly explained and discussed.

The value of detecting early pathologic pulmonary and mediastinal lesions is stressed, and the routine followed is thoroughly explained. Some forty-seven excellent x-rays of the chest portraying all types of abnormal pulmonary, pleural, and mediastinal shadows are presented in detail, with ex-

planatory notes

As this method of study is becoming more and more appreciated, the publication of this complete résumé of the subject is timely and extremely valuable. The book therefore becomes a "must" for all those interested in communal health, and will prove a valuable addition to the library of the radiologist.

MILTON G. WASCH

Textbook of Anesthetics By R J Minnitt, M D, and John Gilhes, M C, M B Sixth edition Octavo of 487 pages, illustrated Baltimore, Williams & Wilkins Co, 1944 Cloth, \$700

This textbook is recommended to the beginner in It teaches fundamental concepts of anesthesia anesthesia theory and technic from preanesthetic observation and premedication ranging through the stages of general anesthesia, and the pharmacology of the agents, to recovery including postanesthetic complications. Of greater interest are the descriptions of the various machines used by our English This book falls short in the matter of brethren An example is the very meager pharmacologic discussion of the drugs where hardly an intimation is expressed concerning their action on the various organs. The chapter on Local and Regional Anesthesia is skimpy and presents very little information to anesthesiologists, but does help on dental nerve blocks A discussion of demerol and curare might have been included The fine diction and clarity of expression make this book interesting and easy reading. This is of particular value to students of anesthesiology because all discussion is IRVING M PALLIN kept to the point

NATIONAL DISCOUNT & AUDIT CO Hereld Tribune Eldy New York 18 N Y

# SUGGESTIONS FOR CONTRIBUTORS TO THE NEW YORK STATE JOURNAL OF MEDICINE

The New York State Journal of Medicine asks its contributors to follow the suggestions listed below in the preparation of their articles. In this way they will greatly facilitate the expeditious publication of the Journal. These suggestions have been devised in order to save correspondence, avoid return of papers for changes, minimize the work of preparation for the printer, and save the high costs of corrections made on galley proof

Size of Articles —It is earnestly desired that scientific articles shall not exceed 6 Journal pages at the outside Longer articles tend to lower reader interest. An average of five or six seems to be the most desirable from this point of view. Calculation can readily be made by multiplying the number of double-spaced typewritten manuscript pages by the fraction two-fifths, e.g., twelve manuscript pages will make five Journal pages.

Manuscripts —Papers must be typewritten on one side only of white sheets consecutively numhered, and be double spaced with one-inch margins. They should be prepared with great care so as to be typographically correct. All headings, titles, subtitles, and subheadings should be typed flush with the left-hand margin. This is imperative for rapid and accurate composition by the printers.

Titles—The title should be brief and typed in capital letters. The subtitle can he longer and should he typed in caps and lower case letters. Under the title, or subtitle, if there is one, should appear the name of the author and city in which he lives. Directly under his name should be the hospital or institution with which he is affiliated.

Subheadings —Subheadings should be inserted by the author at appropriate intervals

References—It is the unfailing practice of the New York State Journal of Medicine to use specific "references" rather than "bihliography" There should appear in the text reference numbers, typed above and to the right of the word to which there is a reference. A list, consecutively numbered, of these references should follow at the end of the manuscript (Note that spelling in list is same as in text). The arrangement should be as follows and should include all items.

a Bool s—author's surname followed by initials, title of book, edition, location and name of publisher, year of publication, volume, and page number Thus, Osler, W Modern Medicine, 3rd ed, Philadelphia, Lea & Fehiger, 1927, vol. 5, p. 57

b Periodicals—author's surname followed hy

initials, name of periodical, volume, page, month (day if necessary), year of publication Thus, Leahy, Leon J New York State J Med 40 347 (March 1) 1940

NOTE The JOURNAL does not include titles of articles

Case Reports —Instead of abstracts of hospital histories, authors should write these reports in a narrative style with properly completed sentences All unimportant details should be deleted with such general negative statements as fit the case

Tables —While tables are very useful on lantern slides in the reading of papers, they fail of this purpose to a large extent in the printed page For that reason it is urged that they he reduced as much as possible to descriptive language

Illustrations —These should be kept to the minimum necessary to make clear the points to he registered hy the author. In some instances they are imperative to proper understanding, in others they are merely picturesque. The latter can be excluded to good effect, both as to space and the not inconsiderable cost.

When illustrations are to be used they should accompany manuscripts and each should always be referred to in the text, preferably by number Drawings or graphs should not he larger than 12 × 16 inches, and must be made with jet black. India ink on white paper Do not use typewrier for lettering. The smallest lettering on 8 × 10 inche copy should be no less than 1/4 inch high. Cross-section paper (white with black lines) may be used, but should not have more than 4 lines per inch. If finer ruled paper is used, the major division lines should be drawn in with black ink, omitting the finer divisions. In the case of finely ruled paper, only blue-lined paper can be accepted. Lettering and all markings must be large enough to be readable after reduction. Mail rolled or flat, never fold Photographs should be very distinct and show clear hlack and white contrasts. They must he on glossy white paper. Avoid round and oval photographs

white paper Avoid round and oval photographs Whenever possible "crop" photographs, 1e, mark portion that can be excluded when reproduced Crop marks should be on margin of photographs Do not run pencil lines through photographs

It is important to mark the top of the illustration on the hack, also its number as referred to in the text, thus, Fig 1, 2, and the name and address of the author

Legends should be typewritten on one sheet of paper and attached to the illustrations

In bronchial asthma Searle Ammophyllin exerts an antispasmodic effect. It relaxes the bronchial mus culature permitting the bronchioles to resume more normal diameter, thus affording freer passage of air

A further advantage—Seatle Aminophyllin is usually effective in relieving patients who have become resistant to the antiasthmatic effect of epinephrine.

Searle Aminophyllin—the Pioneer American Product—is available in all usual dosage forms

# Number 3 of a Series

IN ANEMIA OF CHRONIC BLOOD LOSS

In the management of chronic blood loss, therapy designed to support red cell and hemoglobin formation is essential. Iron must be supplied to correct hypochromia, liver and the B vitamins bolster an overworked bone marrow in the production of red cells. The combination is more effective than iron alone.

# HEPATINIC

presents iron in readily assimilable ferrous form, together with Crude (Unfractionated) Laver Concentrate and Vitamin B Complex

Crude (Unfractionated) Liver Concentrate is prepared so that it retains the crythropoietic and nutritional principles of whole liver which are lost in the highly refined concentrates Furthermore, it is subjected to enzymatio digestion to provide maximum assimilation and prompt therapeutic response.

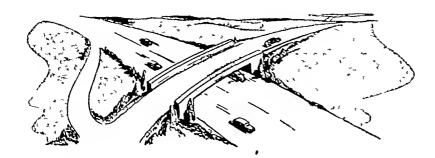

The appealing and palatable taste of Hepatinic assures patient acceptance and particularly recommends the product for pediatrics

FORMULA: Each fluidounce Elixir Hepatinic contains

Ferrous Sulfate 12 gr., Crode (Unfractionated) Liver Concentrate (equivalent to 660 gr. frein liver) 60 gr. Thiamine Hydrochlorkle 2 mg. Riboflavin 4 mg., Niacinamide 20 mg., together with pyridoxine pantothenio acid, choline folio acid, vitamin Bij, vitamin Bij, biotio inositol para-amino-bentoriacid, and other factors of the vitamin R complex.

Bottles of one pint and one gallon Tasting samples on request

McNeil Laboratories

# WHAT A PROBLEM THEY USED TO BE... THOSE PATIENTS WITH MANY VAGUE SYMPTOMS!

Now their treatment often begins at the first visit. It may be only to "make the approach" to the diagnosis or it may go straight on until the destination is reached—the patient relieved.

Subclinical deficiency of essential nutrients is conceived as almost a new disease—caused, not by the presence of a pathogen, nor even the absence of an essential, but none-the-less an entity due to inadequacy of one or more interdependent essentials. The concept is a convenient view forced by prevalence of the condition

Most often, perhaps, it is components of vitamin B complex, the many-sided nutrient, that are inadequate And it is their availability in a noteworthy preparation, like Breonex-Stronger, that makes two-phase management of the patient possible

Breonex-Stronger Solution is administered tentatively or to completion of the case when substantial concentration and rapid absorption of the principal components of B complex are required Supplied in 2 cc ampuls and 10 cc vials, primarily for intramuscular injection

For maintenance dosage of B complex by mouth, Becaplets-Breon are often given after the more profound and prompt treatment has been administered

Especially for children, Becomco-Breon, a potent vitamin B complex liquid with a 'chocolate sun dae" taste, is likewise available

George A. Breon & Company

PALATABLE • WELL TOLERATED • THERAPEUTICALLY EFFECTIVE
The development of CALCREOSE (Maltibie) has, in
deed, "smoothed the rough spots" in creosote therapy
so frequently provocative heretofore of nausea and
distress • Moreover, CALCREOSE (calcium creosotate)
exerts bactericidal and bacteriostatic action up to
three times as great as that of creosote • Thus, in
providing all the well known benefits of creosote in
a pleasant and palatable form, CALCREOSE proves
highly effective in many bronchial and respiratory
affections lessening cough, diminishing expectoration, reducing its purulency and deodorizing
sputum. Also it tends to stimulate the appetite
and improve the patient's general condition

AVAILABLE: As tablets (4 gr.) in bottles of 100 500, and 1000 COMPOUND SYRUP CALCREOSE in pint or gallon bottles.

Calcreose

# Drotective

# FOODS IN CANDIES

THE nutrient value of sugar in candies is well known—it supplies high caloric energy in small bulk, energy which becomes promptly available, with remarkably little digestive effort. The fatigue-dispelling efficacy of candy has gained added recognition during these war years

But in the minds of many physicians candy is little but sugar What are the facts?

During the past two decades especially—since the coming of the candy bar—the greater percentage of candies have come to contain more and more of the recognized protective foods. On the basis of the candy industry's consumption of these foods it becomes apparent that the nutritional contribution of such candies goes considerably beyond merely the caloric value of their contained carbohydrate. Note these figures

During 1943 the candy industry used 250,000,000 lbs of nuts and peanuts. 10,000,000 lbs of fruits, 6,000,000 lbs of eggs, 400,000,000 lbs of milk, cream, and butter, and 400,000,000 lbs of chocolate

Whatever these foods contain of protein, fat, and the noncaloric so-called protective food factors such as vitamins and minerals, becomes part and parcel of the candies in which they are used

# THE NUTRITIONAL PLATFORM OF CANDY

- Candies in general supply high caloric value in small bulk.
- 2. Sugar supplied by candy requires little digestive effort to yield available energy
- 3 Those candies, in the manufacture of which inilk, butter, eggs, fruits, nuts, or peanuts are used, to this extent also—
  - a) provide biologically adequate proteins and fats rich in the unsaturated fatty acids.
  - b) present appreciable amounts of the important minerals calcium, phosphorus, and iron,
  - c) contribute the macin, and the small amounts of thiamine and riboflavin, contained in these ingredients
- 4 Candies are of high satisty value, eaten after meals, they contribute to the sense of satisfaction and well being a meal should bring, eaten in moderation between meals they stave off hunger
- 5 Candy is more than a mere source of nutri ment—it is a morale builder, a contribution to the joy of living
- 6 Candy is unique among all foods in that it shows relatively less tendency to undergo spoilage, chemical or bacterial

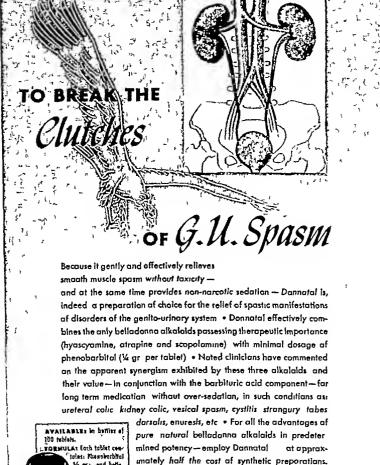

This Platform is Acceptable for Advertising in the Publications of the American Medical Association

Does Tampax improve
the psychological attitude
--tion?

toward menstruation?

**EMPHATICALLY** 

Any one of the many advantages singularly inherent in TAMPAX might well serve to bring a woman greater "peace of mind" during the menses Indeed. many patients have told their physicians that since Tampax fits so comfortably in situ, making them "hardly aware of its presence"-it enables them to "forget that they are menstruating", so they are free from much of the "disturbing annoyance they had every time they menstruated "1

In addition to providing this "natural" comfort, TAMPAN has proved so thoroughly adequate and safe<sup>1,2,3</sup>, and so successful in overcoming problems associated with the external pad such as odor, vul var irritation, and chafing,12,1 and of conspicuous and, finally, allows of so much wider a range of activity during the period . that women everywhere are fast becoming "converts" to this newer, pleasanter, internal form of protection pioneered by a physician

Tampax is available in three absorbencies "Regu lar", "Super" and "Junior" The coupon below is for your convenience

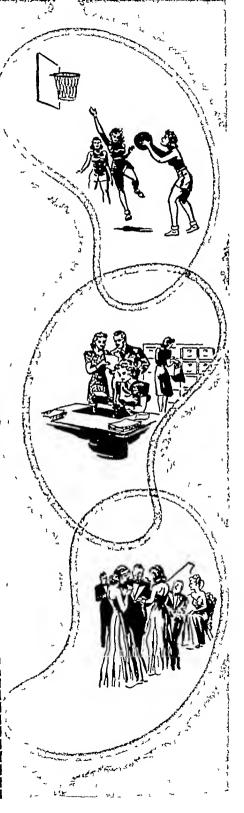

Beforences: 1. West. J Surg., Obst. & Gyn., 51 150, 1943 2. Clin. Med. & Surg., 46:327, 1939 3, Am J Obst. & Gyn., 46:259, 1943.

White s Otomido is sivallable in dropper bottles of one half fluid ounce (15 cc.)—on prescription only

WHEN digestive symptoms and general malaise are accompanied by marked downward displacement

of the viscera, they are often relieved by ANATOMICAL SUPPORT.

X-Ray of patient with visceropiosis (Left) The lesser curvature of the stomach is below the crests of the ilia (Right)  $\lambda$ -Ray of same patient after application of Camp Support for visceroptosis indicating how the viscera is held in a more nearly normal position.

# Visceroptosis Support - CAMP

The roentgenologist may or may not find disturbed conditions in the duodenum...the displaced viscera

being the only finding For these patients, many physicians prescribe adequate rest. proper food at regular intervals, graduated exercises (especially for the patient with "visceroptotic habitus"), and a scientifically designed anatomical support. Numer-

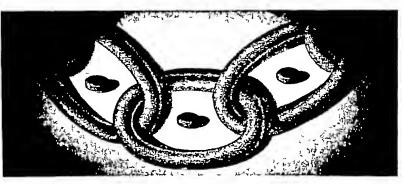

Camp supports for viscerop tosis are fitted and adjusted with the patient in the partial Trendelenburg position Pads are frequently used under the direction of the physician

ous reports show that this treatment results in the gradual disappearance of the digestive symptoms

with improvement in general health and weight gains for the thin patient. In time the support may be discarded

Camp Supports are also of assistance for postural defects that so frequently accompany the visceroptotic condition

# STRONG LINKS For Iron-Deficiency Anemias

In hematinic and regenerative therapy, the combined action of Vitamin B Complex, plus Liver, plus Iron is more effective than any one or two of these. The nutritional influence of liver and vita inins assists in the utilization of iron for hemoglobin production.

Multiple prescription writing to achieve the de sired therapeutle results is not only time consuming for the physician, but inconvenient and expensive medication for the patient.

Each ENDOGLOBIN TABLET contains Liver residue 3 gr Ferrous Sulfate, Exsiccated (USP)

3 gr, Thiamine HCl 1 mg, Rihoflavin 066 mg and Niacin 10 mg

For nutritional anemias not intended for perni cious anemia

Samples and literature to physicians on request.

# ENDOGLOBIN 7ablets

in the evening of the nineteenth century. It surrounded the morning of our own century with the rosy light of hope and promise. Like a glittering sun it shines resplendent on the working day of the twentieth century, revealing new fairways and fresh horizons in nearly every land in the world of science. • • • In commemorating William Conrad Roentgen this year—the centennial of his birth, also the semi-centennial of his discovery of the x-ray—one is inspired anew by the above tribute spoken by Dr. Gosta Forssell, of Stockholm, Sweden, before the Fifth International Congress of Radiology, held in Chicago in 1937.

OUR FIFTIETH YEAR OF SERVICE

# KONDREMUL SERVES

In the treatment of constipation, Kondremul—smooth emulsion of mineral oil with Irish Moss—has been found unusually effective because it mixes with the waste matter in the upper colon, thus converting the fecal mass into a soft stool — Its smoothness of action and gentle effectiveness have definite patient appeal

All three types of Kondrem ul are pleasant to take, and are of creamy consistency

- ◆ Kondremul Plain—for simple con stipation
  - Kondremul with non-bitter Extract of Cascara\*—for atonic, senile and pregnancy constipation
    - Kondremul with Phenolphthalein\* (2.2 grs phenolphthalein per tablespoonful)—for resistant cases

\*Caution Use only as directed

Well nourished? At a glance, yes But good nutrition cannot be gauged so easily. The hypertensive patient, like the diabetic or peptic ulcer case on a strict regime, may be bordering on nutritive failure as a result of his special diet. It takes careful evaluation to determine whether nutritive failure exists.

Spies¹ states: "severe atypical deficiency disease, like other forms of nutritive failure, can be successfully corrected by the application of four essentials." One of these 15 administration of the four crit-

ical water-soluble vitamins in high dosage.

Squibb Basic Formula is the same formula used by Spice 1,2 and Jolliffe and Smith based on years of their clinical experience.

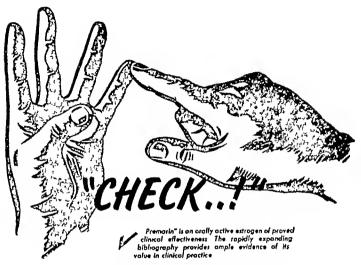

Each Squibb Basic Formula Vitamin Tablet contains, thiamine hydrochloride 10 mg, macinamide 50 mg, riboslavin 5 mg, ascorbic acid 100 mg

For complete information, write on your prescription blank "Nutritive Therapy" and mail to Squibb Professional Service Dept., 745 Fifth Avenue, New York 22, N Y

# Greater Efficacy...

# YET THOROUGHLY NON-IRRITANT

Even under adverse conditions, such as excessive heat and humidity—under which ordinary tar preparations frequently lead to furunculosis and other adverse reactions—Tarbonis proves nonirritant Yet its therapeutic efficacy is equal, if not superior, to ordinary tar preparations, including those of much higher concentration

The active ingredient of Tarbonis, a unique liquor carbonis detergens (5%), is extracted from selected tars by a process distinctly its own This process results in a uniform, nonirritant product high in concentrations of sulfurs

and unsaturated hydrocarbons (the substances to which the action of tar is attributed) The Tarbonis vehicle is a greaseless, vanishing-type cream which cannot be detected on the skin after application

Tarbonis is of excellent value whenever tar is indicated—in all forms of eczema, seborrheic dermatitis, certain fungus infestations, pruriginous intertrigo, and other cutaneous disorders

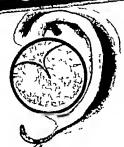

THE TARBONIS COMPANY
4300 Euclid Ave Cleveland 3, Ohio

Distributed in Canada by Fisher & Burpe Ltd Winnipeg Man

All the therapeutic value of tar in an odorless, greaseless, non-staining, non-spiling, vanishing-type cream

# Medications of Choice FOR THE SPECIFIC INVOLVEMENT

# Awralgan in Acute Otitis MEDIA

## Symptoms

Pain, fever, edema, leucocytosis, sense of fullness and impaired hearing

#### Treatment

Relief of pain and inflammation— Auralgan.

#### Action

Decongestant, analgesic, bacteriostatic.

Scientific deteend reprints of clinical studies reporting upon the use of Oresmoson available on request.

# Otosmosan

# in CHRONIC SUPPURATIVE OTITIS MEDIA

# Symptoms

Persistent discharge, often foul smelling, usually no toxemia, no pain no fever

## Treatment

Olosmosan.

## Formula

Sulfathlazole carbamide 20% in glycerol (Doho).

### Action

Deodorizes the discharge, liquifies unhealthy granulations, bocteriostatic, permits normal epithelialization.

Complimentary quantities for clinical trial

# Speed-An Important Factor In Antianemia Therapy

Speedy remission of symptoms in secondary anemia is of primary importance to the patient. Hemoglobin restoration and return of well-being are hastened when therapy not only provides iron, but also compensates for the other deficiencies usually manifested

LIVITAMIN, an unusually palatable liquid, supplies iron which is highly available and promptly utilized, liver concentrate presenting the fractions found valuable in the anemias, a rich store of B vitamins which aid in overcoming the frequently severe anorexia and in correcting nutritional deficiencies

## Each fluidounce of Livitamin presents.

Fresh Liver (as Liver Concentrate)
Thiamine Hydrochloride (B<sub>1</sub>)
Riboflavin (B<sub>2</sub>, G)
Nicotinamide (Niacinamide)
Pyridoxine Hydrochloride (B<sub>3</sub>)
Pantothenic Acid 2 oz. 3 mg 1 mg 25 mg 1 mg 5 mg Iron and Manganese Peptonized Contains the vitamin B complex factors naturally occurring in liver and rice bran, fortified with synthetic B<sub>1</sub>, niacinamide, B<sub>2</sub>, B<sub>6</sub>, pantothenic acid

and with iron and manganese In doses of 2 to 4 teaspoonfuls t.1 d Livitamin rapidly corrects hemoglobin deficiency Available in 8 oz. bottles

# Specific Action

# TO PROMOTE FAT DIGESTION

When fat digestion is impaired due to deficient bile secretion, and when fatty foods prove intolerable in the absence of gallbladder involvement, Degalol—the original, chemically pure deoxycholic acid—offers noteworthy advantages.

A constituent of human bile, it is the fraction chiefly concerned with fat emulsification, promoting the digestion and absorption of ingested food fats and the utilization of the fat-soluble vitamins.

In the dosage required, Degalol exerts little or no choleretic influence. Thus it proves superior to ordinary bile salts which not only are less potent in their influence on fat emulsification, but—since they are required in higher dosage—produce side actions which are frequently undesirable. The powerful choleretic influence of the bile salts, for instance, is definitely to be avoided in catarrhal jaundice though fat digestion and vitamin absorption are to be enhanced.

DOSAGE

One or two 1½ gr tablets t i d. Eupplied in boxes of 100 sanitaped 1½ gr tablets. Avail able on prescription thru all pharmacles When fatty foods lead to postprandial distress and epigastric pain, Degalol frequently proves specific. In suspected or frank deficiency of fat-soluble vitamins D, E and K and carotene, the administration of Degalol together with the vitamins is indicated.

CHEMICALLY PURE DEOXYCHOLIC ACID

Riedel - de Haen, Inc. • New York 13, N. Y.

# PROMPT Relief OF PAIN

GREATER AND MORE PROLONGED ACID
NEUTRALIZING POWER

An Outstanding
Pharmaco-Chemical
Achievement

Magnesium Trisilicate In a True Magma

Contains No Aluminum Hydroxide

**Not Constipating** 

Clinical response to Magmasil sets a new high standard in the treatment of peptic ulcer, gastritis, hyperchlorhydria. Since it is free from the drawbacks of many other antacid medications, Magmasil therapy is marked by dependable patient cooperation.

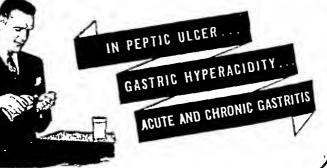

Magmasil cannot lead to alkalosis, to chloride depletion, to constipation. In the dosage employed, it exerts no influence whatsoever on intestinal motility.

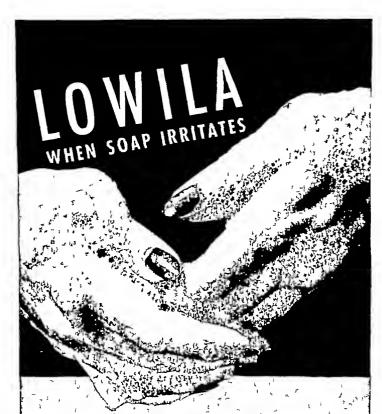

Since its profound neutralizing power (86 cc of N/10 HCl per teaspoonful) is exerted over fully four hours after ingestion, fewer doses are needed, and pain and pyrosis do not recur The customary eleven o'clock dose usually holds the patient comfortable through the night

Because of its high protective action Magmasil leads to rapid remission and unimpeded healing

The purity and potency of drugs and chemicals used in the manufacture of Lilly Products are never taken for granted Testing, assaying—not just "thinking they're right"—determine the acceptability of all crude materials. Even the best materials which the markets of the world afford must pass a rigid inspection. Manufacturing procedures are conducted by trained workers under the supervision of experienced pharmaceutical chemists. The blueprinting of master formulas and the accompanying coupon system practically eliminate the possibility of errors. Finished products are subjected to chemical assay or physiological test as their nature indicates.

Fluid extracts, tinctures, elixirs, ointments, and all other USP and NF preparations bearing the Lilly Label receive the same meticulous care in testing and assaying as do the many prominent, special therapeutic agents so familiar to physicians everywhere Every single Lilly Product must be worthy of the name it bears. You have the assurance that there are no finer pharmaceuticals or biologicals to be had at any price, anywhere. The Lilly Label is the emblem of quality.

## The Customer Is Always Right

It seems still somewhat difficult to get across to large numbers of people the fundamental concept of medical insurance to meet the costs of extraordinary and unpredictable illness. The customers still prefer the burlesques! Perhaps we have not approached the subject with sufficient simplicity. This could be because we have not been too sure ourselves of what we were talking about. It could also be due to the fact that we have not used the most effective means of publicity, or have used them badly

Maybe we have not had a sufficiently

good and salable product.

The growth in recent years of voluntary medical insurance plans in this state was praised by Dr Edward R. Cunniffe, president of the Medical Society of the State of New York, before the Sixth District Branch of the State Society, September 26, 1945 He predicted the development of a uniform insurance policy which would be available to people in all parts of the state

"We have accumulated considerable experience in furnishing medical care to the public through these low-cost prepayment plans," Dr Cunnific stated. "So far, there are three such plans already well established and two more in the process of organization and operation. These plans will cover every county in the state. I believe the time is at hand for all these plans to draw up a uniform policy for medical, surgical, and obstetno care in the hospital which will be available at low cost to everyone in New York State who wishes to take advantage of a plan to prepay medical care."

We still speak in the future tense of the uniform insurance policy. Well, a good deal of recent advertising has featured the plans of a postwar world and the things that people would be able to acquire in the future, ranging from improved locknuts and washers to universal peace. But you can't keep promising forever. For a while people are willing to make allowances, but there are no essential or critical materials involved in writing a medical insurance policy. Enough experience is now accumulated to satisfy actuarial figure hounds. Soon there will be released from the military services enough

doctors to service the policies competently The society is plugging for speed

Dr Cunnifie also appealed at the same meeting for the early release of medical officers from military service so that they might return to essential civilian duties

"Now that the war is concluded there certainly can be no reason for retaining medical officers other than those needed to accompany the army of occupation and a comparative few who are needed to continue their service in the military hospitals

"Conditions in the hospitals," Dr Cunnifie said, "are such that many doctors are needed at once, institutions are so lacking in medical personnel that operations are deferred, patients refused admission, and even whole floors or wards closed due to the inability to provide service. The most urgent need of doctors is in the dispensaries Certainly with conditions in the civilian community as they are, no physican should be held in military service a day longer than the interest of the nation requires."

With sufficient professional service again available to implement the voluntary medi-

cal indemnity policies there seems little excuse for delay in a unified state-wide project

Note that we still speak of insurance Possibly that is a mistake at this point The public is usually more interested in the actuality than in the plan mobile or airplane manufacturer could sell merely the blueprints of his product no matter how excellent, as blueprints, they were Yet that is to some extent what we have been trying to do Furthermore, the public is little interested in the mechanics of how insurance works Just as in buying an automobile it wants to know that it does work. how far it will work on a gallon of gas, and what the operating cost is, where service stations are located It expects to pay reasonably for the automobile, running expenses, and repairs The public, in our humble opinion, will not buy an automobile or insurance protection which operates only in one or another section of the state That is a horse-andbuggy idea which does not fit in with atomic bombs, radar, 500-mile-an-hour travel, television, or what the public thinks modern medicine should offer

And the customer is always right

# The Rh-Negative Problem

Timely recognition has now been given to a hitherto unknown cause of fatality in the newborn during the first week of life, accounting as well for many stillbirths and repeated spontaneous abortions. Within a comparatively short time it has been determined that a certain factor in the blood of the parents may bring about these results Additionally there is observed the unfortunate, often fatal, serologic reaction in a mother who may only have needed a blood transfusion.

The presence of the so-called Rh factor in the blood of about 85 per cent of the white race means that the remaining 15 per cent are without it, they are Rh negative. A couple may be ideally mated in all respects, but if the wife comes within the latter class, the results in subsequent pregnancies are generally unfortunate. The first child may be normal but later there will be abortions and malformations or the infant may be

afflicted with the dread erythroblastosis. The explanation for these results may be found in the numerous articles which have appeared in our medical journals.

A knowledge of these peculiar blood conditions should be had by every physician who undertakes maternity care. In an emergency when a mother requires transfusion or when an erythroblastic baby is born, resort has been had to the father's blood. Usually he comes in the Rh-positive group and his donation merely aggravates the condition sought to be helped. The mother has a severe reaction, often fatal, sometimes the baby dies. It is important not only that the physician be fully informed, but also that the laity be apprised of this condition. Recent articles have appeared on this subject in the lay press.

The only remedy now acceptable is Rh-

<sup>&</sup>lt;sup>1</sup> Woman's Home Companion (Sept.) 1945 Readers Digest (Oct.) 1945 p 38

negative blood, given early In every community lists of suitable donors should be available Every good obstetrio hospital service should provide itself with the necessary facilities, and county medical societies will doubtless organize blood banks in accordance with the known facts

Another somewhat radical suggestion is gaining recognition, namely, that when the premarital serologic tests are made, the Rh factor of each marriage partner be determined and its significance made clear. The Rh-negative serum necessary for this purpose is not yet available in sufficient amounts but it probably will be in time. Such advance knowledge will be of value because, while a change in blood type seems impossible from what we know at the present time, medical science undoubtedly will find means by which the results of pregnancy in such unfortunate unions can be adequately handled.

# Socialize Everything or Nothing, I

On all sides one hears. Why does the medical profession oppose socialized medicino? Not fill of the profession does. Those who do oppose it do so because they think, with good reason, that it will not work as well as the present system of practice unless everything else and everybody else is "socialized" also. Their good reason is tho way it has failed to work well in countries where it has been tried.

There seems little cause to "socialize" medicine and to stop there. Free medicine is now working well, advancing, making progress, as everyone knows, in a free economy Should we "socialize" medicine and not the patients? Should we "socialize" medicine and not the manufacturers who make the drugs, the appliances, the automobiles, the surgical instruments, the biologic products which medicine uses? And how about the labor unions whose members make the things that doctors need? Shall they be "socialized" also?

Wo do not ask these questions out of idle curiosity

This JOURNAL opposes socialised

We believe we correctly represent the attitude of the Medical Society of the State of New York when we do so And the attitude of the Society is the majority opinion of its membership

If this country is heading toward conversion to a socialist republic, we had better know about it. If it is true, as Lincoln said,

that we cannot exist half slave, half free, it seems absurd to think we can exist half socialized, half free, no matter who says so We paid the price of n civil war to settle the first question—what price this one? An inswer to this seems called for

In homoly phrase, it's "whole hog or none" Medicine is only a tiny, if nubbly, minority of the electorate, probably not really worth the trouble to socialize—except as an experiment, a trial balloon so to speak. If it can be "socialized," if the acceptable political and other technics can be thus worked out as, for instance, they were in the "laboratory war" in Spain, then the other professions, as well as business and manufacture, can be subsequently "blitzed" Underneath the double talk lies the single objective.

Well, if it is to be that way, maybe we had better think about it. Things like the Wagner bills, the Pepper bill, E M I C, are handy tools to toss into the machinery of a free economy. Perhaps nobody but the doctors will object to them—until it is too late. Seen against the background of the recent elections in Britain, the rising tide of socialist influence in Europe, the growing dominance of labor in American politics, it is not surprising that attempts should be made, under whatever guise, to convert this country to a socialist republic. Technics of boring from within established political

Confusion in the parties are well known popular mind between socialism, communism, democracy, and republicanism has been worse confounded by attempts to explain their differences

The first great American dependency was created following the panic of 1929 learned to look to ever-loving government for their very existence in many cases myriad alphabetic agencies sprang up with sprightly benevolence during the liberation period of Congress to assume the guardianship of the individual rights and privileges of the taxpayer-citizen in a difficult era, to be later superseded by the regulatory governmental mechanisms of the war years Crisis followed serried crisis for some reason, lurid interagency civil war filled the citizen with respect for constituted authority as soon as he recovered from his nausea

Now it is proposed to lure the voting taxpayer into forgetfulness by giving him everloving government medicine, "socialized" medicine You don't believe it? Well, look at H. R 3293 or S 1050. Don't bother your congressman or senator to send you a copy of the bills Don't you know there's a -peace on? Everything is lovely now

# Current Editorial Comment

# Of This and That

Cosmotarianism. Possibly as a sequel to the atomic bomb, possibly for no such prosaic reason, it appears that Mr Bernarr Macfadden, once a publisher and always a publicist, now devotes his undoubtedly great talents to Cosmotarianism—a Religion

of Happiness

According to a modest little folder reaching this office Mr. Macfadden, from the Cosmotarian Church, Inc , 535 Fifth Avenue, New York, conducts a seedling enterprise with vigor every Sunday at 11 AM. at, of all places, Carnegie Hall He opens modestly, it appears, with "When Religion Brings Race Suicide," on September 16, and wows those who are still conscious seven days later with "Science (?) of Medi-cine" That, at least, was our information on September 10 But—on September 20 we were advised by post card of a crystallization of the Cosmotarian attitude toward our profession, or at least the scientific department thereof The title of the address on September 23-admission freewas changed to "The Murderous Science of Medicine." Apparently, between the first and second announcement all doubt, implied by the question mark in Number 1. had been somehow resolved The Science of Medicine on September 23 is definitely murderous, no ifs, ands, or buts about it

Obviously there was no point in attending the lecture—admission free The matter had already been settled However, good publicist though he is, it occurred to us that Mr Macfadden might not have circularized all the physicians of the state His conclusion seemed so definite, so unqualified as to be important news Under the circumstances, we should be derelict in our duty to the profession and to the public if we delayed in relaying this important news to our subscribers Murder is involved, as alleged

To many it will come as a distinct shock, to others as a revelation of the first magnitude It is, of course, backed up by proper research and documentation will probably appear in subsequent revelations to be made to the local police, the FBI, and the Attorney General. As good citizens we demand that this be done Murder is still a crime and it is our stern duty to must that the law take its course As the accused party Mr Macfadden will be the first to admit that the choice of weapons is ours. And we choose full and complete disclosure of all the facts

Nursing Homes "These so-called nursing or convalescent homes that've gotten to be so common in recent years—I don't know how we ever got along without 'em back in the old days And the urgent need they're filling—I never realized it so much as I have during the war, with the general hospitals overcrowded, practically no private duty nurses to be had, and the doctors having trouble getting around fast onough to see

everybody that needs 'em.

"It helps a lot being able to see several patients in one place and on the whole—most of the places I'm acquainted with—they've been getting reasonably good care. It's better, anyway, than a lot of 'em could've gotten at home. And you take old poople, the chronic cases, folks that aren't acutely sink and so on—the general hospitals, even when conditions were normal, they couldn't keep 'em very long. And, for that matter, having to be in a hospital a long time—lt runs into more money than most people can afford So they're a valuable institution, especially in our small towns.

"But, just as you'd expect with these homes springing up the way they have, there's all kinds, some good and some not so good—and occasionally one, I guess, that's pretty had. So it's getting where there ought to be some regulation of 'em—some standards and what not. Of course the welfare departments—the places where they're paying for cases, they require 'em to meet certain standards. But aside from that and a few places where they have local ordinances covering 'em, so far as I can find out it's a

case of go as they please

"If the State was going to require 'em to be heaned and set up standards they'd have to meet, I'd figure the standards should be fairly flexible. They ought to be in buildings that're safe and sanitary Taking 'em by and large, they should be well equipped and have a registered nurse in charge and all that.

"But some of the smaller places, even if you can't have all the 'fixin's,' it's a blessing, sometimes, just to have some respectable place where you can send a patient, where they can go to bed and have an intelligent woman to wait on 'em and give 'em their pills So I'd favor fixing it so't where they can't have the best they can still have the best they can "

The foregoing extended quotation is from the Bulletin of the New York State Department of Health, August 2, 1945 We have quoted it in extense because we feel that there might be some question as to the conduct of these "homes" If their facilities fulfill a real need at this or any other time, there certainly should be some regulations provided for their proper conduct.

It is true that they seem to afford a refuge in time of need, but being without formal medical supervision, procedures are permitted which would be banned elsewhere. It should be possible to develop community supervision, not only as to physical equipment, but also as to medical control, in order to avoid some of the practices which have been the source of justifiable complaints Such supervision should be equally beneficial to their patrons whether these be patients or doctors.

Sound advice issues from New Jersey's Bureau of Industrial Health. It distributes the following bulletin, with the note

"It's that season again-the "Please Post" time for colds. Because nearly everyone has them, we are likely to take them for granted The fact is many of us have colds needlessly You don't have to have a cold And if you get one, it doesn't have to drag on 'til spring Here are some suggestions (1) Stav away from others who have a cold, especially during the first days. (2) Use a handkerchief or paper tiesues over your mouth and nose when you anecze. (3) Wash your hands often especially before eating. (4) Eat a good breakfast. And watch all three of your meals to see that the food is proper and sufficient. (5) Get plenty of sleep Most people need at least eight hours daily (6) If your job keeps you sitting most of the time, get exercise after work. (7) Wear enough clothes to keep warm outdoors. Take off your outer clothing indoors. (8) If you are catching a cold, go to bed. Keep warm. Drink fruit julces and milk and water Take only light foods. (9) If you feel feversh, have body aches or weakness, or chest pains, call you family doctor Your cold may be flu or pneumonia. Get medical care, and get well quickly Why no talk of cold shots or vitamins? Often they help But no cold vaccine can give protection against all the causes of colds. And no vitamin gives specific immunity to colds they only help build resistance. Regardless of whether you are taking cold vaccine and vitamins or not, the above suggestions still need to be followed They are time-tested They are the measures of good living that will help you this winter season"

Physicians might profit from this advice as well as workers in industry We can think of no group of men and women who disre-

gard more recklessly the sage advice they dispense to others The  $J A M A^{-1}$  reports the deaths in 1944 of 3,172 physicians Among these, 238 deaths were attributed to "Heart disease," says the pneumonia Journal, "continues to lead the causes of death among physicians In compiling these statistics, the usual procedure of including primary causes and contributory factors was followed Coronary thrombosis and occlusion were responsible for 638 deaths in 1944 as compared with 598 in 1943, 250 occurred in the age group 60-69 Diseases of the myocardium and pericardium totaled 193, angina pectoris and other coronary diseases, 135, chronic heart valvular and rheumatic heart disease, 28, subacute bacterial endocarditis (except rheumatic fever), 4, and other diseases of the Cérebral hemorrhage, thromheart, 403 bosis, and embolism were responsible for 366 deaths, arteriosclerosis for 186, and cardiovascular diseases for 72"

Industrial Medicine for January, 1944 quotes Walter C Alvarez, M D,<sup>2</sup> on the subject of "Nervous Breakdowns"

"Many of the people who come to me with complaints of indigestion really have a nervous breakdown, but they do not tell their history in such a way as to make this apparent How does one recognize a nervous break? Only by asking a few essential questions Curiously, able young assistants usually fail to find out the most important thing about a patient, namely, that he has not worked for one or more years And, if they learn this, many do not think to ask why he does not work If they had, he would probably have said, 'I just can't face people If I were to try to talk to a customer I would get littery and have to excuse myself' Very helpful is the discovery that these people cannot read By way of explanation, they say they are not interested enough, or the letters run together, or they forget a paragraph as soon as it is read. Often such a person cannot stand even listening to the radio. or going to a movie At a movie he soon gets tense and has to go out Some get overly emotional, and cry They cannot make decisions at the office, and their work suffers Usually they cannot sleep well at night They are urntable and 'fly off the handle' easily person with such symptoms has, primarily, a

2 P 48

nervous breakdown, his brain isn't working right"

It is interesting to note that these people are disinclined to read The ability to read and to write is one of the most recent acquisitions of the human race phylogenetically speaking It is not remarkable that this art should be lost, this recent skill should be blunted, by disturbances of the nervous system, rather, it is to be expected Most skills are lost in the reverse order of their acquisition We wonder about listening to the radio or going to the movies This type of eye and ear entertainment is at times intolerable even to persons of presumably normal nervous structure and function may be that we have not yet acquired the necessary equanimity, as a race, to withstand the assaults of the products of our technology, many of which are repugnant to persons of discrimination The radio programs are replete with references to various psychosomatic disorders, insistently and repetitiously replete, we may add, with not too subtle references to the ills that flesh is heir to, ranging from the Olympus of constipation down to the valley of the shadow of death without benefit of vitamins While the movies, at which the patient "becomes tense and has to go out," or to which he cannot summon the courage to go, parade horro and crime plots which might well produce insomnia in a well person, to say nothing of increasing the irritability and sleeplessness of anyone who might have survived the ordeal by radio

A Hint for Discussants A correspondent of Medical Economics writes to the point

"My pet peeve at county medical society meetings is the so-called discussant. Often, he has been given no inkling of what the speaker is to say, so he prepares another short paper on the same subject—adding nothing to the principal essay. Sometimes he prepares nothing at all—and is a poor speaker to boot. Not infrequently he has been assigned the job solely because he happens to practice in the same field as the speaker."

That seems to cover the subject ade-

quately

<sup>&</sup>lt;sup>1</sup> Vol 122, No 2, Jan 13, 1945, p 90

### TROPICAL DISEASES WITH SPECIAL REFERENCES TO FILARIASIS (WUCHERERIA BANCROFTI)\*

H W Brown, MD, New York City

(Professor of Parasitology School of Public Health of the Faculty of Medicine, Columbia University)

THE far-flung nature of the recent war exposed American servicemen to many exotio and tropical diseases, and official reports indicate that injection in varying numbers has been ex-The introduction of some of these perienced diseases into the United States in returning soldiers has already been reported, for example, malaria, filariasis, schistosomiasis, kala-azar, and dysentery Experience in the last war suggests that leprosy may appear in a small number of our returned troops after the incubation period of several years. Although the early diagnosis and adequate treatment of these individual cases is important, it is also necessary to evaluate the probability of the spread or establishment of these diseases in the United States. In the transmission of some of these diseases an insect vector is necessary and in the case of malaria and filariasis it is already present in the United States. Insects of the genus (Phlebotomus) that transmit kala-azar do not appear to be widespread or abundant in this country The teetse fly, which transmits African sleeping sickness, is not found in this country and every effort is being made to exclude it

Excreta-borne diseases such as dysentery and typhold fever are already present in the United States and their spread on a wide scale is prevented by our general high standards of sanita-It is possible that localized breakdown in samiation may lead to infections, carriers being the source of the pathogenic organism

Alertness to the possibility of a tropical disease in patients will probably rapidly decrease in the minds of many medical men It should be remembered, however, that the incubation of some of these diseases may be months (kalaaxar) or years (leprosy) The effects of schistosomiasis (blood finke) may not become apparent for fifteen to twenty-five years after the original infection, and malaria may remain dormant in an individual for years

Infection with filaria, Wuchereria bancrofts, has been one of the more important military medical problems and will be discussed in some detail, as it illustrates many of the problems that certain of the so-called tropical diseases have in

Filaria infections and elephantiases due to W bancrofti have not been of especial concern to the

\* Presented at a meeting of the Fifth District Branch at Onelda, September 18 1945.

only immediate contact and experience with the disease was in the small endemic area in Charleston, South Carolina The global nature of the present war, however, has exposed our armed forces to diseases not commonly present in the United States and reports malicate that our troops are exposed to filarial infections and that numbers have become infected 1,2

American public despite the widespread distribu-

tion of this condition throughout the world Our

#### The Clinical Picture of Filariasis

The human reactions to filarial invasion are extremely varied and it is impossible to predict the course of an infection. It appears that persons exposed to infection from infancy respond differently from those infected for the first time as an adult. Since the disease may run a course from infancy through old age of an individual it may vary greatly in its chinical manifestations Broadly, however, the results of filarial infection may be classified as follows

- 1 Asymptomatic
- 2 Inflammatory
  - (a) Inflammation seen early in the infection, as in American servicemen in the Pacific area
  - (b) Inflammation late in the disease, often associated with varying degrees of elephantians
- Obstructive infections, known as elephantiasis
- Asymptomatic Filarians -In endemic areas a large number of the natives are infected with W bancrofti and in due time exhibit microfilariae in their blood without experiencing symptoms referable to the infection On physical examination the patient may exhibit a general glandular enlargement, especially of the inguinal lymph glands. In time the adult worms die. and the microfilanae disappear without the pa tient being aware of the infection I recently encountered a Virgin Islander with an infection of 23,240 microfilariae per cc of blood (Fig. 1), yet this patient, except for a slight general glandular enlargement, had no signs nor experienced any symptoms referable to his filarinfection. If all the microfilariae in 1

were placed end to end they would 11 miles, yet his physic-

that he was inducted u

Army A blood survey of

Fig 1 Asymptomatic filariasis I O, age 17 years. 23,240 microfilariae (W bancrofu) per cc of blood Total length of microfilariae in blood stream is 11 miles. He has had no symptoms referable to his infection and physical examination revealed only a slight general glandular enlargement.

of military age from St Croix, Virgin Islands, demonstrated that 20 per cent of them were infected with filaria, yet practically all of them were totally unaware of their infection

2. Inflammatory Filariasis—The inflammatory reactions of filarial infections may be an

Fig 2 Elephantiasis O C, age 30 Elephantiasis of scrotum and penus Microfilariae absent from the blood Elephantiasis is usually found only in persons repeatedly reinfected and presumably is infrequently the end result of light infections such as our troops are experiencing

allergic phenomenon due to a sensitivity to the products of the worms or to a superimposed bacterial infection, possibly streptococcic Inflammatory reactions to filarial infections have recently occurred in army and navy personnel from one to fifteen months after exposure to mfection in the Pacific 1-1 These recurrent attacks which occur at irregular intervals are characterized by funiculitis, epididymitis, orchitis, retrograde lymphangitis of extremities, and localized areas of swelling and redness of the arms and legs Fever, chills, headache, vomiting, and malaise may accompany these attacks, which may last from several days to two weeks Rome and Fogel and Zeligs have reported a group of psychosomatic manifestations among navy personnel with the inflammatory type of filarıasıs

Somewhat similar acute attacks may occur at monthly or longer intervals for years in patients with or without elephantiasis. Thus, one of our patients from Martinique with a slight enlargement of one leg gave a history of acute attack every month or six weeks for forty-six years

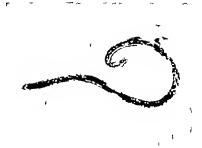

The acute inflammation was limited to the affected leg and ingunal nodes on that ade. It is not unlikely that etreptococci have a role in such reoccurrences

Obstructive Filariasis or Elephantiasis -Elephantiasis is the dramatic end result of filariasis which many mistakenly believe is the inevitable termination of every filarial infection Fortunately, to the contrary, the grossly enlarged scrotum or legs are the exception rather than the rule. The obstructive types of filan ams usually follow years after the original infection and usually are preceded by recurrent acute Adenovarix, hydrocele, chylurocele, and elephantiasis of the legs, scrotum, arms, hreasts, or vulvae are end results. The rate of growth of these enlargements may be slow and proceed over many years Growth may be rather rapid, however, as in the case of a patient I saw recently whose apparently normal-sized scrotum enlarged to weigh 14 pounds in approximately a year due to actual tissue growth (Fig 2) Microfilariae are frequently absent from the blood of the patients in these late stages of the disease, as is illustrated by the result of thick bloodsmear examination of 30 of our elephantiasis patients, in only 30 per cent of whom were microfilariae demonstrable. A moderate eoanophilia may be present during any etage of the filarnal infection.

Elephantiasis is usually seen only in persons living in endemic areas who are exposed to repeated filanal infections year after year—natives who sleep without any protection against mosquitoes all their lives. Even with repeated infections usually only a small proportion of them develop elephantiasis, although in certain Pacific areas the elephantiasis rate is high.

# The Course of Filariasis in American Servicemen

Early in the war in the Padific a considerable number of our servicemen experienced filarial infections of the early inflammatory type. Under the rigorous activities of duty and the hot climate many were physically incapacitated Naturally the men who saw elephantiasis, an end result of the infection, all around them were greatly concerned, as were the responsible military authorities Under tropical conditions these patients had repeated acute filanal attacks, however, they were wisely removed to an area in the United States with a mild climate and their activity limited Zeligs, who has followed the course of the disease in hundreds of these patients at the Marine Barracks at Klamath Falls, in August, 1945, reported that the disease runs a selflimited course and after several clinical reactivations burns itself out. There was no demon-

F10 3, Microfilaria of W bancrofts from the blood showing the sheath. Length varies from 250 to 300 a.

strable impairment of sexual function and severe or incapacitating sequelae occurred in only 0.7 per cent. Coggeshall's studies' likowise indicate that the prognoss in infected servicemen is excellent. Only in a very few of the many hundreds of infected servicemen have microfilariae been demonstrated in the blood? Since there is a good deal of mystery surrounding this disease and since the genitalia are often temporarily infilamed, those affected should be assured of its nonvenereal transmission and of the good prognosis when the patients are removed from endemic areas.

#### The Diagnosis of Filariasis

Clinical Diagnosis.—The clinical diagnosis of filariasis will depend upon a history of exposure to mosquitoes in endemic areas in conjunction with the clinical findings discussed above.

Laboratory Diagnosis —The blood of patients with clinical filariasis does not always contain microfilarias. From twelve to eighteen months presumably elapse from the time of infection until the worm matures and produces microfilariae, hence, during the early months of clinical inflammatory filariasis the microfilariae will not be found in the blood. Likewise, late in the disease, by the time elephantiasis is present the adult worms and microfilariae may both have died out

Except for W bancrofti infections acquired in certain areas of the Pacific the microfilanae may be tenfold as abundant from 10 00 P.M. to 2 00 A.M. as any other time, hence, this is the best time to draw blood for examination. There are several methods of examination of the blood

1 Examination of Fresh Blood The simplest method of examination is to secure on a

<sup>\*7</sup> months after treatment.

slide a drop of blood from the finger, apply a covership, and examine it immediately under the low power of the microscope for the actively moving microfilariae (Fig. 3) Microfilariae range from 250  $\mu$  to 300  $\mu$  in length

2 Examination of Stained Blood Either make a thick smear as for malaria of blood secured from the finger or secure 0.1 cc of blood in a tuberculin syringe from an arm vein and spread over a 1 by 3 inch slide. After drying, stain with Giemsa for forty-five minutes and destain ten minutes in water buffered to pH 7.2. Dry slide and examine under low power of the microscope (Fig. 3). To prepare Giemsa stain add 1 cc of concentrated stain to 50 cc of water buffered to pH 7.2. The examination of a single slide (0.1 cc of blood) will detect infections with approximately 50,000 microfilariae circulating in the blood.

3 Concentration Method To detect light infections or to follow the results of experimental therapy a sensitive technic is the concentration method of Knott \* One cc of blood is added to 9 cc of a 2 per cent formalin solution in a 15 cc conical centrifuge tube The formalin solution lakes the red blood cells, greatly decreasing the After centrifuging at high speed for several minutes the supernatant fluid is decanted and the sediment smeared over a 1 by 3 slide This preparation can be examined directly or allowed to dry and stained with methylene blue or Giemsa before examining Since 1 cc of blood is examined this method should detect microfilariae when as few as 5,000 are present in an adult patient

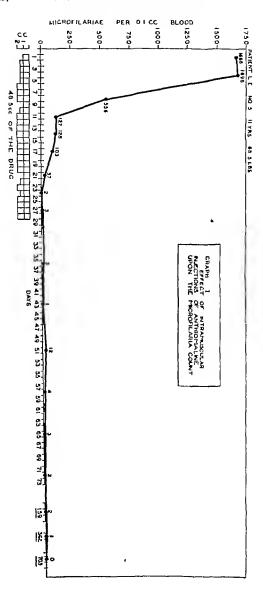

# Intradermal and Serologic Diagnostic Tests

The diagnosis of early clinical filariasis before the microfilariae appear in the bloodstream may be greatly aided by intradermal and complementfixation tests Recently Bozicevich and Hutter, using an antigen prepared from the dog heartworm, Dirofilaria immitis, have shown that intradermal tests with this antigen in 1 8,000 dilution is a highly useful diagnostic procedure. Similarly Culbertson, Rose, and Demarest, 10 using antigen prepared from the cotton-ratifilaria, Litomosoides carini, found a high correlation between positive responses and filarial infections. The complement fixation test of Fairley 11 may also be a useful tool in the diagnosis of early filariasis.

## The Treatment of Filariasis

It is common knowledge in endemic filarial areas that rest and moving to a cool climate aids greatly in reducing the severity and numbers of the acute attacks. On the other hand, strenuous exercise under tropical conditions leads to exacerbations of the lymphangitis. The experience of the Army and Navy has borne this out Although mere changes in climate will not kill the parasite and thus perhaps cure the patient, there is no doubt that a cooler climate improves the general well being of infected persons, which in turn may be reflected in the total course of the

Numerous drugs have been tried in the treatment of early filarial infections. Occasionally the treatment has resulted in a temporary decrease in the number of microfilariae circulating in the blood stream, but the adult worms were not killed, for they continued to produce microfilariae. Several of the drugs that have a temporary action on filarial infections contain antimony. Recently, I treated a group of filaria-infected persons with the trivalent antimony compound, anthomaline (lithium antimony thiomalate), with promising results. The treatment consists of daily intramuscular injections of 3 cc of the drug for two to four weeks. The results of treatment were followed by microfilarial counts.

on the patients' blood for two years following treatment. It will be seen from Table 1 that with the exception of patients No 9 and M, all of the patients experienced a marked reduction in microfilarial counts Graph 1 illustrates the rapid initial drop in microfilarial count with the later slower decrease The question arises, of course, whether the drug kills only the microfilariae for the adults as well It is believed that both are killed, for if the adults were not killed they should produce microfilariae and in time their numbers in the blood approximate that before treatment It is possible that the drug kills the microfilariae and permanently sterilizes the adult worms without killing them Toxic manifestations of anthomaline, consisting of vomiting. joint pain, slight fever, and rash, were experienced by a number of the patients but were not of sufficient severity to preclude continued use of the drug

Culbertson, Rose, and Oliver-Gonzalez<sup>13</sup> recently reported on the use of neostibosan, a pentavalent antimony compound, in 30 patients Using the microfilaria count as the criterion of cure, they report 7 of the patients became negative and 8 had microfilarial reductions of from 83 to 97 per cent. The remaining patients had reductions of from 69 to 7 per cent, and one patient showed an increase in microfilariae. They found neostibosan nontoxic and suggest that even more effective therapy may be secured with larger doses.

Sulfonamides have been used in the treatment of the acute reoccurring lymphangits and cellulitis of filariasis with some success <sup>14</sup> The activity of these drugs is probably upon the streptococci and other bacteria that participate in the cause of the attack. With sulfonamide therapy the patient's fever and malaise subside much more rapidly than the localized inflammation of the leg or scrotum Pons<sup>15</sup> and Advies<sup>16</sup> have both reported some success in treating acute filarial lymphangitis with streptococcal vaccines.

Surgical alleviation of elephantiasis may be successful, but constitutes an admission of failure of early treatment. Removal of the greatly enlarged scrotum frequently gives very good results. Surgery on elephantoid legs consisting of removal of tissue and an attempt to anastomose the superficial and deep lymphatics, although sometimes effective, leaves much to be desired.

# The Introduction of Filariasis into the United States

The introduction of filariasis by returning troops and the establishment of endemic foci in this country is a matter for careful consideration. A number of species of mosquitoes belonging to the genera Anopheles, Aedes, and Culex appear to

be effective vectors of Bancroftian filariasis Filarial development takes place readily in two species of mosquitoes, Culex quinquefasciatus and C tarsalis, prevalent in parts of the United States 17 18 There are also a number of mosquito species here that have been infected experimentally in other countries with W bancrofti transmission of filamasis by mosquitoes is somewhat hazardous to them Heavy infections may result fatally to the mosquitoes Further, there is no multiplication of the parasite in the mosquito as there is in malaria, hence the mosquito must secure from human blood a microfilaria for every worm it transmits to a new victim Further, it is believed that the infectious larva is not injected into the blood stream of man by the mosquito but is merely deposited upon man's skin and must make its own way into the blood These factors militate against successstream ful transmission from man to man In general it appears that an abundance of vectors and human carriers are needed for successful transmission of the parasite In many parts of the United States, although mosquitoes are considered to be a pest and very abundant, their numbers do not begin to approach that found in heavily filaria-infected areas It is possible, however, that through a fortuitous combination of all circumstances, a mosquito might bite an infected individual in this country and live to reinfect another person Dunn<sup>19</sup> reports such an infection in Philadelphia, Slaughter tells of two from Alexandria, Virginia, and Mastin<sup>21</sup> reports one from Mobile, Alabama Presumably these infections were acquired in these areas On the other hand, these areas did not become endemic centers

A number of years ago a large group of Negroes from filaria-infected areas were brought into Charleston, South Carolina. Due to the climate there, the mosquito vector, C quinquefasciatus, can breed much of the year and in the early days before mosquito control they were unusually Thus, the unusual combination of a abundant large number of filaria-infected individuals and a large number of mosquitoes much of the year resulted in the transmission of filamasis to a considerable number of persons in Charleston A survey made there by Johnson<sup>22</sup> in 1915 of 400 individuals composed largely of routine hospital admissions revealed an infection rate of 19 25 per He also reported a questionnaire survey cent that uncovered 213 cases of elephantiasis Within the last few years control measures to eliminate mosquitoes in the Charleston area have been pushed vigorously and the screening of homes has become much more prevalent reasons and possibly other reasons, the transmis-

<sup>\*</sup>The photographed "microfilaria" appears to be a vegetable fiber

sion of filariae in the area has practically ceased and no new infections have occurred in Charleston in the past few years. In other words the infection is dying out. If, under the more or less ideal conditions of climate and a large initial infection, this infection died out in Charleston, it does not seem likely that it will spread widely in the South or at all in the northern areas of the United States where mosquitoes are found in oumbers only during the hot summer months

Filaria infected persons have been reported from Columbia, Beaufort, and Georgetown, South Carolina, Jacksonville, Florida, Mobile, Alabama,14 Philadelphia, Pennsylvania;12 and Boston 24 These persons all give a history of having lived in Charleston, South Carolina or having come from a filarial area in the tropics. No endemic foci or secondary cases arising from these infections have been reported, although the climate of several of these areas is very favorable for mosquitoes and they are found in considerable ahundance. In recent years thousands of Puerto Ricans and Inhabitants of other infected Caribbean countries have entered the United States and made their homes here. We have found that some of these individuals harbor large numbers of microfilariae in their blood, but to our knowledge they have not been the cause of additional cases of filariasis in this country

It is believed that the evidence at hand can be summarized as follows. It is possible that returning filaria-infected troops may transmit, through mosquitoes, their infection to other individuals in this country This occurrence, however, is rather unlikely and although we should be aware of the possibility and do what we can to prevent it, it does not appear likely to be of any great importance, especially since only a very small number of the servicemen have exhibited microfilariae in their blood etream

I wish to thank Dr Norman D Thetford, Chief Medica Officer St. Croix, Virgin Islands, for enabling me to study his patients and for his aid in the therapeutic atudies. This atudy was made possible through the financial support of the John and Mary R. Markle Foundation.

### THE LOUIS LIVINGSTON SEAMAN FUND

The New York Academy of Medicine announces the availability of the Louis Livingston Seaman Fund for the furtherance of research in bacteriology and sanitary science. One thousand dollars is available for assignment in 1945. This Fund has been made possible by the terms of the will of the late Dr Louis Livingston Seaman, and is administered by a Committee of the Academy under the following conditions and regulations
1 The Committee will receive applications from

either institutions or individuals up to December 1. 1945. Communications should be addressed to Dr Wilson G Smillie, Chairman of the Louis Livingston Seaman Fund, 1300 York Avenue, New York 21

New York. 2. The Fund will be expended only in grants in add for investigation or scholarships for research in becteriology or sanitary science. The expenditures may be made for (a) securing of technical help, (b) aid in publishing original work, or (c) purchase of necessary books or apparatus.

# UREMIA. DIAGNOSTIC PITFALLS AND THERAPEUTIC PROBLEMS

JACOB SACHS, M D, Brooklyn, New York

(From the Department of Medicine, Israel Zion Hospital)

TREMIA may be defined as a state of intoxication associated with retention of It usually follows true urinary constituents renal failure, but it may also be due to insufficient elimination of urine caused by prerenal or postrenal factors It manifests itself by a toxic component consisting of headache, vomiting, and anemia, and also by physiologic disturbances such as acidosis, dehydration, and hypocalcemia There is seldom any difficulty in recognizing uremia when it is preceded by Bright's disease or by a period of anuria Not infrequently, however, it masquerades as some type of cerebral, cardiac, or gastrointestinal disease and its existence is then either unsuspected or it is detected too late for effective therapy The following briefly described cases have been selected to illustrate some diagnostic pitfalls and therapeutic problems of this condition

# Case Reports

Case 1 -S B, an 82-year-old man, developed mental deterioration, change in personality, voiniting, and marked anorexia for two months which did not respond to treatment I saw him at home on January 20, 1944 and learned that during the preceding four months he had had urmary frequency, dribbling, and incontinence Examination by a urologist revealed a large prostate, distended bladder, a large amount of residual urine, and incontinence from overflow After palliative local treatment and bladder decompression, the appetite returned. vomiting ceased, and the blood chemistry was normal, but there was some residual mental confusion Quinby1 states that dyspepsia in an old man is frequently due to an overfilled bladder which the patient does not realize is present After urmary retention is relieved, whether or not he is completely relieved depends on the renal function

Case 2—B F, a 70-year-old man, had lymphatic leukemia for five years, coronary sclerosis four years, and had been treated by a genitourinary specialist for prostatism for the past three years. On February 15, 1939, medical examination revealed well-developed uremic symptoms of headache, vomiting, diarrhea, and twitchings, with a blood chemistry percentage of 78 mg of urea, 4.8 mg of creatinine, 6 1 mg of uric acid, and 99 mg nonprotein introgen. He was sent to the hospital on February 17, 1939, where he was treated by bladder decompression and hydration, but he died three days later from a coronary episode.

Case 3—S K., a 60-year-old tailor, had had hypertension and coronary sclerosis for ten years and untreated prostatism for three years For four weeks he complained of increasing headache, yomit-

ing, intractable hiccup, and diarrhea. On May 28, 1943 he had hypertension, fibriliary twitchings, mild albuminuma, and 116 mg of urea in 100 cc of blood. He was sent to the hospital on May 30, 1943, but did not respond to bladder decompression and venoclysis. He died in uremia four weeks later. Autopsy was not obtained

## Comment

The above cases emphasize the unportant role played by bladder-neck obstruction in causing azotemia and in producing symptoms unrelated to the genitourinary tract In 30 per cent of these cases reflex gastrointestinal symptoms predominate,2 due to the common vagal nerve supply of these two tracts 3 The urmary system should therefore be thoroughly investigated in elderly men presenting such unexplainable symptoms, since these patients are often unaware of the existence of urinary stasis Azotemia which eventually develops from this cause is usually reversible It responds to parenterally and orally forced fluids, bladder decompression by catheter or cystotomy, followed if necessary by prostatectomy If the condition remains unreheved for a long time, renal compression atrophy may develop, and its resulting azotemia may then become irreversible Russ' reports 2 cases sent to the Mayo Clinic for suspected gastrointestinal lesions which were disproved by x-ray and other tests Urmary investigations later revealed up to 400 cc of bladder residual, and 250 mg per cent of blood urea concentration due to prostatic obstruction Both patients recovered completely following vesical decompression, forced administration of fluids, and prostatectomy

Case 4—H L, a 70-year-old man, was admitted to the hospital with pneumonia on March 17, 1939 After the administration of only 8 Gm of sulfapyridino he developed in rapid succession jaundice and acute hemolytic ancimia, and voided a portwine-colored urine. The next day there was complete anuria followed by azotemia and uremia. He died forty-eight hours later. Autopsy confirmed the antemortem diagnosis of tubular block by hemoglobin derivatives. This was one of the earliest sulfapyridine fatalities reported, and it emphasizes the importance of daily observation of the blood picture and the renal function and output as a guiding principle in sulfa therapy.

Case 5—A 42-year-old woman was admitted to the hospital on October 9, 1943 for radium treatment of metrorrhagia She received a blood transfusion on October 11 and again on October 18. Twn days later she complained of precordial pain, which was interpreted as a delayed transfusion reaction. During the next few days she developed mental confusion, nausea, vomiting and aphasia with right facial palsy, and the diagnosis of a cerebral vascular accident was entertained. This was followed by increasing stuper fibrillary twitchings, and two convulsions Uremia was now suspected and confirmed by a urea blood content of 140 mg per cent. The patient died five days after the second blood transfusion from uremia probably due to tuhular occlusion by blood derivatives. Unfortunately, in vestigation of the urinary output was started to late, it was not ordered and it was never charted.

Case 6 -A 41 year-old man was admitted to the hospital on the night of January 11 1944 for the treatment of intractable vomiting for three days for which he was given intravenous infusions of glucose and saline. The next morning the report on his blood chemistry showed 70 mg, per cent of urea and 8 mg per cont of creatinine It was now therefore evident that he was in uremia. We then learned that the patient had had oliguria for four days and had volded only a few cc. of urine the past twentyfour hours without ever realizing the importance of this fact. On further investigation, proronal causes of urmary suppression were excluded and postrenal block was also ruled out, since uroteral cathoters were passed readily to the kidneys without meeting obstruction. The renal pelves were then lavaged and venoclysis of 5 000 cc. was given but only a few cc. of bloody urine were voided through the indwelling catheters in twenty-four hours. Decapsulation of both kidneys was therefore done that evening. and a renal biopsy was taken at the same time which later revealed an early stage of acute glomerulonephritis. Intravenous clyses and injections of aminophylline papaverine, and glucose, etc. were continued and his urinary output gradually increased. Yet the asotemia and some uremic symptoms continued to become more intense. The urea mounted to 125 mg. per cent his vomiting ceased, yet he remained mentally alert throughout, but be subsequently developed severe attacks of hiccup and diarrhea. With progressively increasing diurcess the azotemia and symptoms finally disappeared and he was discharged four weeks after admission with a practically normal blood chemistry a mild albuminuma and a urinary specific gravity of 1010 which remained fixed for a few months. This patient had an upper respiratory infection ten days before hospitalization for which sulfonamides were not administered followed by scuto glomerulonephritis with early uremia duo to suppression of urine which usually presages a grave prognosis. Response to treatment began only after decapsulation of both kidneys was performed. It was noteworthy that he remained outwardly calm during his illness.

Case 7—M. D., a 65-year-old woman, was admitted to the hospital on September 16 1943 because of protracted vomiting, vague abdominal pains, disorientation and incontinence of urine. Her condition was poor and she died in twenty-

four hours without any report on the urinalysis or blood chemistry. Autopsy showed bilateral pyelonephrosis secondary to renal pelvic stones with marked reduction in renal parenchyma. Although gastrointestinal malignancy was suspected, uremia was undoubtedly the cause of death.

Case 8-J S. a 44-year-old man, had a left nephrectomy performed on June 25, 1941 for calculous pyonephrosis. He remained well until January 20, 1044 when two impacted stones were removed from the right ureterovesical junction and he was discharged on February 16, 1944. He was later readmitted to the hospital and on March 15 a nephrostomy was performed on the remaining right kidney for drainage of a pyelonephrotic sac. This was followed by increasing asotemia, vomiting, and hiccup which were greatly relieved by venoclysis. However the temperature continued to spake to 103 F for one week and penicillin was administered for three days starting on March 29 The result was dramatic. Within twenty-four bours, urinary drainage was re-established through the ureter, which had been blocked for eight days and three days iater be became afebrile. His uremic figures and symptoms continued to improve slowly and bo was discharged improved from the bospital a few weeks later Ho was readmitted several weeks later to another hospital where he died in uremia. In this case it appears that penicillin had a favorable effect not only on the infected kidney but also in overcoming the local ureteral inflammatory obstruction. Unfortunately, we were unable to obtain a second supply of penicillin for further treatment.

Case 9 -H F a 52-year-old housewife, was ad mitted to the medical service on January 10 1944 because of moreasing dyspace of unknown origin. For the provious three months she had also complained of anorexia, vomiting, and urmary incontinence. On further study, the dyspnea could not be explained on a cardiac or pulmonary basis. The urine sbowed 1 plus albumin, no casts, and on January 14 the blood showed 96 mg of urea and 8.6 mg of creatinino per 100 cc. An x-ray flat plate showed a small left kidney and a large right kidney with a large stag-horn pelvio stone. Urologio consultation revealed cystitis and stricture of the urethra. The patient was transferred to the genitourinary service where she received intravenous infusions plus bladder arrigations and decompression. The blood urea mounted to 120 mg, per cent and she died in premia on January 23, 1944. Postmortom examination confirmed the above x-ray findings. There was very little kidney parenchyma, the right kidney was a pyolonophrotio sac, while the left kidney was atrophic. Both ureters were dilated secondary to tight strictures at each ureterovesical junction. The outstanding symptom in this case was the marked dyspnes. The diagnosis of uremia and its surgical cause was made too late for therapeutio purposes.

Case 10—I N a 58-year-old merchant, was admitted to the hospital on March 30, 1040, complaining in headaches, dizziness vomiting, and diarrhea of ten days' duration. Physical examination was not remarkable. The urine showed I plus albumin

and a few casts and the blood level of nonprotein nitrogen was slightly elevated to 40 mg per cent. Gastrointestinal malignancy was suspected, but was unconfirmed by x-ray and further study Ten days after admission the patient also developed drowsiness, nuchal rigidity, right facial paresis, and absent abdominal reflexes Lumbar puncture was not remarkable and the medical and neurologic impression was meningism or possible cerebral metastatic malig-The blood urea was 53 mg per cent, the creatinine 31 mg per cent The patient became rapidly worse and died in come on April 14, 1940 Postmortem examination was a complete surprise The brain was normal except for edema, the colon showed uremic ulcerations, and the kidneys showed a late stage of subacute glomerulonephritis. The first clinical impression in this case was gastrointestinal malignancy, later, brain tumor was suspected. The existence of uremia was not recognized during life.

The following brief reports on cases of anuma are also of interest. Reflex anuma may occur secondary to unilateral renal calculus. A fatal case of anuma occurred secondary to renal cortical necrosis of pregnancy. Another fatal issue occurred in a 56-year-old man due to anuma of eighteen days' duration. This was caused by rupture of a dissecting scierotic abdominal aorta into both renal arteries, which in turn were completely occluded by clotted blood. Cases of uremia or anuma due to sulfa therapy, transfusions, shock states, and bichloride poisoning are commonly known and require no further comment.

#### Discussion

For the proper urmary elimination of nitrogenous and other waste products, the following three requirements are necessary an adequate renal blood flow, sufficient renal functioning tissue, and unobstructed excretory channels Uremia therefore may be caused by prerenal, renal, or postrenal factors

The prerenal types of azotemia are due to obstruction of the main renal vessels, shock states. loss of blood, anesthesia, and surgical operations Its mechanism is caused by small blood volume and low blood pressure and is explained as fol-The optimal glomerular pressure for lows filtration is usually about 70 mm of mercury. Normally the glomerular pressure is about 40 mm. of mercury below the brachial pressure marked fall in the latter produces a proportionate drop in the glomerular pressure, which in turn causes madequate glomerular filtration, oliguria, and eventually anura The mortality rate in these cases is 40 to 60 per cent The treatment is prophylactic and curative Postoperative shock should be prevented by transfusions or infusions sufficient to produce a urinary output of 1,500 cc The main object of treatment after uremia has developed is to restore blood volume, plasma volume, electrolyte balance, and blood pressure This is accomplished by venoclyses with 3,000 to 4,0000 cc of saline and glucose per day, and transfusions of blood or plasma, depending upon whatever factor is needed. If the blood pressure remains low, neosynephrine or cortical extracts may be given. In certain types of prerenal anuma, reflex or otherwise, decapsulation may be beneficial

The postrenal or elimination type of uremia is due to obstruction to the outflow of urine by blockage of the ureters or intrarenal tubules The tubules may be obstructed by sulfa crystals, by hemoglobin derivatives after transfusions and crush injuries, by plasma cells in multiple myeloma, and by calcium in hyperparathyroidism Ureteral block is caused by ureteral stricture, tumors, stone, external pressure, enlarged prostate, bladder conditions, etc. In these cases, treatment obviously should be the surgical removal or correction of the obstruction whenever possible Ureteral catheterization or dilatation of stricture may establish good urinary drainage If unsuccessful, nephrotomy or pyelotomy on the obstructed kidney may be indicated stricture, complete or incomplete, because of urmary stasis or infection may cause renal damage with uremia similar to Bright's disease, even before the development of pyelonephrosis or hydronephrosis. Hunner reported 9 out of a large number of cases of renal failure from stricture of the ureter, cured by ureteral dilatation The ages varied from 12 to 64 years, and the renal damage and insufficiency existed for from three months to three years in spite of medical treatment After therapeutic ureteral dilatation, the condition was cured, and the blood chemistry and urinalysis returned to normal He makes a plea for a urologic survey in cases of Bright's disease and uremia, to rule out ureteral block In obstruction of long standing, pressure atrophy of the kidneys may occur, and the renal Wharton<sup>6</sup> condition may become irreversible reports 2 cases of uremia due to bilateral ureteral strictures, one cured and the other relieved for a long period of time by periodic ureteral dilata-Urinary obstruction by hemoglobin derivatives and sulfa crystals should be prevented by proper supervision and by recognized precautionary measures in sulfa therapy and transfusions. Prophylactically, sodium bicarbonate is given to prevent crystallization, and sufficient fluids are given to produce a urine output of 1,300 When oliguria occurs, alkalinization and venoclysis and hydration should be used to in-The postrenal obcrease filtration pressure struction by sulfa crystals should be treated first

by ureteral cathoterization and polvio lavage followed if oecessary by pyelotomy, nephroctomy, or renal decapsulation. Fluids should be forced orally and parenterally and should be reduced or stopped on the development of edema

or pulmonary basal rales.

The renal or excretory types of uremia are due to toxic or infectious nephritus or cephrosis, nephroscierosis, pyclonephritis, Kimmelstiel-Wilson disease, and to cortical oecrosis, etc. Increased xanthroprotein and indican in the blood is a better index of uremic intoxication than is increased blood urea. In the early stages of renal insufficiency, polyuma is the compensatory mechanism. But as kidney destruction increases, compensatory diureris fails, more waste products are retained in the blood, and finally with only 10 per cent or less functioning renal tussue remaining, uremia develops. The polyuria now becomes harmful, eventually causing dehydration with or without acidosis, hypocalcemia, etc., which together with toxic symptoms constitute the clinical pattern of uremia. In this conditioo, death, the inevitable, may, however, be delayed several mooths by proper treatment. This consists in maintaining nutritional and vitamin requirements, in reducing the azotemia by increasing the glomerular filtration, and in the correction of existing physiologic disturbances. Iocreased urmary elimination is accomplished by forcing fluids (e.g., 3,000 oc. orally plus 1,000 to 1,500 cc. of physiologic glucose and saline intravecously per day) temia may also be reduced by intravenous iojections of 50 cc of 50 per cent glucose with or without 71/2 grains of aminophylline, or 20 co of 10 per cent magnesium sulfate every four hours for three days, stop one day and repeat if necessary . The development of basal rales edema. or increased venous pressure is an indication to stop or reduce the quantity of venoclysis. Debydration is treated by increased fluid intake as ooted above, acidosis by 3 to 6 Gm of sodium bicarbonate orally or lactate solution (1/6 molar) given intravenously, and the hypocalcemia by administration of calcrum or A.T 10 Vomiting, anemia, coovulsions, and cardiac complications are treated as they arise. In the presence of bypertension or heart disease, smaller amounts of fluid are given intravenously in order to prevent overtaxing the circulation (e.g., 50 cc. of 20 per cent to 50 per cent glucose) up to 500 co of 10 or 20 per cent glucose at the rate of 30 drops per minute. For persistent vomiting, stop food and medication by mouth and administer intravenously injections of 3,000 cc. of 10 per cent glucose, which furnishes 300 Gm. of glucose daily, equivalent to 1,200 calories For detailed treatment of renal uremia and its various symptoms and metabolic disturbances, consult the recent brilliant article written by Thorn.

#### Comment

The recognition of uremia is easily made when it is preceded by Bright's disease or by a period of anurla. At tumes, however, its diagnoss is difficult. It may not be suspected or detected until it has reached an advanced state. This is doe to the fact that the onset is usually insidious, and its symptomatology may simulate diseases of the brain, beart, or gastrointestinal tract.

Renai uremia manifests itself by a toxic group of symptoms consisting of headache, vomiting, hiecup, and anemia, and by physiologic disturbances due to dehydration, acidosis, and hypocalcemia. These are caused by excessive less of water, base, and calcium doe to the attempted corrective diuresis. The acidosis is also partly due to an inadequate synthems of ammonia by the damaged kidneys and their failure to elimi-

nate phosphorus.

The anuric type may be divided into the following three stages. First, there is a period of tolerance to the azotemia, during which the patient is anuric but appears calm and comfortable, the sensorium is clear and there are no symptoms. In spite of this outward serenity, the situation is critical and fraught with danger The ecood stage is a period of mild intolerance, characterized by fatigue, nausea, vomiting, diarrhea, and hiecup. The final stage of major intolerance consists of coovulsions and coma, followed by death.

When suppression of urine develops to cases with severe diseases of the liver, the blood content of urea and sugar is below normal, since these liver functions are depressed, while the percent of nonprotein nitrogen and amino acids is elevated. Therefore, in these cases both the urea and the nonprotein nitrogen concentration should be determined

The exact mechanism of uremia is not entirely clear Large doses of urea and creatinine are out necessarily toxic, yet uremia seems to be conditioned to an accumulation in the blood of these nitrogenous products associated with some possible unknown toxic substances. The azotemia may exist for a long time in a patient without producing symptoms. Eventually, decompensation sots in and the symptom complex of uremia develops. This reaction appears analogous to the decompensatory states which occur in cardina, diabetic, or bypertensive patients, which are responsible for congestive failure, diabetic come, or malignant hypertenson, respectively

The prognosis depends upon the underlying cause. True renal asotemia may exist for a long time and under proper supervision uramia may

wedge-shaped thinning of their edges This thinning of the muscles gives the impression that the circular interrecti space is considerably larger than The umbilious, which was originally inverted, is now spread out to a flat or moderately convex disk in which its original cartilaginous-like rounded border is extended eccentrically to a diameter of about 3/4 inch. The recti muscle separation, which had correspondingly extended, is now about 3/4 inch away from the cartilaginous ring, which can still be felt, in whole or in part Skin and thinned-out stretched fascia now fill the space between and within these rings In cases of premature rupture of the membranes, when there is a release of abdominal tension, the umbilical area will assume the shape of a protruding breast-like nipple. its size depending on the degree of enlargement of the umbilical field, of previous abdominal tension, and on the amount of liquor amnu lost This occurrence is reminiscent of the irregularities appearing at the placental site soon after separation of the placenta, in form resembling multiple, shallow, subserous fibroids ?

Looking closely over the umbilicus one can see faint vibratory to-and-fro movements corresponding to the maternal pulse. They are countable during expiration and at beginning and end of inspiration. However, they are visible and may be counted in every woman, pregnant or not, as well as in every man. They are less distinct in patients with fat abdominal walls or when the maternal pulse and respiration are very rapid or when the abdomen is overdistended.

During a laparotomy the intestines can be seen moving to and fro, corresponding to the aortic pulsations as visible on the abdomen. During the second stages of labor in some cases, when the intra-abdominal pressure is at its highest and aortic circulation most active, its pulsations at times can be seen rising and falling to a height of 1/4 inch. Still, it is hardly conceivable that the pulsations by themselves should be sufficiently powerful to elevate the abdominal contents so as to register them on the abdominal wall. I am inclined to characterize the umbilical region as a sounding board or collector and reflector of the

sound vibrations of the aortic beats—It is most probably both, the force of the pulsations and the strength of their sounds, that are cooperative in the production of the vibratory umbilical movements

#### Summary

- I have shown that while the fetal heart sounds are audible, they are not forcible enough to transmit visible impulses over the maternal umbilical region by way of the fetal chest, liquor amnu, and uterine wall
- 2 Respiration does not take place in an airtight, liquor-amnu-filled bag of waters
- 3 The only sort of respiration conceivable is endogenous, when the fetus gets an oversupply of oxygen and associated gases, at certain times, which the lungs take up—Such respiration is not apt to register on the abdominal wall through the barriers of liquor amnii and uterine wall
- 4 Liquor amnu circulates freely in the lungs at all times
- 5. An excess of liquor amnii retained in the lungs, which was not aspirated, is a cause of attacks of cyanosis with imperceptible pulse rates, associated with Cheyne-Stokes respiration.
- 6 The contractions of labor, which increase the intrauterine tension, have the tendency to express fluid present in the lungs, thus minimizing the incidence of cases showing the bronchial liquor-amnii-retention syndrome
- 7 The vibratory movements of and around the umbilicus are caused by aortic pulsations and vibratory sounds they produce The umbilicus is the thinnest, most yielding, and most sensitive part of the abdomen, readily reacting to motion and sound vibrations
- 8 The umbilious goes through a pattern of evolutionary changes during pregnancy which is followed by a corresponding involution after the termination of pregnancy

#### NEW DERMATOSES SLIDES TO AID INSTRUCTION

The Office of the Surgeon General reports that six sets of lantern slides on cutaneous diseases have been completed by the Army Medical Museum and are ready for distribution They will be loaned to Army teaching centers and are available for deployment teaching programs These slides emphasize dermatoses which have been seen in tropical overseas theaters. All but three are in color

#### TRENDS IN MEDICAL-CARE INSURANCE IN NEW YORK STATE

GEORGE P FARRELL, New York City

(Director Bureau of Medical Care Insurance, Medical Society of the State of New York)

BOUT five years ago the first voluntary A nonprofit prepaid medical-care insurance plans had their modest beginning in New York State.

The success of the plans has been due to the untiring efforts of the doctors, who have given so freely of their time and knowledge in the organisation of these plans and through the cooperation of the organized medical profession and the Blue Cross Hospital organizations in administering The success of the plans also the programs indicates what can be accomplished by mutual cooperation and understanding in the distribution of medical and hospital care for the people in the State

Medical-care plans are now operating in nineteen states in conjunction with Blue Cross Plans and are serving the needs of over 1,600,000 members to the satisfaction of the patients, the doctors, and the medical societies. In New York State four approved plans are in operation, with a membership of over 230,000 A plan has been formed in Rochester and a plan is in the advanced stage of formation for the Albany district The entire State will be covered when these new plans are in operation, with the exception of two counties which have small local Blue Cross plans

Plans operating in New York State offer diversified contracts the Western New York Medical Plan of Buffalo and the Central New York Medical Plan of Syracuse offer medicalsurgical care, including maternity benefits, with a limited number of home and office calls, for subscriber and dependents on an indemnity basis The Medical and Surgical Care Plan of Utica offers surgical care for subscriber and onehalf benefits for dependents, maternity care for subscriber or dependent while hospitalized, a limited number of medical calls for subscriber and dependents while admitted patients in a hospital, and an additional three calls are allowed within ten days after hospital discharge. All benefits are on an indemnity basis.

The United Medical Service of New York offers three types of contracts type one contract provides surgical care for subscriber and dependents. including maternity benefits, while hospitalized on an indemnity basis Type two contract provides for surgical-medical care for subscriber

Presented at meetings of the Flith and Berenth District Branches, at Oreida, September 18, 1945, and at Clifton Springs, September 27, 1945.

and dependents, including maternity benefits, while hospitalized. Medical-care benefits are provided from the fourth through the twentyfirst day, and at the rate of \$10 per week from the twenty-second to the one hundred and eleventh day for each hospital admission These benefits ere on a service basis for subscriber and dependents whose incomes do not exceed \$1,800 a year for a single person and \$2,500 a year for a family

Type three contract provides for surgicalmedical care for subscriber and dependents, including maternity benefits while hospitalized. A limited number of home and office calls are pro-These benefits are on a service basis for subscriber and dependents whose incomes do not exceed \$1,800 a year for a single person and \$2.500 a year for a family This contract is being offered to a maximum of 25,000 subscribers until such time as experience indicates that it can be offered to an unlimited number of subscribers on a sound underwriting basis

The experience of these plans should provide sufficient data and information to enable consideration of a more unified contract on a sound actuarial basis, which would provide benefits to meet the needs of most catastrophic illnesses. It is essential that monthly records be kept on the experience of a plan, in order to determine the benefits which can be offered consistent with

sound underwriting practice

The majority of plans which have been the most progressive, from an enrollment and sound underwriting point of view, offer surgical and medical benefits for hospitalized patients, including obstetrics The cost of home and office calls for medical care is still an unknown and unpredictable factor, because of the lack of control over the amount of care requested by subscribers

It is a natural tendency to request something if it doesn't cost you any more to have it, whether you really need it or not. However, people are not admitted to a hospital just because they want to be, but rather because they have to be. This places an antomatic control on the demand for service.

There is an ever-increasing demand being expressed by labor, industry, public opinion, and politicians for a better solution of the distribution of medical care. Past experience of voluntary plans should give us an answer to the best benefits that can be offered to all those who wish to protect themselves and members of their families against unexpected medical costs. Such plans would be more acceptable to our people than will any plan based upon compulsion and administered through governmental bureaucracy.

Our present membership indicates public acceptance of the voluntary principle. To increase enrollment in our present plans, it is necessary to educate the public on the need for medical care, and to educate the doctor on the need of his active cooperation in supporting voluntary plans.

Due to our experience of the past five years. we are no longer gazing through the penumbra of incomprehension regarding the necessity, workability, and advisability of a voluntary plan In view of the fact that during the past year a number of medical insurance bills have been introduced in the Legislature, it is necessary that we give voluntary plans our full support any study indicates that the people are receiving insufficient medical care, it is possible that some form of legislation may be introduced which would be of a compulsory nature I do not beheve the medical profession is interested in any plan which is compulsory A compulsory plan has definite disadvantages, such as removing the control of the distribution of medical care from the profession, where it belongs offered will be regulated by politicians and not by physicians, and fee schedules established to the satisfaction of the politician and not yours There would be third-party interference between physician and patient. This relationship is a very personal one and no type of plan should interfere with that relationship

Far greater advances will be made in curative and preventive medicine under the system of free practice of medicine than if political medicine is installed. That has been proved where political medicine has been in existence in other countries.

I believe that we will agree that an economic problem exists between the patient and physician, and there is a moral obligation on the part of the profession to find a solution to it

The solution has been found by the profession in the establishment and promotion of voluntary medical care plans for the employed, self-supporting person and his family. Provisions should be made for all persons to avail themselves of voluntary medical care benefits, regardless of employment status, who wish to do so. Recognizing that administrative costs would be increased and perhaps also the underwriting risk, depending on enrollment control, an additional premium could be charged commensurate with the additional cost for this particular group. The highest percentage of our people are wage.

earners who wish to meet their individual obligations in the traditional American way. This is evidenced by the fact that over nineteen million Americans have provided against the cost of hospital care in an incredibly short time. It is reasonable to assume that enrollment in the medical plans will be even more rapid if each individual member of the profession cooperates by educating his patients to the need of providing for the unexpected cost of catastrophic sickness through a voluntary plan

The American people have not shirked individual responsibility, which is always the price of liberty

The care of the indigent is the responsibility of the government, and the cost of medical care for them should be paid by tax money the same as their housing, food, etc., is

In considering the factors which contribute to better health, medical care is only one of several Samtation, hygiene, slum clearance, and many others also contribute to a large degree However, we are primarily concerned with the medical aspect and what effect it would have on the health of the people and the cost

Bismarck introduced compulsory health insurance in Germany in 1883, in 1885 the average illness lasted fourteen days and by 1932 the average illness lasted twenty-nine days, or more than twice as long. During this period medical cost per insured person rose more than nine times. Did the Iron Chancellor have a definite purpose in mind when he introduced compulsory social security?

In Boehm's biography he quotes Bismarck as follows

"One who looks forward to an old-age pension is far more contented and much easier to manage Contrast a man in private service with one who serves in the Chancellery or at Court The two latter must be far more accommodating and obedient than the former, for they have their pensions to think of A great price is not too much if therewith we can make the disinherited satisfied with their lot Money thus spent is well invested if it is used to ward off revolution"

The great price was to the tune of one hundred billion gold marks from 1883 to 1932, over a period of forty-nine years. Have the German people, through compulsory social insurance, traded a certain amount of temporary welfare and security which might have been supplied by private enterprise, for their own economic independence and the very existence of their nation?

From the experience of compulsory health insurance in Germany, it is very possible that the contemplated cost of any compulsory plan might

not be self-sustaining Who is going to make up the deficit—the taxpayers, the doctor, or both?

To meet this ever-increasing demand for a better solution of the distribution of medical care, the medical profession is meeting the challenge by establishing new plans and promoting existing plans No issue has ever called for greater united effort and more active cooperation of the medical profession than the present trend toward somalised medicine The active cooperation and participation of every doctor of medicine is necessary

#### THE FINAL PHASE IN THE CONQUEST OF TUBERCULOSIS

For more than four decades the mortality from tuberculous in our country has been sweeping downward without interruption. The result is that the current death rate from the disease is only about one fifth of what it was at the beginning of the century. The improvement, moreover has been fairly consistent throughout the prosperity of the 20 s, the depression of the 30 s, and the exacting years of the present wer. From 1921 through 1945 the death rate decreased on an average by 4 per cent annually

An essentially consistent per cent annual decline implies, of course, a diminishing absolute annual de-

cline.

It is obvious that a reduction of 4 per cent from the rate of about 100 per 100 000 which prevalled around 1921, means an absolute drop of 4 per 100 000 in the death rate for the year, whereas with the current death rate of about 40 an annual drop of 4 per cent is only 16 per 100 000. Thus, although the measures against tuberculosus have been intensafied since the first World War these efforts have brought diminishing returns. This tapering-off process is also seen in the trends for typhoid fever, the communicable diseases of childhood and a number of other diseases which have been coming under control. It merely indicates that as room for improvement diminishes, it becomes in creasingly difficult to make further gains

reasingly difficult to make further gains.
We may expect a death rate of about 30 per 100-000 in 1980 and of about 20 per 100 000 in 1980.
There is good reason to believe, however, that the actual figures will be even lower than those indicated by the forecasts. Holv soon tuberculosis is reduced to vanishing proportions depends to a large extent on the vigor with which the full means of

combating the disease are utilised.

An important step in this direction was the establishment, last July, of the Tuberculeds Control Division in the U.S. Public Health Service, whose function it is to develop on a nation-wide scale, more effective measures for the prevention treatment, and control of the disease. The program includes grants—rad and a variety of services to States and local communities, the expansion and training of medical nursing, and tochnical personnel, and the carrying on of demonstrations, of clinical and laboratory research, and of general studies. The Division will also work in cooperation with various voluntary agencies in formulating plans and evaluating results.

The new program will give added impetus to the widespread use of x-ray mobile units for mass surveys. Case finding has been, and will continue to be, one of the most important steps in rooting out tuberculosis. Through this large-scale screening process, cases are likely to be found in their minimal stages, when treatment is most effective. Mass x ray can be used particularly where large groups are concerned, as among hospital patients industrial workers, and school children. In order to locate new cases as they arise, these surveys should be repeated periodically. An incidental feature of these mass surveys for tuberculosis is that in a number of in stances they disclose the presence of other discases. The medical care provided for our war veterans.

The menical care provided for our war veterans should be an additional aid in the control of tuber culosis. Under the present program of the Veterans Administration, heepitalnation for tuberculous is available to war veterans, whether or not the disability was connected with their military services. In view of the fact that there are about 11,500 000 men in the armed services who will become veterans, this provision can be of the utmost importance in protecting a large and vital segment of our population from the disease. The basic problem will be to locate the tuberculous veterans in the early stages of the disease, to hospitalise them and to see that they get adequate medical care and rehabilitation.

The campaign against tuberculosis will benefit not only from these direct measures, but also from seneral measures which will raise the standard of living. Recent developments in the science of nutrition will mean not only better foods but also more balanced diets. Likewise, many large-scale housing projects are planned to displace slum areas, where tuberculoses has often found fertile hreeding ground. A large number of municipalities have been giving more attention than ever before to outdoor recreational facilities. The cumulative effect of these and other steps should be to build up strong bodies resistant to disease.

Considering the new elements introduced into the present-day fight against tuberculosis, it is not unduly optimistic to expect that the death rate from the disease may fall below the levels indicated by the recent trend. The final conquest of tuberculosis should be one of the first items on the agenda in planning for the postwar health and welfare of the American people.—Metropolulan Lefe Ins. Co., Statutical Bulletin April, 1946

#### THE ROLE OF TRAUMA IN ACUTE CORONARY THROMBOSIS\*

A Clinical Study of 200 Cases

GEORGE A RACE, MD, New York City

(From the First Medical Division, City Hospital, Welfare Island, Department of Hospitals)

THERE is much controversy at present regarding the role of trauma as a causative factor in acute coronary thrombosis There have been many reports in the literature, such as that of Fitzhugh and Hamilton, in which a sudden, dramatic, indirect injury was followed immediately by the typical syndrome of squeezing substernal pain with radiation to the shoulders and down the arms, dyspnea, cyanosis, lowered blood pressure, and the general picture of shock. It was, therefore, concluded that the trauma had a direct causative significance in relation to the acute coronary attack There have been many reports from authors with an opposite They state, with impressive series point of view of cases, that the role trauma plays in the causation of acute coronary thrombosis is insignificant. One group, Master, Dack, and Jaffe, in a series of more than 1,000 attacks, found only 2 per cent definitely associated with severe exertion or trauma there have been middle-of-the-roaders, such as Phipps, who found that exertion was intimately connected with acute coronary closure in '40 per cent of a series of 437 cases

Lack of agreement on terminology and definitions is certainly responsible for much of the discrepancy For example, one author will distinguish between walking, moderate activity, and ordinary mild ac-Another will divide his headings between severe physical stress and moderate or usual exer-One author will include under severe stress exercise, surgery, and general infection, whereas another writer will separate the latter two categories and not consider them as severe trauma at all other cause for disagreement is the difficult question of compensation cases Some writers feel that the history of patients with a personal axe to grind will be colored by their own desires and become, therefore, unreliable These writers do not include compensation cases in their reports Other men, although recognizing the possibility of tainted testimony, feel that the picture is not a complete one so long as there is an arbitrary selection of cases

This report comprises a series of 200 cases of acute coronary thrombosis. They have been taken from the records of City Hospital between the years of 1938 and March, 1945, inclusive. Of the 200 patients, 141 were men and 59 were women. Their average age was 63 4 years. The youngest patient was a man 27 years old and the oldest was a man 89 years old.

The diagnosis of each case was definitely proved either by electrocardiogram or by autopsy, or by both One hundred twenty-nine cases were confirmed by autopsy and 89 cases by electrocardiogram There were 34 cases of acute coronary oc-

clusion, proved by autopsy, in which he electrocardiograms showed no evidence of the acute lesion. The electrocardiographic reports in these cases spoke of disease of the ventricular muscle, overdigitalization or some other toxic factor, or myocardial damage.

In order to eliminate unnecessary and confusing categories, we have divided the circumstances under which the acute coronary thrombosis developed into five main groups (1) sleep, rest, or other inactive states, (2) mild to moderate but usual activity, (3) unusual or severe exertion, (4) direct physical injury to the chest, (5) no definite history of trauma either solicited or volunteered

Sixty-two cases developed while the patients were sleeping, at rest, or in an otherwise mactive state. Of these 62 cases, 49 were in bed, 7 were sitting in a chair, and 6 were standing

There were 25 cases which developed while the patient was engaged in an activity which was mild and not unusual for him. Five patients developed acute attacks immediately after eating. A hospital employee and a housewife were stricken while mopping floors. Ten attacks occurred while the patients were walking. And other attacks followed such activities as shaving, bathing, and cleaning a rug

There were 5 cases in which the onset of the acute attack was intunately related to a severe and unusual exertion. The first of these cases was that of a 51-year-old mechanic who, after lifting a 100-pound shelf and carrying it several feet, suddenly coughed, developed dyspnea and cyanosis, became nauseated, and vomited He was brought to the hospital and an electrocardiogram confirmed the diagnosis of acute coronary occlusion The second case was of a 49-year-old man whose occupation is unknown. The chart states that he was "lifting something" when he was suddenly seized with severe substernal and epigastrie pain. The diagnosis was confirmed by electrocardiograms. The third case was of a 62-Following the lifting of a year-old handyman heavy motor, he developed pain in the upper abdomen radiating to the back. He became nauseated, cold, and clammy and was brought to the hospital, where the diagnosis of acute coronary occlusion was established by an electrocardiogram This patient died and an autopsy revealed massive anterior and posterior myocardial infarctions with a rupture of In the fourth case, the interventricular septum the trauma was more remote. The patient was a 70-year-old W P A inspector who, ten days before admission to the hospital, had walked two miles During this exertion, which was unusual for lum, he experienced a severe attack of precordial pain Four days later he developed a more severe prolonged precordial pain which continued for several days and finally caused him to seek admission to

<sup>\*</sup> Presented before the New York Cardiological Society, February 25, 1945

the hospital. The diagnosis of acute coronary coclusion was established by electrocardiograms. The fifth patient was a 44-year-old man who worked on a moving van.

While he was carrying a heavy object, he was suddenly seized with a choking sensation, became dyspheic, and broke out in a sweat. The diagnosis of acute coronary closure was made by electrocardiogram.

In the series of 200 cases, there was not a single instance in which the acute coronary occlusion was due in any way to a direct blow to the chest wall.

In 108 cases, no definite history of trauma was either solicited or volunteered. It was felt that in this group the lack of positive evidence of severe trauma was not sufficient beass for assuming that such trauma did not occur. Possibly, investigation concerning this point was not sufficiently thorough. Since more than half of these cases, takee from a large, active general hospital, had inadequate histories, it was thought that the use of the following standard list of questions might be of value

1 Was there an acute attack?

- 2 What were the symptoms of the acute attack?
  - 8 How loog did the symptoms last?
  - 4. What medication was used for the attack?
  - What time did the attack occur?
     What was the patient doing at the time of the
- onset of the attack?
  7 Was the attack associated with a recent
- 7 Was the attack associated with a recent heavy meal?

  8 Had there been any severe exertion by the
- patient over the previous forty-eight hours?

  9 Was this exertion a usual effort or was it
- unusual for the patient?

  10 Had there been any direct recent injury to
- the cheet wall?

  10 Had there been any direct recent injury to
  the cheet wall?

  11 Does the patient consider himself nervous?
- 12. Had the patient had any severe emotional disturbance over the previous forty-eight hours?
- 13. Did any complications arese concomitant with the attack?
- 14 What were the pre-existing modical complications?

15 Will the patient receive compensation benefits from this hospital sojourn?

It should be stated that in oot one of the 200 cases was there a question of compensation. This particular difficulty, therefore, was obviated

A surprisingly large number of cases did not have an acute episode. Io 130 cases the infarction was associated with the acute picture but in 70 of the cases tha acute symptoms were lacking. In 54 of these 70 cases the diagnosis was established only by autopey, in 11 cases the electrocardiogram gave the diagnosis, and in 5 cases the electrocardiographic evidence was borne on by the autopsy findings.

#### Summary

1 Two hundred cases of acute coronary occlusion are reviewed. In no case was compensation involved. There were 141 men and 80 women, whose average age was 63 4 years.

- 2. Extly two cases developed while the patients were eleeping, at rest, or in an otherwise mactive state 25 cases developed while the patients were engaged in an activity which was mild to moderate, and not unusual for them, 5 cases were intimately associated with severe caretice in no case was there direct injury to the chest, and in 108 cases no definite history of trauma or exertion was solicited or volunteared.
- 3 In 130 cases the coronary closure constituted an acute eplaced, in 70 cases the attack was mient.
- For cases of suspected acute coronary occlusion, a standard list of questions is presented. It is hoped that its use may lead to more accurate history taking and more rapid diagnosis.
  - 5 The discrepancies of existing classifications of activity are noted and a simpler nomenclature is suggested.

Thanks are due to Dr Walter Benzel (or his kind encouragement and helpful criticism in the preparation of this paper

#### LEAD POISONING IN A FURRIER

ALFRED SCHICK, M.D., New York City

LEAD, because of its widespread use, is one of the common and frequent causes of industrial poisoning. Although lead intoxication has become less frequent in recent years, because of precautionary measures and oew industrial methods, it is still a so-rious occupational hazard. About nine liundred specific occupations are cited involving a potential exposure to lead. The diagnosis of lead poisoning is sometimes missed because the manifold signs and symptoms of this disease so often simulate those of other diseases, and because the attending physician unless he is sware of the possibility of lead poisoning,

may easily fall to relate the signs and symptoms to the true condition.

Lead may enter the body through the respiratory passages, the gastronotestinal tract and the skin. The latter is of little practical significance. The gastronotestinal route is only slightly more important for logested lead is largely excreted with the feeces without being absorbed at all, or excreted with the bille into the bowols. Thus only relatively small amounts of lead reach the systemic circulation by way of the gastroiotestinal system. The respiratory system is considered the most common and

most dangerous route by which lead absorption takes place Flury cites the high incidence in lead workers of diseases of the respiratory tract, such as bronchitis, laryngitis, etc. A given amount of lead is ten to one hundred times more toxic when inhaled than when swallowed. Furthermore, there is a striking variation in the degree of tolerance to lead intoxication in different individuals. Some persons may become injuried after a short exposure to lead while others may live in the same environment for years without apparent ill effects.

The classic signs and symptoms of lead poisoning do not always appear fully developed or combined in a significant syndrome The most important manifestations of lead poisoning are referable to lesions of the neuromuscular system, the brain and the spinal and peripheral nerves may be involved But increased blood pressure, constipation, intestinal cohe, lead gum, or blood pathologies, such as anemia and basophilic aggregations, may not complete the picture One or the other of these signs and symptoms may be present whereas others may No conspicuous signs indicating impending lead poisoning may appear L Teleky describes monosymptomatic cases, especially where the rate of lead absorption is slow. For instance, weakness of the extensor muscles of the forearm may appear and remain for an extended period as the only manifestation of lead into a cation Affected are usually the more used muscles, 1 e, the right extensors in right-handed people, and vice versa Even laboratory findings do not always aid in establishing the diagnosis 6 Fall of hemoglobin and diminution and stippling of red cells may be transitory of active plumbism may fail to show an increased lead content in the blood, whereas no plumbism may be manifest in individuals showing a high level of lead in the blood The urine may frequently contain an increased amount of lead, but not invariably and not constantly 7 The quantity of lead exercted in the feces is indicative of the amount of ingestion rather than of absorption 8 Thus, the diagnosis of lead poisoning must depend upon the presence of elinical manifestations and the demonstration of lead as the causative factor

#### Case Report

As an illustration of the foregoing we report the following ease in a white man, 40 years old O recalled no illness or disease prior to 1940, when weakness and pain developed in his right forearm and persisted for two months These signs and symptoms disappeared without therapy and the patient was symptom-free until 1944, when he began to notice a burning sensation in his throat, accompanied by a dry cough, and a return of the attacks of pain and weakness in the forearm attacks became more frequent and eventually more severe and were worse after evertion and in cold weather The patient was treated by several physieians for a variety of diseases, including anginal syndrome, allergy, and tendovagants, but no therapy gave relief. The patient was referred to me with a diagnosis of a possible neurosis

The clinical examination revealed little Skin, mucous membranes, heart, lungs, abdomen, central nervous system, and blood pressure (130/90) were normal, he neither smoked nor drank All

laboratory findings, including complete blood chemistry and blood count, Wassermann test, feces and urine examination, were negative Roentgenographs of the shoulders, upper extremities, spine, and chest showed no abnormalities. However, the patient demonstrated slight difficulty in fully extending the right wrist and slight sensory disturbances on the dorsal side of the right forearm.

The painful sensation, the sensory disturbance, and the weakness of the muscles gave the impression of a neuromuscular affection In search of a cause, a careful history was taken with special attention to the occupation of the patient It was learned that he had been a furrier for many years, working as a forefinisher, in which work he particularly used his right arm. Previous to the onset of his present illright arm ness, he had worked for six weeks, for seven and onehalf hours daily, on a particular type of skin which he had not previously handled These skins were ordinary lambskin, imported from South America. In order to make them similar in appearance to genuine Persian lamb, they were dyed after arrival in New York with a preparation containing lead The freshly dyed skins were then bleached with hydrogen perovide and were then ready for the manufacturing process Upon questioning, the patient remembered that he had worked with identical skins during the time he experienced his 1940 attacks of pain and weakness in the arm

An examination of a sample of the dyed skin revealed the high lead content of 10 7 per cent (Laboratory of the Department of Labor)

The patient's history of exposure to lead and the consideration of a given individual susceptibility suggested lead intoxication. Since the most frequent and disabling signs and symptoms of this disease are those pertaining to the neuromuscular system and since muscles as well as nerves are directly affected by lead, a diagnosis of lead poisoning seemed to be justified. T. M. Legge and K. W. Goadby's point out that in plumbism cramps of the muscles, the nerve supply of which is becoming affected, hyperesthesia, or anesthesia, may be present as well as neuralgic pain. Mr. O's signs and symptoms manifested themselves in the extensor muscles of the right forearm and their supplying nerves. There were no other clinical or laboratory findings. Urine and feces were not examined for lead. The burning sensation in the throat and chest was attributed to lead irritation of the respiratory passages.

The diagnosis of plumbism was further supported by the following considerations—the patient had been a furtier in good health for many years, having suffered but two attacks of illness in his adult life. On both occasions, the complaints were similar. And on both occasions, the illness had been preceded by a short period during which he worked with a particular type of skin, shown to have been dyed with lead. In each illness, his signs and symptoms were relieved and gradually disappeared when he refrained from handling the offending type of skin. And although he did not at any time give up his work as a fur forefinisher, continuing his handling of all types of fur except the South American lamb, he suffered no return to his symptoms.

Of particular interest in this case are three factors (1) The disease was comparatively poor in characteristic signs and symptoms, (2) there were marked sensory complaints, rare in lead poisoning, (3) only one other report of lead poisoning among furriers is found in the literature, this report dealing with furriers working on skins dyed to resemble chinchilla 10

#### MALARIA DUE TO PLASMODIUM FALCIPARUM IN NEW YORK

HOWARD B SHOOKHOFF, M D \* and PHILIP STRAX, M.D New York City

THE following case report illustrates some difficulties which may be encountered in diagnosing the commonest of all tropleal diseases -malaria

#### Case Report

S.R., a married woman of 28, returned from London, England, to New York by plane. She left London on February 7, 1945, and reached New York on February 7. Her route took her through two West African ports both highly malarious. She stayed overnight in each port and recalled having been bitten by mosquitoes in both of them. Sho stopped at a port in Brazil also, but it is probable that malaris control is reasonably effective at that point. Her exposure to malaria probably took place

point. Her exposure to mannar processity took place on either February 8 or February 4
On February, 12 she began to feel tired, and to have generalized aching The same day she had two shaking chills soveral hours spart, and became nauscated. From then on she had repeated attacks of chilliness, beadache, and vomiting until February 17, when she was admitted to a hospital. The head ache was sovere, and unlike anything she had ex

perienced before.

Physical examination showed no abnormalities in the heart or lungs, but the spleen was moderately enlarged Blood counts showed anemia and leuko-penia (Table 1) The test for albuminuria gave a 1 plus reaction No malaria parasites were found in a blood gnear examined specifically for them on February 19

The patient was treated with sulfadusine for one day and then given penicillin intravenously

TABLE 1 -- BLOOD COURTS

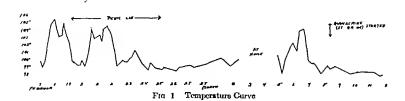

Date February 17 1945 February 22, 1945 March 5 1945 April 30, 1946	SS 2 Hemoglobia (14.5 Gm	2 890 000 000 000 000 000 000 000 000 000	Male Blood	Polymorphonuclear	Sect Lymphocytes—
---	-----------------------------	---	------------	-------------------	-------------------

individual doses were 20 000 units. Between February 19 and February 25 she received 320 000 units-Fig. 1 shows the course of her temperature curve. The normal temperature from February 24 to Febru ary 28 may represent the natural course of the dis-case rather than a response to peniciliin. She was

discharged on March 3
On March 4 the symptoms, including fever chillings headache, and vomiting, recurred and on March 5 sho was admitted to another hospital for further study Thin blood amears taken on March further study Thin blood amount taken on March 7 and March 8 were reported negative for malaria

paramtes.

On March 8 twenty-four days after the onset of illness, one of us (H. B. S) saw the patient in consultation. It was noted that the temperature curve was characterized by rises of temperature lasting about thirty-six hours and having a double peak (Fig. 1)

<sup>\*</sup> Epidemiologiat, Tropical Disease Diagnostic Service, Health Department, City of New York

Physical examination showed the patient to be Examination of apprehensive and definitely pale he heart and lungs revealed no abnormal findings The spleen was moderately enlarged, reaching to about three fingerbreadths below the left costal not enlarged, and there was no jaundice

blood smears were taken for study In view of the exposure to malaria, the character of the temperature curve, and the physical findings, it was felt that a clinical diagnosis of malaria due to rt was felt that a cumear diagnostic street and street headache suggested that pernicious cercbral manifestations might develop at any time In view of the imminence of another bout of fever, we initiated treatment without awaiting the results of the blood smears taken Quinacrine (atabrine) was given in a dose of 0 2 Gm every six hours for five doses, and then 0 1 Gm three times a day for five days About two hours after starting quinacrine the patient began to feel as though another attack were coming on, but this feeling subsided promptly From then on she had no fever and improved rapidly

Thick smears were made again on March 9, twenty hours after the original smears were taken, and about eighteen hours after the start of treatment Prolonged search revealed two ring forms in a smear taken March 8, and two more in another smear taken March 9 Thus confirmed the diagnosis of P falciparum infection Smears taken March 12 and

March 22 revealed no plasmodia

We examined the patient again on May 1 had remained well A blood count on April 30, 1945, showed distinct improvement with respect to the anemia (Table 1) The tip of the spleen could just be felt on deep inspiration A thick blood smear was negative for plasmodia

#### Discussion

Malaria, due to P falciparum, often called estivoautumnal malaria, frequently does not show the classic recurrent bouts of chills and fever Sometimes the fever is completely irregular but a certain proportion of cases show the type of curve seen in the present case, namely, a series of bouts of fever characterized by double peaks. This phenomenon has been observed in experimental infection by Boyd 1 The clinical manifestations of this type of malaria are often very bizarre, and in general are extremely variable. The only safe rule for the clinician to follow is to suspect malaria in anyone who is ill and who has recently been exposed to the disease.

Estivoautumnal malaria is always an emergency A patient such as the one described here may, within two hours, go into fatal coma It was for this reason that treatment was instituted without awaiting confirmation of the diagnosis by laboratory examination

The number of parasites in the circulating blood in P falciparum infections is, like the clinical pic-Severe cases do not ture, extremely variable necessarily show many parasites There are certain phases of the developmental cycle of the parasite during which it may disappear completely from the peripheral blood Therefore, it is essential to examine further blood smears when the first one is negative In those instances in which the parasites are scanty, the use of the thick-smear method is indispensable. This was evident in the present case, when four examinations made with the ordinary thin smear failed to reveal the parasite.

A case of malaria due to P falciparum is reported The infection was apparently acquired in West Africa in the course of a trip by air from London to The diagnosis was suspected on New York City clinical grounds but could not be substantiated in the laboratory until examination by the thick smear method was employed. The value of repeated examinations of the blood and the employment of the thick-smear technic in suspected cases is emphasızed.

Boyd, M. P., et al. Publication, Am. A. Advancement Sc, No 15, p 198, Fig. 3, 1941

#### SEDATIVES—A NATIONAL PROBLEM

If drugstores stopped selling sedatives for a period of two weeks there would be an awful lot of people on the night shift who couldn't sleep days and a lot on the day shift who couldn't sleep nights, then there would be some who weren't on any shift

(shiftless) who couldn't sleep any time
Everybody seems to be tired but nobody seems
to know what to do after they get to bed. The old
gag about being so tired they couldn't get to sleep, still is being heard—so they get up, have a cup of coffee, a sandwich, a cigarette, another sedative tablet, some mineral oil, and hop back in bed and start counting sheep till they get into the 100,000's and by that time it's almost morning—so they get up, read a few chapters of Forever Amber and then off to work

It is a good thing that there are still some drugs that have to be obtained by prescription to protect those people who are trying to avoid rigor mortis by taking alternate doses of synthetic sedatives and stimulants A sedative taken at night often has a "hangover" effect the next day so that the person

is not sure he's alive till late in the morning, and wonders why he is so tired after such a good night's sleep

The most common reason for the prescribing of sedatives is a wastebasket term called "nervous-ness". An interesting group of slang synonyms has An interesting group of slang synonyms has arisen from this hackneyed complaint heeby-jeebies, jitters, shakes, willies, jumps, frazzled, twidgety, skittery, going all to pieces, blowing one's

top, going haywire, going berserk, ad infinitum
The central nervous system apparently is taking a terrific pounding with the so-called advance of civilization, but as long as chemical depressants are available as easily as they are now, there is very little hope for the future Perhaps physicians proscribe sedatives too often for minor transient insomnias, thereby creating a potential addiction in patients If the present trend of administration of sedatives continues there will come a time when they will have to be classified exactly as narcotics and dispensed accordingly — J J Lightbody, M D, in the Detroit Medical News, Sept. 10, 1945

#### Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the JOURNAL. The members of the committee are Oliver W H. Michell, M. D., Chairman (428 Greenwood Place, Syracuse), George Bachr, M. D., and Charles D. Poet, M.D.

#### Management of Arterial Occlusions

66 THE Management of Acuta or Slowly Progressive Arterial Occiusions ' is the subject of the lecture to be given by Dr A. Wilbur Duryee to the Nassau County Medical Society on Tuesday, November 27, at 9 00 r m. Dr Duryee is associate clinical professor of medicane, College of Physicians and Sur-

cons, Columbia University The lecture, presented by the Medical Society of the State of New York, and arranged by the Council Committee oo Public Health and Education, will be held at the MacArthur Auditorium, Mercy Hospital, in Rockville Centre, Long Island

#### Treatment of Virus Diseases

REENE County Medical Society and the medi G cal staff of the Memorial Hospital of Greene County will hear Dr David K. Miller, professor of medicine, University of Buffalo School of Medicine, speak to the "Recognition and Treatment of Virus Discasses" on November 29 at 9 00 r.m. The meeting will be held at the Memorial Hospital of Greene County, Catakill.

This instruction is presented as a cooperative endeavor between the Medical Society of the State of New York and the New York State Department of Health.

#### Onondaga County Hears Lecture on Vascular Diseases

A JOINT meeting of the Onondaga Couoty Medical Society and the Syracuse Academy of Medicine will be held Tuesday November 20, at 8 30

The place will be the University Club of Syracuse. Dr. A. Wilbur Duryce, associata clinical professor of

mediane, College of Physicians and Surgeons, Columbia University, will speak on "Management of Penpheral Vascular Diseases"

This instruction has been arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York.

#### Genitourinary Infections

HE Medical Society of the State of New York and the New York State Department of Health, as a cooperative endeavor, presented postgraduate instruction to the Franklin County Medical Society on October 31 at the Alice Hydo Memorial Hospital. Dr Leo E. Gibson, professor of clinical surgery Syracuse University College of Medicine, spoke on "Infections of the Genitournary Tract."

#### Teaching Day at St. Lawrence Hospital

A CANCER teaching day was held at the St. navrenes State Hospital, In Ogdenaburr, on November 1 It was presented under the auspices of the Medical Society of the County of St. Lawrence, St. Lawrence State Hespital, Medical Society of the State of New York, and the New York State Department of Health, Division of Cancer Control.

Dr. Morton L. Levin, assistant director, Division of Cancer Control, New York State Department of Health, and Dr. Cushman D. Hasgunsen, sexistant professor of surgery, College of Physicians and Surgeons, Columbia University, spoke during the afternoon section of the program. Dr. Levin, seith-CANCER teaching day was held at the St.

afternoon session of the program. Dr Levin s sub-ject was "Cancer Incidence, Provalence, and Mortality," and Dr Haagensen spoke on "Cancer of the Breast."

Dr James P Smith, president of the Medical Society of the County of St. Lawrence, was chair-man of the afternoon meeting. Dr John A Pritchard, senior director of St. Lawrence State Hospital was chairman of the evening session which followed a dinner served at the State Hospital,

At the evening meeting Dr Clyde L. Randall, pro-fessor of gracology, University of Buffalo School of Medicine, pave a talk oo "Diagnous and Treatment of Cancer in the Female Pelvis," and Dr Lloyd F Craver, assistant professor of clinical medicine, Cornell University Medical College, discussed "Leu kemias and Hodgkin's Disease."

The cancer committee for the program included Drs. Arthur A. Hobbs, Jr., chairman William R. Carson, Frederick E. Clark, and Stanley W Sayer

#### Tumors of the Lung and Mediastinum

POSTGRADUATE instruction in tumors of the Ling and mediastinum, arranged for the Saranao Lake Medical Society by the Medical Society of the Stata of New York in cooperation with the New York State Department of Health, was presented oo November 7 in the John Black Room, Saranac Laboratory, Baranac Lake. Dr. William DeW. Andrus, associate professor of surgery, Cornell University Medical College, in New York City, gave the instruction.

#### Hormonal Therapy

THE second of two postgraduate instructions in practical medicine was given by Dr Ivan Heliminn, assistant professor of medicine, and associate in therapeutics at the University of Buffalo School of Medicine on October 25 before a meeting of the staff of the Memorial Hospital of Greene County

and the Greene County Medical Society Dr Hekimian's subject was "Practical Applications of Hormonal Therapy"

The lecture was arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York

#### Cancer Instruction in Albany

CANCER Teaching Day was held in Albany A on October 18 at the Auditorium of the Albany College of Pharmacy, for local physicians, under the auspices of the Medical Society of the County of Albany, the Albany Medical College, the Third District Branch of the Medical Society of the State of New York, the Tumor Clinic Association of the State of New York, the Medical Society of the State of New York, and the Division of Cancer Control of the New York State Department of Health

The afternoon session was opened by Dr Arthur J Wallingford, president of the Medical Society of the County of Albany, who turned the meeting over to Dr John J Clemmer, chairman Two aspects of the disease were taken up at this time "Cancer of the Head and Neck," by Dr Hayes Martin, attending surgeon, Memorial Hospital, New York City, and "Cancer of the Prostate," by Dr Charles B Huggins, professor of surgical urology, University of Illinois After supper at the Fort Orange Post, American Legion, the evening session resumed at the Auditorium under Dr Emerson G Kelly "Cancer of the Stomach" was discussed by Dr George T Pack, attending surgeon, Memorial Hospital, New York City, and "Hormone Therapy and the Prevention of Gynecologic Malignancies" was the topic of Dr Clyde L Randall, professor of gynecology, University of Buffalo School of Medi-

The cancer committee included Dr Clemmer, chairman, and Drs Arthur F Holding and Arthur

W Wright

The program committee included Dr Kelly, chairman, and Drs John G Horner, John G Mc-Keon, Thomas J O'Donnell, Philip S Van Orden, Robert D Whitfield, and Albert M Yunich

#### Kingston Cancer Teaching Day

CANCER teacling day was held in Kingston on A CANCER teating un, was been and Hotel, under the auspices of the Medical Society of the County of Ulster, the Third District Branch of the Medical Society of the State of New York, the Tumor Clinic Association of the State of New York, the Medical Society of the State of New York, and the Division of Cancer Control of the New York State Department of Health

The afternoon session was opened by Dr Mortimer B Downer, and Dr Francis E O'Connor acted as chairman "Cancer of the Skin and Alhed Tumors" was discussed by Dr Earl D Osborne, professor of dermatology and syphilology, University of Buffalo School of Medicine, and "The Role of the Practicing Physician in the Care of Cancer" was the topic of the talk by Dr Frederick S Wetherell, professor of clinical surgery, Syracuse University College of Medicine

After dinner, "Cancer of the Prostate" was discussed by Dr Charles B Huggans, professor of surgical urology, University of Illinois The sessions

closed with an outline of biopsy in tumors

The local committee on arrangements included Dr Francis E O'Connor, chairman, and Drs Wilham S Bush, Frederic W Holcomb, B F Mattison, Charles O'Reilly, Edward F Shea, Frederick Snyder, James S Taylor, and Frederick H Voss

#### PENICILLIN AND SYPHILIS A WARNING

Penicillin has been used in the treatment of syphilis in various stages and has been found effective in clearing up the manifestations of the disease. Stokes,\* in discussing the treatment of late syphilis with penicillin, states that it produces symptomatic and serologic transformations that are equal if not superior to those obtained by long and arduous procedures with arsenic and heavy metals Mooret reviews the history of chemotherapy and concludes, "The rapid and safe cure of early syphilis is just around the corner" He qualifies this statement. around the corner" He qualifies this statement, however, as follows "How best to use it [penicillin], alone or in combination with other forms of treatment, is as yet undetermined but is under organized nation-wide, governmentally sponsored study, from which definite results may be expected rapidly to emerge" This new form of therapy has spurred investigation into other rapid methods of treatment, employing large and frequent doses of agents heretofore used Although the reports of results by all these methods are distinctly encouraging it should be remembered that the determination

of the ultimate cure of syphilis is a long-range process measured in years rather than in months ability of the Treponema pallidum to remain dormant for many years and even affect the second generation many years after birth has been demon-

strated all too frequently in the past

With these tragedies in mind it is well to mix a word of caution with enthusiasm for a new method of treatment until the end results are definitely known It is therefore of special importance that all patients treated for syphilis in this interim of determining the proper and infallible method, if such can be found, should be followed up serologically and physically with great care over a period of years Every returning veteran who has been given penieillin for syphilis should therefore be re-examined from time to time to prevent, so far as possible, the late ravages of the disease in himself and his family

#### ARMY DOCTOR SAYS TRACTION METHOD MOST EFFECTIVE FOR FRACTURES

In evaluating methods of treatment in the fracture of the thigh bone, Col Francis M McKeever advises the election of traction or suspension methods to the exclusion of other types of treatment by

the average surgeon
Colonel McKeever, (MC), AUS, who writes in
the August 4 issue of the Journal of the American Medical Association, is the chief of surgical service and chief of orthopedic section of the Percy Jones General and Convalescent Hospital, Battle Creek,

Michigan.

Fracture of the shaft of the femur or thigh bone "is the cause of prolonged total disability," says Colonel McKeever, "and all too frequently of a severe permanent disability Because of the long period of total disability and the severe economic burden imposed by this injury there have been constant efforts to develop methods of treatment which will shorten enforced resumbanes and thus lighten will shorten enforced recumbency and thus lighten the financial strain of this injury The objectives of these technics have been to effect recovery in the shortest possible time and at minimal cost

The medical officer's study is based on the observation of 47 patients treated in many different army hospitals by many different surgeons. His conclusion was that "the safest method of treatment of this fracture for the average surgeon in the aver-

age hospital is traction."

Traction is the pull applied to the lower fragment of the broken limb to keep it in alignment with the upper fragment Thus traction works to overcome the counter pull of the muscles, which would force the broken ends apart, so that they could not heal

Colonel McKeever states that he does not wish to

criticize any technics or procedures, but points out that since they require a high degree of skill and a "special armamentarium" thoy are not practical for use by the average surgeon. The fixation methods, for instance, either internal or external, involve the fastening of the bone inside or outside of the

leg, with a steel bone plate and transfixion screws.

"The stanchest champion of internal fixation of fractures of long bones in this country," the author observes, "has clearly, emphatically, and consistently warned against the general use of this method by these availabled as "to emphatication or restricted". by those unskilled in its application or restricted as to facilities for its employment."

Complications were most prevalent, according to Colonel McKeever's study, among the group of patients whose fractures were corrected by open opera-tion and set by internal fixation. The most fre-quent and severe disability following in the wake of fracture of the shaft of the femur is loss of knee motion.

In the Journal report, 82 per cent of patients treated by traction could bend their knees to a right angle or better Only 59 per cent of those treated by internal fixation could bend tho knee to a right angle, and right angle flexion was possible in only 57 per cent of those treated by external bone fixation. No patient treated by traction had any loss of mo-tion in the hip, ankle, or foot Colonel McKeever concludes, in judging the re-

sults of treatment by disability resulting from shortening of the limb, from loss of motion in the knee and other joints, and from the degree of muscular wasting away, that both external and internal fixation with plate and screws were "definitely inferior

to traction."

neutral sodium ascorbate tablets—in the treatment of conditions in which vitamin C is indicated. In this way they are securing the maximum corrective effect without the acid-shift, gastric irritation and laxative action that too often result from massive doses of straight ascorbic acid.

SODASCORBATE truly marks a new milestone in vitamin C therapy, for it is the only product that supplies neutral sodium ascorbate for oral administration. With SODASCORBATE you can administer full and frequent doses of vitamin C without undesired after-effects Each SODASCORBATE Tablet contains 120 mg of sodium ascorbate, equivalent in vitamin C activity to 100 mg (or 2000 U S.P units) of ascorbic acid

SODASCORBATE Tablets are indicated in clinical and subclinical scurvy and in all conditions where vitumin C has been found of value. Recent studies suggest its use in infectious diseases and toxic conditions in pregnancy and lactation; in allergies, especially hay fever; in some cases of ginglvitis and pyorrhea for lack of energy and endurance associated with vitamin

C deficiency and as a chlorine-free substitute for salt in heat-exhaustion.

THE AVERAGE DOSE for adults and children over 12 years is one tablet three times daily, or as indicated by the condition. For children under 12, one-half tablet. This may be dissolved in milk for bables and young children.

SUPPLIED IN BOTTLES of 40 and 100 tablets, as well as in "hospital-size bottle containing 500 tablets. For professional samples and covering literature, sign and mail the coupon

# Annual Assembly of United States Chapter of International College of Surgeons in December

THE Tenth Annual Assembly of the United States Chapter of the International College of Surgeons will be held in Washington, DC, at the Mayflower Hotel, December 6, 7, and 8, 1945, under the chairmanship of Dr Custis Lee Hall, FACS, FICS, and under the presidency of Dr Herbert Acuff,

FACS, FICS Details may be obtained from the Sccretary of the Chapter, Dr L J Gariepy, FACS, FICS, 16401 Grand River Avenue, Detroit, Michigan, or from the office of the Business Secretary, Mr Ralph E Osborne, 1512 Spruce Street, Philadelphia, Pennsylvania

#### Association on Mental Deficiency to Meet in Cleveland

THE sixty-ninth annual meeting of the American Association on Mental Deficiency will be held at the Hotel Cleveland, Cleveland, Ohio, on November 28, 29, 30, and December 1, 1945 The program, as arranged, presents sections on Institutional Administration, Research, Psychiatry, and Medicine

There will also be classes in the fields of mental defect, psychology, and teacher training

The presidential address will be given by Dr E Arthur Whitney, of Elwyn, Pennsylvania, on the evening of November 29

#### Cancer Society Plans \$500,000 Research Fund

A LLOCATION of \$500,000 of the money received in this year's campaign of the American Cancer Society for the start of a research program was announced on October 16 by Dr C P Rhoads, chairman of the research committee formed by the National Research Council in cooperation with the society

The money will be divided among chemical, biologic, and clinical research, and research in physics, of which \$50,000 is recommended for fellowships to attract to cancer research men being released from the armed services and wartime research activities

Besides the fundamental necessity of investigating the disease, the research will inquire into the basic problem of the formation and development of living tissue, essential to an understanding of cancer

Formal announcement of the program was made at 10 00 A M October 17 at the old Memorial Hospital, at a conference of the society's Field Army regional commanders and its medical directors

Dr Rhoads emphasized that the research program

must provide the basis for expansion for ten or more years ahead "The work which is being done this year," he said, "is the foundation on which, with the future gifts of the American people, can be built an ever greater citadel of hope for all mankind."

A statement by the society pointed out that it was coordinated research which solved the problems of the atomic bomb, and said that similar methods might be applied to the problems of disease with comparable results

"There is a difference, however," the society said, "in that the bomb project itself was a gigantic application of knowledge which had previously been discovered in the research laboratories of universi-

"In cancer research a comparable amount of fundamental knowledge has not yet been produced Until it is developed in medical schools, universities, and research clinics a successful solution to the cancer problem cannot be assured—It is the aim of the present program to provide the necessary bases of knowledge which are the first fundamental"

### Baruch Committee Appoints Physical Rehabilitation Consultant

Dr. Frank H Krusen, Director of the Baruch Committee on Physical Medicine, has announced the appointment of Col Howard A Rusk, (MC), AUS, as Consultant on Physical Rehabilitation for the Baruch Committee Colonel Rusk, whose pioneering work as Chief of the Convalescent Division of the Air Surgeon has attracted national attention, will make his headquarters at the New York office of the Committee created a year ago by Bernard M Baruch

#### Postwar Antileprosy Fight On

THE thirty-eighth annual meeting of the American Mission to Lepers was held on October 18 and 19, at the Calvary Baptist Church, New York Dr Eugene R. Kellersberger, the General Secretary, announced that this meeting is the first since the inception of the Mission's Postwar Antileprosy Program for the extension of this Christian medical service. The Postwar Program, under the direction of Mary E. Hughes, has as its final objective the eradication of leprosy from the earth. A fund of \$500,000 is being raised for this work of prevention of leprosy. The plan calls for the establishment of training centers in eight countries where the

incidence of leprosy is highest, so that local assistants may be trained in the detection and treatment of the disease. This advance in the work is added to the established program of spiritual ministry and backing.

The regular work of the Mission was reported upon by physicians and missionaries returned from the field, in Angola, Cameroun, Congo Belge, Nigeria, China, Burma, Korea, Siam, Malaya, and India.

Dr William Jay Schieffelin, President of the Mission since 1906, presided over the general meeting on [Continued on page 2434]

# THE VALUE OF KNOX GELATINE FOR INFANT FEEDING

Pure, nnflavored Knox Gelatine (USP) has long been recognized as an easily digested supplementary protein in many types of diets.

Clinical studies on infant nutrition show that when 1% and 2% Knox Gelatine is added to infants' formulae, there is a reduction of curd tension and a significant improvement in digestive function

The doctor concerned with special problems in infant feeding will be interested in details of these findings in a Knox booklet on the subject. Clip the coupon below and send for your copy

October 18 Addresses were made by Dr H L Weber, from Cameroun, Africa, and Julia Lake Kellersberger, who is the author of "Congo Crosses"

Luther H Hodges, vice-president of Marshall Field and Company, Chicago, and National Chairman of the Postwar Antileprosy Program, spoke at the annual dinner of the Mission on October 18, at the Henry Hudson Hotel

A. Donald Miller, General Secretary, the Mission

to Lepers, London, addressed the meeting on the long connection of the British and the American Missions, and discussed the cooperation of the Christian churches of Great Britain and United States in the further fight to eradicate leprosy

On Friday morning, October 19, Dr and Mrs. Eugene R. Kellersberger entertained at breakfast at the Henry Hudson Hotel one hundred leaders of local auxiliaries from the various states, followed by a conference of the General Secretary and his wife with the volunteer workers

#### County News

Albany County

The regular meeting of the county society was held in the auditorium of the Albany College of Pharmacy on October 24. Dr Emil Novak, associate professor of obstetrics at the University of Maryland School of Medicine and associate in gynecology at the Johns Hopkins Medical School, gave a lecture on "Functioning Tumors of the Ovary"

Dr Arthur Wallingford, president of the county society, was the principal speaker at the first annual dinner of the Rosary Society of St. Peter's Catholic church, Stillwater, in the DeWitt Clinton Hotel on October 3

Talking on the subject, "Socialized Medicine," Dr Wallingford said physicians as a group are opposed to it and he called it unAmerican, in that it would destroy individual initiative.\*

Columbia County

The annual meeting of the county society was held at the General Worth Hotel on Tuesday morning, October 2

Ma, Ralph Spencer, (MC), AUS, Colonel Morehouse, and Cmdr Norton S Brown, USN, were the

speakers

Major Spencer, Hudson physician, spoke on "Phlebothrombosis and Pulmonary Embolism," and Colonel Morehouse on "Escape from the Philippines with General MacArthur".

**Dutchess County** 

The next regular meeting of the county society was held at the Hudson River State Hospital, Poughkeepsie, on October 10, 1945 The program, a regional teaching day on psychotherapy in general medicine, began at 4 00 pm Dr Leslie A Osborn, assistant professor of psychiatry, University of Buffalo, Dr James H Wall, assistant medical director of New York Hospital, White Plains, and Dr Foster Kennedy, professor of clinical medicine, Cornell University Medical College, presented the papers.

Erre County

Doctors of the Ontario Medical Association, Counsellor District 4, visited the Institute for the Study of Malignant Diseases, Buffalo, on October 3, to learn how this state and the institute are fighting cancer Dr Louis C Kress, institute director, and members of the institute staff were the speakers

The Buffalo visit was part of the program for the all-day meeting arranged by the medical staff of the Douglas Memorial Hospital in Ft Erie It included

\* Asterisk indicates that item is from a local newspaper

nn evening meeting in the Ft Erie Hotel at which Dr R. P Vivian, Ontario minister of health, spoke and an afternoon session in the Bullard Theater, Ft Erie, at which cancer authorities from Buffalo and Toronto discussed various phases of cancer treatment and control

Dr Clayton W Green discussed gastrointestinal malignance and Dr George L Sheehan spoke on Hodgkin's disease Treatment of breast cancer and early diagnosis of cancer was discussed, respectively, by Dr G E Richards and Dr W G Cosbie, both

of Toronto \*

Franklin County

Dr John N Goode, formerly of Kushaqua, has opened an office for the general practice of medicine in Malone

A native of New Jersey, Dr Goode received his degree from the New York Medical College, in New York City, in 1905 He practiced his profession in the metropolis until 1913, when he moved to a small place just outside of Poughkeepsie. In 1919 he went to Saranac Lake \*

Twenty-seven physicians from seven foreign countries and fourteen from the United States attended the thirty-first annual session of the Trudeau School in Saranac Lake. Classes continued through the first week in October \*

Jefferson County

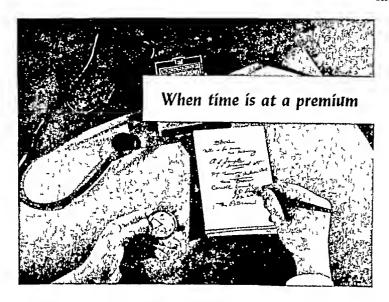

Dr Roy W Vanallen, for the past eight years a practicing physician in Philadelphia, where he has served as health officer for the township, has moved to West Carthage, and opened offices there November 1 \*

Dr E Chifford Soults was discharged from the Army on September 25 after three and a half years in the medical corps He has reopened his offices in Carthage and resumed his practice of medicine, which he interrupted in May, 1942, to volunteer for

military service

Holding the rank of major at the time of his discharge, Dr Soults saw active service in England, North Africa, Iran, France, and Germany during two and a half years overseas. He went into Europe soon after D-Day and had charge of a number of hospitals of the Ninth Air Force. After the German surrender he supervised an increased number of hospitals before returning to this country in the summer. In August he left for Randolph Field, Texas, where he took a refresher course in surgery, and from there he studied at Bellevue Hospital in New York before going to Westover Field for his

# **PYRIDIUM**

(MO.U.S.PAT OFF)

## affords several distinct advantages

#### EASE AND CONVENIENCE OF ADMINISTRATION

Pyridium is convenient to administer No laboratory control, accessory medication, or other special measures are necessary for effective Pyridium therapy

#### LACK OF TOXICITY

Therapeutic doses of Pyridium may be administered with complete safety throughout the course of cystids, pyelonephritis prostatits and urethritis.

#### RAPID RESPONSE

Prompt gratifying relief of distressing urinary symptoms is the characteristic response to Pyridium therapy

For gratifying relief of distressing symptoms in urogenital infections.

[Continued from page 2434]

Dr Soults holds the Bronze Star for gallantry in action and earned five stars on his ETO ribbon for participation in five major engagements '

#### Kings County

A stated meeting of the county society and the Academy of Medicine of Brooklyn was held on October 16 at 8 45 PM in McNaughton Auditorium The scientific program was a celebration of the onehundredth anniversary of the Library of the Medical Society of the County of Kings and the Academy of Medicine of Brooklyn, with addresses by Dr Edward R. Cunniffe, President of the Medical Society of the State of New York, and Dr E Jefferson Browder, directing librarian of the county society and Academy

The Long Island College of Medicine, in Brooklyn, will present the fourth postgraduate course in industrial medicine from January 14 to February 1, Afternoon and evening seminars and morning climes will be devoted to intensive orientation in industrial medical administration, internal medi-cine in industry, the occupational diseases, and industrial surgery. Inquiries should be addressed to the department of preventive medicino and community health, 248 Baltie Street, Brooklyn 2, New York

There will be a meeting of the Pediatrie Section of the county society on Monday evening, November 26, 1945 at 9 00 PM at the Kings County Medical Society Building, 1313 Bedford Avenue, Brooklyn Dr A. M Butler will speak on "Water and Salt Metabolism in Dehydration in Infancy"

#### Monroe County

The regular meeting of the county society was held on October 16 at 8 30 PM The program consisted of a panel discussion of workmen's compensa-tion practice The speakers included Miss Mary Board, State of New York Department of Labor, Dr David J Kaliski, Director, Committee on Workmen's Compensation, Medical Society of the State of New York, John B Hudson, past-presi-dent, Adjusters' Club of Rochester, Charles W Green, LL B, and Dr John C Detro Dr Howard L Prince acted as moderator

Dr M N Smith-Petersen, Boston, addressed a meeting of the Rochester Academy of Medicine on October 2 at 8 45 PM

He discussed "Surgical Treatment of Rheumatoid Arthritis" Climical professor of orthopedic surgery at Harvard University Medical School, Dr Smith-Petersen is originator and first user of the "Smith-Petersen pin" now used extensively in cases of hip

Dr Harold H Baker, president of the academy, presided Other new officers assuming their duties are vice-president, Dr J Craig Potter, secretary, Dr John L Mercer, treasurer, Dr Lyman C Bounton, and assistant treasurer, Dr Henry B Crawford

A dinner in Dr Smith-Petersen's honor was held at 6 30 P M in the University Club '

Dr Rufus B Crain, chairman of the heart committee of the county society, was guest speaker at Rochester Zonta Club luncheon on September 18 at the Rochester Club

Dr Crain is assistant medical director at Eastman Kodak Company and is a member of the American Heart Society He is also interested in the Industrial Workshop for rehabilitation of injured and liandicapped persons \*

A Community Health Education Conference was held in Rochester on October 17 and 18, with meetings at the Rochester Academy of Medicine, the University of Rochester School of Medicine and Strong Memorial Hospital, and the Hotel Sheraton. The conference was sponsored by the Council of Social Agencies, Industrial Workshops, Inc., the Medical Society of the County of Monroe, the New York State Department of Health, the Rochester Health Bureau, the Tuberculosis and Health Association of Rochester and Monroe County, Inc., and the University of Rochester School of Medicine and Dentistry

On October 17 at 9 30 A.M. the subject of "Basic Principles in Health Education" was discussed by the chairman, Dr Harry S Mustard, director, De Lamar Institute of Public Health, New York City, Dr Reginald Atwater, executive secretary, American Public Health Association, Robert Osborn, assistant executive secretary, New York State Committee on Tuberculosis and Public Health, Dr Robert S Westphal, district State Health Officer, New York State Department of Health, Rochester, and Herman Norton, Director, Health and Physical Education, Rochester Board of Education. At a luncheon meeting Dr Frank Krusen, professor of physical medicine, Mayo Clinic, and director of the Baruch Committee on Physical Medicine, Rochester, Minnesota, spoke on "Physical Medicine and Health Rehabilitation." Dr G Kirby Collier, president of Industrial Workshops, acted as chairman At the afternoon meeting, with Dr William A Sawyer, medical director of Eastman Kodak Company, Rochester, presiding, Dr Krusen discussed "Physical Therapy in Industry and the Community"
Discussion was led by Elizabeth Wise, OTR,
director of Industrial Workshops Next on the
program was a discussion on "Health Education in
Industry" by Dr. Loss Colleges Industry," by Dr Ingo Galdston, executive secretary, Committee on Medical Education, Now York Academy of Medicine, Dr Leonard Greenburg, Director of the Division of Industrial Hygiene, New York State Department of Labor, Albany, Dr Charles F McCarty, director, medical activities, Kings County Medical Society, and Marie Goulett, executive secretary, Tuberculosis and Health Association of Rochester and Monroe County, Inc.

A public meeting was held in the evening at which Dr Wilson G Smillie, professor of public health and preventive medicine, Cornell University Medical College, New York City, spoke on "Public Health in the Postwar World" Dr Smillie was introduced by Dr Albert D Kaiser, director of the Rochester Health Bureau and professor of child hygiene at the University of Rochester School of Medicine and Dentistry

On October 18 a discussion of "New Dovelop-ments in Health Education" was held by Drs C C Wilson, professor of health and physical education,

# Accent on Velvet Smoothness

The process used in manufacturing the "RAMSES"\* Flexible Cushioned Diaphragm produces a dome which is soft and pliable and can best be described as being as smooth as velvet.

Thus velvet-smoothness lessens the possibility of irritation during use.

The "RAMSES" Flexible Cushioned Diaphragm is manufactured in sizes of 50 to 95 millimeters in gradations of 5 millimeters. It is available on the order or prescription of the physician through any recognized pharmacy

DIAPHRAGM

[Continued from page 2438]

Columbia University, Bruno Gebhard, director of the Cleveland Health Museum and associate in health education at Western Reserve University, Cleveland, James H Lade, director of the Division of Syphilis Control of the New York State Department of Health, Richard C Jaenike, assistant professor of medicine (psychiatry), University of Rochester School of Medicine and Dentistry, Albert D Kaiser, and Miss Edith Walker, associate director, department of health education, Rochester Board of Education.

At the afternoon meeting "Health Education in the Training of Medical and Public Health Personnel" was discussed by Dr W W Bauer, director of health education, American Medical Association, Miss Evelyn Rahm, health educator, US Public Health Service, Spartanhurg, South Carolina, Miss Ruth TeLinde, director, department of public health nursing, University of Syracuse College of Mcdicine, Dr Harold Mitchell, District Health Officer, New York City Department of Health, and Dr Earl Koos, professor of sociology, University of Rochester Dr Harry S Mustard acted as chairman

#### New York County

The appointment of Dr Ernest Lyman Stebhins, New York City Commissioner of Health, as professor of public health administration in the School of Hygiene and Public Health of the Johns Hopkins University, Baltimore, and as assistant director of the school, was announced on October 21 by Dr Isaiah Bowman, president of the university.

Isaiah Bowman, president of the university.

Dr Stehhins is expected to assume active duty under his new appointments by July 1, 1946, when Dr Allen W Freeman, professor of public health administration since 1923, will retire Upon the retirement of Dr Lowell J Reed, director of the school, within the next few years Dr Stehhins will succeed him in that position, according to the announcement.\*

New advances in the rehabilitation of amputation cases, plastic surgery, and other technics to minimize the human cost of war were demonstrated on October 15 at the New York Academy of Medicine.

Army and Navy officers conducted a group of newspaper men through elaborate exhibits the two services presented as part of the Academy's eighteenth annual graduate fortnight. Also present were four disabled veterans, three of them amputees, who told of what Army surgeons had done for them to ease their return to civilian life.

One veteran wore a steel plate because of a head mjury, another had lost a hand, a third had lost a leg, and the fourth had lost both legs. All praised their artificial aids. Artificial hands and legs were described as highly efficient, "once you got used to them," they said.

Regarding recent criticisms by wounded veterans who had found artificial limbs unsatisfactory, it was explained that such men usually were complaining about temporary limbs. Permanent limbs, it was emphasized, were not given to amputees until nine months after they had become adjusted to temporary ones. The Navy showed treatments of injured eyes, ears, mouths and hands, and Navy officers said plastic surgery was making it possible to make many wounded appear as normal human beings again.

The exhibits were open until October 22

The regular monthly meeting of the Association for the Advancement of Psychotherapy was held at the New York Academy of Medicine on October 26 at 8 30 pm Dr Frederic Wertham read a paper entitled "A Psychosomatic Study of Myself" Discussion was led by Drs Carl Binger and Nolan D C Lewis

Dr Henrik Dam, D Sc, associate member of the Rockefeller Institute for Medical Research, delivered the Edward Gamaliel Janeway lectures at Mt Sinai Hospital on October 30 and 31 at 8 30 PM His topics were "Medical Aspects of Vitamin K" and "Some Effects of Vitamin-E Deficiency and Fatty Acids"

Dr Ernest L Stchhins, Commissioner of Health, announced on October 16 that Dr Ralph S Muckenfuss has returned from military service and has resumed his duties as Director of the Bureau of Laboratories of the Department of Health Colonel Muckenfuss has been on military leave since July 22, 1942

During his service, Dr. Muckenfuss commanded the First Medical General Laboratory in the European Theater of Operations and was stationed in England and in Paris. He was also in command of the European Theater blood hank. For his outstanding services he was awarded the Legion of Merit. The citation reads as follows.

"Lt Col Ralph S Muckenfuss, Medical Department, United States Army, for exceptionally meritorious conduct in the performance of outstanding services as Commanding Officer, 1st Medical General Laboratory, from 28 June 1943 to 19 January 1945 Through the initiative and energy of Lieutenant Colonel Muckenfuss, the 1st Medical General Laboratory, the first organization of its type, was set up in the United Kingdom The unit performed in a superior manner its mission of assisting all hospital laboratories, performing laboratory examinations beyond the resources of hospitals, maintaining the only virus diagnostic laboratory in the United Kingdom, maintaining a veterinary laboratory, and investigating the causative factors of epidemics. As United Kingdom Consultant in Research, Lt Col Muckenfuss did much to further the scientific hackground of medical practice in the European Theater of Operations. Under his supervision, the only blood bank in the United Kingdom was organized Entered military service from New York."

During the absence of Dr Muokenfuss, Dr David D Rutstein, Deputy Commissioner of Health, acted as Director of Laboratories in addition to his duties as Deputy Commissioner Dr Rutstein will devote full time to his duties as Deputy Commissioner

October 15 marked the beginning of Harlem's Chest X-Ray Jamhorees, the highlight of a two-month antituberculosis campaign in that section of the city, it was revealed on October 12 by Health Commissioner Ernest L Stebbins Free chest x-rays were offered during the campaign to overy adult resident of Harlem, an area where tuberculosis still kills nearly ten people every week

Jointly sponsored by the Central Harlem Health

The superb man made facilities at the Saratoga Spa are placed in a setting of great natural beauty In this screne environment a sick person is ideally prepared for the full benefit of medical care

Here your patient is relaxed in both mind and body, so that the therapeutic values of the Spa'a naturally carbonated mineral waters are enabled to exert their maximum efficacy

Your patient auffering from such conditions as cardiac, vascular or

rheumatio disorders receives the benefit of the Spa's restorative powers under a regimen of treat ment which you yourself recom mend

Well trained physicians are available in Saratoga Springs for consultation with your patient on the details of the program

With your patient at the Spa, you find needed relief from postwar atrain in the knowledge that your directions for his continuing care will be faithfully carried out.

#### "PHYSICIAN GIVE HEED TO THINE OWN HEALTH"

Many physicians have recently come to the Spa for the same kind of treat ments that helped their patients here. After a restorative "cure" at the Spa, you, too would return to your practice refreshed—resultanced—ready for the busy days that still lie ahead

#### Westchester County

Effectiveness of ultraviolet-ray irradiation of schools, churches and theaters in the control of airborne diseases, such as influenza and colds, will be tested in a three-year experiment in Pleasantville, Dr William A Holla, Westchester County

Health Commissioner, announced on October 10
The test, which Dr Holla said would be the first to be applied to an entire community, will begin January 1, when ultraviolet ray lamps will be in-stalled in Pleasantville's three schools, eight

churches, and one movie theater

Sponsors of the project, with the County Health Department, are the Milbank Memorial Fund, which will defray part of the expenses, the School of Medicine of the University of Pennsylvania, which has been conducting research on the plan, and the General Electric Company, which will provide the ultraviolet lamps

Dr Mildred Wells, of the faculty of the School of Medicine at Pennsylvania, will supervise the

test

Besides influenza and cold, the experiment is

armed at such diseases as mumps, measles, and some types of pneumonia, Dr Holla said He explained that the village of Mt Kisco, seven miles north of Pleasantville, slightly larger in population but comparable in school population, will be kept under observation as a "control" on the three-year expen-

Thirty women physicians of Westchester were guests of the county society at dinner on October 2 at the Roger Smith Hotel, White Plains was informal discussion concerning the responsibilities of women physicians in organized medicine.

One of the guests at this dinner was Maj Barbara Stimson, of Briarcliff, who has just returned from England after three years service with the British Army Other women physicians of the county who were present included Drs Hazel J Trefts, Elvim Ostlund, and Margaret Loder, of Rye, and Dr

Gertrude M Hyde, of Port Chester
Officers of the Society who served as hosts included Dr Laurance D Redway, of Ossining, president, Dr Isadore Zadik, of Mount Vernon, president-elect, Dr Robert B Archibald, of Bedford, vice-president, Dr Henry E McGarvey, of Bronxville, secretary, Dr Reginald A. Higgons, of Port Chester, and Dr George C Adie, of New Roshelle Rochelle

# Necrology

Peyton Fortine Anderson, MD, of New York City, died on October 10 of a heart ailment, at the age of 54. He was graduated from the New York Homeopathic Medical College in 1913 and later did postgraduate work at the University of Vienna Dr Anderson was an associate visiting physician at Harlem Hospital, associate attending physician at Sea View Hospital, and vice-chairman of the Harlem committee of the New York Tuberculosis and Health

# Hospital News

#### Representatives of Nation's Blue Cross Plans to Meet in New York

PLANS for extending prepaid hospitalization to every employed person in the country were discussed at the national conference of Blue Cross Plans held October 29-31 at the Hotel Commodore, The conference was attended by New York City hospital leaders and representatives of the nineteen million persons affiliated with America's eighty-seven Blue Cross Plans

Scheduled speakers included Louis H Pink and Frank Van Dyk, president and vice-president, respectively, of Associated Hospital Service of Now York, which serves more than two million Blue Cross

subscribers in Greater New York.

With five states, representing 5 per cent of the

population of this country, still uncovered by Blue Cross Plans, the conference will be primarily concerned with methods of making the hospitalization service nationwide

Other projects considered at the conference included cooperation with management and labor to include health benefits in wage agreements, convenient transfers and out-of-town benefits, recommendations for extending medical and surgical bill prepayment plans, encouragement of individual and community enrollment with emphasis on rural areas, payroll deduction for federal government employees, and coordination with tax-supported programs of medical care

#### Rules for Admission of New Patients to State Institute for the Study of Malignant Diseases

EACH patient must be referred by a physician, who is requested to make appointment for admission, in advance, giving the following informa-

Name, address, age of patient

Location of lesion and extent of disease

Physical condition of patient (state whether or not patient is ambulatory)

Factors and dates of treatment, if irradiation

has been given

Operative findings and slide, if operation has

been done (state extent of recurrence)
6 Biopsy report and slide, if biopsy has been dono and tissue has not been sent to our laboratory

Upon receipt of this information, an appointment will be given at the earliest possible date the patient The demand for beds 18 can be accommodated greater than the supply and therefore most ambulatory patients may have to be treated as outpatients

If, for any reason, a patient is unable to keep an appointment, it is requested that the Institute be notified as far in advance as possible

The policy of the Institute is to concentrate on the treatment of primary cancer, to eliminate all hopeless cases, and bonign cases where feasible Treatment is free to residents of New York State. Residents of other states are not accepted for treatment or examination

Due to our limited facilities, prophylactic treat-

ment is not given to postoperative cases

#### Improvements

About twenty-five rooms for personnel in the Lawrence Hospital Nurses' Home, Bronxville, have been completed on the fifth and sixth floors and are in the process of being furnished, Albert J. O'Brien, superintendent of the hospital, said on September Rooms in the sixth-floor penthouse quarters are the same as the other rooms, Mr O'Brien explained \*

A Mullikin portable iron lung was presented by members of Ithaca Lodge 666, Loyal Order of Moose, to Memorial Hospital, Ithaca, on September 22

On behalf of the lodge membership and officers Edward Barron, governor of the Moose Lodge pointed out that while the lung was being presented to the hospital, its use was not to be confined to that institution, and that it would be made available to the Reconstruction Home if needed \*

Modernization and improvements at the City Hospital, Schenectady, costing approximately \$11,200, are now underway, Dr William C Treder, city health commissioner, said on September 9 addition, a \$7,166 x-ray unit has been ordered.\*

#### At the Helm

Election of Dr Edmund Ezra Day, president of Cornell University, and Mrs Albert D Lasker to the board of managers of the Memorial Hospital for the Treatment of Cancer and Allied Diseases, in New York City, was announced on September 24 by Reginald G Coombe, president of the hospital \*

Thomas J Watson, president of the International Business Machines corporation, has accepted an invitation to serve as a member of the board of trustees of Vassar Brothers Hospital, Poughkeepsie,

Robert Hoe, president of the local hospital board, made known on September 28

Mr Watson was elected as a member of the Vassar Hospital board at its regular meeting on Wednesday, October 10 The board, which acted on the matter at a special meeting September 27, will be increased from mineteen to twenty members, Mr Hoe said \*

Miss Eileen Young, who has been on the staff of Memorial Hospital in New York City for the past

is to be added for this purpose Horace A Moses gave the first hospital to the village He built the first hospital, now the nurses' home, at his own ex-A new hospital was started in 1918 A portion of the new wing will be dedicated to the memory of Mrs Howland G Pell, who left a fund for construction of an addition

As a gesture of affection for Dr John E White, long a surgeon and physician on the staff of the Alice Hyde Hospital, and at the suggestion of the president of the staff, Dr F F Finney, a room has been set aside at the hospital where he may receive patients referred by other physicians, for consultation

The room, originally planned as a central supply room, but long unused because of the personnel situation, was arranged by Miss Isabel Reardon, superintendent, assisted by employes of the hospital, as a surprise to Dr White

Dr Leon Passino presented a desk lamp and Dr F F Finney an office table, as part of the furnish-The remainder of the equipment is from the former office of Dr White A basket of flowers, presented by Dr Daisy H. Van Dyke, adorned the room when Dr White was "introduced" to his new office

New York University Collego of Medicine announced the official opening of a campaign for \$750,000 to build the Hall of Residence of the proposed NYU-Bellevue Medical Center October 22 at a luncheon at the Fifth Avenue Hotel, and at the same time indicated that \$615,000 has already been raised toward that goal by Maurice Levin, chairman

of the Hall of Residence Campaign Committee
The campaign is the second in a series to which the public will eventually be asked to contribute \$15,000,000 for the six major building units of New York University's share of the proposed \$27,500,000 N Y U -Bellevue Medical Center, a joint city and university institution. The Alumni Association of NYU College of Medicine announced on October 16 its campaign for a \$500,000 fund to erect Alumni Hall Auditorium, of which \$122,000 already has been raised

The Hall of Residence will be erected at Thirtythird Street, between First Avenue and the Franklin D Roosevelt Drive, at the northern end of the new medical center, which will stretch from Twenty-fifth

to Thirty-fourth Street

Plans for construction of an addition to St Peter's Hospital, Albany, which will accommodate one hundred and fifteen patients, were announced on October 5 by the Rev Mother Mary Borromeo, superior of the Sisters of Mercy in Albany

The project, to be started in the spring, has been authorized by the hospital trustees, headed by the Most Rev Edmund F Gibbons \*-

A \$6,000,000 veterans hospital is to be built on an eighteen-acre site in the Fort Hamilton Military Reservation in Brooklyn, Gen. Omar N Bradley,

Veterans Administrator, announced on October 8 in

Washington.

The one-thousand-bed hospital will be designed for general medical and surgical cases Funds for its construction are included in the 1946 appropriation act, the independent Offices Bill The Veterans Administration is acquiring the site by transfer from the War Department, and right of entry already has been granted

The site of the new hospital will be in the southeast part of the Fort Hamilton Reservation, which includes a total of 175 acres Barracks now occupy These have been used during the war to house soldiers entering and leaving the port \*

All general hospitals should accept communicable disease patients so that more nurses can become experienced in that field, Dr Robert Korns, acting head of the Communicable Disease Division of the Now York State Hoalth Department, told the Northeastern Hospital Association at a meeting held in Albany, recently

Dr Korns spoke on the subject of hospitals' rele in the control of communicable diseases. He stated the department has doctors and nurses anxious to serve with hospitals in any problem relative to such diseases from the medical or nursing standpoints. The doctor informed the group the length of isolation for various maladies has been shortened in some instances from seven to twenty-one days

General hospitals should train their nurses in the treatment of communicable diseases. About 50 per cent of the student nurses receive no training at

all in the field, he said.

Dr Korns recommended the use of ultraviolet lights, the use of certain vapors, and the control of dust in the sick room by employing oil on the floor, walls, and linen.\*

Frank D Schroth, publisher of the Brooklyn Eagle, addressed the opening luncheon of the sixtyseventh campaign of the United Hospital Fund and the Visiting Nurse Association of Brooklyn en September 25, at the Hotel St George, Brooklyn. Mr Schroth, who recently returned from a tour of the Pacific battlefronts, related some of his ex-periences He has been active in behalf of fundraising campaigns, and is the chairman of the Brooklyn Chapter of the Red Cross

Adrian Van Sinderen, chairman of the Brooklyn Division, announced the goal for Brooklyn in the citywide appeal of \$1,661,255 on behalf of the eighty-six member hospitals and the Visiting Nurse Association of Brooklyn will be \$250,000, a queta of \$25,000 greater than last year Approximately 50 per cent of hospital care in the United Hospital Fund member hospitals in Brooklyn is provided free or at less than cost. Last year in these non-profit hospitals 101,094 bed patients were given 1,305,009 days of care, 98,520 individuals made 1,305,009 days of care, 98,520 individuals made 447,514 clinic visits, 21,548 babies were born in the United Hospital Fund member hospitals and 49,946 ambulance calls were answered by these hospitals, 179,531 visits were made by the Visiting Nurse Association, and 33,691 patients cared for

Everett M Clark is the executive vice-chairman, and Mrs Henry Mannix is chairman of the Women's The treasurer of the United Hospital Committee

Fund campaign is Edward P Maynard

uccessful management of high blood pressure calls for a regimen which is adjusted to individual requirements. Physical activity is gen erally curtailed and overwork is avoided. In certain circumstances special diets are prescribed and the use of stimulants is restricted.

These measures are often supplemented with the administration of Theominal. This combined vasodilator and sedative aids in reducing blood pressure to a more normal level. As a consequence hypertensive symptoms are relieved and the risk of complications is reduced.

DOSAGE: The customary dose of Theominal is 1 tablet two or three times daily: when improvement sets in the dose may be reduced. Each tablet contains theobromine 5 grains and Luminal Vi grain.

Luminal (trademark) Winthrop Chemical Company Inc., brand of phenobarbital.

Supplied in bottles of 25, 100 and 500 tablets.

Orange County A regular meeting of the Women's Auxiliary to the Orange County Medical

Society was held at the home of Mrs Carlos E Fallon in Newburgh on October 2 The President, Mrs W A Schmitz, of Middletown, presided Eight new members have been gained in the past

The members present were told of the completed plans and work that had been done for the Cancer Control Meeting held in the Auxiliary Hall of the State Hospital at Middletown on October 30 at 7 30 PM. The meeting was sponsored by the Orange County Auxiliary and the American Cancer Society, which is headed in Orange County by Mrs. Harry F Pohlmann, of Middletown.

The speaker at the meeting was Dr Louis C Kress, who heads the New York State Cancer Re-

search Institute

The Newburgh members entertained our Auxiliary after the meeting

#### "DOCTOR JONES" SAYS-

This question of vaccination against smallpox somehow it reminds me of the situation that existed for so many years between this country and Japan People that were best acquainted with the Japs— I remember reading an article—it must've been at least fifteen or twenty years ago—this fellow said it was only a matter of time before we'd have trouble Army and Navy officers said the best with 'em way to avoid it was to be prepared and let 'em know it But they were a long way off and to most of us, especially us folks back here in the East, the idea seemed rather ridiculous Then came "Pearl seemed rather ridiculous Then came 'Pearl Harbor' Now we've got something on our hands Smallpox—here in New York State we haven't had a case reported since 1939 There were up-

wards of seven hundred cases in the country in that year but they were mostly in a few states Since then it's been coming down and, generally speaking, it's been comparatively mild So the tendency is to sort of lose interest in it

But we shouldn't forget that for hundreds of years it was one of the world's greatest scourges—as common as measles is today—thousands dying from it and others scarred and disfigured Then, back in the seventeen-nineties, Edward Jenner (it was an Englishman this time, not a German) he learned that it was a tradition among the farm folks that anyone that'd had cowpox never got smallpox He began vaccinating 'em and that was the beginning of control of smallpox. Late years, with our understanding of bacteriology and so on, they've kept improving the vaccine until vaccination has gotten to be about as safe and simple as getting the kid's

But it's like the war when folks begin getting the idea it's most over they tend to relax and let down. And that could be disastrous Smallpox—a virulent strain of the virus could develop and, if we weren't vaccinated, we could get the real old-fashioned stuff back again. Grandma Peasley—she had everything out of her closets the other day because she'd found one moth "When there were a lot of 'em," Grandma says, "it was terrible discouraging But when I can't find but one, that's the time to get shut of 'em"-Paul B Brooks, MD, in Health News, July 16, 1945

#### REVIEWED

A Manual of Tropical Medicine. Prepared Under the Auspices of the Division of Medical Sciences of the National Research Council By Col Thomas T Mackie, (MC), AUS, Maj George W Hunter, III, Sn C, AUS, and Capt C Brooke Worth, (MC), AUS, with the collaboration of Col. George R. Callender, (MC), AUS, et al Octavo of 727 pages, illustrated Philadelphia, W B Saunders Co, 1945 Cloth, \$600

This book, prepared for the armed forces under the auspices of the National Research Council, is authoritative and up to date. Also, it is compact, comprehensive, and well presented. The illustrations of the life cycles and modes of transmission of parasites are notably effective. The authors are all experienced parasitologists, and the section of thirty-five pages on laboratory procedures used in diagnosis gives only technics of proved effectiveness.

The material covers not only diseases rare outside the tropics, but most of the diseases, common to temperate and tropical zones, which are due to infections, nutritional disorders, heat, and injury by animals and insects. Beginning with the virus and nickettsial diseases, the authors proceed through the bacterial and mycotic infections to the protozos and metazoa. Cutaneous diphtheria is not in the section on bacterial infections, but in "Miscellaneous Condi-

tions," which includes several other specific infections of the skin. The neuropathy of diphthena is not mentioned, although frequently diagnosed in the Mediterranean Theater of Operations by the British. Such cases are called Guillain-Barré syndrome by the Americans, specific proof is rarely sought by the British, who assume that any neuronitis in a man with recent ulcer of the skin is postdiphtheritic

The use, choice, and hazards of specific therapeutic agents are given in adequate detail. While the manual is forced to omit many interesting aspects of tropical medicine, it admirably fulfills its purpose and should be read by all who have occasion to deal

with this phase of medicine.

WILLIAM DOCK

The Foot. By Norman C Lake, MD, MS Third edition Octavo of 432 pages, illustrated Baltimore, Williams & Wilkins Co, 1943 Cloth, \$500

The fact that this book has reached the third edition indicates its popularity and usefulness. This is an excellent, although condensed treatise on congenital and acquired lesions of the foot. It is

J B L'EPISCOPO

The Psychology of Women. A Psychoanalytic Interpretation. Vol. 1 By Helene Deutsch, M D Octavo of 399 pages New York, Grune & Stratton, 1944 Cloth, \$4.50

From her rich experience in the treatment of neuroses in women, hospital cases, and wayward girls. Dr Deutsch has written an illuminating and profound study of the personality of women. Her approach is psychoanalytic and fruitful, although in some respects she differs from her instructor, Freud Her keen and understanding mind sheds new light on behavior that often appears perplexing A special chapter is devoted to each of the three essential traits of femininity—narcissism, passivity, and masochism. In her discussion of the "active" woman (the masculinity complex), there is an illuminating analysis of George Sand, who in life was an aggressive, masculine, domineering woman who destroyed her weak lovers, and yet in her reveries and writings portrayed passive, feminine, and dainty heroines In this book, Helene Deutsch delineates the emotional conflicts that all women face in their development from the prepuberty stage to womanhood, conflicts that most women successfully resolve, but that may prove a source of difficulty and a cause of illness to those who cannot resolve these problems The book will be of tremendous value to all who have to deal with women, whether they be physicians, teachers, or parents

MATTHEW BRODY

The Midwest Pioneer His Ills, Cures, and Doctors By Madge E Pickard and R. Carlyle Buley Quarto of 339 pages, illustrated Crawfordsville, Ill., R E Banta, 1945 Board, \$500

This first edition is a very attractive volume limited to five hundred copies, and "is a by-product of more extensive work in the field of middle-western history." To begin, this is interesting reading for the laity and intensely interesting for the doctor

The progress of medicine this past century cannot be described more vividly than by observing the contrast between what we now know and practice and what was practiced then. The indomitable spirit of the pioneers of the Middle West is what accounts for the persistence in their adventurous enterprise in the face of what appeared insurmountable difficulties and heartrending discouragements

What typhus fever was to invading armies, so was malaria to the invading pioneers of the West. A favorite couplet of that day gives additional

emphasis to this statement

 $\underline{\mathbf{D}}$ on't go to Michigan, that land of ills, The word means ague, fever, and chills

It is startling, one might say shocking, to learn what a primitive state medical knowledge was in a little more than a century ago The courage of the doctor and pioneer is felicitously embodied in the dedication of the authors "To the Pioneer Doctor who boldly faced the wilderness, and the Pioneer who bravely faced the Doctor "

S R. Blatteis

An Introduction to Somatic Methods of Treatment in Psychiatry By William Sargant, M.B. (Cantab), and Eliot Slater, MD Octavo of 171 pages, illustrated Baltimore, Williams & Wilkins Co. 1944 Cloth, \$2 50

Drs Sargant and Slater, who have had the advantage of a sound basic education in psychiatry, have written in a practical vein out of their rich experience of serving in two evacuation centers of the Maudsley Hospital in London during and since the "blitz"

One particularly welcomes the emphasis upon the somatic aspects of mental illnesses, etiology, and treatment, although the constitutional, genetic, and

psychopathologic factors are not overlooked. The contents is concerned with a brief critical review of various approaches to the understanding and treatment of mental disorders followed by pithily formulated chapters on insulin shock therapy, convulsive therapy, treatment of cerebral dysrhythmia (epilepsy), chemical sedation and stimulation, continuous sleep treatment, uses of intravenous barbiturates, diet, vitamins and endocrines, prefrontal leukotomy, malarial treatment of general paralysis, and a final chapter on the relation of psychologic to somatic treatment Technics which the authors were not personally acquainted with have been omitted. A useful index is appended. This book puts the focus where it should be, on

the practical aspects of treating the patient whom the physician is obligated to serve in the most effective way possible in the light of present-day knowledge

FREDERICK L PATRY

Poet Physicians. An Anthology of Medical Poetry Written by Physicians Compiled by Mary Lou McDonough. Quarto of 210 pages Spring-field, Ill, Charles C Thomas, 1945 Cloth, \$500

The magnitude of poetic material written by medical men, much of it of high quality, is extraordinary Mrs McDonough has selected the highquality material and arranged it chronologically, beginning with Wang Wei (699-759) and ending with John W Thompson (1906-) The selections are prefaced by informative sketches of the authors. One hundred and ten authors are represented. Every physician will find some pleasant surprises in this excellent anthology—and much edification. And there is good cheer as well, for indeed we all lustily echo Wade Oliver's invocation on page 180

Be with me, laughter, on the last, lone mile To make my baffled pilgrimage worth while.

ARTHUR C JACOBSON

Proteins and Amino Acids Physiology, Pathology, Therapeutics. Prepared under the supervision of the scientific staff of the Arlington Chemical Company Octavo of 173 pages, illustrated Yonkers, the Arlington Chemical Co , 1944

This volume contains clinical data on proteins and amino acids in health and disease. It is a critical reviewand discussion of more than five hundred orginal papers. There is an excellent discussion of the nal papers There is an excellent discussion of the normal and abnormal protein metabolism, and several sections dealing with clinical conditions associated with protein depletion, such as nutritional edema, anemia, diseases of the liver and ladavir successful and others. The kidneys, surgical conditions, and others text is concise and up to date. The

Octavo of 264 pages, illustrated Bal Williams & Wilkins Co, 1944 Cloth, \$3 00 Baltimore,

The literature on lead poisoning in this country alone is voluminous, for the subject is a most important one, as the hazard is not limited to industrial activities. This is a 264-page book in which the authors offer nothing new, but review the ontire literature on the subject, and in a condensed form, present to the reader the most important data covering the absorption, pathology, clinical symptoms, diagnosis, and treatment of lead poisoning, as well as the manufacture and use of lead products

The book is well written and has a large bibliography and index. It should prove very useful to the busy practitioner and to those interested in industrial medicine who cannot spare the time to review, or are not fully acquainted with, all the literature on the subject

C T GRAHAM-ROGERS

A Clinical Study (with a The Hair and Scalp By Agnes Savill, M D Chapter on Hirsuties) Third edition Octavo of 304 pages, illustrated. Baltimore, Williams & Wilkins Co, 1945 Cloth,

The third edition of this book should be a valuable addition to the library of the general practitioner as well as the dermatologist The reason so many people with hair and scalp troubles seek advice from barbers, hair dressers, and cosmeticians is that too little attention is given such maladies by the doctors

As Doctor Savill states, the common diseases of the scalp and hair, apparently so simple, often prove to be some of the more serious and puzzling problems of medicine and warrant more attention by the doctor She gives detailed advice, not only by the doctor She gives detailed advice, not only on such subjects as brushing, washing, and the care of the normal hair and scalp, but also hair fall, itching, and scaly conditions of the scalp She also describes the harmful effects of permanent waving, singeing, bleaching, and dyeing of the hair

The more serious afflictions of the hair and scalp and skin diseases affecting the scalp are thoroughly described and brought up to date in this edition and Dr Savill has also incorporated all valuable informa-

tion from older treatises on the subject

This book is the most detailed and authoritative work on the hair and scalp published in some time

ALFRED POTTER

Special Pathology and Green and Yellow Cross Therapy of Injuries Caused by the Chemical War Materials of the Green Cross Group (Phosgene and Diphosgene) and of the Yellow Cross Group (Mustard Gas and Lewisite) By Hermann Büscher, tard Gas and Lewisite) Translated from the German by Nell Con-MDQuarto of 156 pages, illustrated Ann Arbor, Paper, \$4 00 Edwards Brothers, Inc , 1944

This excellent monograph deals with the special pathology and therapy of injuries resulting from chemical warfare materials. It is a compilation of the author's views and results of his experiments and observations drawn from a wide experience as a physician whose duty it was to examine and treat the many casualties resulting from the work of destroying the immense stocks of war gases in Germany after World War I

It is an important practical guide for all who are interested in this special and difficult field.

Alfred Goerner

Physical Diagnosis By Ralph H Major, MD Third edition, revised Octavo of 444 pages, illus Philadelphia, W B Saunders Co, 1945 trated Cloth, \$5 00

The third edition of Ralph Major's Physical Diagnosis continues to maintain the high standards of the preceding editions The many outstanding features which this reviewer noted before are to be found again, notably the absence of material which does not belong in a textbook of physical diagnosis and the number and pertinence of the illustrations The historic approach is emphasized and eponyms are given in profusion.

There is one serious omission which should be rectified in the next edition Although chronic adhesive pericarditis is described in detail on page 267, the clinically much more important chronic obliterative pericarditis (concretio cordis) is not

described

MILTON PLOTZ

Secretory Mechanism of the Digestive Glands. By B P Babkin, M D Octavo of 900 pages, illustrated New York, Paul B Hoeber, Inc., 1944. Cloth, \$12 75

Under this modest title, Dr Babkin, a scientist of world renown and a former pupil of Pavlov, has written an exhaustive description of the physiclegy of digestion, after more than forty years of intensive

study and research in this field

There is a thorough didactic discussion of all phases of gastric secretion, including chapters on the nervous and chemical phases, the effect of cheline and leathin, hypoglycemia, the effect of mucin on digestion, and the use of histamine and insulin as gastrie stimulants. The digestive hormones, secretin and lipocaic, and the secretory depressants, urogastrone and enterogastrone, are discussed. The remainder of the book is given to a detailed discussed the secretory depressants.

discussion of the salivary glands, to which Dr Babkin has devoted considerable research

extensive bibliography is included

This is a book which should be on the desk of every gastroenterologist and internist, and will solve many problems perplexing the general practitioner and student of digestive disease.

CHARLES G WILLIAMSON

Safe and Healthy Living Series of 8 volumes, by J Mace Andress, Ph D , I H Goldberger, M.D., Marguerite P Dolch, and Grace T Hallock New Octavo, illustrated Boston, Ginn & Co, edition 1945

The publishers present this new edition in an eight-volume series of health books designed for instruction in the elementary-school grades various authors are selected from school and community departments of hygieno and health educa-

The subject matter is presented in language appropriate for the various grades, with colored illustrations designed to attract and interest childern

The topics include personal hygiene, nutrition, growth, safety, and cooperation in a community program for healthy living

The series serves a useful purpose in educating the

child in the ABC's of hygiene

ALTRED E SHIPLEY

Dissolved slowly on tongue SULFACAINE LOZENGES initials a high salivary concentration of locally active Sulfathicanle prolocyed and maintained concurrently with the local anoseshedic action of Bentocatine. Contain 3% grs. Sulfathicands & gr Bentocatine.

INDICATED for sulfonamide-susceptible propharynged infections, as in septic sore throat, totalilits, peritonalilits, infectious gingivilis, and as a prophylottle measure following propharynged surgers.

ON PRESCRIPTION ONLY in bottles of 36, 100 500 and 1000

available also as

#### SUGGESTIONS FOR CONTRIBUTORS TO THE NEW YORK STATE JOURNAL OF MEDICINE

The New York State Journal of Medicine asks its contributors to follow the suggestions listed below in the preparation of their articles In this way they will greatly facilitate the expeditious publication of the JOURNAL These suggestions have been devised in order to save correspondence, avoid return of papers for changes, minimize the work of preparation for the printer, and save the high costs of corrections made on galley proof

Size of Articles -It is earnestly desired that scientific articles shall not exceed 6 JOURNAL pages at the outside Longer articles tend to lower reader interest An average of five or six seems to be the most desirable from this point of view Cal-culation can readily be made by multiplying the number of double-spaced typewritten manuscript pages by the fraction two-fifths, e g, twelve manuscript pages will make five Journal pages

Manuscripts -- Papers must be typewritten on one side only of white sheets consecutively numbered, and be double spaced with one-inch margins They should be prepared with great care so as to be typographically correct All headings, titles, subtitles, and subheadings should be typed flush with the left-hand margin This is imperative for rapid and accurate composition by the printers

Titles — The title should be brief and typed in capital letters The subtitle can be longer and should be typed in caps and lower case letters Under the title, or subtitle, if there is one, should appear the name of the author and city in which he lives Directly under his name should be the hospital or institution with which he is affiliated

Subheadings.—Subheadings serted by the author at appropriate intervals

References —It is the unfailing practice of the NEW YORK STATE JOURNAL OF MEDICINE to use specific "references" rather than "bibliography" There should appear in the text reference numbers, typed above and to the right of the word to which there is a reference A list, consecutively numbered, of these references should follow at the end of the manuscript (Note that spelling in list is same as in text) The arrangement should be as follows and should include all items

Books—author's surname followed by initials title of book, edition, location and name of publisher, year of publication, volume, and page number Thus, Osler, W Modern Medicine, 3rd ed, Philadelphia, Lea & Febiger, 1927, vol. 5, p. 57

Periodicals—author's surname followed by

initials, name of periodical, volume, page, month (day if necessary), year of publication Thus, Leahy, Leon J New York State J Med 40 347 (March 1) 1940

Note The JOURNAL does not include titles of articles

Case Reports —Instead of abstracts of hospital histories, authors should write these reports in a narrative style with properly completed sentences All unimportant details should be deleted with such general negative statements as fit the case

Tables —While tables are very useful on lantern slides in the reading of papers, they fail of this purpose to a large extent in the printed page. For that reason it is urged that they be reduced as much as possible to descriptive language

Illustrations —These should be kept to the minimum necessary to make clear the points to be registered by the author. In some instances they are imperative to proper understanding, in others they are merely picturesque. The latter can be excluded to good effect, both as to space

and the not inconsiderable cost

When illustrations are to be used they should accompany manuscripts and each should always be referred to in the text, preferably by number Drawings or graphs should not be larger than 12 × 16 inches, and must be made with jet black India ink on white paper Do not use typewriter for The smallest lettering on 8 × 10 inch lettering copy should be no less than 1/4 inch high Crosssection paper (white with black lines) may be used but should not have more than 4 lines per inch finer ruled paper is used, the major division lines should be drawn in with black ink, omitting the finer In the case of finely ruled paper, only blue-lined paper can be accepted Lettering and all markings must be large enough to be readable Mail rolled or flat, never fold after reduction Photographs should be very distinct and show clear black and white contrasts They must be on glossy white paper Avoid round and oval photographs

Whenever possible "crop" photographs, 1e, mark portion that can be excluded when repro-Crop marks should be on margin of photoduced Do not run pencil lines through photographs

It is important to mark the top of the illustration on the back, also its number as referred to in the text, thus, Fig 1, 2, and the name and address of the author

Legends should be typewritten on one sheet of

paper and attached to the illustrations

THE NEW STRUNCTH of Wellcome Globin Insulin with Zinc, 40 units per co., gives the physician greater flexibility in prescribing globin insulin to meet patients needs. The lower strength is particularly suitable for milder cases where fewer units are needed for diabetic control While the U-80 continues in wido use especially for moderately severe and severe cases the new strength enables the practitioner and patient to meet insulin needs more closely

Other recognized advantages of 'Wellcome Globin Insulin with Zine still hold of course—the relatively rapid onset, the sustained action for sixteen or more hours covering the period of maximum carbohydrate intake, and the diminished activity at night minimizing the likelihood of nocturnal reactions

The new 40 unit strength will be readily distinguishable by a distinctive red and tan label. As before the 80 unit per cc. ampule is easily recognized by its green and tan label Both strengths are available in vails of 10 cc Developed in the Wellcome Research Laboratories, Tuckahoe New York. U S Patent No 2,161 198 Literature on request. Wellcome Trademark Registered.

HOMOGENIZED BABY FOODS

# GREATER NUTRIENT AVAILABILITY\* HIGHER DIGESTIBILITY SMOOTHER TEXTURE

Being not merely atrained but HOMOGEN IZED as well Libby a Baby Foods may be fed—and are well tolerated—as early as the fifth week of his

Libby a exclusive process of homogenization advantageously changes the physical structure of strained foods and improves their digestibility. By ruptining cell capsules, it releases the cell-contained nutriment dispersing it uniformly throughout the food substance. Digestibility is enhanced by the greatly increased surface area presented to the digestive juices.

Food iron probably the nutrient least supplied by the milk formula itself, is thus rendered more available, as demonstrated by experimental and clinical studies of hemoglobin regeneration.

By comminuting mert cellulose fibers, homogenization facilitates their handling in the digestive tract, without interfering with their "bulk" action

Texture thus becomes visibly and palpably smoother, a feature apparently to the young infant's liking

#### WHEN VITAMIN K IS NEEDED

Synkayvite\* Roche is the choice of many physicians because of its distinctive clinical advantages. Synkayvite is water sokible stable and—molecule for molecule—has "on ontihemor rhagic activity even greater than that of fot soluble menadione" (J. G. Allen, Am. J. M. Sc. 205:97 1943). It may be taken arally without the use of nauseous bile salts or administered parenterally Synkayvite is available in oral tablets, 5 mg each, and 1-cc ampuls, 5 mg and 10 mg each.

HOFFMANN LA ROCHE INC., Nulley 10, New Jersey

ومحاوا المحاجبة والمحاورة

SYNKAYVITE 'ROCHE'

TO OBTAIN BEST RESULTS. the sore throat patient should not eat or drink fluids for one or two hours after instillation of Paredrine Sulfathiazole Suspension He should also make every effort to reduce nose-blowing and throat-clearing to a minimum

Smith, Kline & French Laboratories, Philadelphia, Pa

THBOFL ;

IN SORE

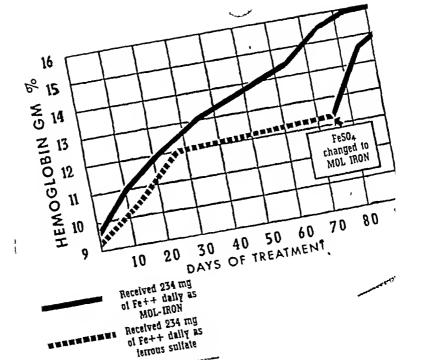

Sulfathiazole is particularly effective against the hemolytic streptococcus which apparently causes the vast majority of sore throats

There are two other important reasons why Paredrine-Sulfathiazole Suspension—when ad ministered intranasally—is so successful in the treatment of acute nasopharyngitus

- 1 Part of the Suspension remains beneath the middle and superior turbinates—and, mixing with sinus drip retards the proliferation of bacteria before they reach the nasopharynx and intensify the infection
- 2 Part of the Suspension drifts downward over the nasopharynx forming a fine frosting on the nasopharyngeal mucosa. This thin blanket not only keeps producing a bacteriostatic solution at the site of infection, but also appears to provide marked surface analgesis.

# PAREDRINE-SULFATHIAZOLE SUSPENSION

vasoconstriction in minutes bacteriostasis for hours

!

The therapeutically superior effect of Mol iron is well dem onstrated in the above graph which illustrates the comparative rate of hemoglobin regeneration, in response to treatment with Mol Iron and ferrous sulfate, in two pregnant women having approximately the same degree of iron-deficiency anemia. This response is typical of that observed in an evaluation of Mol Iron in a series of pregnant women with hypochromic anemia.

A specially processed, co-precipitated complex of nolybdenum oxide (3 mg.) and ferrous sulfate (195 mg.).

Available clinical evidence indicates that, in hypochromic anemia, the therapeutic response to this highly effective synergistic combination — as compared with equivalent dasage of ferrous sulfate alone — has unusual advantages:

- 1) NORMAL HEMOGLOBIN VALUES ARE RESTORED MORE RAPIDLY INCREASES IN THE RATE OF HEMOGLOBIN FORMA-TION BEING AS GREAT AS 100% OR MORE IN PATIENTS STUDIED
- 2) IRON UTILIZATION IS SIMILARLY MORE COMPLETE.
- 2) GASTRO-INTESTINAL TOLERANCE IS NOTABLY SATISFACTORY—even among

o,

patients who have previously shown marked gastro-lotestical reactions following oral administration of other tron preparations.

Indicated In: Hypochromic (iron-deficiency) anemias caused by inadequate dietary intoke or impaired intestinal obsorption of Iron; excessive utilization of Iron, as in pregnancy and loctation; chronic hemorrhage

Dosage: One or two toblets three times doily after meals.

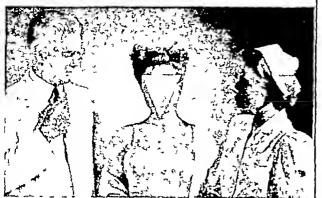

Available in battles of 100 and 1000 tablets Ethically promoted — not advertised to the laity

# THE CAAMPS OF DYSMENORRHEA brought under control

Menstruating uterus human cramp-like contractions with tetany and acute pain

Same uterus after administration of Pavarrine The contractions are of consider ably less amplitude and nearer the base line.

Intrauterine balloon tracings reveal that

Pavatrine has a morphine like action in counteracting the

tetranic contractions of essential dysmenorthea. Symptomatic
relief is afforded during the period of spasmolytic effect.

# PAVATRINE

(8-diethylaminoethyl fleorane-8-carboxylate hydrochloride)

#### Indicated in

- Dysmenorrhea due to hypertonicity or excessive contractions.
- Gastrointestinal Spasm—gastric, duodenal, sphinger of Oddi colon.
- Urinary Bladder Spasm—in cystitis, instrumentation of tenesmus.

Average Dose 1 or 2 tablets three times dally

Paratrine is the registered trademark of G. D. Searle & Co., Chicago 30 Illinois

SEARLE

# BY INJECTION

subcutaneously or intramuscularly, ADRENALIN provides rapid symptomatic relief in asthmatic paroxysms; is useful in the prevention and treatment of other allergic reactions; localizes and prolongs the action of local anesthetics. Intravenously, it is used in shock and anesthesia accidents.

## BY APPLICATION

for its vasoconstrictor action in hemorrhage, ADRENALIN permits better visualization of the field, and aids in the diagnosis and treatment of certain conditions encountered in ear, nose and throat practice.

## BY INSTILLATION

into the nasal passage, ADRENALIN produces prompt decongestion; in the eye ADRENALIN decreases vascular congestion, and aids in the location of foreign bodies.

# BY INHALATION

orally, ADRENALIN relieves severe attacks of bronchial asthma by relaxing the bronchial muscles.

Its remarkable ability to stimulate the heart and increase cardiac output, raise the blood pressure, constrict the peripheral arterioles, dilate blood vessels of voluntary muscles, and relax bronchial muscles makes ADRENALIN one of the most versatile and useful therapeutic agents at the command of the physician Little wonder, then, that it's always kept close at hand in operating room, office, and medical bag

To permit full use of its many therapeutic applications, there is a form of ADRENALIN (Epinephrine) to meet every medical need Solutions of 1100, 11000, 12600, 110,000, Suspension of 1500 in oil, and Inhalant, Suppository, and Ointment

A rapidly absorbed and therefore quickly effective method of assuring the full analgesic, anupyretic action—a method which likewise insures a desirable, concomitant intake of fluid is offered in-

# Acetyl-Vess

# CHLOROPHYLL THERAPY

### The New Biologic Approach to healing

Provided in Chickey 100 Date

#### Natural, Nontoxic Chlorophyll Preparations

he application of chloro phyll therapy—the new, basic bealing principle in the topical treatment of wounds, burns, battleinjuries, ulcers and sum lar lessons, especially those of the chronic, recalcitrant type—is now available to the medical profession in CIII.ORESTUM, trade name for the therapeutic chlorophyll preparations of the Rystan Company

The water soluble deriva tives of chlorophyll "a" have been shown by exhaustive clinical investigations in many leading medical schools and hospitals, during the past four years, to have these distinct therapeutic advantages (1) they are completely nontaxic; (2) they accelerate tissue repair through their stimulating action upon cell metabolism, and (3) they are efficient deodorants through their prompt inhibition of secondary, proteolytic anacrobic bacterial activity

Its deodorizing ability emphasizes the value of Chlore sium in the treatment of such offensive leasons as chronic osteomyelitis, leg ulcers, severe secondarily infected third-degree burns and even ulcerative carcinomata, where the makedorous problem be comes of paramount importance to patient and physician alike Prompt elimination of the distressing odors is combmed with rapid cleaning up of the wound and the early development of healthy granulation insue.

Healing progresses at a measurably accelerated pace under the sootling influence of the natural biogenic, tissuestimulating properties of chilorophyll as found in Chlorosum.

Write for "Chlorophyll— Its Use in Medicine"!

Chloresium is ethically promoted.

Available at all leading druggists.

# WITH White's

# SULFATHIAZOLE GUM

in Oropharyngeal Infections

One tablet of White's Sulfathiazole Gum chewed for one-half to one hour

- I promptly provides a high solivary concentration of locally active (dissolved) sulfathlazale
- that is sustained throughout the chewing period in immediate cantact with infected arepharyngeal mucosol surfaces,
- 3 yet even with maximal dasage, resulting blood levels of the drug remain so law as to be virtually negligible

INDICATIONS: Local treatment of sulfona mide-susceptible infections of oropharyngeal areas acute tonsillitis and pharyngitis septic sore thout infections gingivitis and atomatitis, acute Vincent a disease.

DOSAGE: One tablet chewod for one-half to

one hour at intervals of one to four hours depending upon the severity of the condition. If preferred, several tablets—rather than a single tablet—may be chewed successively during each dosage period without significantly increasing the amount of sulfathiazole systemically absorbed.

Available in packages of 24 tablets, sanitaped in slip-sleeve prescription boxes.

IMPORTANT: Please note that your patient requires your prescription to obtain this product from the pharmacist.

# Not Merely

#### **ISOLATED NUTRIENTS**

Essential though they are, vitamins are nevertheless not the only nutrients which may be lacking in the diet of persons physically below par Nutritional imbalance, not infrequently the cause of poor physical stamina, excessive irritability, and poor appetite, may be attributable to other dietary-induced deficiencies. In consequence, adjustment of the entire nutritional intake is indicated

Virtually any diet can be enhanced to a point of adequacy through the addition of three glassfuls of Ovaltine daily Made with milk as directed, this delicious food drink supplies liberal quantities of most essential nutrients, as indicated by the table below Qualitatively Ovaltine is equally valuable, it provides biologically adequate protein, readily assimilated and utilized carbohydrate, well emulsified fat, B complex and other vitamins, as well as essential minerals Ovaltine proves advantageous both as a mealtime beverage and a between-meal snack. Its low curd tension insures rapid gastric emptying, hence it does not interfere with the appetite for the next meal

THE WANDER COMPANY, 360 N. MICHIGAN AVE., CHICAGO 1, ILL.

# Announcing... PENICILLIN OINTMENT SCHENLEY

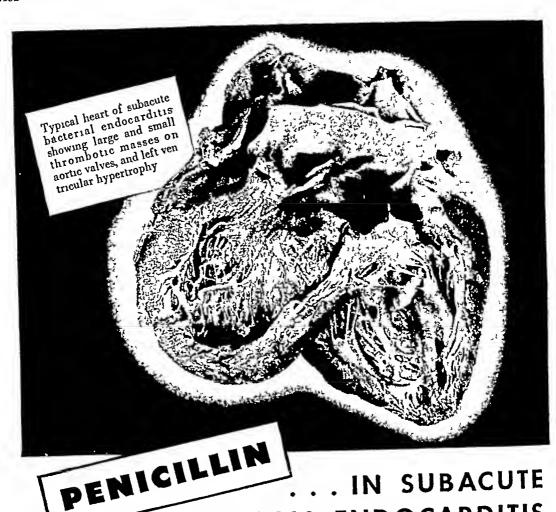

It is possible by topical application to reach local levels of penicillin activity far in excess of the highest ranges main tained by intravenous and intramuscular administration.

Penicillin Ointment Schenley is indicated in the treatment of superficial infections of the skin caused by penicillin-sensitive organisms. In deep-seated pyogenic infections with penicillin-sensitive organisms, the ointment may be used as an adjunct to systemic penicillin therapy and other measures.

When you specify Penicillin Ointment Schenley, you are assured of the highest standard of excellence, because Schenley Laboratories maintains the same rigid program of control for this ointment as it has always maintained for Penicillin Schenley

SCHENLEY LABORATORIES, INC Executive Offices: 350 Fifth Avenue, New York City

Penicillm 18 the best agent available for the treatment of this devastating disease. Although in a few instances it may be desirable to use the continuous intravenous route, intramuscular injection is the one of choice. If best results are to be obtained 200,000 to 300,000 units should be given daily for three weeks or longer (Keefer, C. S et al New Dosage Forms of Penicillin, J A. M A. 128 1161, Aug 18, 1945)

Bristol Penicillin, because of its low toxicity and freedom from pyrogens, as well as its absolute sterility and standard potency, provides dependable therapeutic action

The rapidly developing new clinical uses of this potent antibiotic are abstracted in issues of the BRISTOL PENICILLIN DIGEST. If you are not receiving your copies regularly, drop us a line.

# TODAY THEIR CHANGES ARE BETTER

Advances in the therapy and care of arthritic patients have considerably increased their chances for recovery....

Many factors have aided in this improved prognosis in arthritis. Patients are seeing their physicians earlier, when more rapid improvement can be expected. The physical and dietetic care of the patient is now better understood. Greater cooperation of the patient is obtained by education, and in general a more scientific approach to the problems is made.

An outstanding contribution to the improved prognosis in arthritis is Ertron — evaluated and proved effective in thousands of cases over a ten year period

The results with Ertron therapy bave been measured — muscle strength, joint size, weight gain, mobility — all have been tabulated in addition to other valuable information in the extensive studies which have determined Ertrons field of usefulness in the artbritic picture

#### ERTRONIZE THE ARTHRITIC

To Ertronize, employ Ertron in an adequate daily dosage for a sufficiently long period to produce optimal improvement. Gradually increase the dosage to the toleration level and maintain this dosage until maximum improvement occurs. Ertronize early and adequately for best results.

Ertron alone — and no other product — contains electrically activated vaporized ergosterol (Whittier Process)

Supplied in bottles of 50, 100 and 500 capsules
Parenteral for supplementary intramuscular injection
Ethically promoted

The potentiation of the central action of phenobarbital by the belladonna alkaloids (Friedberg, Arch f. exp. P. & P. CLX, 276) renders possible attainment of desired effects with relatively small doses, thus avoiding "hang over" and other unpleasant side-actions. In contrast to galenical preparations of belladonna, such as the tincture, Belbarb has always the same proportion of the alkaloids

Indications: Neuroses, migraine, functional digestive and circulatory disturbances, vomiting of pregnancy, menopausal disturbances, hypertension, etc

Formula Each tablet contains 1/4 grain phenobarbital and the three chief alkaloids, equivalent approximately to 8 minims of tineture of belladonna

Belbarb No. 2 has the same alkaloidal content but ½ grain pheno-barbital per tablet

THOUGH the sulfonamides presented a signal advancement in the treatment of gonorrhea, many published reports Indicate that peni cillin is the therapeutic agent of choice for three potent reasons First, the openicillin process effective in virtually all instances. Second safety penicillin is practically nonzire. Third, brenty of treatment in the majority of cases definite cure can be effected in 24 to 48 hours.

Studies at an Army Station Hospital showed that most sulfonamide resistant gonococci are fully susceptible to pendillin that penucillin resistance is difficult to establish.

Fruch 1 W., Behr B Edwards R B and Edwards V W 1m J Siph Gener & Ven Dis 28,527 (Sept) 1944

From a study of 109 patients, the conclusion is drawn that penicillin effectively eradicates chemoresistant gonor thea in the female

Greenblatt R. B. and Street A. R., J. A. M. A. 126, 161 (Sep. 16) 1944. In the Technoral Bulletin of Mediane, No. 26 recently issued by the Wat Department, penicellin is rated to be the drug of choice in the treatment of gon

J A M A 126,373 (Oct 28) 1944

191 consecutive cases of sulfooamide resistant gonorrhea responded dramat ically to penicillin

Ergh, R. and Gur G. I. Jr., J. Maine M. A. 55 207 (Nov.) 1944

At a U S Naval Hospital 200 cases of sulfonamide-resistant gonorrhea treated with penicillia, showed no toxic reac trons all returned to duty in one third of the time previously required

Penicitin-C.S.C. in Individual viols and in combination packages is available through all pharmacles.

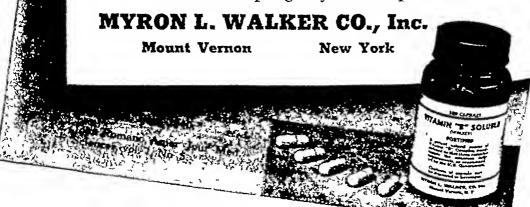

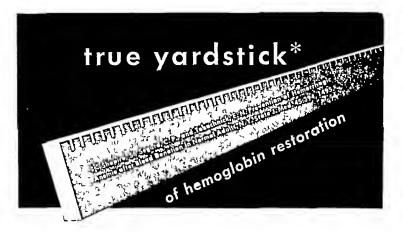

Vitamin B holds a well-recognized place in the treatment of alcoholism. Alcoholic polyneuropathy is said by Jolliffe<sup>1</sup> to be unquestionably due to vitamin B<sub>1</sub> deficiency. Romano<sup>2</sup> states that both vitamins B<sub>1</sub> and B<sub>2</sub> have definite value in this condition. It is also believed that the addition of nicotinamide hastens recovery of the patient. (Spies, Sydenstricker, Jolliffe).

Vitamin "B" Soluble (Walker) supplies all the factors of the B complex, plus additional fortification of various constituents. Each capsule contains 3 grains brewers yeast concentrate, 1 mgm. Thiamin HCL, 1 mgm. Riboflavin, 5 mgm. Nicotinamide, 30 mgm. Ascorbic Acid. The dosage potency is regulated by the physician according to severity of the symptoms.

The generous use of Vitamin "B" Soluble (Walker) preceding and following indulgence in alcohol, does much to prevent symptoms of depression and nervous irritability that so commonly occur. In bottles of 30 and 100 capsules.

Liberal samples gladly sent on request

Eleven of 15 white collar workers in good health and on adequate diet experienced a precipitous depression in blood hemoglobin averaging 14% following blood donation of 500 cc. The period of hemoglobin restoration could be shortened one third by giving Licuron B after donation of blood but only one sixth by giving ferrous sulfate. If Licuron B was also given prophylactically it prevented or minimized hemorrhagic anemia but larger doses of ferrous sulfate did not obtain this beneficial effect.\*

Licuron B is the bi active antianemic (1) It provides the copper iron ratio which is basic therapy in hypochromic anemia (2) It raises the intritional status of the patient with liver B vitamins augmented by the crystalline vitamins thiamine, riboflavin and niacinamide Licuron B is supplied In sugar coated tablets. ## THE POST-WAR NEED

for an institution such as THE PHYSICIANS' HOME is likely to become greater, rather than less. Increased competition within the profession and the steady developing trend toward the Government's assuming responsibility for distribution of medical care, are but two factors which our older colleagues will have to face. We must make sure, here and now, that this worthy and friendly charity will grow and expand in the years to come.

Make checks payable to

## Editorial

#### Socialize Everything or Nothing, II

Yes, the war is over and everything is lovely now You can relax. Especially if you are a physician Everything is going to be "duck soup" The young men are coming back. The war bonds you have bought are going to be a solace in your old age Penicillin, streptomycin, the sulfa drugs will reduce the practice of medicine to a more routine, eliminating the necessity for diagnosis, and anything else can be sprayed with DDT except a few surgical cases, useful for teaching purposes. The postwar world should be something! Ho, hum! So they are going to nationalize the atomic bomb and pay higher wages for shorter hours of work and reduce taxes Splendid, no doubt about it Splendidl

Those fellows down in Washington are pretty smart. Look how they fed everybody during the war and gave them all that gasoline, tires, and oil, meat and cigarettes, too Maybe they could do as good a job

with doctoring the folks now that modern science has made it so simple and all Something to think about Especially for poor people. There are getting to be so many poor people now, with the cost of hving going up so fast, and the take-home money getting less and less It doesn't seem right somehow Maybe that's why there are so many strikes.

Well, it will all be better as soon as the Wagner-Murray-Dingell hill, 1945 version, is passed. That bill will "socialize" medicme for the poor folks-and the rich ones, too give them ever-loving government medicine with employers paying 4 per cent on wages up to \$3,600, the same as they pay now for unemployment and old-age benefits on wages to \$3,000

Of course, the employees would be taxed 4 per cent on wages up to \$3,600 a year, about four times what they pay now on wages up to \$3,000 a year, but who minds that?

Certainly not the employers Unless they happen to employ themselves For making that mistake they would pay 5 per cent and be ineligible for unemployment and temporary disability insurance—and serve them right, too, let them get sick and see who cares

If you are foolish enough to work for yourself the worst is too good for you

But we will skip over all these tiresome figures Everybody knows that if you want security you have to pay for it Take the recent war, for instance, well, it gave us security, not particularly social perhaps, but security for a while from dictators—except

in Argentina and Spain—and we will have to pay for that somehow as well as the "socialized" medicine and the strikes which don't produce any salable goods, to our way of thinking, so why don't we socialize everything and have done with it? Messing around with a partly free and partly socialized economy seems to us to combine the worst and most expensive features of each, to no particular advantage.

As we have hinted at various times, we are opposed to the socialization of medicine, but if the public must have it and is willing to pay for it, then we demand the socialization of everything Whole hog or none

## Serious Problems Confront Medicine

The medical profession in every aspect of its life is confronted with weighty problems It takes the obligation to resolve those problems seriously and exercises its responsibilities professionally with reasonable skill, considered judgment, and due regard to the public interest, both in education and in private and public practice. It has consistently raised its standards of training and achievement, and will continue to do so if left to itself For many of its problems are of a nature so particular that few nonmedical persons can ever hope to understand them This is not to be mysterious, it is a statement of simple fact Sometimes even the doctors don't comprehend them

One of these serious problems is medicine And doctors Obviously something makes them tick, but what? If only that were known, why, then anybody could be a doctor and practice medicine But in this whole country there are only a paltry one hundred and eighty-six thousand medical doctors, most of them without whiskers but with a high death rate from diseases of the vascular system Very few wear silk hats. and some can read or write only with great Amazing! Some know a good difficulty deal about medicine but nothing about politics, others know much about disease but little about people Still others know a lot about people but less about medicine

And medicine itself—what a serious problem that is! Give one person sulfa drugs and he gets well, another dies Cocaine eases pain in one person, and eases his successor right into the next world, for example Hopeless? Not at all State medicine will stop all that by substituting nonpoisonous security for everybody from cradle to grave, abolishing these problems and the need for medicine

Our own opinion is that of all the grave and vexing problems of medicine, people are Here are the doctors raising the worst educational standards, learning more about things, studying Washington politics and other diseases, medical plans of labor unions, putting things in cyclotrons and taking out something else-but forgetting the people Write five That is a serious mistake hundred times, "That is a serious mistake." People are our worst and most serious prob-Not the public, not the funny little statistical dolls holding each other's hands in the graphs, not the curious distorted things one sees delineated by modern artists in the galleries or described in print by modern writers, but the man, woman, or child in the next seat in the subway were not for them medicine could close its books without loss of its gravely impeccable Respectability It is something to think about

#### When Is Higher Education as it Spins? I\*

The legislature of the State of New York in 1945 passed a bill, presumably under pressure, providing that graduates of medical schools not approved by the Board of Regents be allowed to take licensing examinations in this State Basing his decision upon a memorandum by the Board of Regents in which reasons against such a law were itemized, Governor Dewey finally vetoed the bill

For the time being, at least, standards of medical education in the State seemed to be upheld. No one not properly qualified could be admitted to examination for medi-None but graduates of apcal licensure proved schools could hope to practice legally in the state, but only, be it noted, by reason of Governor Dewey's veto The legislature, in its wisdom, like Barkis, was willin' to have In spite of the representations it otherwise of the Medical Society of the State of New York, the State Department of Education, and other interested individuals and organizations, the legislature would have changed the law Both the public and the medical profession owe a debt of gratitude and appreciation to the Governor for a last-moment reprieve

Among those who opposed the action of the legislature was the Board of Regents of the State Department of Education. This board has, in the past, stood either actively or passively in favor of the maintenance of the highest standards of education in the State. It would seem to be the proper function of the Regents to maintain and jealously to guard those standards. This they seemed to be doing when they opposed the action of the legislature earlier this year. But—

Word has now come that on September 21 the Regents reversed their stand and took action making it possible for graduates from unregistered medical schools to be admitted to the New York State Licensing Examination

The precise language of the decision has not yet been obtained for examination, but so far as can be learned, this action was taken under a section of the law which permits the Regents to accept evidence of preliminary professional education for licensing a candidate to practice any such profession in lieu of that prescribed by the laws relating to such profession, provided it shall appear to the satisfaction of the Regents that such candidate has substantially mot the requirements of such laws. Many graduates of a certain unregistered medical school were accepted into the Medical Corps by the Army and so this question now arises as to whether they are eligible for the licensing examinations. Actually the action of the Regents would appear to be limited only to veterans.

Legal opinion appears to be that if this privilege is extended to veterans, it must also be extended to other graduates of the unregistered school, whether they be veterans or nonveterans Similarly, if the standards for admission to licensure are relaxed for graduates of one unregistered school. they must also be relaxed for graduates of other unregistered schools This opens up some interesting possibilities Perhans more will be known about this situation when Regent Woodward and the Board of Examiners meet with the Medical Council as is planned

The Associated Press carried the announcement by Commissioner of Education Stoddard on October 11, for "immediate release" Newspapers of October 12, a holiday, carried the story The action of the Regents was taken September 21, 1945, nineteen days earlier One is justified in thinking that news of such importance ments more immediate announcement One is curious as to the causes of the delay Could the Commissioner be a little reluctant to release to the people the news that the State standards of medical education had been compromised? Or could the fact of publication on Columbus Day soften the blow for the people, since so many of them would be otherwise occupied on the holiday and fail to read about it? Or was the Commissioner at a loss, or up a tree to explain the about-face of the Board of Regents on a question so germane to the maintenance of the highest standards of medical education in the State? These possibilities occur to us

The apologia of Dr J Hillis Miller, Asso-

ciate Commissioner of higher and professional education, which closed the press release of October 11, contains everything except the actual washing of hands

"We are convinced that the policy which the Department of Education has followed in normal times has served to protect the health and wellbeing of the people of the State The contingencies of war, however, have resulted in our utilizing the services of some graduates, heretofore unqualified to take professional licensing examinations, not only in the armed forces but through internships in our approved hospitals We have been in search of a procedure through which we could regard professional experience and internship in good hospitals as equivalent to certain aspects of required education and experience We believe that the policy established by the Regents at its September meeting will meet this situation We are hopeful by means of this procedure that we can take care of worthy cases, particularly veterans, and at the same time protect our basic professional laws and the educational standards which have placed New York State in an enviable position as regards professional licensure"

This is as neat an explanation of the scuttling as anyone could desire, saying nothing in many words, graciously exploiting the worthy veteran, exculpating the Board of Regents, and raising the pierced colors of higher education bravely to the masthead as the ship slowly founders

#### Current Editorial Comment

"Glorification of the common man has somehow led to glorification of commonness itself

"This is no salutary trend It encourages, in sequence, mediocrity, complacency, insufficiency, dependency, and socialization

""The common man, says Louis Karnosh, 'will readily lend himself to socializing schemes, for in such programs he dissolves his inferiority sense in the mob. The uncommon man will instinctively rebel against socialization, for its sole purpose is to reduce him to the colorlessness of the crowd

"'If the day ever comes when medicine is trimmed down to a cheap and prosaic commodity, it will certainly be very common, and commonness is the one poisonous ingredient which will destroy it as an art!'" Medical Economics<sup>1</sup> thus comments editorially upon a tendency which the discerning physician has observed in much that has happened of recent years. We do not infer that medicine alone has been attacked by this subtle, poisonous ingredient, but it is certainly evident that much so-called thinking about the affairs of medicine has seemed to treat it as a "cheap and prosaic commodity"

Certainly medical service should be available to all who need it. Not, however, as a political handout, not as a commodity, but as a service of high quality, produced by the best-trained physicians our institutions of learning are able to qualify for practice

With this standard there can be no compromise

## Immediate Return of Directory Information Requested

DOCTORS are urged to return the biographic and World War II Service cards recently sent to them immediately, as soon as the requested information has been filled in This is important in order not to delay publication of the 1946 Medical Directory of New York, New Jersey, and Connecticut

<sup>\*</sup> This is the first of two editorials on the action of the Board of Regents The second will be published in the December 15 issue and will answer the question here posed.

1 Press Release of Bureau of Publication of New York, State Education Department, Albany, New York.

#### The President-Elect

Dr William Hale, of Utica, was chosen for this office at the recent meeting of the House of Delegates of the Medical Society of the State of New York, held in Buffalo October 9, 1945

Dr Hale was born in Ontario, Canada, on January 24, 1886, and received his elementary education there prior to entering Amherst College He was graduated from Queens University Medical School in 1910 and was salutatorian of his class. After spending three months in Queen Street West Hospital, Toronto, and serving a period as surgeon in a railway construction camp north of Lake Erie, he served an internship in Faxton Hospital, Utica. This was followed by postgraduate work at Manhattan State Hospital and Bellevue Hospital

Dr Hale entered the practice of medicine in Utica in 1914, just ten days prior to the outbreak of World War I The following year he was commissioned in the British Army and attached to a hospital reinforcement group Later he was attached to the 42nd Battalion of the Black Watch, Royal Highland Regiment of Canada

Following the battle of Vimy Ridge in 1917, Dr Hale was invested with the Military Cross by the late King George V at Buckingham Palace, and a year later was again decorated, this time with a bar to the Military Cross for exceptional services rendered in the infantry

Dr Hale resumed practice in Utica in 1919, and at that time set up a plan for Disaster Relief for the Utica Red Cross Committee which was later adopted by the American Red Cross

Dr Hale is a Fellow of the American College of Surgeons and a diplomate of the American Board of Gynecology and Obstetrics He was a secretary of the Faxton Hospital staff for six years and president of the staff for two years

Always active in the affairs of his medical organizations, he served the Utica County Medical Society as secretary for fourteen years, as president for four years, and as a delegate to the House of Delegates of the Medical Society of the State of New York for four years. He is a consultant in gynecology to the Utica State Hospital and Marcy State Hospital

The new president-elect has been keenly interested in community affairs. In 1920 he organized preschool clinics for the Child Welfare Department of Utica and assisted in bringing about the merger of the Utica Visiting Nurse Association and the Child Welfare Association. He has served the combined organization as medical director for four years.

Dr Hale is a charter member of the Academy of Medicine and for ten years was chairman of its Membership Committee and for the past twelve years has served as secretary of the Phi Gamma Delta Graduate Association of Utica. He is also a member of the Masonic Fraternity and Ziyara Temple of the Mystic Shrine, as well as the Central New York Branch of the Alumni Association of Queens University, which he also served as secretary for twelve years. He is a member and past president of the Utica Medical Club, past president of the Utica Rotary Club, and an active member of the Thousand Islands Summer Residents Association For twenty years he has been surgeon to the New York Central Railroad Company, the Delaware, Lackawanna and Western Railroad Company, and the New York, Ontario and Western Railroad Company

In 1922 Dr Hale married Mabel Elizabeth Lloyd They have a son, William Hale, Jr, who enlisted in the Army during his freshman year at Hobart College and served overseas, and a daughter, Jill Hale, a junior at Mt Holyoke College

## A SUMMARY OF THE PROBLEMS OF SULFA AND PENICILLIN FASTNESS

M L TAINTER, M.D , Rensselaer, New York

(From the Winthrop Research Laboratories)

THE modern field of chemotherapy opened up about forty years ago with the development of Ehrlich and his group of highly effective arsenicals for the treatment of spirochetal diseases. Spirred on hy his concept of complete sterilisation of the body from a angle dose of a drug, many workers devoted themselves to the search for other chemotherapeutic groups. The development of synthetic compounds has brought about notable success in several fields, such as the treatment of amebiasis with chimiofon and vioform and of malaria with atahrine and plasmochin.

Chemotherapeutic discovery reached a peak at the time of Ehrlich A second peak was achieved when Domagk introduced the sulfanilamide type of drugs For the first time his contribution demonstrated in a convincing manner that it was going to be possible to control all bacterial infections, either through the use of the sulfa-type drugs or hy other compounds yet to be developed. The opening up of the field of sulf anilamide research nitracted an unprecedented number of investigators, so that developments in this area came very quickly and the more fruitful lines of investigation were fairly rapidly explored Interest in these products has, therefore, diminsahed to some extent, except perhaps as to various phases of their clinical applications

A third peak in chemotherapeutic research has developed only recently with the discovery and successful commercial elaboration of penicillin and other antihotic substances. We are now at the stage where all possible ramifications of the clinical applications of penicillin are being explored, and in the laboratory a feverish search is going on for new antibiotics with new fields of application. An intense effort is also being made to discover the secret of the mechanism of the antiseptic action of these compounds, so that new synthetic agents might be tailor-made for special purposes.

Sprochetes have been repeatedly demon strated to be able to become resistant to areencals if the therapy is not carried out in a special man ner

We have learned to use these drugs so as to achieve the therapeutic goal in spite of this adaptive ability of the organisms. The malarial parasites do not seem to be able to adapt themselves to atabrine or plasmochin, so that exposures to low concentrations may minimize the infection

but do not appear to lead to altered resistance of the organisms

In the initial phases of the sulfanilamide studies, cures of various bacterial diseases were secured in a very high percentage of patients. Since then there has been a tendency, for at least some infections, for the responses to be progressively less satisfactory until finally, in such an infection as gonorrhea, considerable difficulty is now encountered in handling the infection effectively through the use of any of the sulfa compounds.

A characteristic set of data is that published by Carpenter, at al., who showed that only 15 per cent of genecoccus cultures studied by them in the early part of 1942 were reastant to sulfonamides. By July of 1943 this percentage had increased to 59 per cent. This change occurred during a continuous study of the treatment of genorrhea in a community as part of a special program of public health. A summary of their figures is presented in Table 1

A problem which immediately suggests itself is whether a similar type of resistance to penicillin and other antibotics is apt to develop, and if so, are there methods whereby this can be avoided entirely or minimised in its long-range importance? The specter has been often present in the minds of thoughtful students of chemotherapy of being deprived of the use of one highly effective compound after another by the development and propagation of resistant strains of organisms. Is this the inevitable end of all chemotherapeutic efforts, or is there a chance that compounds properly used may preserve their chemotherapeutic power undiminished indefinitely?

#### Sulfa Fastness

The first question to be answered is whether sulfa fastness is encountered in all organisms or whother it is a peculianty of response of only a limited number. No attempt has been made to explore the entire literature of this field to collect data on each individual organism against which sulfas have been used. However, fastness to certain organisms has been reported by the following nuthors, among others, indicating that this property is fairly widespread among bacterial organisms. gonococcus, 1 poilmococcus, 4 hemolytic streptococci, 4 brucalli, Escherichia coli, and staphylococcu. These organisms comprise

the more important ones against which sulfa drugs are employed

The conditions under which sulfa fastness develops have been reproduced experimentally many times As an example, Boak and Carpenter2 exposed the gonococcus to gradually increased concentrations of sulfanilamide and found that the lethal concentration was raised until organisms were finally able to withstand previously fatal amounts When the organisms have once been made resistant to the sulfa drug they do not necessarily retain this fastness indefinitely, although they may do so There is a difference between individual organisms in this respect, which so far has no very complete explanation In studies on the streptococci, Cutts and Troppoli found that the resistance to sulfanilamide was maintained at a high level for one month, but spontaneously disappeared after about three months For the pneumococci. Schmidt et al 8 found that resistance to sulfapyridine was retained by his strains through more than two hundred passages through mice Working on the gonococcus, Westphal et al 9.10 have reported that 9 out of 10 cultures became resistant to sulfapyridine in twenty to twentyeight days and that the sulfapyridine fastness persisted for at least two months after the organisms were removed from a sulfa-containing me-Staphylococci were found by Spink et al 7 to remain resistant to the sulfa drug for at least two years. Inasmuch as some strains of an organism do not become resistant at all to the drug, as evidenced by the references above, there would seem to be an inherent mechanism peculiar to the individual bacterium which determines whether the fast state can be developed, and if so. how long it will persist under the conditions imposed

A problem which requires consideration at this point is whether resistance developed to one sulfa drug will make the organism equally resistant to other compounds in the same general Kirby and Rantz's reported that E coldeveloped resistance which was demonstrated against all four of the sulfa drugs they tested. namely, sulfanilamide, sulfapyridine, sulfathiazole, and sulfadiazine They postulated that all organisms susceptible to the bacteriostatic action of sulfonamides are capable of becoming resistant to all the sulfonamides Westphal and Carpenter9,10 studied the crossed tolerance of organisms for sulfa compounds They found that sulfapyrdine-fast strains of gonococci grew well in a medium containing 0 055 per cent of sulfanil-However, sulfamlamide-fast strains tolerated only 0 02 and 0 03 per cent of sulfapyri-Apparently, for this organism and the strains studied, the tolerance was conditioned by individual reactivities of the organisms involved The problem was investigated in a direct manner by Lowell et al. 11 who used pneumococci They reported that strains made tolerant in cultures to one of the sulfas also became resistant to the others studied to approximately the same extent Again in their studies, however, individual strains of organisms varied in the ease with which fastness was acquired

Sesler and Schmidt<sup>12</sup> also observed that various strains of pneumococci varied in the case with which they developed resistance. This variation may consist of changes in the rate at which a strain will develop resistance as well as in differences in the actual maximum concentrations of the drug against which resistance can be developed. In general, these latter authors found that resistance was developed most rapidly to the least effective drug and most slowly to the most highly effective drug. They also noted that resistance to one sulfa compound was associated in that organism with resistance to the other drugs they had under test.

A very instructive case bearing on this has been reported by Frisch, Price, and Myers They studied a patient having a type VIII pneumococcus pneumonia, the organism of which was originally quite sensitive to sulfadiazine but which became resistant during treatment patient in an adjacent bed contracted pneumonia by contact with the first individual The organisms recovered from his sputum also were re-This indicated a carrysistant to sulfadiazine over of the sulfa-fast state from one patient to another in a very direct manner In these patients, fortunately, their pneumococcus retained its sensitivity to sulfathiazole, as was shown in vitro. This drug, together with the appropriate serum, was, therefore, administered to both patients and recovery occurred A later follow-up study revealed that even two months after hespitalization both patients continued to carry virulent sulfadiasine-resistant strains of their type VIII pneumococcus in their sputum.

The question of the mechanism of the development of this fastness should be considered. It is highly probable that this is directly associated with the mechanism of action of the sulfanilamide compounds. It is not appropriate to discuss here the various theories of sulfa action on organisms. One point, however, which may be considered very quickly, is whether the sulfnfast state is simply an uncovering of naturally resistant organisms through the killing off of the more susceptible ones. There is a natural variation in the sensitivity of the organisms to these chemotherapeutic compounds, as has been well summarized by Hill et al.13 However, the degree of resistance which can be developed by appropriate means is greater than can be demon strated for any individual organism present in the original culture when initial exposure to the drug is made It would nopear, therefore, that there is more to this sulfa fast state than just a weeding out of the more highly sensitive organisms.

Schmidt and Sesler demonstrated that individual bacteria having increased resistance were created with each successive exposure of pneumococci to sulinpyridine. They were also able to differentiate between the sensitivity of normal and of sulfa fast organisms, and the spontaneous variation in sensitivity encountered in normal populations. Kirby and Rantz interpreted their results on sulfonamide resistance as indicating an interaction between the organism and the common structural unit of all the sulfonamides, namely, the para-amino-bensene-sulfanilyl nucleus. They suggested that this interaction might involve the same ensyme system as was concerned in the para amino-bensole-acid rela

tronship to sulfa action

Spink et al. were able to confirm the observations of Landy et al. and Housewright and Koser that the resistant strains elaborated an inhibitory substance which was tentatively identified with para-amino-benzoic acid Reed et al.,15 working on Clostridia, found that the species which produced the largest amount of inhibitor were those against which the sulfonamides exerted the least bacteriostatic action. They pointed out, however, that slight bacterostatio effects in vitro might be associated with marked antiseptic power in vivo, where the effects of sulfa drugs are reinforced by tissue constituents. That the tissues are not inert in this entire estuation was also demonstrated by Boroff.16 who found that the serums of sulfn resistant patients antagonized the action of sulfa drugs on sensitive organisms. Whether the substance responsible for this is para-amino-benzoic acid or some other metabolite was not established by the studies.

Under the influence of the sulfn drugs, changes in the morphologic types of bacterial colonies may be developed, such as shifts between rough and smooth strains. However, Cutts and Troppoli believe that such changes of phase, although simultaneous with sulfanilamide resistance, are not causally related and may vary independently. Along the same lines, MacLeod and Daddi' reported that pneumococci made resistant to sulfapyridine had no detectable changes in morphology, virulence, or specific immunologic characteristics.

It would seem that the most popular theory explaining the cause of increased resistance is one of an increased ability of the organisms to syn thesize para amino-benzole acid However, there are some sulin compounds, such as para-aminomethylbenzene-sulfonamide and 3',5'dibromosulfanilanilide, which are not inhibited by paraamino-benzoio acid The suggestion would naturally be made that these might be inhibited by the compound corresponding to para-aminobensore acid, which, in the case of the former product, would be the para-amino-methyl benzone acid However, etudies by Lawrence and others11 have demonstrated a lack of antagonism between these compounds, so that it is necessary to postulate some other mechanism, provided it can first be demonstrated that organisms become resistant to these compounds in the same way as they do to the classical para-amino-benzenesulfonamide types. There is a gap in our knowledge here, which will be filled shortly

A phenomenon which will require much conaderation in trying to explain the mechanism of the development of fastness is that some organ isms apparently cannot be made fast by any ordinary means. For example, Carpenter and Allison19 found that their strains of gonococci acquired only n slight, if any, tolerance to sulfathiazole, although resistance to sulfanilamide was readily established Scaler and Schmidt12 report similar experiences, as do also a number of others "11 What would appear to be needed here is a careful correlation between the paraamino-benzole neid production of organisms in the resistant and sensitive states, as well as between normal organisms and those in which it has been demonstrated that resistance could not be developed One should be able to demonstrate that in these latter their para-amino-benzoio neid production remained at very low levels. How ever, a complication in the easy acceptance of the para-amino-benroic-acid theory is that the compounds studied by Lawrence," mentioned above, are fully effective against organisms that

have been made completely resistant to the usual sulfa drugs

From the chincal standpoint an important question is whether sulfa fastness developed in vitro will be accompanied by similar lack of sensitivity of the organism in the sick patient The case report of Frisch et al , referred to above,3 clearly indicates that there is close correlation between the in vitro and the in vivo responses of Another comparable report on the the organism pneumococcus is that of MacLeod and Daddi 4 Spink et al 7 have carefully studied the correlation between the in vitro and in vivo responses to the sulfa compounds and find the two appear to be directly related For the gonococci, similar correlations have been made by Frisch et al, 19 Carpenter and coworkers, and Cohn's group 20

So far as the sulfa drugs are concerned, the most important element in the development of clinical resistance is undoubtedly the promiscuous use of self-medication Practically all writers on the development of sulfa fastness in gonorrhea emphasized that this is associated practically without exception with self-medication at inadequate levels of dosage If the sulfa compounds were to become popular for selfmedication by internal administration for treatment of other diseases, it is entirely probable that other organisms would develop similar fast states which would make subsequent therapy difficult A problem which is still in the controversial phase is whether the local application of sulfadrugs to the surface of the body is apt to result in the development of resistant organisms increasing use of sulfa nose drops, salves, bandage applicators, etc. would render this possibility of more than academic interest. So far there would seem to be little evidence that the very minimal and limited exposure of the body to sulfa compounds under these methods of application could alter in any significant way the reactivity of the invasive organisms

#### Penicillin Fastness

With the advent of penicillin, the experience gained in treating infections with sulfa drugs was scanned to see whether guidance in this phase of the problem might be obtained There is no doubt that resistance to penicillin can occur just as it does to sulfonamides Schmidt and Sesler<sup>21</sup> have demonstrated penicillin resistance in pneumococci, and have shown that it does not alter the sulfonamide sensitivity of the organisms They report the work of others where the converse has been demonstrated to be true larly, Spink et al 7 have shown that staphylococci may become resistant to penicillin, although they do not believe that this has much clinical importance Gallardo<sup>22</sup> examined one hundred

and eight strains of staphylococci, of which twenty-four were either naturally resistant to penicillin initially or became penicillin fast during the course of treatment Interestingly enough, fastness to penicillin was observed in both pathogenic and nonpathogenic strains, indicating here a lack of correlation between those particular attributes

There is no reason to believe that the mechan-18m involved in the development of penicillin resistance is the same as in the case of resistance to sulfa compounds, particularly if the importance of para-amino-benzoic acid is granted, since penicillin is not significantly affected by this compound 23 Penicilin apparently blocks the growth of organisms by interfering with their process of division 24 It has only weak action on spores and very little effect on organisms in the resting phase A very intriguing aspect of the penicillin action is that there is a considerable lag phase and that the action is not controlled by the number of organisms present 25 In this respect penicillin action resembles that of an enzyme rather than a compound which is used up on producing its physiologic effect An excellent review of the mechanism of penicillin action has recently been published by Herrell 26

There is much evidence that the recent suggestion of Cavallito, Bailey, et al <sup>27-29</sup> is an important one. They have discussed the relationship of sulfhydryl groups to the activity of pencillin and have shown that various materials which contain this group are able to mactivate the antibiotic substance. In addition, they have extended their observations to show that a number of other antibiotic substances also behave in a similar manner. Confirmation of the importance of the sulfhydryl grouping has been brought forward by Hauschka and his collaborators <sup>20</sup>

Todd<sup>31</sup> has studied the actual changes going on in bacterial solutions in the presence of penicillin He has demonstrated that there is a relationship between the ability of penicillin to lyse the organisms and its antiseptic action he points out that bacteriostasis or even death to the organisms can be produced without lysis, and he interprets the entire phenomenon as being part of one continuous chain of action in which bacterial multiplication, death, and then lysis are effected serially through the same mechanism He points out that penicillin is much more effective in young cultures when active multiplication is going on, and that the actively multiplying organisms are more susceptible to the lytic action than are older cultures He shows that, if this lysis is causally related to the rapidity of multiplication, this should result in an unusual effectiveness of the penicillin, which is indeed the

case This may help to explain, as he points out, why pencillin is so much more effective an antiseptic compound than are chemicals previously
available which lysed organisms by less specific
mechanisms

The question of how organisms can become fast against penicillin action cannot be answered in any simple way Demeric<sup>12</sup> has shown that the resistance to penicilin persists through more than twenty broth transfers. He postulates two possible mechanisms for the dévelopment of penicillin-resistant organisms

1 That resistance is an acquired characteristic which develops through the interaction between bacteria and penicillin when the two are in contact with each other

2 That resistance is an inherited characteristic which originates through mutation and its origin is independent of penicillin treatment

It would seem that the first possibility is n relatively unpromising one, since it implies a selective persistence of more resistant organisms, the greater registance being achieved through their ability to withstand highest concentrations of the antihiotic substances. This is in essence the theory, as has been discussed in relation to sulfaactions, of the drug weeding out the less resistant members of the population and leaving a new population derived from only the more resistant survivors Such a theory seems to the writer to be madequate in view of the repeated demonstration that the degree of resistance which can eventually be shown is far beyond that possessed by any organism present in the culture when freshly exposed to the antibiotic substance.

Demeric a second theory 12 involves assumption of the occurrence of mutations which radically modify the registance of the organism through the introduction into it of new characteristics first glance there might be some heatation about accepting the theory that such mutations continnously occur, in view of the common concept that mutations are extremely scarce and infrequent events However, it must be remembered that the total number of bacteria present in a culture runs into astronomic figures, and that it is entirely possible that mutations are frequent enough in an organism as simple as the bacterium to permit the required changes in its protoplasm under the conditions of study Inasmnch as many mutations are probably occurring in addition to those which are under study affecting penicillin remstance, it would follow that these may be much more frequent in organisms at this low level of development than they are in higher

Spink and Ferris<sup>11,61</sup> reported that staphylococci which had been made resistant to penicillin produced an inhibitor for penicillin However, this is not universally true, since they also observed four strains which had been made highly resistant by exposures in vitro, but which were apparently lacking in any inactivator of the antiblotic

McKee and Houck\* have reported that increased resistance to penicillin and loss of virulence are accompanied by a slowing in the rate of growth of organisms and variations in the types of colonies. However, they did not find in pneumococci any change in the bile solubility or in type specificity, nor were there alterations in the fermentative reactions.

Of chaical importance in penicillin therapy. just as in that with sulfa compounds, is the question whether in-vitro resistance to the antihiotic is indicative of resistance in vivo Warmer and Amluxen26 reported that a hemolytic Staphylococcus aureus which was resistant to penicillin in vitro resisted the same concentrations in vivo Similar observations have been reported by Schmidt and Sealer 11 for pneumococci, and would seem to be generally applicable Penicilin fastness, once induced, apparently may permat over prolonged periods of time, although this again is much influenced by the characteristics of the specific strain. There is also a marked difference between strains in the case with which such fastness can be developed Reports have been made of fastness developed in hemolytic Staph aureus, 32,36 streptococci,26 pneumococci,21 ronococci,23 and probably many others

The prevention of the development of penicillin-fast strains is, of course, very important if penicillum therapy is to continue as highly successful as it is at present. Apparently most organisms which are at all sensitive to penicillin can be killed by it at concentrations which are within attainable levels. If the therapy is so adjusted that effective concentrations are used from the outset, then the organisms are killed very quickly before an opportunity is afforded for their passing over into the resistant state. It follows from this that it should be axiomatic to use high doses of penicillin at the very outset of treatment, and to continue this extremely vigorously until the infection has been completely climinated start out on a low dose in the expectation of building up to the minimum required level would simply ensure that an inadequate therapeutic response would be secured or that difficulty would be encountered no matter what eventual lovel of penicillin concentration is finally at-

In visw of this situation it becomes obviously necessary to ensure that inefficient self-medication with penicillin be avoided and that the dosage recommended by the physician be kept at such levels as will produce fully offective concen-

trations in the blood or tissues from the beginning of treatment 87 It has been this sort of reasoning that has led the Food and Drug Administration to attempt the arduous and largely thankless task of controlling the potency and the recommended dosages of all forms of penicilin, even though they be designed only for surface application where there is no serious danger to the life of the patient if the therapy be only incompletely It will be very interesting to observe during the next few years whether the regulations now being promulgated will be sufficient to keep the use of penicilin completely under the control of physicians or whether there will develop with this drug an extralegal self-medication comparable to that which is now in vogue with the sulfa If the latter situation arises, increasing numbers of penicillin-resistant infections can be confidently anticipated

#### INVESTIGATORS UNCOVER NEW EVIDENCE IN POLIOMYELITIS STUDY

Three investigators from the University of Michigan School of Public Health have discovered that the virus which causes infantile paralysis can be present in a person's intestinal tract for as long as mineteen days before the onset of paralytic symptoms

Gordon C Brown, ScD, Thomas Francis, Jr, MD, and Harold E Pearson, M.D, all of Ann Arbor, Michigan, based their study on 51 stools and 57 throat washings taken at the Detroit Recreation Camp, northeast of Brighton, Michigan, in July, 1944 Their report appears in the September 8 issue of the Journal of the American Medical Association

The camp, which the investigators say is "clean and well taken care of," is owned and operated by the City of Detroit for the benefit of underprivileged boys and girls. Several cases of infantile paralysis broke out in the camp, all confined to one cabin, which housed ten boys between the ages of 13 and 17

The first boy became ill on July 2 and three days later he was admitted to the Herman Kiefer Hospital, Detroit, with the diagnosis of poliomyelitis.

pital, Detroit, with the diagnosis of poliomyelitis.
On July 9, the three Ann Arbor investigators in company with Detroit health officials, visited the

camp and began their study, which was aided by a grant from the National Foundation for Infantile Paralysis, Inc

On July 28, one of the camp boys, Richard W, was admitted to Herman Kiefer Hospital with symptoms of infantile paralysis. Thus, nineteen days elapsed between the time the stool was taken and the onset of the disease

When a preparation of his stool specimen was injected into a monkey, it caused weakness in the animal's left arm and partial paralysis of the left leg-

"The detection of virus in the stool of Richard W establishes the fact that virus may be present in the intestinal tract for some time before the onset of the paralytic disease," the Journal article says "More than the usual precautions were taken to verify this finding

The original stool was processed twice and each time caused typical symptoms in monkeys. Diagnosis was corroborated by microscopic examination, which showed characteristic if not extensive involvement of the nervous tissue. The fact that four other boys exposed for exactly the same period likewise had virus in their stools adds materially to the evaluation of the findings."

#### CONFERENCES ON THERAPY

DEPARTMENTS OF PHARMACOLOGY AND MEDICINE, CORNELL UNIVERSITY MEDICAL
COLLEGE AND THE NEW YORK HOSPITAL

THESE are stenographic reports, slightly edited, of conferences by the members of the Departments of Pharmacology and of Modicine of Cornell University Medical College and the New York Hospital, with collaboration of other departments and mustitutions. The questions and discussions involved participation by members of the staff of the college and hospital, students, and visitors. The next report will appear in the February 1, 1946 issue, and will concern "The Use of the Mercurial Directics."

#### Surgical Treatment of Hypertension

DR. McKren Cattell. The medical treatment of bypertension has been a problem in therapy which has not been satisfactory. In recent years we have beard more and more about the surgical approach to the problem and we hope today to get some of the latest information about that, and perhaps also the views of other groups who are coocerned with the problem. Dr. Ray

will open the discussion

DR. B S RAY I may begin by saying that the surgical treatment of hypertension is and has been for the last twelve years in the experimental stage The first operations done deliberately to lower hypertension were based largely on empiricism, upon the observation, for example, that when a spinal anesthesia was produced, with the level somewhere above the middle thoracio regioo, there was a concomitant fall in blood pressure. It was reasoned from such an expenence that one might, with selective operation. cut vasoconstrictor cerves supplying the large vascular bed in the splanchnic area and the lower extremities, and thus permanently lower blood pressure. Unless one believes or can show that there is some advantage in lowering the blood pressure by this means, there is no other useful purpose for the operation. I believe, therefore, that operation can be evaluated solely on its ability to lower the blood pressure. There are some who maintain that elevated blood pressure is only one manifestation of hypertensive vascular disease, and that lowering the blood pressure will have little or no benefit on the patient who has such disease Until or unless that can be proved, the operation, if it can lower the pressure, deserves continued usage, since evidence can be presented which suggests that there are advantages in association with the lowering of the blood pressure.

Until recently, the surgeons have been occupied with finding a suitable operative method, one that would be practical, as nearly complete in its sympatheetomizing effect as possible, and reasonably safe for the patient. The first operation consisted in extensive laminectomy and division of many anterior spinal roots, thereby ioterrupting the sympathetic outflow to the splanchnic region. This was a formidable operation, and was destined to be replaced by something more practical There followed then for several years a variety of operations designed to interrupt the sympathetic pathways in the paravertebral area, that is, outside of the spinal regloo One of these consisted in cutting the sym pathetle pathways in the thorax above the diaphragm Another one consisted in interrupting the pathways below the diaphragm. A few surgeons employed removal of the celiac ganglia. However, all of these operations were half measures, and the results from these operations were not sufficiently good to warrant their continuation.

The operation which we cow employ, which has been in use oow for about five years (at our negrital for about four years), and which is often referred to as the Simithwick operation, is a thoracolumbar sympathectomy. It removes a very large portion of the sympathetic supply to the splanchnic vascular region and to the lower externities, and it is done in such a way that the possibility of regeneration of the sympathetics

is greatly diminished

In sympathectomizing any part of the body there are several principles that one must keen in mind One of these is that the removal of the sympathetics to the area one wishes to sympathectomize must be as complete as possible. We have demonstrated beyond question in the oppor extremities that if 10 per cent of the sympathetic supply remains, the result is compromised 50 per cent. Another principle is that the operation must be performed in such a way that regenera tion is avolded or minimized. In animals we know that the sympathetics will regenerate over long distances Another principle that I belleve is important is that the sympathetic system should, if possible, be interrupted in the proganglionic rami, leaving intact the postgaoglionic neurons. Cannoo has demonstrated that if the postganglionic ocurons are intact, there is

much less sensitivity of the blood vessels to circulating epinephrine than occurs if these neurons are interrupted. Often it is easier to divide the peripheral neuron than the proximal one in performing a sympathectomy, that is, it is easier to interrupt the postganglionic than the preganglionic neuron. The surgeon must appreciate this principle and direct the procedure toward the proper neuron.

A brief review of the anatomy of the sympathetic system and the splanchnic area will explain the principles employed in the operations for hypertension The entire sympathetic system has its origin from the first thoracic to the second or third lumbar segments of the cord The first, or preganglionic, neurons, on leaving the cord, traverse the anterior spinal roots and join the thoracolumbar ganglionated chain, which lies in the paravertebral gutter anterior to the transverse processes of the vertebra believed that the chief sympathetic supply to the large vascular bed in the splanchnic area arises from the sixth thoracic to the second lumbar segments The preganglionic neurons connect directly or have an intermediary neuron to the celiac and adjacent ganglia in the region of the renal pedicles From this latter group of ganglia, the last, or postganglionic, neurons arise and supply the splanchnic vasculature

The thoracolumbar sympathectomy now in use removes all the ganglionated chain from the eighth thoracic to the third lumbar ganglia as well as the greater, lesser, and least splanchnic nerves. The white rami of supply are divided close to the points at which they emerge from the intervertebral foramina and brain clips are placed across the divided ends to discourage regeneration. All connections with the celiac and adjacent ganglia are cut, thus leaving these ganglia and their postganglionic neurons intact though completely detached from any central control.

For adequate operative exposure, the lower ribs must be resected and the diaphragm divided Only one side can be done at a time, and the operation therefore requires two stages, allowing about ten days to elapse between stages. Intratracheal ether is the anesthetic of choice and pressure anesthesia is resorted to only occasionally when the pleura is accidentally opened. A pneumothorax at the time of operation presents no difficulties and is corrected by aspirating the air as the wound is closed.

The results of this operation have not been completely tabulated by any means, but we have now 100 cases that have been followed for six months or more, and for that period of time we have been able to draw certain conclusions

In the 100 cases operated upon six months to

three years ago, two patients died postoperatively This makes an operative mortality of 2 per cent The total of operations performed to date now exceeds 150, and there have been no further deaths The 2 patients who died were among the first 50 to be operated on and were what I would consider now to be bad risks of them had cardiac decompensation and had been digitalized, the other was so obese that a postoperative atelectasis which caused her death could not be satisfactorily dealt with Twentyfour per cent can be classed as having a good result, that is, their blood pressures in any position are not more than 150/100 We have operated on no patients who have had "borderline hypertension" Thirty per cent show improvement in that the blood pressure has been significantly lowered from its original level and the highest level in any position now is 165/110 this latter group the postoperative pressure represents a lowering of at least twenty points in the systolic and at least ten points in the diastolic pressures over those present before operation The two groups together comprise 54 per cent of the total and may justly be considered to have a satisfactory result from operation This estimation of results is based entirely on lowering the blood pressure It has nothing to do with the question of symptoms

Another 23 per cent have shown some sustained lowering of pressure but not enough, I feel, to warrant enthusiasm. Included in this group, for example, would be a patient who had a preoperative pressure of 280/160 and postoperatively 200/130. Perhaps it is unfair not to consider such a case as having been improved, but if this were as much as could be accomplished in all cases, there would be little justification in my mind for continuing the surgical treatment of hypertension. Twenty-one per cent had poor results, that is, there was no significant improvement.

The results in these 100 cases approximate those reported by Smithwick in 1943. In the 75 cases he followed one to five years after operation, he estimated that 61 per cent were improved, 16 per cent were slightly improved, and 23 per cent had poor results. The operative mortality was less than 3 per cent. It may be that the 2 or 3 per cent operative mortality can be lowered if there is more careful selection of cases, but even so it is apparent that the operation is a relatively safe procedure when you consider that most of these patients are usually considered poor risks for any operation.

There are various ways to evaluate results and much statistical study may be necessary before we can learn what we should know about the results of sympathectomy in hypertension At

present, we are trying to reason backward from our good results and our poor results in determining what patients are suitable for the operation. Now, we must assume that all the patients we subject to operation have about an equal chance for improvement. Some of those whom we were less enthusiastic about before operation have had the best results, and the reverse is also true.

White and Smithwick suggested an analysis of operative results based on the preoperative grade of eyeground changes and the type of hypertenmon. The universal division of eyeground changes is into four grades In grade I there is narrowing of the arterial caliber, in grade II there is also artenovenous nicking, in grade III there are retinal hemorrhages, in grade IV there is papilledems. The types of hypertension, of which there are three, are based on the following Type I is that in which the pulse pressure is less than one half the diastolio pressure, type II is that in which the pulse pressure is equal to or not more than 20 mm greater than one half the diastolic pressure, and type III is that in which the pulse pressure is more than 20 mm. greater than one half the diastolic pressure Type I is presumably the most favorable and Type III the least favorable for operation White and Smithwick subjected 100 postoperative cases to an analysis in an attempt to discover what value the grade of eyeground changes and the type of hypertension might have in anticipating the operative results. I have similarly subjected my cases to this type of analysis and found results mmilar to those of White and Smithwick.

It may be seen that the percentage of good results from operation is highest in those with minimal eyeground changes and type I hypertension, but there are some failures. Also, in those with more advanced eyeground changes and type III hypertension, while the percentage of good results is low, there are some successes

This study is presented in some detail to demonstrate how inadequate thus far our criteria are in determining accurately beforehand what results may be expected from operation. While generalizations can be made, based on such signs as eyeground changes, type of hypertension, and other aspects of the disease, evaluations of this kind may not pertain to the individual patient. Therefore, for the present, we choose to consider all hypertensives suitable for operation unless they demonstrate certain specific complications of their disease or some unrelated physical state not compatible with the operative risk.

Let us consider some factors that appear to be useful in determining the desirability of operation I believe, first of all, that patients who have serious cardiac disease should be excluded. That kind of statement, I know, would be immediately challenged by cardiologists, but I have my own ideas about what constitutes serious heart disease Patients with heart block or cardiac decompensation or those who have had frank clinical coronary occlusion are very poor operative risks and stand to gain little from sympathectomy The patients with advanced renal damage, i e , those who have nitrogen retention which is not improved with the ordinary measures, or who show poor urine concentration, or who have a phenolsulionphthalein ontput that is alarmingly low, are excluded from operation. Third, patients who show signs of acute encephalopathy, increased intracranial pressure, mental confusion, and disorientation should not he operated upon. Patients who have had strokes but have none of the other signs of cerebral disease, on the other hand, often are among those obtaining the best results from operation. In addition, it is found that patients over the age of 50 have uniformly poor or only moderately good results. The best results have been obtained in patients under that age

Men, on the whole, respond less well than women to the operation, although some men have had remarkably good results. Two men in our series of cases have been threatened with induction into the army since their postoperative blood pressures met the requirements of army standard, and letters certifying their previous hypertensive states have been requested by the inductees desiring to avoid military service Some of the poor or mediocre results in men in the past have doubtless been due to the policy of resecting the lumbar sympathetic chain on

one side only in order not to sterilize the patient Resection of the lumbar chain to or below the second ganglion causes loss of ejaculatory power, though all other sexual functions are undisturbed I am convinced now that failure to resect the lumbar sympathetics compromises the results, and I have taken the attitude, therefore, that unless a man is willing to have the complete operation, none should be done

A few patients known to have glomerulonephritis have been subjected to thoracolumbar sympathectomy and, although the blood pressure in each has been significantly lowered, they have not been bettered in other respects sufficiently to warrant the procedure. On the other hand, a few have been unsuspectingly operated upon whose kidney biopsies have shown them to have glomerulonephritis, and some of them have had a good lowering of the blood pressure.

Poor operative results have occurred consistently in patients who have shown a rising diastolic pressure over 140, particularly in those with significant impairment of kidney function. Poor response to both cold-pressor and sedation tests probably constitutes a contraindication to the operation, but I have not yet seen fit to deny operation to an eager patient on this basis alone.

We must finally show that in addition to lowering the pressure there are other benefits to the hypertensive state resulting from sympathec-The improvement in eyegrounds is a very constant finding following the operation If there has been any lowering in pressure, hemorrhages will almost always disappear and papilledema can be counted on to disappear if the pres-One may reason from these changes that if the retinal vessels can change in this degree, perhaps the cerebral vasculature will also improve, since we usually look upon the ocular vessels as an index of the state of the cerebral If possible, we should show that vasculature some improvement occurs in the cardiac status and in the renal status Very little evidence has been seen that renal function is improved even when blood pressure is returned to normal. though Smithwick has reported such an occur-But a few patients have appeared to show significant improvement in their cardiac status. that is, improvement in the electrocardiogram and in the size of the heart One patient, whose electrocardiogram showed significant coronary changes before operation, a year later, with a normal blood pressure, showed a comparatively normal cardiogram

In brief conclusion, therefore, I believe it can be said that the thoracolumbar sympathectomy now in use gives promise thus far of producing a significant lowering of the systemic blood pressure in at least 50 per cent of the patients We are beginning to obtain some evidence also that the lowering of pressure can improve the cardiac status, cerebral vasculature, and, very occasionally, renal function The final proof of the value of the operation will come after the cases have been studied for a good deal longer than has yet been possible

DR CATTELL Will you discuss the changes in cardiac status, Dr Stewart?

DR HAROLD J STEWART It was only a short time ago that I looked over the series of electrocardiograms of this patient Before operation there were progressive changes in the electrocardiograms which made us think that she had an anterior apex lesion There was deep coving of the T-waves in Leads I, II, and IV Serial changes occurred while the patient was under observation before the operation A year later the T-waves were upright and of normal contour in Leads I, II, and IV

DR CHARLES H WHEELER Might not these changes represent the recovery from coronary occlusion rather than beneficial effects of the sympathectomy?

DR STEWART That is true Patients show the same changes as the result of a coronary occlusion, so that one cannot be certain that the changes in this case are related to the restoration of the normal blood pressure However, Dr White recently reported a review of Dr Smithwick's cases, and I think that in these there are enough observations showing that significant electrocardiographic changes follow the operation in many patients

DR HARRY GOLD I would like to ask a question about the cases of congestive heart failure which, you indicated, were not favorably influenced by the sympathectomy By including them among the "poor results," do you mean that the blood pressure did not fall in these cases?

DR RAY All the results have been evaluated in terms of blood pressure fall alone

DR GOLD It isn't clear to me why, in patients with heart failure, the blood pressure should not fall after the operation in much the same way as in other cases unless it turns out to be that those who show heart failure also have such advanced vascular disease that the operation fails to lower the pressure

DR RAY There is, of course, the fact that few patients with congestive heart failure have been operated upon. My impression is that not only is the operative risk unduly great in such patients, but that significant improvement in their cardiac status or in longevity is hardly to be expected even though the blood pressure might be lower.

DR GOLD It may well be that the operative

risk in patients with beart failure is much greater, but it isn't quite clear to me why such patients, provided they survive the operation, should not do better if their blood pressure falls following the operation. Excessively high pressure certainly increases the strain on the heart. But again, as you indicated, it may be that the number of such cases has been too few to make a final judgment

Dr. RAY All operative results cited here today referred only to the effect of the operation in lowering the blood pressure and disregard tho effect of the operation on symptoms Since the operation is directed solely toward lowering pressure, the most pertinent evaluation of results can be based only on this change. Few. if any, patients are made more than temporarily worse symptomatically by the operation, many maintain that they feel better after operation even though pressure is not significantly improved, while some with good lowering of pressure find no improvement in those symptoms which they formerly associated with their hypertension About 10 per cent of the patients that have been operated upon have had no preoperative (or postoperative) symptoms

DR. EUGENE F Du Bois I noticed that almost all of the conditions mentioned as contraindications to sympathectomy represent types of patients upon whom one would not like to per-

form any major operation

Dr. RAY Hypertensive patients are notably poor risks for any type of major surgery example, the principal cause of mortality in cholocystectomy is hypertensive disease has been gratifying to find the operative mortality as low as it has been in sympathectomy

STUDENT Is there a difference in the gastrio

acidity before and after the operation?

DR. RAY We have studied gastrio acidity before and after sympathectomy and have found no effects. I have in mind, however, that section of the parasympathetic supply to the stomach might be more effective in diminishing gastrie acidity. It would be a relatively simple matter to cut the vagi at the diaphragm Both vagi are divided at the diaphragm often enough these days at the time of total gastrectomy and no known deleterious effects occur on the function of the remainder of the intestinal tract

DR JANET TRAVELL It is interesting that Dr Lester Dragstedt and his associates, of the University of Chicago, have reported that supradiaphragmatic double vagotomy in patients markedly reduces both the night volume of gastric juice and gastric acidity

Dr. H. E B PARDEE Have you any figures on the subsequent changes in the blood pressure after the early improvement?

DR RAY I am not entirely prepared to answer that question There is a common belief, which is frequently stated, that there is a tendency for the blood pressure to "creep" back up to its original level after an initial lowering, but few have felt called upon to qualify that statement. What I have found so far is that the blood pressure may gradually return to its preoperative level in the first six months, but If the pressure is at a lower level six months after operation, it tends to remain lowered for as long as it has been observed In other words, if the results are not evaluated until more than six months after operation the tendency for the blood pressure to "creep up" is not so impressive

2519

DR. PARDEE How long after six months have you followed the blood pressure changes?

Dr. RAY Up to three and one-half years DR PARDEE And in how many of those has the blood pressure crept back after an months?

Dr. RAY In comparatively few in the early cases, that is, those subjected to the other types of operation, and now followed ten, eleven, or twelve years, it has been noted that those few who had significant lowering of pressure after six months all continued to maintain the same pressure thereafter

DR. CATTELL The natural history of the disease seems so important in the evaluation of these results I wonder if Dr Gold would com-

ment on that.

Dr. Gold If we are going to draw any deductions from the behavior of 100 hypertensive patients who have been operated upon and observed carefully during a subsequent period of six months to several years, we have to relate them to a similar number of cases without operation who have been similarly carefully observed That seems obvious enough, but I am not sure that such control observations are made as well as they should be In the work of the Research Committee of the New York Heart Association there have been assembled records of many hundreds of hypertensive patients in attendance nt the cardiac clinics over a period of many Some of these have been charted, and they give some idea of how variable blood pressure may be in any individual. Most people know that there are sharp peaks and troughs in the blood pressure record, the first time the pa tient is examined the blood pressure may be 170/100 and the second time a few days later, or a few minutes or hours, 140/85 Once he seemed like a hypertensive patient and the second time like a normal one. However, it is the broader sweeps in the life history of the hypertensive state which I believe are so commonly overlooked, namely, the periods of many months when the blood pressure is very high followed by

periods of many months when the blood pressure is much closer to the normal range brought here several samples of such cases which I would like to pass around They cover frequent blood-pressure readings over periods of many months to years On any of these charts you will find points at which you may place an imaginary sympathectomy with very gratifying results Here is a record describing a period of observation of five years with an average blood pressure ranging around 220 systolic and 130 diastolic If you place this imaginary operation at the appropriate point, it will be followed by a blood pressure ranging around 160/105 on the basis of four readings taken in the subsequent period of approximately a year and a half course, as you see, the blood pressure went up These are random examples from a large batch of charts They may not even represent the best ones Here is an excellent record with the blood pressure gradually mounting, as shown by many readings taken over a period of a year and a half, with a systolic pressure between 190 and 200, now place the imaginary sympathectomy at this point and the blood pressure goes down to a level around 150, at which it remains over a period of more than a year Before one can be impressed by the long-range hypotensive effects of the sympathectomy, an attempt will have to be made to match the results against such records as I have here

DR WHEELER There are many things one would want to know about these patients How do we know that they have not had a coronary occlusion or are patients in congestive heart failure?

DR Gold These patients have been very carefully studied clinically and with electrocardiograms. Those that I am showing here are free of any factors that one can put one's hands on to explain the protracted period of lowered blood pressure.

DR WHEELER Granted that this happens, as you pointed out, Dr Gold, still it is unusual to see a patient with hypertension of long standing lose the hypertension, and it would be still more unusual, as in Dr Ray's cases, to see a long series of hypertensive patients whose pressure happened to fall coincident with the operation

DR GOLD I agree that it would be very unusual to see a long series of hypertensive patients lose their hypertension coincident with an operation, but then I don't doubt that the blood pressure goes down as the result of this operation, and that in some it may remain down for a very long time. In point of fact, the operation may cause such pronounced fall of the blood pressure and impairment of the vasomotor control that for some time the patient may be unable to be

upright without fainting. The question is not about the immediate or very early effects of the operation on the blood pressure, but about the long, persistent lowering of the blood pressure. Here I am inclined to describe the operative results somewhat differently

My impression is, on the basis of the natural behavior of hypertensive patients, that important and persistent decline of the blood pressure as the result of sympathectomy does not apply to nearly half of the cases, as the present surgical reports indicate, but rather to a very small pro-The operation is apt to be associated with a protracted period of inactivity and some revision in the patient's attitudes and habits favorable to the sustained lowering of blood pres-The patient who has risked his life in a serious operation to lower his blood pressure is a chastened person and is likely, for some time, to avoid involvements in sustained physical efforts, tension-provoking situations, or torrents . of emotion Many of these longstanding moderate reductions of the blood pressure following the operation may, therefore, be due to these factors rather than to the direct effect of sympathectomy While I am inclined to agree that there are cases in which the removal of the sympathetics is the factor responsible for successful and protracted lowering of the level of the blood pressure. I am of the impression that the specific effect of sympathectomy has little to do with the sustained moderate reduction of the hypertension which occurs in the majority of the so-called successful cases It is my opinion that when remissions which occur spontaneously and those due to such accessory factors as I have mentioned are subtracted, the number of successful "cures" by sympathectomy will turn out to be very small

DR RAY I am well aware that in some patients blood pressure does fall unaccountably with or without operation. In our own sense we are in a position to compare the initial results of the present operation with those of three other types of operations for hypertension. If the patients (about 65 in number) that were subjected to the earlier types of operation for hypertension be used as a control group, a comparison of their initial results with the initial results in the patients subjected to the thoracolumbar sympathectomy leaves no doubt regarding the specific depressor effect of the latter operation.

Another point to emphasize is that in my experience it is rare to see any significant drop in blood pressure after the first stage of a two-stage sympathectomy. The lowering, if any, comes after the second stage is completed.

Dr. Gold That is the point No one can help being impressed with the initial effects

It's the long-lasting effects that do not seem to me very impressive Isn't the remussion resultng from the operation merely an interlude of no great consequence in the history of the hypertension in the great majority?

Dr. Cattell How do you explain the failure of the blood pressure to fall after the first stage?

Physiologically it seems rather surprising DR. RAY I don't believe so, Dr Cattell, be-

cause I am impressed with the fact that it does not take much sympathetic supply to make up for partial loss.

DR. CATPELL Is that related to the fact that sympathetic innervation overlaps and is still profusely distributed after cutting part of the

supply?

DR. RAY I think so In our published results of the investigation of sympathetic supply to the upper limb it was found that the segmental supply to the limb arises from the second to the tenth thoracic segments. In a few patients with Raynaud's disease all anterior nerve roots carrying sympathetic fibers to one upper limb were divided while all hut one were divided on the opposite side Postoperatively, the hand on the side on which a single root has been left intact was found to be elevated in temperature only one half as much as the opposite (completely sympathectomized) hand In one case, tho subsequent division and in another the temporary blocking with procaine of the single remaining root resulted in additional rise in temperature of the homolateral hand to a temperature equal to that in the opposite completely sympathectomized hand This experiment, we concluded, demonstrated the necessity for interrupting all sympathetic fibers to the area one wishes to sympathectomize

DR. CATTELL How extensive do you think the distribution of that fiber was?

DR. RAY It was extensive enough to maintain the temperature of the hand 50 per cent colder than the opposite one, and when that remaining nerve was blocked out with novocaine or cut, the temperature equaled that in the sympathectomized hand.

DR JOHN B DETTRICK I would like to comment on one point Your study was presented from the standpoint of the effect of the operation on the blood pressure, but you stated that there is as yet no proof of the benefit of the drop in blood pressure. What we are really interested in knowing is whether it prolongs the life span of the patient. Does it add to his comfort? It seems to me very difficult to establish any control to decide how much benefit has resulted It would be necessary to pick comparable patients or else go back years to similar age groups with similar blood-pressure levels and symptoms and use those as controls to evaluate the benefit of the operation. With regard to the blood pressure itself, I am inclined to think a person can get along satisfactorily even with a high blood pressure I have followed some patients now for as much as ten years who had a history of high blood pressure going back fifteen years We ought to have some enters to evaluate this more accurately other than blood-pressure records

Dr. PARDEE Don't you think we have this in the electrocardiogram, the eyegrounds, and the change of heart size? Those are three def-

into things that can be observed

DR DEITRICK I have seen a patient who had a very large retinal hemorrhage and a blood pressure of 200/110 five years ago, and today her pressure is 165-180/100 Her retinal hemorrhages and her headaches have disappeared Why, I don't know

Dr. Ray Those are exceptional cases are talking about 50 per cent of the whole, and you are talking about the exceptional case

Dr. Stewart One would not find 25 out of 100 cases of hypertension that would show any such results

DE RAY If it can be shown that operation stops or slows the progress of objective signs of the disease, that would provide one method of evaluation

Dr. Destrick It would be desirable to have control studies on patients with the elevated blood pressure as the only abnormality

DR RAY We cannot save patients in the last stages of the disease Our effort should be to prevent or postpone that

Dr. Deitrick That is why I would like some controls to see to what extent that can be done

DR RAY There is the Keith-Wagner evaluation of life expectancy in hypertensive disease against which results may be compared after a few more years have elapsed

Dr. STEWART I think the way these patients feel is also important. They feel like normal individuals when their blood pressure is down to normal

DR GOLD I want to say a word about the electrocardiogram We ought to consider the electrocardiographic changes which occur after the operation with great circumspection electrocardiogram of a patient with hypertensive disease is extremely labile We have observed large series of electrocardiograms taken during periods of several years in the hypertensive patients of our clinics. It is not at all uncommon to find the tracing normal at one time, while at another time T-1 or T-2 are inverted, or the RT interval is depressed, these changes occurring without any particular relationship to the state of the patient They are similar to the electrocardiogram of patients with coronary artery disease

In one patient a coronary thrombosis will result in marked changes in the tracing which remain permanently, but the patient is quite free of symptoms. In another, the changes may disappear and the electrocardiogram returns to normal, while the patient is almost incapacitated with anginal pain.

As for symptomatic improvement in patients with hypertension, the interpretation of this in sympathectomized patients needs even greater caution. We are all familiar with the common experience of the anxious hypertensive patient who can hardly wait for the reading to be finished before he asks what his blood pressure is. If you tell him it is 220, he is very much disturbed and continues on his way with no end of symptoms. Tell him it is 150, give him some reassurance, if necessary a placebo, and one frequently finds that the same patient carries on almost free of disturbing symptoms.

DR RAY I make no claims for the effect of the operation upon symptoms, since the indications for and the results of the operation are not based on symptoms. As a matter of fact, the patients who get the greatest lowering of blood pressure are sometimes the most uncomfortable for the first period of months afterwards until they can accommodate to the new pressure. Often the patient who comes back in a month or two after operation and says he feels fine is the one that has had no lowering of blood pressure, but were I to rationalize the operation on such flimsy claims, I would feel less secure in defending it

DR MACK LIPKIN You described the contraindications for the operation What are your indications at the present time?

DR RAY Those who don't have the contraindications

Dr. LIPKIN Any individual that we have reason to believe has had hypertension long enough to make it more than a single observation and who does not fall into the group with contraindications is considered suitable for the operation?

DR RAY Yes

DR WHEELER Am I correct in understanding that, if you saw a patient over a period of six months who repeatedly had a blood pressure of 170 systolic and 105 diastolic, you would operate on that patient forthwith?

DR RAY I would give him the opportunity of it

DR WHEELER I would like to ask a question of Dr Stewart as the person who usually sees the hypertensive patient before the surgeon

does To which patients do you recommend the procedure at this time?

DR STEWART I would go by that list which Dr Ray showed

DR WHEELER Any patient who has a persistent hypertension?

DR STEWART Without contraindications, yes DR WHEELER Could I ask you the same question, Dr Pardee?

DR PARDEE The operation is a new procedure, about which there is a great deal yet to be learned. I would hesitate to present it or recommend it to a person who had hypertension which was asympathetic and which was not associated with evidence of progressive arteriolar changes. The person who was having symptoms or showed arterial changes which I thought might result in a cerebral hemorrhage or a renal complication or a cardiac complication I would think suitable for operation.

DR GOLD You would then send them for operation when they are in the late rather than in the early stage of the disease?

DR PARDEE Yes I would not use it as a preventive as yet, because I am not quite sure at the present time how effective it is I would not like to subject anyone to a procedure in which there is a 2 per cent operative mortality

DR. RAY Of course, it is an eminently fatal disease we are talking about

DR PARDEE I know, but you can watch it for three or four years without doing the patient much harm

DR GOLD And many of these patients live to ripe old age

The reason which is often given for operating on an early case of hypertension is that one can hardly expect the blood pressure to fall in an advanced case in which the vessels are so badly That argument doesn't appeal to me diseased I recently saw a 37-year-old man with very advanced hypertension, on whom a Smithwick operation had been performed about two years previously. At that time he had a blood pressure of about 260/130 He now has a blood He was subject to headpressure of 240/130 aches, shortness of breath, and anginal pain on slight provocation before the operation headaches are somewhat diminished, but then, he worked very hard up to the time of the operation and has not worked since The anginal symptoms have not improved About six months after the operation he developed a cerebral hemorrhage with left hemiplegia, from which he has recovered The operation seems to have been a complete failure as far as one can judge The point I wish to make, however, is that the failure was not due to incapacity on the part of the blood vessels to dilate, for shortly after the

peration the blood pressure was so low that it could barely be registered, and when the patient began to be up and about he had to wear an abdominal binder as well as hinders on his legs in order to help him maintain an adequate blood

pressure.

The fact seems to he, in this case, that the sympathectomy temporarily eliminated his capacity for vasomotor adaptations, but seemed to have done nothing to after the basic course of the disease.

DR. CATTELL Dr Goldring, professor of clinical medicine at New York University, has been interested in this problem, but he was unable to be present so he sent a statement, which I would like to ask Dr Wheeler to read at this time.

DR WILLIAM GOLDRING There are two primo objectives in the treatment of hypertension One is specific and aimed at elimination of the cause of the disease, the other is nonspecific and aimed at the alleyiation of symptoms.

In the earlier days of its application it was widely felt that sympathectomy might prove to be a specific measure on the grounds that buman essential hypertension is caused by primary renal ischemia and that such ischemia might be eliminated by relief of splanchnic vasoconstriction. However, there is a growing body of acceptable evidence against the primary renal ischemic origin of human essential bypertension, and furthermore, studies before and after sympathectomy have clearly shown that the renal blood flow does not increase after the operation.

It seems quite clear now that sympathectomy must be considered a nonspecific method of treatment.

Whether or not one is impressed with the results to date depends upon his acceptance of partial or temporary reduction in blood pressure as an advantage to the patient Thus implies that the blood pressure itself imposes a strain on the arterioles and on the left side of the heart. The question of the relationship between bypertension and arteriolar disease is still unanswered There are some who believe that renal arteriolar disease precedes and accounts for the elevation of blood pressure, others advance evidence which appears to indicate that bypertension precedes and accounts for the secondary occurence of arteriolar disease. And still a third group of investigators are of the opinion that elevated blood pressure and arteriolar disease are independent of each other, le., both vasoconstriction and its symptom, hypertension, on the one hand, and arteriolar disease on the other, may be unrelated, concomitant effects of tha still unknown pressor mechanism In this latter view, simple lowering of the blood pressure would not be expected to reduce the degree or extent of arteriolar disease

The existence of these three hypotheses, indicating n fundamental difference of opinion, strongly suggests that any assumed advantage to the arterioles of lowered blood pressure must still be considered a matter of speculation

The spanng effect of lowered blood pressure on the left aide of the heart seems obvious and a highly desirable goal, but even in this regard I would be more impressed with reduction of blood pressure to average normal levels than merely a lowered blood pressure still in the by pertensive range

It should be remembered that blood pressure is a highly variable function, the method for its measurement is crude, and in particular there is often no direct relationship between the height of the blood pressure and the seventy of the disease. It would be unfortunate if a final estimate of the worth of surgery in hypertension should eventually rest on nothing more secure or significant than measurement of the level of blood pressure.

Sympatheetomy is a method without equal for the relief of intractable headache, but in theory and from chincal observation of both medically and surgeally treated patients, I am impelled to the tentative opinion that sympathectomy has not been established as a sound treatment for this disease

Undue enthusiasm for surgery now might con ceivably result in some slackening of interest in the major problem in the therapy of bypertensive disease, namely, discovery of the causative mechanism and its management by specific measures.

Sympathectomy is a nonspecific symptomatic treatment Pending final analysis of accumulating data it should be considered as no more than a highly desirable clinical experiment.

Present uncertainty concerning the value of sympathectomy is no better exemplified than in the conflicting views expressed by different in vestigators, one current opinion is that the operation should be restricted to those with advanced vascular disease, since no other form of therapy is effective, the other is that the operation should be reserved only for the earlier stores of the discuse, since no benefit can be expected after extensive vascular disease has appeared While it appears to me that the latter view is hy far the more reasonable, I am impressed with the lack of agreement among competent observers who have had actual clinical contact with both medically and surgically treated hypertensive patients. The inference must be that the results in surgically treated patients are open to various shades of interpretation

Its final appraisal must rest upon one single crucial criterion, namely, the life span of surgically treated patients as compared with expected longevity without operation. This is admittedly a difficult and perhaps even impossible task. If the answer is ever to come it will be from continued application to the problem, and I for one will look forward to a more definitive statement in the future. For the present I am compelled to hold in abeyance any real enthusiasm for this method of treatment.

DR CATTELL Would you like to answer any of the points Dr Goldring made, Dr Ray?

DR RAY There is no real conflict between Dr Goldring's and my statement of the problem I repeat that from the surgeon's standpoint the operation is designed primarily to lower the blood pressure in hypertensives and if in ten, fifteen, or twenty years from now it can be shown that these patients live longer, then the value of the operation will have been proved. It is true that in some patients headaches are benefited by thoracolumbar sympathectomy even though blood pressure may not be lowered, yet headache alone can rarely, if ever, be considered a worthy indication for such an extensive operation is all well and good to look for the cause and the nonsurgical cure of hypertension, but after these many hundreds of years none has been forthcoming, so I hope the medical profession will bear with a few of us who are approaching an old problem from a new angle If we don't start, how can we evaluate the results twenty years hence?

## Summary

DR GOLD The surgical treatment of hypertension was the subject of the conference this afternoon. There have been several surgical procedures but the one which appears to have proved most successful in lowering the blood pressure is the double thoracolumbar sympathectomy. This involves the preganglionic severance of sympathetic connections to the central nervous system from about the eighth dorsal to the third lumbar segments. The operation abolishes vasomotor control to the splanohnic area and lower limbs. We have had the views

of a surgeon with a fairly extensive experience in this form of operation. He maintains that a fairly significant lowering of the blood pressure may be expected in at least 50 per cent of the patients, and called attention to evidence that the operation not only lowers blood pressure but affects the course of the disease in other respects namely, improvement in the vessels of the evegrounds, the heart, and possibly the kidneys Widely divergent views were expressed An intermst with a large experience in the management of hypertensive disease indicated that there was no evidence that the sympathetics are important in the causation of the disease. He stated his belief that sympathectomy is a nonspecific symptomatic treatment, serving essentially to relieve the intractable headaches of the hypertensive While there is general acceptance of the fact that the operation produces initial lowering of the blood pressure, it is indicated that the pressure tends to rise again in the majority and that the persistent moderately lowered level of the pressure in many of these patients may well be due to the altered habits and attitudes of the patient who has subjected himself to a serious operation for the purpose of escaping the dangers of high blood pressure It was pointed out that there are long periods in the life of the hypertensive patient when the blood pressure is very much lower than at other times, and that such variations in the natural history of hypertension complicate the interpretation of the surgical results

There are divergent opinions as to what kind of patients might be most suitable for this operation Some prefer to operate only on early cases and others prefer to reserve the operation for longstanding ones in which it is clear that the disease is not stationary and is progressing to more serious phases. It was pointed out that whether patients who have been operated upon will live longer than medically treated patients with hypertension is the crucial question, and that concerning this we have, as yet, no in-There seems to be fairly strong beformation hef that thoracolumbar sympathectomy is a highly desirable clinical experiment at the present time

ON TOP

The schoolmaster was angry with the doctor's small son. "I will certainly have to ask your father to come and'see me," he remarked.

"You'd better not," said the boy, "he charges five dollars a visit"—J Am Inst Homeop, Aug, 1945

## Annual Meeting

## Medical Society of the State of New York

Address of the President\*

EDWARD R CUNNIFFE, M.D.

AM PRESENTED to you under very different circumstances than usually obtain at this eeting As you well know, government restricon on transportation and the ban on convenons were responsible for our mability to meet as riginally scheduled This delay might have inerrupted the normal presidential succession in However, due to the fortunate prour Society ision in our Bylaws that recognizes the Presidentlect as also the First Vice-President, and the ery gracious action of Dr Bauckus, who resigned 1 May, I was allowed to take office at the usual me. I have now served five months in this caacity, most of which time is the period of the year then the Society is least active. Notwithstandog the fact that the failure of the House of Deleates to meet in May deprived us of its instrucions and information concerning the sentiment f the members of the county someties which they epresent, we were able to carry on the usual busiiess of the Society without loss of effectiveness. That this was possible is due entirely to the loyal and self-sacrificing work of the members of our Council and members of the council committees Mindful of this, I would like at this time to exress my smoore thanks for their unselfish devo-This attitude is even more commendable ion when we recall that they have served unstitutingly or this additional time when the pressure of their practice was far above the normal demands.

In carrying out the routino work of this organiration and also continuing the program of the ast administration, the work of several committees should, I think, be noted for your special The Planning Committee's report attention will show a careful study of many subjects and all suggestions for improving the delivery of medical care with many of the proposals before legislative bodies for changes in the manner of medical practice Its subcommittee, under the chairmanship of Dr Sullivan, has done a monumental work in making a thorough survey of the medical facilities available in every county of our state. This report provides us with information not only to question radical statements concerning inadequate means of providing medical care, but also should be of great assistance to us in planning

\* Delivered at the 139th Annual Meeting of the House of Delegates of the Medical Society of the State of New York, Buffalo, October 8, 1945.

for more hospitals and diagnostic centers if and where found necessary

Dr Mitchell's Committee on Postgraduato Education has set an enviable record for successful educational meetings throughout the state. We are modest when we say that the postgraduate teaching of our society surpasses that of any other state in this country The work is so extensive that its report need only to be read to be appreciated for its great value not only to our profession, but equally to the people of our state. As a result of the unusual interest in the attempt last year to pass a bill licensing another cult. a subcommittee of the Council was appointed to study all suggested means of protecting the citizens of our state from treatment by untrained The study included all known state provisions for becaming the various members of the different cults practicing the bealing arts. This study has been a careful and impartial one-all advocates of proposed remedies were allowed to express their opinion before our subcommittee and also before the Council The matter of conditions obtaining in many states has been investigated and the committee has done special work appraising the effectiveness of the Basic Science Law and examining the condition already existing which created the demand for it. This commuttee will be ready to report at this session the results of their study to the House of Delegates.

Many other committees have done such excellent work, I regret that tame will prevent me from naming them, but I do wish emphatically to state that their work is recognized and appreci-

This session promises to be a very busy and important one, due to the fact that the last meeting of the House of Delegates was held in May. 1044. Therefore, a space of seventeen months has intervened between meetings, and consequently a great many additional matters of business will be presented for discussion at this session. This, together with the appeal of one of our members from the decision of a component society which must be heard by our delegates, makes it very important that we do not delay unduly in getting to the active business of this meeting However. I would like to pause briefly to call attention at this time to some of the legislation that is sure to be presented at the next meeting of our Legislature

One matter is the question of compulsory health insurance, which is of unusual interest to us in New York State For not only are we concerned with the Wagner-Murray-Dingell Bill, which is pending before the national congress, but also with similar measures which may be placed before the state legislature in the next session The question is often asked, "From what source does the demand for compulsory health insurance come?" Certainly it does not come from the people who need medical care the most For instance, the two states in which there has been the greatest clamor for compulsory health insurance are California and New York State These two states, for the most part, are better provided with medical facilities, such as medical schools, hospitals, doctors, sanitation, and the ability to pay for this service, than almost any other states in the umon

The demand for compulsory health insurance does not come from some southern states where there truly is a need for better medical facilities and ways of paying for medical care, where transportation is difficult and sanitation poor. Actually, the great demand for Federal medicine and other government medical care plans comes from welfare workers, professional reformers, and certain sections of the labor movement.

About the first two I will make no comment As for labor's demand for health security through a compulsory Federal scheme, I can only point to a speech made by Samuel Gompers, President of the American Federation of Labor, in 1916 He said, and I quote "There are certain species of compulsory social insurance that by their mere statement carry with them the conviction of their self-evident necessity and justice, into which the element of depriving people of rights cannot enter-such as workmen's compensation and oldage pensions But when compulsory health insurance and compulsory unemployment insurance are proposed, the question arises at once, What are the conditions and regulations to be imposed by the government to regulate the conduct of the supposed beneficiaries?"

Calling attention to this same speech, Mr. Gompers, who was, by the way, a very prominent labor leader, continued "Recently a gentleman of the highest standing stated to me that during the time he was in Germany, and in a position to know, German workmen came to him seeking aid to get out of that country to the United States They told him that by reason of the taxes which they were compelled to pay into compulsory social-insurance schemes, they had no money left except for the absolute necessities of life and were unable to secure sufficient funds

to come to the United States even in the steerage. He said to me further that in Germany, where compulsory social insurance has been more extensively worked out than in any other country, the workmen of that country, by reason of their property interests in compulsory social insurance, have been compelled to remain in Germany and work under circumstances, wages, hours, and conditions of employment which forced them to endure conditions below the standards of a living wage" This is certainly a state of serfdom. Let us hope that labor does not unwittingly bring upon itself a similar condition in this country

It has been proved that the highest standards in the lives of the workers have been secured by the development, the organization, and the exercise of the economic power of the workers. Although this economic power is indirect, it is the most potent and the most direct social health insurance of the workers. It is the only agency that can readily guarantee to the workers protection against the results of the eventualities of life and give them a feeling of security.

The organization of labor, which has secured reductions in the hours of their daily toil, secured higher wages and better standards of life, secured safety and sanitation, has done more to eliminate poverty and misery and unemployment and sickness than all other agencies of government and private industry combined. There was more voluntary social insurance among the workers in the Umted States than in any other country in the world. This was in 1916. How much more true that is today when labor wields great power to achieve a better security than any government-controlled scheme will bring

In my lifetime I can remember the days when workers were trying to free themselves from the almost hopeless conditions in the mines when the family of a worker could hardly live from hand to mouth Today labor sits at the peak of its many victories to gain better working and living conditions. Recently we had occasion to note that on Labor Day Mr Truman spoke to the workers, giving labor his assurance that he was their friend, Mr Dewey congratulated labor for its fine record of few strikers, and Mr La Guardia, of New York City, advised the American Federation of Labor and the CIO to get together so that they would have more power Today labor passes not only on bills concerned directly with labor, but those affecting the general welfare of the community, endorsing those which it deems beneficial and disapproving those which it believes pernicious By so doing they have broadened their base of operation and have increased their sphere of influence and added to their power

This is not a criticism of labor and labor organi-

ions I cite this in order to show that pers we, too, can take a lesson from labor ould we not, perhaps, broaden our interest in slation? The State Society does this to some ent through its legislative officers in Albany, no doubt county societies too could take a re ective laterest in all kinds of legislation, not y having to do with medical care, but with the lfare of the community at large

For example, e hill before the national legisure calls for a nummum wage of 46 cents en ar for a forty hour week. This would be a ge of \$16 per week. When the social security ;, income tax, and unemployment tax are subcted, it certainly will not leave a living wage seems plain that a minimum wage must start a living wage and above that the law of supply d demand and the skill of the operator would a basis for bargaining Would it be harmful us as en organization to disapprove a measure the low minimum wage as found in this hill? seems to me that that has e direct relationship the bealth of the people, and it is offered as an istration of how we may widen our sphere and ln influence or power

This is my personal opinion, but it is an exaple of a constructive attitude we should take certain types of legislation. An educated prosuon should belp form policies of government

fecting the welfare of the people

I do not wish to convey the impression that ell bor unions are in favor of compulsory health inrance. Some are absolutely egainst it but are king that due consideration be given to caring r those in the lower meome group, providing em with adequate medical care at a cost that ey can meet I think that this can be fully anrered by the rapid growth and progress which is been made in extending voluntary medical surance throughout the state

This is a matter which was close to the heart of y predecessor, Dr Bauckus, who for many ears worked to bring about prepayment plans hich would make voluntary medical insurance vailable to all who wished it in this state. We ow have four active plans in successful operation New York State. Two more plans are in the rocess of organization. Thus, in a matter of a ow weeks, every county except two will have vailable medical insurance coverage. This has een very encouraging, but it is not enough

I believe that we have now sufficient experience nd that the time is opportune for representatives f the various plans to get together with our Director of Medical Insurance, and with a comnttee chosen for this purpose, to draw up a um orm policy which can be promoted and sold to dividuals as well as groups, throughout the ntire state. This policy should provide medical,

surgical, and obstetric care for in-hospital patients on an indomnity basis However, this does not mean that insurance groups ere to abolish their present plans, they may have whatever additional plans they wish, but one type of polley covering the entire etate is absolutely necessary at the present time. It is my hope that this recommendation will not merely be etudied time has come for action, and I would like to request the House of Delegates to take action on this immediately and to ask that the committee make a report to the Council at the December meeting

It is appropriate at this time that we should give thought to our fellow dectors who have been serving in the armed forces during the war Of less than one hundred and twenty thousand active doctors in the United States, sixty-two thousand volunteered and were inducted into the military forces Ten thousand of these are from the Empire State

Many complaints have come to us during the war years of the surplue of doctors they beve ac cepted for service. We have no criticism with the Army and Navy for demanding more dectors than were required at a time when the danger of some disaster during the invasion might require many more doctors for the adequate care of the casualties However, the war is over Any emergency that occurs now will be found among the civilian population, whose care has been a great strain upon the greatly reduced number of doctors remaining on the bome front either because they were not acceptable to the military forces or because they were essential in their community The mortality and morbidity statistics of civilian population during this period have been very gratifying However, we have fortunately had no epidemio end no virulent scasonal diseases to combat during this time. No one would main tain that the medical supervision and care was on a par with that of the prewar days

Again, the fact is unquestioned that many of our medical men serving for several years in the military forces have been employed in work having no relation whatsoever to the practice of medicine These men have accepted this condition, which has made their sacrifice even greater, for nothing injures the morale of a doctor as much as to be employed in something other than medicine

Their achievements have been very great. They have been reported to have given the best medical survice not only for any army in previous wars, but for any army of this war Now the situation. however, is changed radically The war is over Except for doctors who must maintain military hospitals, care for the wounded, and other doc tors who will be required for the army of occu

pation, there will be few medical officers needed by either the Army or Navy

We are being besieged with letters asking for the release of medical officers who are very anvious to return to civilian life, it is apparent that practically all the doctors desire, now that the war is over, to be released from anything that resembles regimented medicine and returned to the free and independent practice they enjoyed before the war

There are numerous reasons why we should do everything in our power to hasten their release from the military service. For one thing, their rehabilitation will take a long time. The discharged medical officer will have a difficult road to travel for at least five years after being separated from military service. There will be such matters as a mortgage to meet, insurance premiums and income tax to pay, his children will have grown older and more expensive to support, in many cases he will have a new office to locate and equipment to purchase. He must recapture his practice and rehabilitate himself in medicine

Many medical officers have served since the beginning of the struggle in work not too well related to the practice of medicine. They will need refresher courses, and these must be provided for them. The younger men, who went in after only a nine months' internship, will want to complete postgraduate training with internships and residencies. They will need our earnest assistance in securing these positions.

Let it not be said that we have failed the physician or neglected to carry out the promises that were freely given in the early days of the war. We must help him in every way by making educational opportunities available, by using the returning man as an assistant when we need an assistant, by helping him secure office space or sharing our offices with him

Finally, we should recall the ethical conditions that pertain to the situation when absence of a physician sends the patient to another. You will find in Chapter III, Article 4, of the principles of medical ethics of the American Medical Association, in Section 7, "When a physician is requested by a colleague to care for a patient during his temporary absence, or when, because of an emergency he is asked to see a patient of a colleague, the physician should treat the patient in the same manner and with the same delicacy as he would one of his own patients cared for under similar circumstances. The patient should be returned to the care of the attending physician as soon as possible."

Section 8 says, "When a physician is called to a patient of another physician during the enforced absence of that physician, the patient should be relinquished on the return of the latter" —the fair interpretation and observation of these principles will serve us well in this postwar period of confusion and will, I am certain, do a great deal toward lessening the hardship which our discharged medical officers will have to bear. Let me repeat part of my contribution to the Report of the Judicial Council

We are very much impressed by the lack of knowledge of the principle of ethics of the American Medical Association and the rules of conduct of the state association by many members of the profession

We are also mindful of the fact that there is too little instruction or explanation of these principles now given during the students' time in the medical schools. A few schools have a lecture or two on the subject by a member of a local medical society, but even this slight indoctrination into the traditions of our profession is the exception rather than the rule. The importance of this condition is augmented by the fact that between seven thousand and eight thousand graduates have been inducted into the military forces at the end of a nine months' internship immediately following graduation.

These men have had very little, if any, information regarding the principle of ethics or the rules of conduct. In normal times this condition would be corrected by association during their internship with men serving on the visiting staffs of hospitals and by attending meetings of the local society, where the rules of conduct are often discussed and the practical application of the principles of ethics are demonstrated. It is conceivable that the professional success of a young doctor may often be handicapped by the injudicious or unwise violation of these principles, which proves a severe obstacle for him to overcome

Therefore, it would seem wise for the various county societies to inaugurate and encourage a course of instruction on the principles of ethics and rules of conduct for the new member. This, we feel quite certain, is as necessary to the doctor's ultimate and complete attainment of his aims as are any of the other plans for continued post-graduate courses.

I must call your attention to annual attempts which have been made in the State of New York to legislate against animal experimentation Without doubt the so-called antiviviscetionists will introduce another bill in the next legislature.

Up to this time medical organizations and the research institutes concerned with the advancement of science have not thought it necessary to justify their work. However, the reception by the public of lurid accounts of degenerate cruelty to trusting animals is an indication that the pub-

must receive more education in popular form the benefits to man and animals which accrue m the use of dogs and other animals in medical perimentation. Last year the antivivisection was dangerously close to being passed

need not tell this audience how unfair are the sguided attacks of these partisans on this imtant phase of medical science. It is suffinite to say that if a law is ever passed in this te to prohibit animal experimentation, then dical science will be set hack a good fifty years is the plan of the State Society to marshal all ress for education and public opinion in this ite to offset the efforts of antivivisection groups to County has already set up its scientific com-

mittee to do a job of education, and it should be congratulated for this effort

In closing I am sure it is needless for me to suggest to you the thought that no duty could be more apparent than the duty of continuing the business of this session with all the deliberation necessary to anable the House to arrive at sound conclusions and with the appropriate actions. The present, it seems to me, is no time for hesitation and ill-considered action. Let us always keep in mind the obligation assumed on entering the profession to keep always before us the purpose of upholding the dignity and honor of the profession, to exalt its standards and to extend its sphere of usefulness

# Address of the Past President\* HERBERT H BAUCKUS, M.D

SHOULD like to make the observation that the progress of medicine does not carry on ry far in advance of the general education and derstanding. A historic review of the diffilties under which scientific attainment labored id at times almost totally perished, from the ne of Hippocrates, some 400 years BC, until e dawn of the twentieth century, presents a orld tragedy that seems for us now almost imssible to believe. There was medicine before ippocrates, but I mention him because he took ertinent facts and the knowledge gained from tual observation and drew reasonable concluons from them. Ho sat beside the patient, und signs and symptoms, and faithfully and uthfully recorded thom He tool clinical case stories, first employed the bedsido method, and this way established the art and science of dignosis and prognosis

The methods of Hippocrates were in great connat with the usual experience of the medieval enturies in which medicine and scientific progress are so blinded by mystery, magio ritual, and the recopt of uninformed authority that attempts at regress were in vain. New thinking was heresy in other words, there could be little free, honest, and open thinking, and those who essayed to do his vontured all to the hazard of less of their own

It is quite different in the fields of medicine tolay, hut we still have groups who are more intersted in making converts to their dogmas of phipsophy than in actually studying the sick firstland. I am trying to say that if we want to find

\*Delivered at the 139th Annual Meeting of the House of Delegates of the Madical Society of the State of New York Juffalo, October 8, 1945 out about medical care and the needs of our people in this respect we need to regularly go among them and see them sick and well, and discuss the problem of health and life with them. The class doing this these many years, and who have faithfully and regularly recorded their observations in the practice of medicine, are the physicians. We would think that if the State of New York was to carry on any program, especially a new program for medical care, long and careful study should be made by the practicing physicians in the field

I feel the situation keenly now because recently, as a member of a committee representing the Medical Society of the State of New York, I attended a meeting with a small committee selected from the New York State Temporary Commission on Medical Care To my knowledge representatives of the practicing physicians have never met with this entire commission, and this was really the first opportunity that had been presented to our group to thoroughly go into the subject. Why it took some twelve months to arrive at this meeting I do not know, but having come to the point I felt that now we finally would begin a discussion of the fundamentals for constructive advances in medical care I am disappointed to roport that this was not at all the case

At this meeting we were confronted with three proposals or plans, all drawn up in definite dia grams "to form a hasis for discussion" hut all devoted to the revolutionary change of attempting to provide medical and hospital care through compnisory sickness insurance. It would seem as though the long-standing methods of practice that had protected the lives and health of the people of the State of New York in an unrivaled degree had suddenly melted and faded away and

pation, there will be few medical officers needed by either the Army or Navy

We are being besieged with letters asking for the release of medical officers who are very anxious to return to civilian life, it is apparent that practically all the doctors desire, now that the war is over, to be released from anything that resembles regimented medicine and returned to the free and independent practice they enjoyed before the war

There are numerous reasons why we should do everything in our power to hasten their release from the military service. For one thing, their rehabilitation will take a long time. at once were to be of no moment It seemed strange that they so soon should be replaced by the entrance of a new force for the regimentation of medical and hospital care

And thus at our first consultation we were told. not only in effect but in the actual words of the members of the special committee present, that ves, we are going to have compulsory sickness insurance and you physicians had better have it run by the State than by the Federal government That seemed to be the main point at issue—not a discussion of the needs of our people but an argument cleverly planned and written to give weight to preconceived ideas of compulsory sickness insurance And not only that, but the plan, or something like it, must be produced quickly, and as soon as possible introduced before the legislature of this Empire State! I might add that the three plans as presented offered much less in medical care than do our voluntary medical care plans in existence today. It was stated that they had to be so limited in order to avoid the stupendous and impossible financial cost of the The medical care proposed whole program amounted to medical and surgical care in the hospital only, features which find insurance coverage by the commercial companies of today The proposals would insure all residents regardless of economic status for this in-hospital medical and surgical care but they did not provide home or office treatment for anyone, not even the low pay and medically indigent groups. It seemed to me an inexcusable indifference to the needs of the lesser privileged for the sake of pushing the more easily promoted portion of the compulsory sickness insurance fantasy

Your committee offered numerous criticisms and constructive suggestions. It recommended the study of the recent report by the Committee on Laboratory Service and Medical Care under the chairmanship of Dr. O. W. H. Mitchell and Dr. F. Leslie Sullivan. It pleaded for the life of the

Voluntary Medical and Hospital Care Plans, the life of the voluntary community hospital, the preservation of freedom in medical thinking from bureaucracy and political maneuver. We advanced the cause of preventive medicine and the public health. We recalled that we pay dearly for security, and especially for this bogus security, if we throttle the initiative and ambition to achieve. We deplored the entry of this foreign endorsed speculation into the field of American medicine.

We pointed out that there were many families who had difficulties in the procurement of their medical needs because so many of their doctors were away in foreign military service and this was not a propitious time for radical change. With nearly half of the active practicing physicians of our state participating in the armed forces could we not allow them some time for reflection and thought on the subject, or wait until at least they could set foot on their home soil?

To all of this there were many answering statements, but I sum them up for myself on two main themes (1) it must be compulsory sickness insurance, limited in medical care but embracing all people, and (2) we must hurry up with it right away so we can do it before the Federal government does it

And at this point, my fellow practitioners, I present the well-worn problem to you—the 1945 model—a great bid for the political domination and regimentation of a people that have the best medical care ever in the world

This House of Delegates is a democracy and I doubt not it will take the presentation of many points of view before our deliberations are completed. But once decided, let us remain loyal to our decisions, follow leadership loyally, work hard and earnestly, function efficiently as a united profession. I know you have the intelligence, the independence, the integrity, and the courage to seek without bias after the truth. "And the truth shall keep us free."

## House of Delegates Minutes of the Annual Meeting

### October 8 and 9, 1945

THE 130th Annual Meeting of the House of Delegates of the Medical Society of the State of New York was held at the Hotel Statler, Buffalo, New lork, on Monday, October 8 1945, at 10 15 A.M.
Dr Louis H Bauer, Speaker, Dr William Hall
Vice-Speaker, Dr Walter P Anderton, Secretary,
Dr W Guernsey Frey Jr, Assistant Secretary,

SPEAKER BAUER The House will be in order

#### Section 1

#### Report of Reference Committee on Credentials

SPEAKER BAUER The Chair recognizes the Chairman of the Credentials Committee Dr McCarty Dr. Charles F McCarty, Kings. There are eighty-six delegates and twelve officers registered

SPEAKER BAUER Thank you. I declare the 139th Session of the House of Delegates of the Medical Society of the State of New York open for the transaction of business.

Mr Secretary is there a quorum present? SEGRETARY ANDERTON Yes, there is a quorum

present.

#### Section 2

#### Approval of the Minutes of the 1944 Session

SPEAKER BAUER The first order of business is the

SPEAKER BAURE. The Brit order of Dusiness is the approval of the minutes of the 1944 Session.

SECHETARY ANDERTON Mr Speaker, I move that they be approved and adopted as published in the June 15 and July 1, 1944 issues of the New York STATE JOURNAL OF MEDICINE and that their reading be dispensed with.

Dr. George W ROSMAK I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

#### Section 5

#### Reference Committees

SPEAKER BAUER Mr Secretary, will you please read the Reference Committee appointments? Gentlemen, I ask you to pay particular attention to this reading because, due to the short notice at which this meeting was called, a number of the men who originally were appointed were unable to come and there have been a great many last-minute changes. Further there are at least two or three people who do not know they are on committees. Listen carefally

SECRETARY AMPERTON The Reference Com mittees of the 1945 House of Delegates are as follows

REFERENCE COMMITTEE ON OREDENTIALS: Charles F McCarty Charmon Kings County Wendell R Ames Cattaraugus County Roger A. Hamphill, Livingston County Henry S. Martin, Wyoming County Arthur A Fischi, Queens County

Mr Speaker, I move that the reports and supplementary reports of Officers, Council, Trustees, Legal Counsel, and District Branches that have been published and distributed to the members of the House be referred to the respective Reference Committees without reading

DR ALFRED M HELLMAN, New York I second

that motion

There being no discussion, the motion was

put to a vote, and was unanimously carried Speaker Bauer The reports are so referred There are three Reference Committee tables in the back of this room, and the rest of them are just outside of the door. There are stenographers available prepared to take your reports All officers and members of Council Committees are asked to hold themselves in readiness to appear before the various Reference Committees at which their particular work is to be considered Four copies are required of all reports and resolutions

(See 66) Section 4

### Supplementary Report of Past-President

SPEAKER BAUER Dr Guess and Dr Gartner, will you form a committee to escort the immediate Past-President of the Society, Dr Bauckus, to the platform?

(The delegates arose and applauded as Drs Harry C Guess and Albert A Gartner, of Eric County, escorted Dr Herbert H Bauckus to the

platform)

SPEAKER BAUER Gentlemen, as you know, this is a deferred meeting. This meeting should have have been held the first of May Normally, Dr. Baueless and the Bauckus would have been President at the time this meeting was held, however, he felt that when the first of May came around, and there was no prospect of our being able to hold a meeting, he should not continue as President, as Dr. Cunniffe had already been elected to take office at that time. Therefore, he resigned, and being the First Vice-President as well as President-Elect, Dr. Cunniffe automatically became President. becamo President, nevertheless, it seems only right that we should hear from Dr Bauckus and lot him add to his report which is in your hands in the Gentlemen, the immediate printed document Past-President of the Medical Society of the State of New York, Dr Herbert H Bauckusl
Past President Bauckus Mr Speaker, ladies

and gentlemon, it is a great honor to have been President of the Medical Society of the State of New York, and I think you very sincerely for it

I also wish to acknowledge the great support I have had 10 this work from my own county society,

the County of Erro.

As you have heard from the Speaker, I have not been President of this Society since the first of Mas I became President following a wonderful man To follow in his footstops was indeed a difficult position in which to be. Dr McGoldrick did a great deal to train me in the work that was to come and in the same way I feel bided very happy that you have now as your President, Dr Cuanlfie. He is a great leader and he deserves your support. Not only that, but the Medical Society of the State of New York deserves your support. This year I feel that is especially necessary.

My work from March, when my report which has been printed and is in your hands was compiled up to the present time takes in a great deal of ground and I should like to have the opportunity of offering some bits of information about what happened during that period Therefore, I take this opportunity of fairly and fully giving you my point of views actually discounted that during this meeting I shall not trouble you

again

It is a great comfort to feel that the Medical Society is in a financial condition to permit our functioning property. That has been due largely to the careful way in which the funds of this Society have been preserved and safeguarded. However, we do have the money to do that which is in our minds as being necessary and that too is a great comfort. The point is to use the money when it is needed and when it shall be effective for good.

During the year we had a special committee appointed under the Committee of Public Health and Education known as the Laboratory Committee or to be more cract, the Committee of Laboratory Service and Medical Care, under the chairmanship of Dr F Leelle Sullivan. That Committee has done a very important piece of business for us, and I hope you will earefully read the report. Even before the report was out, we made great use of it,

as I shall indicate later on.

We had also set up a Medical Practice Committee to more thoroughly study the question of medical practice in New York State. That had to do in part with the difficulties that your officers the Council, and all concerned with the official family had in protecting the health of the citizens of New York State from cultiam. We had, in March and April, considerable activity before the Legislature and before the Governor on the question of liceusang the chiropractors, and as you know there was a large hearing on the subject at Albany. At that time we had the opportunity of presenting our point of view but also the chiropractors had an opportunity to introduce testimony—testimony of people that they claimed benefited under the work of the chiropractor. We spent a great deal of time on this subject, and most of it is covered in the report of the Legislative Committee under the chairmanship of Dr John L. Bauer. That, of course, will come to your attention at the proper time.

I would like to say that I falt that the situation last year was quite difficult and it was partly difficult because of the fact that the legislators made it plain to us that they were in a way very fired of this constant pressure upon them. I believe that is true, and it is no reflection on the part of the legislators that they object to such pressure. However they must expect to put up with things of that nature when they are in public office. It was represented to some of them that we ought to make some

changes, constructive changes, that would remove this condition in which each year the Logislators and the Governor were importuned to give license and official recognition to the chiropractic cult, and part of this I feel, came because of the fact that in the last few years many of the iggislators have been told that a basic science law would take care of this situation and that if we had a basic science law enacted, and it worked properly we would not have much trouble.

I would like to say that during the period of our offorts to work against this proposed permicious legislation some of our physicians went to committees, notably the Education Committee, at Albany, with the proposition that the basic science law is semething that was quite the thing. Well that, in a way, is all right as an independent point of view, but the House of Delegates hast year told us not to support a basic science law, and of course told us to fight against chiropractic been singlegislation, and there we were to do that job—and that I think we

We are going to have these questions discussed again today and temorrow and, I hope, with an open mind. I have an open mind on the question of the basic science law, and we have tried in many ways to find out more about it. I believe, from talking with His Excellency the Governor of New York State, and with some legislators, that they feel that I lleansing does take place in the chiropractic field it will be accompanied by a grandfather claus. It was told to me that yes, we had that in medicine we in a measure had that in cetcopathy, so we must expect that that would occur in the chiropractic legislation.

It has been said that if the bane science law is working, and chiropractors are licensed then you don't have much trouble with regulating them. The main argument that is of any moment at all as I see it, is that we might have some way of better enforcing the Medical Practice Act than we now have. The answers from many states that have this type of legislation and have a barde science law too give us a certain amount of information, but still not sufficient to throw much light on the subject. The facts are that once the chiropractor is licensed they do not have much trouble with him because then the chiropractor is within the iaw, and with the two thousand chiropractors in New York State licensed I take it that we will not have very much concern about it further either

In order to disapate the idea that licensing and the basic science law are all they claim. I would like to call your attention to these pages of the telephone book from the Detroit Telephone Directory There they have these laws in effect, and I say that we have no such advertising in New York State. It has been said that once these people are licensed to practice chiropractic they will not and cannot practice medicane. I think we know better than that, but I will read a few of these advertisements for you Here (holding up the advertisement) is a lady with a stethescope around her neck. Mr Speaker, I move that the reports and supplementary reports of Officers, Council, Trustees, Legal Counsel, and District Branches that have been published and distributed to the members of the House be referred to the respective Reference Committees without reading

DR. ALFRED M HELLMAN, New York I second

There being no discussion, the motion was put to a vote, and was unanimously carried SPEAKER BAUER. The reports are so referred

There are three Reference Committee tables in the back of this room, and the rest of them are just outside of tho door. There are stenographers available prepared to take your reports. All officers and members of Council Committees are asked to hold themselves in readiness to appear before the various Reference Committees at which their particular work is to be considered. Four copies are required of all reports and resolutions.

Section 4. (See 66)

Supplementary Report of Past-President

SPEAKER BAUER Dr Guess and Dr Gartner, will you form a committee to escort the immediate Past-President of the Society, Dr Bauckus, to the platform?

(The delegates arose and applauded as Drs Harry C Guess and Albert A Gartner, of Eric County, escorted Dr Herbert H Bauckus to the

platform.)

SPEAKER BAUER Gentlemen, as you know, this is a deferred meeting This meeting should have have been held the first of May Normally, Dr Bauckus would have been President at the time this meeting was held, however, he felt that when the first of May came around, and there was no prospect of our being able to hold a meeting, he should not continue as President, as Dr Cunniffe had already been elected to take office at that time. Therefore, he resigned, and being the First Vice-President as well as President-Elect, Dr Cunniffe automatically became President, nevertheless, it seems only right that we should hear from Dr Bauckus and let him add to his report which is in your hands in the printed document Gentlemen, the immediate Past-President of the Medical Society of the State of New York, Dr. Herbert H Bauckus!

PAST PRESIDENT BAUCKUS Mr Speaker, ladies and gentlemen, it is a great honor to have been President of the Medical Society of the State of New York, and I think you very sincerely for it

I also wish to acknowledge the great support I have had in this work from my own county society,

the County of Eric.

As you have heard from the Speaker, I have not been President of this Society since the first of May I became Prondent following a wonderful man follow in his footsteps was indeed a difficult position In which to be Dr McGoldrick did a great deal to train mo in the work that was to come and in the same way I feel indeed very happy that you have now as your President, Dr Cunnifie Ho is a great leader and he deserves your support. Not only that, but the Medical Society of the State of Now York deserves your support. This year I feel that is especially necessary

My work from March, whon my report which has been printed and is in your hands was compiled, up to the present time takes in a great deal of ground and I should like to have the opportunity of offering some hits of information about what happened dur-ing that period Therefore, I take this opportunity of fairly and fully giving you my point of view so that during this meeting I shall not trouble you

again.

It is a great comfort to feel that the Medical Society is in a financial condition to permit our functioning properly. That has been due largely to the careful way in which the funds of this Society have been preserved and safeguarded. However we do have the money to do that which is in our minds as being necessary, and that too is a great comfort. The point is to use the money when it is needed and when it shall be effective for good.

During the year we had a special committee ap-pointed under the Committee of Public Health and Education known as the Laboratory Committee or to be more exact, the Committee of Laboratory Service and Medical Care under the chairmanship of Dr F Lealie Sullivan That Committee has dom a very important piece of husiness for us, and I hope you will earsfully read the report. Even before the report was out, we made great use of it,

as I shall indicate later on.

We had also set up a Medical Practice Committee to more thoroughly study the question of modical practice in New York State. That had to do in Part with the difficulties that your officers the Coun-cil, and all concerned with the official family had in protecting the health of the citizens of New York State from cultiam. We had, in March and April, considerable activity before the Legislature and before the Governor on the question of licensing the chiropractors, and as you know there was a large hearing on the subject at Albany At that time we had the opportunity of presenting our point of view but also the chiropractors had an opportunity to introduce testimony—testimony of people that they daimed benefited under the work of the chiro-Wo spent a great deal of time on this subject, and most of it is covered in the report of the legislative Committee under the chairmanship of Dr John L. Bauer That of course will come to your attention at the proper time.

I would like to say that I felt that the attraction last year was quite difficult, and it was partly difficult because of the fact that the legislators made it plain to us that they were in a way very tired of this constant pressure upon them. I believe that is true, and it is no reflection on the part of the legislators that they object to such pressure. However lators that they object to such pressure. they must expect to put up with things of that nature when they are in public office. It was represented to some of them that we ought to make some changes constructive changes, that would remove this condition in which each year the Legislators and the Governor were importuned to give license and official recognition to the chiropractic cult, and part of this, I feel came because of the fact that in the last few years many of the legislators have been told that a basic science law would take care of this situation, and that if we had a basic acience law enacted, and it worked properly would not have much trouble.

I would like to say that during the period of our efforts to work against this proposed permicious iecislation some of our physicians went to committee, notably the Education Committee at Albany, with the proposition that the basic science law is something that was quite the thing. Well that, in a way, is all right as an independent point of view but the House of Delegates last year told us not to support a basic science law, and of course told us to fight against chiropractic licensing legislation, and there we were to do that job-and that I think wo

We are going to have these questions discussed again today and temorrow and, I hope, with an open mind. I have an open mind on the question of tho basic science law and we have tried in many ways taste statute is an and we have then it many want to find out more about it. I believe from talking with His Excellency, the Governor of New York State, and with some legislators, that they feel that if licensing does take place in the chiropractic field it will be accompanied by a grandfather clause. It was told to me that yes, we had that in medicine we in a measure had that in osteopathy so we must expect that that would occur in the chiropractic

legislation.
It has been said that if the basic science law is working, and chiropractors are licensed, then you don't have much trouble with regulating them The main argument that is of any moment at all as I see it, is that we might have some way of better enforcing the Modical Practice Act than we now have. The answers from many states that have this type of legislation and have a basic science law too give us a certain amount of information, but still not sufficient to throw much light on the sublect. The facts are that once the chiropractor is licensed they do not have much trouble with him because then the chiropractor is within the law, and with the two thousand chiropractors in New York State licensed I take it that we will not have very much concern about it further either

In order to desipate the idea that ilconsing and the basic science law are all they claim, I would like to call your attention to these pages of the telephone book from the Detroit Telephone Directory they have these laws in effect, and I say that we have no such advertising in New York State. It has been said that once these people are licensed to practice chiropractic they will not and cannot practice mediane. I think we know better than that, but I will reed a few of these advertisements Here (holding up the advertisement) is a lady with a stethoscope around her neck. This man here (holding up advertisement) features

"GOOD HEALTH Service Back—Spinal—Colonic Correction"

This advertisement, with the man's picture on the side (holding up advertisement) reads

"X-Ray and Fluoroscopic Examinations

"This office is completely equipped to render a health service embracing all the latest mothods of modern drugless therapy including electrotherapy, colonic irrigation, corrective diet, light treatment, and up-to-date technic for the correction of spinal distortion"

This advertisement (holding up advertisement) says

"Specializing in Back Injuries Arthritis—Rheumatism—Sciatica—Neuritis X-Ray Fluoroscope Electrical Treatments—Intestinal Irrigation"

What are those but the practice of medicine more or less licensed, true, not licensed to practice medicine but licensed to practice this cultism which is, as we know, an attempt to practice uninformed medicine. Therefore, I feel there is not anything in what is proposed that will help the situation except that we all the more try to have our Medical Practice Act enforced It will not be entirely effective People will try self-medication, and they will do a great many things that they want to do, but the Medical Society of the State of New York will not place its stamp upon this departure from good medi-The legislation in the amendments that nearly passed were based upon putting this husiness on a little higher plane, and legislators afterwards said, "If you had had a board composed of more physicians, and with a higher standing, we would have been in favor of passing this bill," and they certainly would have

I want to call your attention to that, and I also want to call your attention to the fact that the Legislature passed an act which would lower the licensing standards in New York State, because it would admit to examination pupils from schools heretofore not allowed, and His Excellency, Governor Dewey,

as you know, vetoed that

We have gone with this so far that it is well known anyone who runs may read, that the enactment of basic science legislation is a compromise to these people who say thay you can't do very much with eliminating the chiropractic cult at the present time. The Medical Society, above all people, cannot afford to make this compromise The minute we do we are going to get into more and more trouble Each year the chiropractors that are licensed in various states go to the Legislature and importune them for a greater measure for broadening the act enabling them to do what they want to do, so I hope you will think of this situation It is a very im-More and more we have beportant one this year come divided in our opposition to chiropractic, don't forget, because we have heen taking up this basic science idea. No one who has only passed that requirement is fit to practice medicine, and if they are not fit to practice medicine we should not condone their doing so This I offer (holding up advertisement above referred to) as a piece of evidence that that would happen.

We have had quite an important year in the development of our voluntary medical care plans, and I think that our new Bureau has done a great deal at least in the education of physicians on this sub-ject. However, we should endeavor to go further Because this is quite new, and because than that we know that the membership did not understand too well—none of us did—we are attempting as much as possible to be guided by the wishes of the House of Delegates, not only their orders, and in general trying to go along with what the practicing physicians of this state want us to do President Cunniffe, I am sure, has in mind that he shall endeavor to make further progress in this direction. How it can best be done, he will tell you in part, and others, I hope, will throw some light on the subject too I feel we have the funds, if necessary, to do something more constructive along this line Certainly, we are expected to do that. We, of course, have had the question of voluntary medical care insurance taken up in various states, and we have discussed the subject some with them, and I should report that this year, representing the Medical Society of the State of New York, I met with the presidents of several state societies at a meeting that was originated and called by the Michigan State Medical Society We also there considered the subject of enhancing our public relations by broadcasting material that had to do with the position of medicine and the public health It is difficult to go into the subject thoroughly, but I hope that some attention will be given to a means of more closely associating ourselves with other states in these endeavors. That, I know, is best done through the American Medical Association, and to that, of course, we are all pledged

There is one item more that I have to report upon I have put this in writing as a conclusion to the report that you have had in printed form

(This portion of the report appears on page 2529 of this issue under heading of "Address of the Past-

President) SPEAKER BAUER Thank you, Dr Bauckus! I hope you will keep a seat on the platform.

The remarks of the immediate Past President are

referred to the Reference Committee on the Report of the President, Dr Coon, Chairman

(See 66-76) Section 5

## Address of President Cunnifie

SPEAKER BAUER The next gentleman I am going to introduce, I am going to repeat a story that he told me about himself Those of you who were at our meeting a year ago last May remember that

when the present President of the Medical Society of the State of Now York was elected he very mod cetly told a story, and said that he was reminded of Winston Churchill who, when he was a boy in school received a prize and very proudly wrote to his mother about it, to which she replied, "Dear Winston, I am glad to hear of your good fortune. I know you don't deserve it, but try to live up to it." Gentlemen, the present President of the Mechenl Society of the State of New York has already lived up to It, and before his term is up we know he is going even far ahead of it.

Dr LaGattuta and Dr Flood will you be a com mittee to escort the President of the Medical Society

of the State of New 1 ork to the rostrum?

(The delegates arose and applauded as Dra. Frank LaGattuta and Edward P Flood of the Brenx, escorted Dr Edward R. Cunnifie to the plationn)

PRESIDENT CONNEFFE Thank youl

SPEAKER BAUER There is one other thing about this President, which I don't believe he has even stopped to realize yot himself, that is so far as I know he is the only President of this State Society who will have presided at two Annual Meetings of this Society He is presiding at this one, and as his term will not expire until next May he will still be presiding at the next Annual Meeting

Gentleman, your President, Dr Cunniffel Parsident Connifre In coming up between those two men I felt guilty After hearing the two previous speakers I feel a great deal like the dog in a There was a story that I heard once upon a time. tramp who was a ventriloquist, and going along one summer morning he felt a little thirsty, so be found a place where they had swinging doors and pushing one aside he walked in, and he was apparently fortunately followed by a little dog. He said to the bartender, "I want a whiskey" Then he asked the dog what he would have and the dog sald that he would have a whiskey too The bartender said, "What is that you said?" The tramp replied, "Ask him," and the dog said, "I es I will have a whiskey too" So the bartender put two whiskeys on the bar, saying "That is a very valuable dog you have there." The tramp said, "Yos, I was offered one hundred dollars for him a few days ogo but I refused it. However, conditions are different now, and I would be glad to sell him for much less." So the bartender said "I will give you \$20 for that dog. He would be a good dog for me to have around here." The tramp said, "Done' and he offered the \$20 for the drinks, but the bartender said, "The drinks are on the trade." After finishing off the two drinks of whiskey the tramp walked to on an ewo drines of winsey the train water to the swinging doors, but just as he put his hand on one the dog said, "Hey wait a minute!" He turned around, and the dog said, "Did you say you were offered \$100 for me a few days ago and now you sold me for \$207. The trainp said "Yes," and the sold mo for SAN' The tramp said "les, and use dog said, "Well I'll be dammed if I ever speak again." (Laughter) That is the way I feel after having to follow Dr Bauckus and Dr Baucr, who are such excellent orators. Dr Bauckus has desired. sembed and reported so wonderfully on his administration, which has overlapped mine, that it is really a repetition to say it in a very different and inferior

(This portion of the address appears on page 2525 of this issue under heading of "Address of the President.)

SPEAKER BAUER Thank you, Dr Cunniffel The remarks of the President will be referred to the Reference Committee on the Report of the President, Dr Coon, Chairman, except that portion which pertains to compulsory sickness insurance, and that will be referred to the Reference Committee on the Report of the Planning Committee, Dr Di Natale, Chairman.

I believe there are no other supplementary reports to be given, Mr Secretary?

SECRETARY ANDERTON No (Picase note that Dr. Werts submitted direct to the Reference Committee on Report of Council-Part VII, Dr Moses H Krakow, Chairman, the following Supplementary Roport on the Medical Care Insurance Bureau, which was not mimeo-graphed and distributed to the delegates so it is being included here, and will change the above to that extent.)

Section 6 (See 51)

Supplementary Report. Medical Care Insurance Bureau

To the House of Delegates—Gentlemen.

I herewith submit a supplementary report as Chairman of the Council Committee on Public Relations and Economics.

#### MEDICAL CARE INSURANCE

The Rechester Plan known as the Genesee Valley Medical Plan, Inc., has now incorporated and has applied to the State Wolfare Department for approval, and plans to be in operation before January 1 1946 At the request of Dr Albert Kaiser Presi dent of the Plan, Mr Farrell, Director of the Medical Care Insurance Bureau, was asked to extend an invi tation to all counties within their operating area to participate in the program at the Seventh District Branch meeting in Chilton Springs on September 27 As a result of his talk at the Clifton Springs meeting, great interest was manifested by all the adjacent county societies in becoming participants in the Plan.

Mr Farrell appeared at the Fifth District Branch meeting in Oneida on September 18, at the Third District Branch meeting on September 20, at the Fourth District Branch on September 21, and at the Sixth District Branch on September 27 these meetings talks were presented and discussions were held on the advantages of medical-care insurance on a voluntary basis and active participation and interest were urged on the part of all members of the medical profession.

On October 1, Mr Farrell appeared before the Warren County Medical Society at their Annual Meeting and discussed the proposed plan which me under consideration in the Albany area, and a motion was adopted to instruct the representatives of Warren County that they would participate in whatever plan was adopted in the Albany District

On October 3 a meeting was held in Albany at the request of Dr Arthur E. Heslin and representatwee of cloven counties in the Albany area were present. A definite program was agreed upon to provide for in-hospital medical-surgical care including obstetnes, to be taken back to the respective

county societies for their consideration

Three meetings have been held with Mrs Schults. Chairman of the Program Committee of the Womnn's Auxiliary, and arrangements are being made to present medical-care insurance before all of their Auxiliary groups. At the present time nine re-quests have been received from different county Woman's Auxiliary groups to have this subject presented to them, at which time many lay people will be invited to learn of the advantages of medicalcare insurance on a voluntary basis. Mrs. Griffin, President of the Woman's Auxiliary, has arranged for Mr. Farrell to address the group in Buffalo at the House of Delegates meeting on Tuesday, October

9, at 8 30 A.M

At the present time there are four approved plans operating in New York State with a membership of over 230,000. When the two plans which are now in the process of formation are in operation, the entire state will be covered with the exception of two counties, Chautauqua and Jefferson, which have individual Blue Cross Plans. However, the Medical Society of Jefferson County has requested Mr Farrell to speak to their group on October 11 regarding the possibility of extending medical-care insurance to their county.

The progress and interest shown in voluntary medical-care insurance during the past year is definite evidence of the need of the support of the entire medical profession to help promote and increase enrollment in these plans. This is particularly true in view of the fact of the appointment by Governor Dewey of a Commission on Medical Care Insurance to study the needs for a medical-care plan to be reported to the Legislature no later than February 15,

1946

### Respectfully submitted,

CARLTON E WERTZ, M.D., Chairman (The following are a number of supplementary reports that have been mineographed and distributed and referred to their respective Reference Committees)

Section 7 (Sec 61)

Supplementary Report of Council—Part I Postgraduate Education

To the House of Delegates—Gentlemen

I herewith submit a supplementary report, as Chairman of the Council Committee on Public Health and Education

#### Postgraduate Education

In May, 1945, letters were sent to all physicians who had arranged for courses of instruction for inclusion in the Course Outline Book requesting them to make any changes in subjects or speakers they desired

To provide additional instruction to be announced in the 1945–46 Course Outline Book, letters requesting the names of additional speakers and subjects were sent to the professors and executive officers of several departments in the nine medical schools in New 1 ork State There was excellent response and the revised Course Outline Book will include many new and timely subjects. Among these are additional series of lectures on dermatology, general medicine, obstetrics, otolaryngology, and surgery

The revised Course Outline Book will be ready for

distribution within a few weeks

On July 10, 1945, the annual Meeting of the Council Committee on Public Health and Education with representatives of the New York State Department of Health was held in New York City Present at this session, in addition to the Committee were the Chairman of the Subcommittees on Child Welfare, 4-H Clubs and Youth Health Activities, and Cancer, the Assistant Commissioner for Medical Administration, the Assistant Commissioner for Local Health Administration, and Directors of various divisions of the New York State Department of Health and officers of the Medical Society of the State of New York The meeting

was held to review the work accomplished by the Committee in the field of postgraduate medical education during the year May 1, 1944 to May 1, 1945, and to discuss future plans. Mimeographed material was distributed at this Meeting showing the number of lectures and the subjects given, the percentage of attendance, the counties in which this instruction was presented, and the amount of instruction provided jointly by the Medical Society of the State of New York and the New York State Department of Health. The participation of the New York State Department of Health is no small factor in the joint postgraduate medical education program offered by the Medical Society of the State of New York, and the Committee expressed to the Department the appreciation of the Society for not only the cooperation of the Department in developing programs but also for the financial assistance received.

In addition to the postgraduate instruction mentioned in the report of the Council Committee on Public Health and Education submitted on March 3, 1945, instruction has been arranged for the follow-

ing county medical societies

County	Instruction	Number of Lectures
Greene	Virus diseases	1
	General medicine	2
Jefferson	General medicine	1 2

#### Supplementary Report of Council—Part II Maternal and Child Welfare

Maternal Welfare —At the request of the Director of the E.M.L.C. Bureau of the New York State Department of Health a meeting of the Subcommittee on Maternal Welfare was held in New York City on June 14, 1945. Present at this meeting, in addition to the Subcommittee members, were members of the Subcommittee on Public Health and Education, members of the Subcommittee on Child Welfare, the Assistant Commissioner for Medical Administration and the Director of the E.M.I.C. Bureau of the New York State Department of Health, and officers of the Medical Sciency of the State of New York. This meeting was held to discuss certain problems relative to the designation of specialists for the E.M.I.C. program

A meeting of the Subcommittee on Maternal Welfare was held in New York City on Tuesday September 11, 1945 Present at this meeting, in addition to the Subcommittee members, were members of the Committee on Public Health and Education, immbers of the Subcommittee on Child Welfare the New York State Commissioner of Health, the Director of the E.M.I. C. Bureau of the New York State Department of Health, the Commissioner of Health of the City of New York, and officers of the Medical Society of the State of New York. Certain problems concerning the E.M.I. C. program were discussed at this seeson.

Cussed at this seemon.

Child Welfare — A meeting of the Subcommittee on Child Welfare was beld in New York City on March 7, 1945. Present at this meeting were Members of the Subcommittee on Child Welfare, members of the Council Committee on Public Health and Education, and representatives of the New York State Department of Health and the City of New York Department of Health. This meeting was held to discuss routine matters.

A meeting of the Subcommittee on Child Welfare was held in New York City on April 10 1945, to discuss child behavior problems and juvenile delinquency Procent at this meeting in addition to the Subcommittee members were Members of the Council Committee on Public Health and Education officers of the Medical Society of the State of Yew York Approximatives of the New York State

Departments of Education and Montal Hygune, Beard of Education of the City of New York, Selective Service of New York and Research on Social Devisitions of the Department of Neurology of the College of Physicians and Surgeons of Columbia University. Also discussed at this meeting were reports and recommendations from the Army. These had todo with individuals rejected by the Army, approximately 30 per cent having nervous and mental disorders.

Members of the Subcommittee on Child Welfare have attended meetings held by the Council Committee on Public Health and Education for the discussion of recent developments in the E.M.I.C. Program. For a report of these activities see the report of the Subcommittee on Maternal Welfare.

Section 9 (See 44)

Supplementary Report of the Council, Part III Industrial Health

In April 1945 a letter was received by the Chairman of the Council Committee on Public Health and Education from Dr Carl VI. Poterson, Secretary, Council on Industrial Health, American Medical Association This communication requested the personnel of communication requested the personnel of committees on Industrial health in the county medical societies in New York State. Letters were sent to the secretaries of all county medical societies in New York State requesting this information which, when received, was formarded to Dr Peterson.

The following is a copy of a letter, which was sent to all chairmen of county society committees or subcommittees on industrial health in New York

State by Dr Carl M. Peterson

"June 19, 1945

"Dear Doctor
'I learn from Dr O W H. Mitchell, Chairman
of the Committee on Public Health and Educa
tion, that you have been appointed Chairman of
the Committee oo Industrial Health in the
County Medical Society

"We are pleased indeed to learn of this interest in industrial medical matters in your area and we shall always be glad to be of as much help as possible to you in developing a program. Our general recommendations are contained in the pamplet which I enclose. It is quite possible, of course, that all of these recommendations will not apply to your area. They are suggestions only "We recommend particularly that you establish

contact with the Sudy Committee on Industrial Health of the Medical Society of the State of New York and the Division of Industrial Hygiens of the New York State Department of Labor Dr. Leon H. Griggs Dr. Leonard Green

Chairman
Study Committee on
Industrial Health
Stato Tower Building
Syracuse, New York

burg
Executive Director

Hygrene
N Y State Department of Labor

80 Centre Street New York 13, New York York

"They will be able to give you further instructions about setting up an industrial health program in your area.

"Cordially yours, CARL M. PETERSON M ib., Secretary Council Committee on Industrial Health

At the meeting of the Council on June 14, 1945, the Chairman of the Council Committee on Public Health and Education requested that Dr Herbert H Bauckus be reappointed as chairman of the Study Committee on Industrial Health in place of Dr Leon H Griggs, the present chairman, and Dr Griggs to remain on the Study Committee as a member to fill the vacancy created by the sudden death of Dr Robert K Brewer, a member of the Study Committee

Section 10 (See 109)

### Supplementary Report of Council-Part IV Public Health Activities

4-H Clubs and Youth Health Activities — The Chairman of the Subcommittee on 4-H Clubs and Youth Health Activities attended a meeting of the New York State 4-H Health Committees held in Syracuse on March 14, 1945 A very comprehensive report of the health programs was presented The matter of employment of a full-time health educator was one of the important items on the pro-Your Chairman feels that a health educator should be employed who would cooperate with the government health agencies, the Medical Society of the State of New York, and many other organizations and gave his support to such a proposal recommendation was favorably received

Cancer —A meeting of the Subcommittee on Cancer was held on April 11, 1945, in New York City Present at this conference, in addition to the Subcommittee members, were the Chairman of the Council Committee on Public Health and Education, officers of the Medical Society of the State of New York, and the Chairman of the New York State Committee of the American Society for the Control of Cancer The purpose of this meeting was to consider some of the difficulties between the New York State Committee of the American Society for the Control of Cancer and the American Cancer Society

A request was received from the Executivo Director of the American Cancer Society for the names and addresses of county society chairmen of cancer committees. Letters were sent to the secretaries of all the county medical societies requesting this information

Since submitting the annual report, arrangements have been completed for nine Regional Teaching Days on Cancer to be presented in various counties throughout the State, with a total of thirty-three lectures

Hard of Hearing and the Deaf —At the meeting of the Council on May 10, 1945, the Chairman of the Council Committee on Public Health and Education read the following letter of resignation re-ceived from Dr C Stewart Nash, Rochester, Chairman of the Subcommittee on Hard of Hearing and the Deaf

"I am tendering my resignation as Chairman of your Subcommittee on the Hard of Hearing and

"I am reluctant to do this, for, in this Committee, opportunities to serve the Deaf and the Hard of Hearing are great and I have a particular interest in serving the Doaf and the Hard of Hearing In addition, the Department of Health of the State of New York has promised the Committee its complete cooperation and financial support All the Department has asked is that an estimate of the amount of money needed to run the ten or twelve Conservation of Hearing Centers throughout the State for the year 1945 plus the amount of money needed to supply hearing aids to deserving indigents, be submitted to Dr Edward Rogers in time to be included in the Department's 1946 budget

"Frankly, this work needs the services of a fulltime man, but in any case it needs a chairman with more time at his disposal than I am able to

"Please be assured that I shall be glad to assist both you and the new chairman to the best of my ability

C Stewart Nash, M D, Chairman"

The Chairman of the Council Committee on Public Health and Education, after reading the above letter, requested that this vacancy be held open until he had time to investigate just what the Depart-

ment of Health is planning

The Council voted that the request be granted Diseases of the Chest —Following a meeting of the Council Committee on Public Health and Education in New York City on July 11, 1945, with representa-tives of the Division of Tuberculosis of the New York State Department of Health and officers of the Medical Society of the State of New York, the Chairman of the Council Committee on Public Health and Education, in company with representatives of the Division of Tuberculosis of the New York State Department of Health, held conferences with the deans and other representatives of the four upstate medical schools, namely, Albany, Buffalo, Rochester, and Syracuse The Committee agreed to be a ter, and Syracuse cosponsor of a postgraduate program to be largely centered in the four state tuberculosis hospitals. These are Mount Morris Tuberculosis Hospital, Now York State Hospital for Incipient Pulmonary Tuberculosis, Homer Folks Tuberculosis Hospital, and Hermann M Biggs Memorial Hospital proposed to establish from four to six additional residencies at each institution which will provide intensive instruction on diseases of the chest for physi-cians returning from military service. The Medical Society will not be obligated except for an occasional lecture to be given at these institutions as a part of the regional postgraduate program of the Society At the meeting in New York City on July 11, there was general agreement that adjacent medical schools should be invited to participate in the Such a plan would give the physicians program serving in the hospitals an opportunity to have the advantage of facilities and instruction not available in the institutions The representatives of the medical schools were very enthusiastic about the proposal. At the present time, an announcement is being prepared but is not ready for release.

Section 11 (See 80)

## Supplementary Report of the Council-Part V Laboratory Service and Medical Care

Preface of Report of Preliminary Study, First Part This Committee was created by the House of Delegates through the recommendations of the Planning Committee for Mcdical Policies to study the need for centers for diagnostic aid to physicians throughout the State of New York

Meeting of House of Delegates, May 8, 1944

"Regional Centers for Diagnostic Aid-The Committee has made a very comprehensive study of the necessity of the location and the supervision of the centers in rural areas believe they can be created and operated in care fully selected areas with no damage to free and unfettered practice of medicine. Since no specific recommendations are made at this time. we will not go into dotails of their report. They do, however, recommend that a special committee or subcommittee be appointed by the President to make a survey of New York Stata to determine the need for such a program and the areas to be cared for The suggested methods of operation, are of course, tentative, and if the survey indi-cates the desirability of establishing such diag-nostic centers then the details of management would have to be worked out carefully Reference Committee recommonds the appointment of such a committee by the President.

It is a Subcommittee of the Council Committee

on Public Health and Education

The assignment of the study by your Chairman has been made by districts and the Committeemen 878

Third District Fourth District Fifth District Sixth District Boyenth District Eighth Dustrict Chairman

First District

Dr A. A. Eggston Dr S R. Monteith Dr S L Smith Dr Kenneth Bott Dr Dan Mellen

Dr George A. Marsden Dr I N Peterson Dr Walter Thomas Dr Peter DiNatale Dr F Leelie Sullivan

These men have been engaged in a complete sur vey of each town, village, and city in each county of their district, and have carefully recorded these facts.

1 Mapping the areas with town and county

lines 2. Denoting the nearest exact figure of population in towns and villages of 3 000 or over, in cities and counties

Locating on these maps and in narration that number of effective and meffective physicians and the ratio relative to specialists and general practi-

tioners

4. Locating all legally incorporated hospitals with specification as to type of hospitalization, proportionate number of beds and remarks as to type of service, and as to whother it has sufficient service capacity for the community served. Notation of x ray motabolic, electrocardiagraphic and labora tory service, and blood bank facilities.

5 The location of all laboratories

The location of all laboratories assisting in diagnosis of any type. Specification as to type approved or unapproved whether they are associated with or independent of a hospital and the variety and scope of work ilone, that is bacteriology serology pathology tissue section, hematology milk and water examination, and so forth

It has been charged from time to time as stated at the November 9 1911 meeting of the Council, that soveral areas, particularly in the northern part of the State, are not amply covered by doctors or that the facilities for doctors to practice are not modern, thus the creation of this Committee to clarify to what extent diagnostic aid is lacking and where. We will have at hand when the fundamentals are known information and material so that discussion may be instituted relative to medical care in any region of New York State with the ex-ception of the City of New York and Long Island

It was the understanding of the Committee as moved by Dr Louis H Bauer that this was a preliminary study and later if the need arose a special committee or field worker might be bired to intomaly the survey The primary purpose is to study the need for increased facilities for diagnostic aid in rural areas, and if such aid is found to be necessary to determine where these Diagnostic Aid Centers

should be located

The Committee has met regularly since its inception, the first meeting being held on December 9, 1944, and monthly to date. We have consulted with the New York State Department of Health, Division of Laboratories, Procurement and Assignment Service, the Health Preparedness Commission, as well as the Planning Committee and the Committee on Public Health and Education of the Medical Society of the State of New York

It is not the duty or interest of this Committee to theorize on the socialistic trends in medical care, nor is it its duty to suggest plans of any type for the alteration of discovered difficulties or ills. These remedies for poor quality care, lack of facilities or personnel will be studied and suggested by the Planning Committee of the Medical Society of the State of Naw York, under the chairmanship of Dr

John Stanley Kenney

This Committee might state, however, that if so desired, an experimental clinic for diagnostic aid onested at experiments that for algebraic might be set up in the counties of Schuylor Chenango and Tioga, or one station might be set up in the Fourth District to take care of the north and northeastern part of Delaware County the southeastern part of Schoharie County and the southeastern part of Schoharie County

Wo are grateful for the assistance of the following people, who so kindly gave of their time and advice Dr Gilbert Dalldorf, Director of Divisional Laboratories New York State Department of Health, Dr Edward S Rogers, Assistant Commissional Commissiona sioner (Medical Administration) New York State Department of Health Dr Ruth Gibert, Director of Diagnostic Laboratories, New York State Department of Health, Dr O W H Mitchell, Chairpartment of Health, Dr U W II Augenen, Junaturan, Committee on Public Health and Education, Medical Society of the State of New York, Dr Charles Post, Dr George Bachr Dr Morras Maslon Dr R. L. Jeager, Dr Loo Simpson, Dr Thomas Goodfellow Assemblyman Loe B Masion Dr Thomas Goodfellow, Assemblyman Lee B Mailler, Chairman, New York State Health Proparodness Commission William Burna, Capt., (USNR) and Dr Joo R. Clemmons New York State Procurement and Assignment Service for State Procurement and Assignment Service for Physicians, Dr Basil MacLean Chairman, Now York State Temporary Commission for Medical Care, Dr Morton Levin Assistant Director, Division of Cancer Courton New York State Department of Health, Dr F E. Coughin, Datrict State Health Officer, Dr V A. VanVolkenhurgh, Assistant Campuscing Local Health Administrations (Local Health Assistant Campuscing Local Health Assistant Local H Assistant Commissioner (Local Health Administratson) New York State Department of Health.

The composite report will be filed with the Secre-

F LEBLIE SULLIVAN M D Chairman Subcommittee on Laboratory Service and Medical Care Medical Society of the State of Non York

July 18, 1945

Moetings of the Subcommittee on Laboratory Service and Medical Care were held on March 7,

April 11 and May 9 1945

At the request of the State of New York Commisson on Medical Care a meeting of the Subcommit too on Laboratory Service and Medical Care was held in New York City on June 14, 1945 The Com mission was interested in the survey which the Subcommittee is making of the need for a program relating to regional centers for diagnostic and

Commentary, Second Part-District One

The First District consists of the counties of Westchester, Putnam, Rockland, Orange, and Dutchess Westchester County (Surveyed by Dr A. A. Eggston)

It was found that Westchester County is adequately supplied by hospital, x-ray, and laboratory facilities. There are sixteen general hospitals with efficient laboratory, electrocardiographic, and metabolic services which serve the acutely ill. Several blood banks supply the area and seem adequate However, a supply with a little more dispatch might be useful in the northern part of the County

In addition, the State has county laboratory facilities at Grasslands Hospital, with branch laboratories in Peekskill and Mt Vernon It will readily be seen, therefore, that the County of Westchester is more than amply supplied with laboratory facilities, while in contrast, some of the counties nearby appear deficient. An interesting thing about Westchester County is that the population has decreased by 50,000 from 1940 to 1943. The 1943 census gave a total of 523,000 population.

The hospital bed ratio is 1 to 183 population, and

the physician-patient ratio is 1 to 920

Putnam County (Surveyed by Dr A. A. Eggston)

The survey of Putnam County shows the need of a good, centrally located general hospital offering all laboratory facilities including a blood bank. At the present time, the patients of this county have to travel for miles to get proper laboratory facilities either at Bedford, Danbury, Connecticut, Peekskill, or Poughleepsie

At Cold Springs, situated at one end of the County, there is one small forty-bed hospital, and at Lake Mahopac, a fifteen-bed maternity hospital, which does some medicine and some minor surgery

The population of the County varies from 15,000 to 25,000, and there are only eleven active doctors,

most of whom are past 50 years of age

It would seem that a good general hospital would add greatly to the medical care and be of tremendous aid to the local doctors, in addition to attracting younger men to this locality. At the present time, of course, many Putnam County patients go to West-chester County for use of the facilities in that county

county
Dr Dalldorf thinks that Westchester County
could serve such a small county, while to Dr Eggston, it seems that a county so situated, and of such a
population, is justified in having a general hospital

in the county itself

When the population is at its height, the ratio of physician to patient is 1 to 2,277, and 1 to 1,363 at

the lowest

There is no county laboratory service, no x-ray facilities, except for some work that is done by the

private practitioners

At our subcommittee meeting of April 11, Dr Baehr commented that the report from Westchester and Putnam Counties sounded like an ideal report He stated that relative to Putnam County, there will soon be a State agency looking into the matter of where new hospitals should be located, new laboratories, etc. In this, the work of the Committee, as it progresses, is going to play a great part. Each man responsible for one or more counties will be beginning to keep his eve on parts of the county in which the facilities are to be located, and finding out, at the same time, what the need of the county is Rockland County (Surveyed by Dr Stephen R. Monteith)

Here we find a compact county with an average population of 71,532, with a physician-to-patient ratio of 1 to 1,574. The county is so small that it is accessible at all points, therefore it can be said that there is no part of the county uncovered by good medical care. In peacetime there is one doctor to 938 people.

There are two general hospitals maintained in the county—one in Suffern and one in Nyack. It has recently been proposed by the Rockland County Medical Society to erect a county hospital to care for chronic diseases, thus relieving the congestion in these

two small hospitals

It appears that facilities such as these are definitely needed. Along with the proposed hospital, the establishment of a county laboratory would appear advisable. There is but one recognized laboratory in the county, which is maintained by the Good Samaritan Hospital in Suffern. There are no pathologists resident in Rockland County, and the laboratories maintained by the other hospitals, both State and general, located in the county are not up to State-approved standards.

Although all hospitals are equipped to do transfusions, there is no blood bank in the county—Both hospitals maintain x-ray and cardiographic depart-

ments

At West Haverstraw, the New York State Reconstruction Home laboratory is equipped—including facilities for basal metabolic rate determinations and electrocardiograms. However, due to the shortage of trained assistants the laboratory cannot function

It would seem, in view of the fact that many residents of Rockland County go to New York City and to hospitals in northern New Jersey, particularly to Jersey City Medical Center, Hackensack Hospital, and hospitals in Paterson, that Rockland County is amply covered

Dr D E Overton, Assistant District Health Officer, in his letter of May 3, states that the five townships of Rockland County cover an area of 20 by 25 by 16 miles, with a population, as stated heretofore, of 71,532, and a ratio of physician to patient of 1 to 1,574. In some of the individual townships, such as Orangctown, the ratio is 1 to 2,273, and Stony Point 1 to 2,130, which seems comparatively high if taken by townships. However, due to the compactness of the county, the population is well taken care of Also, it has been learned that on return from military service many of the men plan to locate in the county.

Orange County (Surveyed by Dr S R. Montesth)

There are 101 active physicians in Orange County serving an estimated population of 135,536, giving a ratio of 1 to 1,342. Taking into consideration the fact that there are several areas that are rural, and that the various men, although located in one place, cover other areas, the county is adequately covered, and there is no dearth of physicians

Hospital facilities in the county are, on the whole, adequate and well distributed—six general, one

mental, (?) one sanatorium

Although State-approved laboratories are maintained in the hospitals at Cornwall, Middletown, and Newburgh, with unapproved laboratories in Goshen, Newburgh, Port Jervis, and Otisville, there is no county laboratory service. These unapproved laboratories appear to do work adequate to the demand upon them There is no blood bank X-ray departments are operated and electrocardiograms done

Dr Waterhury, Secretary of the Orange County Medical Society, feels that a tuberculosis hospital Is needed in this county

Dutchess County (Surveyed by Dr Scott Lord 8mith)

Dutchess County is satisfactorily covered for medical care as far as number and distribution of doctors go However, on the eastern end of the county, the loss of any one man would leave the district uncovered and impossible to take care of from the surrounding areas.

Laboratory facilities are available and adequate. A county laboratory would better coordinate the public-health work and the Health Officer's activi-

Relations between the medical profession and the welfare boards—both city and county—are most harmonious, and are functioning under an agreement made eleven years ago and still in force

In Dutchess County as elsewhere, the medically indigent are taken care of nt the expense of unpaid hospital or doctors' bilis and occasional insufficient

care given

The population of the county is 120 524 giving n physician-to-patient ratio of 1 to 1 370. In all, there are thirteen hospitals and infirmances three hospitals operate State-approved laboratories eight maintain unapproved laboratories, one of which is connected with n private hospital. Seven are equipped to do basal motabolie rate determinations and electrocardiographic work, four additional hospitals are supported to the control of the pitals do only basal metabolic rate determinations ten maintain x-ray departments.

It has been recommended by the State that n county wide inboratory service, inclusive of the City of Poughkeepsie be established.

Albany County (Surveyed by Dr Kenneth Bott)

The population of Albany County is 221 315: with a physician-patient ratio of 1 to 687 present time this county does not have sufficient physicians. However, in peacetime the county is well covered

Due to the fact that the New York State Labora tory, Albany Hospital Laboratory and Bender Laboratory are all situated in the City of Albany, the city is well cared for as for laboratory facilities

This does not hold good, however for the rest of the county where the nonpaying patient has no access to laboratory work. It has been suggested that no county laboratory service be established by contract with either the Albany Hospital Laboratory or the Bender Hygienic Laboratory
Dr H L Nelms, Secretary of the Albany County

Medical Society, feels that it present the hospital bed capacity is insufficient, due to wirtime condi-tions. Otherwise the county is extremely well cared tions.

Columbia County (Surveyed by Dr Kenneth Bott)

With n population of 41 464, this county has n physician-patient ratio of 1 to 1,728. There is one 100-bed hospital. Laboratory service is connected with the Hudson City Hospital, but there is no service available for the nonhospitalized patient. There is no blood bank

The City Hospital is Inadequate at present and many of the inhabitants must go to Albany or Pittsfield Massachusetts for treatment. It is the opinion of the writer that the county is not suf ficiently covered by medical and laboratory care at the present time.

Many of the county's doctors are now in the

armed forces and no doubt, when discharged will resumo practico here.

It is surprising to note that Inasmuch as a County Health Unit has been established there has been no mention of county laboratory facilities.

Greene County (Surveyed by Dr Kenneth Bott) The population of Greene County is 27,926 and

has n physician patient ratio of 1 to 1,330

With one 60-bod hospital, hospital inculties are inadequate at present, as this hospital draws from Schoharic and part of Albany County There is no blood bank. There is no county laboratory service available for the nonhospitalized patient.

Rensselaer County (Surveyed by Dr Kenneth

This county has a population of 121,834 and n physician patient ratio of 1 to 952 three general hospitaal

This county seems to be ndequately covered by medical care nithough there is no county laboratory

service available.

Schoharle County (Surveyed by Dr Kenneth Bott)

Thus is a sparsely populated county of 20,812 inhabitants with a physician-patient ratio of 1 to 1,487. However, this figure does not give an accurate idea of the medical situation there. The county is absolutely devoid of diagnostic ald, either x ray cardiography, metabolic rate determinations, or laboratory facultics. There is one 7-bod hospital at Cobleskill and n private 8-bed hospital at Jeffer BOL

Dr L. Becker, Chairman of the Public Health Committee of the County Medical Society feels that the county is inndequately covered and that they are in need of n hospital, but further states that they are not equipped with the type or number of men nt this time to man such n hospital. Seven of the fifteen physicians in the county are over 65 years of ngo and there are six young physicians in the service. Due to the proximity of Albany and Schenectady, n fair type of medical care is main

Sullivan County (Surveyed by Dr Kenneth Bott)

With a population of 37 901 and n physician patient ratio of 1 to 883 and two general unapproved hospitals, this county is well covered. It is also near Port Jervis, where x ray and inhoratory facilities are available. However, there is no county inhoratory service for Sullivan County

Ulster County (Surveyed by Dr Kenneth Bott)

In this county of 87 017 people the physician patient ratio is 1 to 1,280. This figure is deceiving, as practically all of the doctors are concentrated in the villages and city, while the outlying districts are poorly covered

There is county inboratory service nyallable.

Fourth District

Clinton County (Surveyed by Dr Dan Mellen)

With n population of 54,008, the physicisn-patient ratio is I to I 687. There are two general hospitals and one county hospital with an ugregate number of 240 beds. County laboratory service is nvallable except in the field of tissue pathology. The two upproved laboratories are associated with the hospitals at Plattsburgh.

Essex County (Surveyed by Dr Dan Mellan)

This is n relatively small, mountainous county with n population of 34,178 and n physician to-patient ratio of 1 to 899 There are two general hospitals

with a total of 65 beds

There is no county laboratory service available and it would probably be more prudent to contract for service with the neighboring laboratories

General conditions are good in this county

(Surveyed by Dr Dan Mellen) Franklin County

Three general liospitals and thirty-nine physicians care for a population of 44,286, with a physician-to-patient ratio of 1 to 1,136. There are three approved laboratories doing blood chemistry and research

No county laboratory service is available, and recommendations are noted in the Summary of

Deficiencies

Fulton County (Surveyed by Dr Dan Mellen)

With a population of 48,597, the physician-patient ratio of Fulton County is 1 to 1,279 The only general hospital is located in Gloversville, with a capacity of 125 beds The hospital has complete facilities and there is an approved county laboratory connected with it

At present, the conditions are inadequate and it is felt that almost a double number of beds could be

utilized

Montgomery County (Surveyed by Dr Dan Mellen)

With a population of 59,142, the physician-patient ratio is 1 to 1,515 There are two general hospitals in the City of Amsterdam, with a total capacity of 260 beds. This county also has an approved laboratory service with laboratories in each of the bospitals, and a branch in Canajoharie It is felt that at present there is a dearth of physicians, also that a few more hospital beds could be used to good advantage

Hamilton County (Surveyed by Dr Dan Mellen)

This county covers perhaps the greatest number of square miles, 2,250, but has a population of only 4,188 There are six effective physicians, giving a 4,188 There are six energing physician-patient ratio of 1 to 698 There is no hospital, no county medical society, and masmuch as this county is so sparsely populated, there is no hospital behavior service available. Two of the townships are considering a contract for such service with the Fulton County Laboratory, in Gloversville. Such action seems advisable and should be taken

Saratoga County (Surveyed by Dr Dan Mellen)

The county has an actual population of 65,606 Due to its spas and the fact that its summer population increases greatly, it is somewhat difficult to estimate the medical-care statistics for the year round The physician-to-patient ratio for the actual population is 1 to 1,5257, which in itself is low There are two cities in this county, Saratoga Spa and Mechanicville Mechanicville, with a population of over 9,000, has no hospital, and this has been taken up further in our Summary of Deficiencies At this time we wish to call your attention to the report of this county as submitted by Dr Thomas Goodfellon, who so generously gave of his time and advice. His letter of statistics may be found in the Book No 2 of County Reports

Schenectady County (Surveyed by Dr Dan Mellen) A county laboratory service is available for the County of Schenectady There is but one general hospital for the county, which has a population of 122,494 and a physician-to-patient ratio of 1 to

1,065

St Lawrence County (Surveyed by Dr Dan Mellen) With a population of 91,098 and a physician-patient ratio of 1 to 1,345, this county supports five general hospitals In general, medical care seems adequate Hospital facilities seem well distributed. except in the southern and southeastern part of the All but Canton have county laboratory county Bervice

Improvement could be made at Massena, where hospital facilities could be increased, the present building is government-constructed, single-story, and barracks-type, so arranged as not to permit much flexibility in operation, and lacking private rooms (Lanham Act) This building should be replaced by one of permanent structure with an increase of bcds There are no doctors in the towns of Lawrence

Warren County (Surveyed by Dr Dan Mellen)

This county has a population of 36,035 and a physician-patient ratio of 1 to 1,135. There is one general hospital with 124 beds in the city of Glens Falls There is a need for more hospital beds, but the problem of staffing is unsolved This county is supplied with county laboratory service

Washington County (Surveyed by Dr Dan Mellen) The physician-patient ratio in this county is 1 to 1,731, the population being 46,726. There are two general hospitals which are private hospitals, with a total of 126 beds County laboratory service is available in the northern part of the county through contract with Warren County Washington County has contracted with the Mary McClellan Hospital in Cambridge for laboratory service for the southern part of the county, but this is not an approved labo-County laboratory service for the entire ratory county is recommended.

Fifth District—Surveyed by Dr George Marsden

Herkimer County

The population is 60,963 and the physician-patient ratio is 1 to 2,258. The county supports three general hospitals. While all of the hospitals have laboratories, there is but one approved laboratory, which is located in Ilion. There is no county labora-

While the ratio is high as far as doctors are concerned, it is stated that there is adequate medical

care for this county

Jefferson County With a population of \$2,280 the physician-patient ratio is 1 to 1,513 There are two general hospitals with a total of 353 beds They are both located in Watertown Although both of these hospitals have state-approved laboratories, there is no county laboratory service available for this county There is no blood bank. And it is felt that there is not adequate medical care for this county

The population for this county is 22,815, with a physician-to-patient ratio of 1 to 1,755 There is Approved county one general hospital of 57 beds laboratory services are available

Dr Phelps, whose letter is incorporated in the county detailed report, states that ten additional beds are needed in the hospital and that there is one area uncovered since the doctor has been taken into the army

Madison County

Two general hospitals with a capacity of 101 beds care for a population of 39,598
There is a physicianpatient ratio of 1 to 1,209
There is no county laboratory service available

Oneida County

The population is 215,210, and the county has a physician-patient ratio of 1 to 1,328 This county has a number of mental hospitals and the medicalcare problem as for physicians is adequately covered. However, there are no county laboratory facilities.

Onondaga County

This county is well cared for, with a physician-patient ratio of 1 to 732 in the city of Syracuse, and 1 to 1,884 for the whole county

There are six general hospitals and five special hospitals with a bed capacity of 1,742 and 301 bassinets. County laboratories are available.

Oswego County

This county has a population of 61,236 and a physician-patient ratio of 1 to 1,611 There are two general hospitals and one tuberculoais hospital All three have x-ray and laboratory facilities. Only one of the laboratories is approved, however

It would be feasible to establish a county labora tory system in this county with a hranch laboratory at some point, as Oswego City Hospital is too small for the load.

Physicians should be established in the outlying

districts.

Sixth District—Surveyed by Dr I. N Peterson

Broome County

Medical care for this county seems madequate, and it is not without strain on the existing facilities that good care is provided. Three general hospitals are planning postwar expansion.

With a population of 165,749, the ratio of physician to patient is 1 to 1,246. There are five general hospitals, one of which is open only to the employees

of a local industry
While county laboratory service is available in
Binghamton, Endicett, and Johnson City, there has been no such service established for the county as a whole.

Cheming County

With a total of forty-eight physicians and a population of 73,718, the physician patient ratio is 1 to 1,375 With adequate hospital and laboratory facilities, this county recoves nearly normal medical recentles, this county receives nearly normal medica-care. Difficulties have arised during these war years due to personnel shortages. The chief shortage was the lack of a competent ishoratory director. This has been remedied lately, and a resident pathologist-bacteriologist is now in charge.

Chenango County

With a total of twenty-one physicians and a population of 30,454, a physician patient ratio of 1 to 1,000 medical care is markedly reduced. Hospitals at Norwich and Bainbridge are the only two in the county There is no county laboratory service shall. Further deficiencies are discussed in the Sum-

Cortland County

Hospital and laboratory facilities seem to be ede-quate in this county, although they are stretched rather thinly over the rural districts. The population of the county is 33 668, and the physicianpatient ratio is 1 to 1,800

It would seem wise to establish branch laboratories in a central point, such as Otselle or South Otselle, under the direction of the director of the Cortland County Laboratory

Delaware County

The population of the county is 40,989 and the physician patient ratio is 1 to 2,000. The situation as disclosed by this survey indicates the necessity for the development of a county system of hospital and laboratory service with adequate facilities for medical and hospital care and for clinical and laboratory investigation.

Considering the location of the two existing satisfactory hospitals and the varying degrees of population, it appears to Dr Peterson that the logical cito of development would be at Walton.

Schuyler County

Although this is a small county, it would seem that there is an inadequacy of modical care. There are only sowen effective physicians in the county to care for a population of 12,979 people

There is no blood bank and no county laboratory service available. There is one small general hos-

pltal with 36 beds.

Tioga County

The physician-to-patient ratio for this county is 1 to 1,450, with fifteen effective doctors and 27,072 population. There is one general hospital of 67 beds. The county has the equipment for a hlood bank but as yot has been unable to find the help to main-

tain the service. At present there is no county laboratory service.

Tompkins County

The population of 42 840 mostly centered about the city of Ithaca, and seventy five physicians, give a physician-patient ratio of 1 to 1,283 Medical care in this county has been maintained at a high level. There is complete laboratory service.

Seventh District—Surveyed by Dr Walter Thomas

Cayuga County
The ratio of physicians to population is 1 to 1,985
The prewar ratio was 1 to 701. There are ample

hospital facilities, one bed to each 251 persons. Until recently, the county laboratory was complete and fully approved, but since the resignation of the

director, approval was withdrawn.

Livingston County

Only one incorporated hespital in the county allows one bod to 1 070 persons, which according to the anthonties is adequate. The physician patient ratio is 1 to 1,165 There is one approved laboratory which supplies county service.

Mouroe County

The physician to-patient ratio in the county is to 1,090. There are nine general hospitals with a total of 2 318 beds, a ratio of 1 to 189 population.

In addition, there is a county tuberculous hospital, a county hospital for the aged, and a mental hospital for the county Ample laboratory facilities are available through eight approved laboratories.

Ontario County

The physician-to-patient ratio is 1 to 1,382, and there are ample hospital facilities. County labora-tory service is available.

Seneca County

This county has a physician-patient ratio of 1 to In a county has a physician-patient ratio of 1 to 1818, which is less by 41 per cent than the prewar figure of 1 to 1,230. There are two general hospitals with one bod to each 467 people. There are no approved laboratories, but there is one laboratory at Geneva, a few miles away.

According to the letter of Dr. Prederick Lester, which is incorporated when the prediction of the product of the prediction of

which is incorporated under the individual county detailed report, there are insufficient hospital beds and it is recommended that there be a new hospital at Seneca Falls.

Steuben County

The physician-patient ratio in this county is 1 to 1,685 pepulation, the hospital-bed ratio is I to 200. There are adequate laboratory facilities, three approved and two unapproved laboratories.

Wayne County

The physician-patient ratio is 1 to 1,551 at the present time as compared with 1 to 1,076 before the war, or an increased load of about 44 per cent. There is only one incorporated hospital of 26 beds, but there are three other hospitals with a total of 77 beds, in which the work is comparable with that of the first. There is a complete, approved (except for Wassermann tests) laboratory connected with the State School at Newark, which services the county under contract.

The comment by Dr Hobbie, Secretary of the Wayne County Medical Society, is incorporated

with the county reports

Yates County

This is the smallest county of the district. It has a population of 16,381 and a physician-to-patient ratio of 1 to 1,365. The hospital at Penn Yan of 50 beds gives a ratio of 1 to 327 population. An approved county laboratory is operated under the directorship of the Ontario County Laboratory.

Dr R. F Lewis, Secretary of the County Medical Society, states that general conditions are satisfac-

wij

Eighth District—Surveyed by Dr Peter J Di Natale

Allegany County

There is adequate medical care, with a physicianto-patient ratio of 1 to 1,417 Several towns in the north-central and east-central parts of the county have no physicians, but it is understood that surrounding medical facilities are available

It would seem feasible to increase the hospital facilities and it is believed that such a plan is under

way

Cattaraugus County

The physician-patient ratio is 1 to 1,513 Of the forty-eight effective physicians in the county thirty-three are centered in three communities

All types of diagnostic and are available to the county However, there is no blood bank in any of

the four general hospitals

Chautauqua County
The ratio of physician to patient is 1 to 1,500, there are four general hospitals and one tuberculosis hospital. There are three approved laboratories There is no blood bank.

It is felt that the county is on minimal medical care due to the fact that so many of the physicians

are in the services

Ene County

With its population of 798,377, the city of Buffalo has a ratio of 1 physician to each 1,297 population, while the remainder of the county has 1 to 1,719 Adequate laboratory service is available. There are eleven general hospitals which do all types of diagnostic work.

Genesee County

A county of 43,875 population has a physicianto-patient ratio of 1 to 1,435. There are two general hospitals with a total bed capacity of 137. Both of these hospitals are raising funds for additional building when the time permits.

Approved laboratory service is available, but

there is no blood bank

Niagara County

With a population of 160,110 the physicianpatient ratio is 1 to 1,442. There are four general hospitals with a bed capacity of 550. There are two approved laboratories. However, there are no county laboratory faculties. The City of Niagara Falls maintains a city laboratory under State aid. There are four unapproved laboratories in the county

Orleans County

This county is adequately covered by physicians. Apparently there are no general hospitals in this county. There are no laboratories. The county has considered contracting with Genesee County, but the director could not employ assistants to take care of the additional load.

Wyoming County

This county seems to have only minimum medical care. There is one general hospital, which, according to Dr. Humphrey, is about 33 per cent overcrowded. Laboratory facilities are excellent.

F L SULLIVAN, M.D.

Summary of Deficiencies

Third Part

### First District

Westchester County —This county may increase the efficiency for the blood-bank supply for the northern part of the county

Putnam County—There are some conflicting opinions about the needs of this county—Our survey shows need of centrally located hospital. There are no laboratory or x-ray facilities—There is one hospital of 40 beds located at Cold Springs, in the western part of the county near the Hudson River

Dutchess County —Dr Scott Lord Smith states, "A county laboratory would better coordinate the public-health work and health activities"

Rockland County —There is no county laboratory service. We recommend the erection of a hospital for chronic diseases. There is no blood bank maintained, although apparatus is available.

Orange County—There is no county laboratory service, although there are three state-approved laboratories in the county—Cornwall, Middletown, Newburgh Dr E C Waterbury, Secretary of the Orange County Medical Society, states that a tuberculosis hospital is needed in the county There is no blood bank in the county

### Third District

Albany County —This county includes three cities, Albany, Cohoes, and Watervliet, also several villages with an over-all population of 221,315. There is adequate hospital coverage but a shortage of physicians. Adequate service (laboratory) for the City of Albany is provided. This is not true, however, in the case of Albany County outside of the city While facilities through the Bender Hygienic Laboratory are adequate for patients who are able to pay for the service, a county laboratory has not been established or service provided under contract Hence, while specimens for evidence of communicable disease can be examined at Division of Laboratories and Research, the types of service, including clinical-pathologic examinations, that are of such marked value as an aid in diagnosis are not available in the county outside of Albany for persons who are not able to pay for the work.

Greene County—There is no laboratory service for patients not in hospital. There is no blood bank. Increase in size of the hospital is needed. All specialized medicine is sent to Albany. More time for the pathologist is advised.

Columbia County —There is no laboratory service for nonhospitalized patients There is no blood bank for the county —There are insufficient hospital

beds but postwar plans for culargement of the hosnital have been made.

Sullivan County —There are two hospitals in the county, one at Monticello (30 beds), and one at Liberty (35 beds). Neither hospital is approved. There are two individual laboratories in Liberty and one laboratory in the Monticello Hospital. There are no laboratory facilities available for the county It is the beholf that Port Zervis, in Orango County, handles this work Question of trends of travel.

Rensselaer County —There is no county labora tory service available for this county, and such is recommended Otherwise, the county, which comprises two cities—Rensselaer, Troy—and soveral villages, is well covered

Schobarle County —This is n rural county with fourteen physicians, six of whom are over 64 years of ago. There are two privately owned hospitals, one at Cohleakill and one at Josseson with a total of 15 beds. This county affords no type of diagnostic aid It is recommended that a county laboratory service be established Dr L. Becker Chairman of Public Health, feels that the county is madequately evoured and that a hospital is needed However, he feals that in this time they do not have the number or type of men to man a fully equipped hospital.

Ulster County -- Medical service is satisfactory in this county

#### Fourth District

Clinton County—Conditions are satisfactory There is approved county laboratory service avail able except in the field of tissue pathology. It is recommended that laboratory service be developed so that all necessary types of diagnostic procedure can be provided

Essex County—There is no county laboratory service. Due to the geographic condition of the county and the fact that it is a rural distinct it is impracticable to establish a county laboratory service, and it is felt that it is better to contract with a nearby approved laboratory or laboratories for such work. It is felt that the village of Essex is inadequately covered by medical service.

Franklin County—No county laboratory service is available. It is recommended that such be established with centers in Malone, Tupper Lake, and Saranac Lake.

Fulton County —This county is well covered as far as physicians and diagnostic aid are concerned However, the hospital capacity should be practically doubled.

Montgomery County —The ratio of physicians is iow, 1 to 1,515 5, and the bed capacity in the hospital should be increased.

Hamilton County —This is a very small county which has only six doctors. There is no county hedical society. There are no county laboratory facilities available to the small population of 4,183. Two of the townships are considering a contract for laboratory service with the Fulton County Laboratory in Gloversville. No action has been taken, but it would be advisable.

Saratoga County—The City of Mechanleville, with a population of 9,000, has no hospital and must depend on the overrowded Troy hospitals. The county needs an more doctors and an additional hospital

Schenectady County —Due to the fact that Schenectady is an industrial city and that the population has increased during the past few years, the hospital is drastically inadequate to take care of the needs of the population. The effort has been begun to ruse funds to erect another hospital in Scherectady, which bertofore has had only a general hospital. Laboratory facilities in the county are excellent.

St. Lawrence County—Increased hospital facilities at Massena are advisable. There is at present a government building, constructed as a single-story building (barneks-type), so arranged as not to permit much flexibility in operation and no private rooms (Lanham Act) The bospital facilities should be increased by ten bods and five bassinets. There is no doctor in the towns of Lawrence and Brasher

Warren County —There is a need for extra beds in the hospital however, the problem of staffing such is unsolved Nurses and orderlies cannot be hired.

Washington County —Washington County contracts for laboratory service for the northern part of the country with Warren County, and the southern part with Mary McClellan Hospital, at Cambridge Howover at present Mary McClellan Hospital does not have an approved pathologus. It is recommended that approved laboratory service should be provided for the entire county

#### Fifth District

Herkimer County —There is no county laboratory service and such is recommended for the county There seems to be some inadequacy of physicians in the town of Marathon

Jefferson County —There is no county laboratory service m Jefferson County and there is no blood bank.

Lewis County—Dr Phelps comments that ten additional beds are needed in the bespital. There is electrocarding raphic review. One area is now uncovered by a physician, as he is in the armed forces.

Madison County —There is no county laboratory service available for nonbospitalized patients. The only approved laboratory is at Oneida, and this laboratory does not do tissue pathology

Oncida County—In this county the Utica City and Utica State Hospital Laboratories are the only State-approved ones. These are not approved in pathology. No county laboratory service has been established, but the City of Utica has provided approved facilities through contract with the Utica State Hospital Laboratory. The city also offers a limited amount of service to physicians in part of the county but its recommended that laboratory service for the county but service for the county but observed to be provided, with laboratories located in Utica and Rome. Dr. Hugh Shaw states that although the number of doctors is sufficient in peacetime, at present there is a temporary shortage.

Onendaga County -There is no deficiency in this

Oswego County — It would be featible to estable has a branch laboratory in this district, as the Oswego City Hospital is too small for the load. The ratio of physicians is low and it would be well to increase the number, especially in the rural districts.

#### Sixth District

Broome County—Hospital capacities have been stranged by the influx of war workers into the county, and by personnel shortages Likewase laboratory facilities have felt these factors. Three general hospitals are making postwar plans to expand. The Burghamton City Hospital has asked the City for

mcreased laboratory space and personnel A branch of Kilmer Laboratory, at the Bingbamton City Hospital, would satisfy the needs of the northern and eastern extremities of the county

Chemung County —There is no deficiency in this county

Chenango County —There is no county laboratory service for nonhospitalized patients. The western part of the county could he given laboratory service through contract with the Cortland County Hospital Laboratory, as the staff at the Cortland County Laboratory has not carried an overload of work such as some other cities, and could direct a hranch laboratory. A lahoratory situated in a central point could supply this county, Schuyler, and Tioga Adequate postwar medical care would require the location of several physicians in this section with some clinical laboratory facilities at their disposal

Cortland County —A branch laboratory at the central part of the county, such as Otselic or South Otselic, under the direction of the Cortland County Lahoratory, would be desirable

Delaware County—Hospital and clinical laboratory facilities are extremely limited and poor in quality, except at Sidney and Margaretville, where local projects have recently been undertaken. In terms of medical care the resident physicians are handicapped by the lack of diagnostic facilities and hy distances necessary to travel. Note remarks for Broome County

Otsego County —Except for wartime personnel sbortages, laboratory service and medical care appear normal.

Schuyler County —There is no county laboratory service for this county. The existing laboratory is unapproved and a private laboratory established several years ago by one of the local physicians has served well during these war years. There is no blood bank (See Chenango County.)

Tioga County—No county laboratory facilities available Approval of the Tioga County General Hospital laboratory is pending (see Cortland County remarks) Further extension of laboratory and diagnostic aid to meet increasing demands for improved medical care should consider the benefits of the location of branch laboratories at Owego and Deposit

Tompkins County—Dr R D Fear, District State Health Officer, states that "The hospital has for many years been confronted with a local problem arising from a shortage of nursing personnel This situation necessitated closing part of the bospital except during emergencies caused by epidemic or communicable disease" Therefore, there is an inadequacy of hospital beds at present in this county

### Seventh District

Cayuga County —County lahoratory needs a director

Livingston County —There is no deficiency in this county.

Monroe County—The present ratio of patients has increased 65 per cent and the physicians are at present overworked

Ontario County -This county is well covered

Seneca County—There are no approved aboratory facilities Laboratory work for this small county is sent to Geneva, which is a few miles distant. It is suggested that county laboratory facilities be established by contract with some nearby county. Dr. Frederick Lester comments that there

are insufficient hospital beds and would recommend a new hospital at Seneca Falls There are no electrocardiographic facilities in the county There is no physician in the town of Lodi The doctor who previously practiced there is now in the armed forces

Steuben County —The facilities in this county are satisfactory

Wayne County—Dr Hobbie, Secretary of the County Medical Society, states that, "Wayne County does not at present have enough hospital beds for adequate care Lahoratory facilities are at some points 40 miles distant, but this is alleviated by the fact they can be sent to other laboratories near at hand Some areas not adequately covered since doctors have been taken into the service"

Yates County —Dr R F Lewis comments, "No electrocardiographic service in any of the bospitals"

## Eightb District

Allegany County —Several towns in the north-central and east-central part of the county have no physician. It seems that the hospital capacity should be increased. A building plan is under way at Wellsville. Except in the field of pathology (tissue), county laboratory service is available.

Cattaraugus County — There is no blood bank. Many towns have no physician but nearby areas take care of this inadequacy

Chautauqua County—There is no blood bank. Many towns are without a physician Adjoining areas care for the patients of these towns

Erie County -The county is well covered.

Genesee County—Two general bospitals are overcrowded, but plans for expansion are under way Building to begin as soon as time permits There is no blood bank for this county

Niagara County —Niagara County has no county laboratory service—The City of Niagara Falls maintains a city laboratory under State aid—Service therefrom is offered to physicians in a few surrounding townships—It is suggested that provision of county laboratory service through contract with the Niagara Falls Public Health Laboratory be made

Orleans County —There are no approved laboratory facilities in this county. It needs a county laboratory in either Medina or Batavia. No electrocardiographic service is available, and there are insufficient doctors. The county needs supplemental medical care and laboratory facilities.

Wyoming County—Dr L H Humphrey comments that the bed capacity is overcrowded by 33 ½ per cent Laboratory facilities are excellent hut understaffed The hospital is inadequate for present demand for service, and over half of the hospital is old and urgently needs replacement. More room is needed for diagnostic laboratory facilities and for x-ray therapy

F LESLIE SULLIVAN, MD

Section 12 (See 57)

Supplementary Report of Council—Part VI Rehabilitation

The Chairman of the Subcommittee on Rehabilitation has had several conferences with the Chief of the Bureau of Medical Rehabilitation of the New York State Department of Health and the Director of the Division of Vocational Rehabilitation of the New York State Education Department regarding the fee schedules for the rehabilitation programs.

These are Handicapped Children's Program of the New York Stato Department of Health and the Vocational Rehabilitation Program of the New York State Education Department. The Commissioner of Health of the New York State Department of Health has approved the fee schedules for orthopedio surgical procedures accepted by the Subcommittee on Rehabilitation, representatives of the State Departments of Health and Education, Director of the Workmon's Compensation Bureau and officers of the Medical Society of the State of New York.

A meeting of the Subcommittee on Rehabilitation was held on June 14, 1945, in New York City Present at this meeting, in addition to the Subcommittee members, were members of the Council Committee on Public Health and Education, Director Work men s Compensation Bureau of the Medical Society of the State of New York, officers of tha Medical Society of the State of New York, and representatives of the State Departments of Health, Education, and Social Welfare. The Chairman of the Subcommittee on Rehabilitation expects to be able to submit an article for publication in the Journate, including a statement of these feee, within a few weeks.

Respectfully submitted
O W H. MITCHELL, M.D., Chairman

Section 13 (Sec 52)

Supplementary Report of Council—Parts VII and VIII Medical Service and Public Relations

To the House of Delegates Gentlemen.

At frequent intervals, we have been recoving bulletins from the Director of the Council Committee of the American Medical Association on Medical Service and Public Relations, Dr. Joseph S. Lawrence. The members of this State Committee have contacted Congressmen and Senstors from time to time, in order to keep them informed of the physicians attitude toward the legislation. Among ourselves we have discussed the problems, but only once in a regular meeting in February in Albany. At present, the new Wagner-Murray Dingell bill is the favorite football

Respectfully submitted,
John L. Bauer, M.D., Chairman

Section 14. (See 115)

Supplementary Report of Committee on Workmen's Compensation—Part X

A Joint Medical Conference Committee has been authorized by the Council and the organization meeting of sama was held on Wednesday, September 19, 1945, in New York City The Joint Medical Conference Committee consists of

Mr Charles Deckelman—The Travelers Insur-

ance Company
Mr Herbert F Dimond—Fidelity and Casualty
Company of New York

Mr Sianwood L. Hanson—Liberty Mutual Insurance Company Mr Warren C Tucker—Utica Mutual Insurance

Mr Warren C Tucker—Utica Mutual Insurance Company

Mr Edward J Powers The State Insurance Fund

Mr Oliver G Browns—The Self Insurers Association

Mr Henry D Sayer—Compensation Insurance Rating Board

The above group represents stock, mutual, self-insurers, and State Insurance Fund.

The medical members of the committee are

Dr Harry Aranow Dr Vincent O Moscato
Dr Chas, Gordon Dr Dan Mellen
Heyd

Dr Joseph P Henry Dr Malvin Dr David J Kaliski (representin

Dr Melvin B Hasbrouck (representing the Osteopathic Society)

With the formation of this state-wide committee, we shall recommend the formation of local committoos in all large county societies, to consist of mem bers of the compensation committee of the medical society and representatives of the varied compensa The central tion insurance interests in each area. committee will inaugurate studies and discussions which will be distributed to the county society compensation committees and will receive from the local committees general problems for discussions and decisions. It is hoped that the establishment of the local committees will provide a greater contact between employers, insurance carriers, and the medi-cal profession and provide a means of settlement of medical bills and compensation problems locally In general, the purpose of this venture is to facilitate the administration of the Workmen a Compensation Law, to improve medical practice, and create a closer and more harmonious relationship among the vari ous groups,

At the writing the Chairman of the Workmen's Compensation Board of the Department of Labor has not, as yet, sot a date for a hearing on our request for a general increase in the fee schedule. Attempts are still being made to create a joint conference committee of the State Medical Society and Labor organisations in New York State for discussion of workmen's compensation matters of mutual interest.

Now that railrood travel and hotel facilities have eased somewhat, it is the purpose of the committee to continue personal contact with local county societies. A greater interest will be taken in improving the quality of medical care and preventing any violations of the provisions of the Workmen's Compensation Law by greater vigilance and activity on the part of the county society Workmen's Compensation committees.

The standards of qualification of physicians should be more rigidly applied by local county societies and an attempt made to simplify code latters granted to general practitioners not specializing. Considers tion will be given to the problem of inspecting periodically medical bureaus licensed through county medical societies, and an attempt will be made to provide assutance from the State in enforcing the provisions of the law requiring employers maintain ing medical bureaus to obtain a license after medical society approval.

A bearing was bold on September 20 by the Chairan of the Workmen's Compensation Beard, Miss
Mary Donlon, and representatives of the New
York State Hospital Association tha Council of
Radiologists, Pathologists Physiotherapists and
Anesthesiologists, and your State Compensation
Committee, at which consideration was given to the
form of a bill to be introduced into this section of the
Legislature to amend Section 13-f (1) of the Workmon's Compensation Law to include radiology,
pathology physiotherapy and anesthesiology as the
practice of medicine and also to amend Section 13-d
(2)g to include these specialities and to provide for a
proper and equitable relationship between these
specialists, employed full or part time by bespitals,
and the bospital. Als to amend Section 124-6 of the

Education Law to include these specialties as the practice of medicine and to provide for a proper and equitable relationship between these specialists employed by hospitals and the hospital, and also to exempt them from the punitive provisions of this Section These provisions will also be contained in Section 1250 of the Education Law, which will be amended to include within the practice of medicine the specialties of radiology, pathology, physiotherapy, and anesthesiology

Your committee recommends that the Workmen's Compensation Law be amended to provide for a bureau of investigation in the Department of Labor to assist the Department and the Workmen's Compensation committees of the medical societies in investigating complaints against all parties in interest in Section 13 of the Workmen's Compensation Law This bureau should he adequately staffed by an assistant Attorney General and ample provisions

should be made for it in the budget

The bureau of collections created by the Workmen's Compensation Committee is functioning actively and invites county medical societies and members to avail themselves of its facilities in the collection of medical bills and other matters relating to

workmen's compensation practice

Your committee drew attention to Section 15, subdivision 8-a of the Workmen's Compensation Law, which provides for the employment of disabled veterans in industry. Physicians should be advised that the cost of medical care and compensation for second or additional injuries sustained by such veterans (after a period of one hundred and four weeks) will be paid out of a special fund thus permitting industry to employ such disabled veterans through greater assurance that the hazard of second injury will not fall too burdensomely on the employer

Your committee recommends that those county societies which have not as yet answered Bulletin No 60, issued in February of this year, asking for the names of especially qualified specialists provided under the 1944 amendment, send in such names, if

available, as soon as possible

Your committee recommends that the Chairman of the Workmen's Compensation Board be urged to instruct referees to provide a fee in excess of the minimum \$10 and \$25 for physicians and specialists, respectively, for testimony hefore the Department of Labor, in instances where the physician or specialist must travel a great distance and spend more than the usual amount of time in the procedure. Mileage fees are limited under State law and are entirely inadequate at present. The difference may be made up by instruction to the referee to use his judgment in allotting an increased fee where indicated by circumstances.

A number of State Examining Committees in Radiology for applicants who desire qualification in this specialty have been set up and it is contemplated that additional committees will be set up to cover

the Albany and Binghamton areas

Your Committee anticipates momentarily a statement from the Chairman of the newly created Workmen's Compensation Board of the Department of Labor concerning her policy in the administration of the Workmen's Compensation Law affecting medical practice and this statement we hope will be available for the Reference Committee and the House shortly

Your Committee has made available to the Chairman of the Reference Committee, Dr Simpson, a number of recommendations for amendments to the Workmen's Compensation Law which are too voluminous to include in a supplemental report but will

no doubt be alluded to in the Report of the Reference Committee Steps will be taken to seek the support of the Department of Labor and other interested groups in the passage of these amendments at this session of the Legislature

Commercialism should be stamped out from Workmen's Compensation practice and a step in this direction would be to prohibit the operation of commercial x-ray laboratories, owned by lay persons or corporations and operating through the employment of an authorized and qualified physician. This could be brought about by amending Section 13 of the Workmen's Compensation Law to provide that all such laboratories should be owned, operated, and supervised by qualified physicians.

Your Committee strongly urges the Chairman of the Workmen's Compensation Board of the Department of Labor to implement the amendments to Section 13 of the Workmen's Compensation Law providing for the employment of especially qualified medical specialists in the Department of Labor

It is further suggested that the Law be so amended as to permit the Chairman of the Workmen's Compensation Board to pay a fee in excess of \$7,500 and up to \$10,000 for such specialists on a part-time basis

> Respectfully submitted, HARRY ARANOW, M D, Chairman

Section 15 (See 67)

Supplementary Report of Council—Part XI Medical Licensure

To the House of Delegates, Gentlemen

I herewith submit a supplementary report as Chairman of the Council Committee on Medical Lacensure

During the year 1944 tho total number of licenses issued by Boards for the forty-eight states, District of Columbia, Alaska, Puerto Rico, and the Virgin Islands was 9,606, 7,035 were issued after examination, and 2,571 by reciprocity or endorsement of other state licenses or the certificate of the National Board of Examiners This figure is an increase of 1,330 over 1943, when a total of 8,276 were licensed The increase in the number of licenses is reflected mostly in the number of annual graduates of all medical schools, except the Women's Medical College of Pennsylvania, due to the accelerated program during

Now York State, in 1944, licensed 788, one-twelfth of the entire number licensed in the United States and possessions (In 1942 this state licensed one sixth of the total.) Six hundred and thirty-seven of these represented additions to the medical profession. Of this number, for 1944 in New York State, 224 were foreign physicians, 137 less than in 1943. Now that the war is over the figures in this respect for 1945 and 1946 should prove an interesting study.

The statistics for total licenses include many examined in 1943 and even a few in the previous years, and so do not represent strictly additions to the

medical profession.

During the calendar year 1944, the greatest number of licenses—912—were issued in the state of California, while more than 700 were licensed in the states of Pennsylvania—898, Ohio—837, and New York—788 Fewer than 100 licenses were issued by each of twenty-two states, the District of Columbia, and the territories and possessions The fewest were licensed—7—in North Dakota, and none were licensed in Wyoming

Compared with the data for the year 1943, in-

crouses in the number of physicians registered last vear wer, somewhat higher in a number of states, particularly in the states of California, Georgia Maryland, Michigan, Missouri, Ohio and Pennsyl vania. In New York State there were 124 fewer

licenses issued.

Candidates Examined by Medical Examining Boards—"Throughout the year 6 791 were ex-amined, of whom 5 895 passed and 806 failed," as stated in the Annual Report in the J.A. M.A., May 12 issue. Of the total examinees, 5 432 represent graduates of approved medical schools in the United States, of whom 2.9 per cent failed, the 61 graduates of approved Canadian schools had 27 9 failures, and 8 0 per cent of the 25 who were graduates of approved medical schools no longer operating failed. The greatest percentage of failures, 53.0 per cent, was among the 691 graduates of medical schools located m countries other than the United States and Canada. Of the 582 graduates of unapproved medical faculties registered 45 4 per cent falled. In each instance the number of examinees was noticeably less than in 1943 In 1944 there were 1 002 fewer examinees from approved medical schools, 10 fewer from Canadian graduates, 76 fewer from schools now extinct, 340 fewer graduates of foreign faculties of medicine and 175 fewer from unapproved schools This fall ing off in the number of examinees is no doubt due to the accelerated program and the graduation of two classes by medical schools in 1943, by most of the approved institutions. It must be noted, however, that many of those examined late in 1943 were not actually lineensed uotil 1944, and since it is permissible for a candidate to take an examination in more than one state and be counted as an examinee in each state, the 6 791 physicians and others examined for licensure do not represent an actual number of individuals.

Failures — Twenty three approved schools in the United States had no failures before medical licensing beards, thirty two had less than 50 per cent, and six between 6 and 10 per cent. There were eight schools with 10 per cent or more failures in state examinations. These figures and percentages are modified by data on those who were examined by the National Board of Medical Examiners in its final examination as well as those passing state tests."

In the rine medical colleges in this state, New York, that is, Albany, Columbia, Cornell, Louisland College of Medicine, Syracuse Buffalo, and Rochester universities, 2.5 passed tests by the Medical Examining Board, while 23 falled. Five hundred and thirty-two passed and 12 failed the Part III examination of the National Board of Medical Examiners. The total number of examiness taking tests was 221, in which 786 passed and 35 failed, or a percentage of 4.4 failures. One medical school had no failures, 2.8 per cent of those who studied medicine in the remaining cleft schools in this state who appeared for licensure in 1944 had previously failed, and 23.4 per cent failed who obtained their medical education in thirty-six schools located in other states.

"Three Canadian schools had no failures before United States licensing boards, while the other six schools had percentages higher than 14. The highest percentage was 60.7 from 9 graduates of the University of Montreal examined in six states. New York State examined 17 Canadian graduates and California 11 and all other states fewer than 6. Graduates of medical schools of other countries were examined in twenty-one states and Puerto Rico."
In 1944 of the 9.600 licensed, 423 had been un-

In 1944 of the view licensed 423 had been unsuccessful previously before licensing boards. From

the approved echoois, 92 of those licensed had previously failed a state beard examination. Forty-four failed once before being licensed in a given state, and 29 after one failure elsewhere. Nineteen received licenses after more than one failure, ten of whom were registered in the original state, six elsewhere, three failed in the state where licensed and elsewhere. Two bundred and fifty nine graduates of foreign medical schools were registered after previous failures and seventy two of unapproved schools were registered. Sixteen of the loreign graduates had five failures before passing an examination for license, fourteen had ax examinations, ax had failed seven, eight had failed eight, six, nine, three ten, one each, eleven and twelve two thurteen, and one failed eighteen tests. In wenty-one states all physicals licensed last year had no fadures in a state medical examination before being registered. There were 2 401 such individuals. With the exception of the states of California, Illinois, Massachusetts, New Jersey, New York, and Ohio, the number of physicians licensed throughout the country in each state for particular failed eight number of physicians licensed throughout the country in each state for particular failed eight number of physicians licensed throughout the country in each state for particular failed eight number of physicians licensed throughout the country in each state after proviously having failed was less than ten.

Reputation by Reciprocity or Endorsement—The greatest number of licenses issued by reciprocity or endorsement in any one state were 469 as inconsed in California. Our state issued 335 Four states endorsed 100 or more, that is Ohio, 106, Michigan 148, New Jersey 159, and Teras 100 The largest group presenting the same type of credentials were the 702 diplomates of the National Board of Medical Examiners. On the basis of this certificate 259 were certified in this state of New York. One hundred or more physicians presented licenses issued by Illinois, Missouri, New York Ohio, Peansylvania, and Tennesce No physician holding a Versda or New Mexico certificate applied for registration in another state duriog the year In Arisona and in New York, one physician was registered on the basis of foreign cerebentials, presenting licenses from Great Britain

and Austria, respectively

Meentades Representing Additions to the Medical Profession.—There were 8 633 additions to the medical profession in 1944. New York State had 637 additions, 403 by examination and 220 by reciprocity or endorsement. During the same period there were 3 627 deaths among the members of the medical profession, so that in reality the increase in the number of physicians was actually 3,300. Many more than this latter number were added to the armed forces as medical officers in 1944, so that in actual figures there has been a decrease in the number of doctors available to the civilian population rather than an increase as one might anticipate in ileu of the accelerated program. While two classes were graduated from most medical schools in 1943 the number of physicians added to the profession did not increase, since many physicians who obtained M.D degrees in December of that year were not able to receive licences until early in the year 1944 owing to administrative details. In 1944 the number in this group was 979 more than in the previous year

The greatest number of physicians added to the profession in any one state was in Pennsylvania—821 Both Now York and Ohio added more than 600 and California and Missourn more than 300

Estimated figures indicate that on January 1 1945 the number of physicians in continental United States, neduding those licensed in 1944, was 101,689, excluding physicians who are in military service, engaged in full-time too hospital work, retired, engaged in full-time teaching, or not in practice, there remain approximately 100 000 physicians in private practice some of whom are part-time teachers.

Table of Physicians Examined on the Basis of Credentials Obtained in Countries other than United States and Canada, 1930–1944

Year	No Examined	Passed	Percentage Failed
1930	167	92	44 9
1931	158	91	42 4
1932	182	96	47 3
1933	200	129	35 5
1934	285	170	40 2
1935	437	303	30 7
1936	588	382	35 O
1937	920	637	30 8
1938	1,164	716	88 5
1939	1.691	839	50 4
1940	2,088	948	54 7
1941	1,717	698	59 2
1942	1.630	800	45 4
1943	1,031	519	49 8
	691		53 8
1944	091	325	53 B
Total	12,949	6,834	47 2

Licensure for the Relocated Physician —To assist the physician returning to civilian practice or in locating in areas where there are shortages of physicians, the licensing boards of nineteen states, Alaska, and Puerto Rico provide for the issuance of temporary permits, usually without immediate examination New York has no such plan. In view of the recommendation of Procurement and Assignment Service to enact legislation to facilitate the relocation of physicians into needy areas, especially in cases of discharged medical officers desiring such adjustments. "In addition, the New Jersey Medical Practice Act exempts from its requirements a lawfully qualified physician and surgeon of another state taking charge temporarily of the practice of a lawfully qualified physician of New Jersey during his absence from the state. Such permission may be granted by the Board of Medical Examiners for a period of not less than two weeks nor more than four months, but not exceed one year in the aggregate."

months, but not exceed one year in the aggregate"
Physicians Examined on the Basis of Credentials
Obtained in Countries Other than the United States and
Canada—In New York State no matriculates of
foreign schools after 1940 will be permitted to qualify
for examination unless, in addition to other requirements, the Department of Education or its agent has
had an opportunity to inspect and approve the
school from which the candidate was graduated
The requirements of candidates for medical licensure
in New York State on the basis of credentials obtained in countries other than the United States and

Canada are the same as reported in 1943

"Ninety-two faculties of medicine and two licensing corporations of nineteen European countries and nine other countries are represented. There were 691 examined by twenty-one states and Puerto Rico, of whom 325 passed and 366, 53 0 per cent, failed Graduates of the University of Vienna represent the largest group, 135, who were examined in thirteen states, with a failure percentage of 46 7. Five states examined 54 graduates of the University of Berlin, of whom 48 1 per cent failed. More than 35 graduates of the universities of Paris, Bologna, and Lausanne also were examined in the United States last year."

The greatest number of foreign graduates examined by any one state was 510 in New York (252 less than the 762 examinees in 1943), of whom 224 passed and 286 or 561 per cent failed. No other state tested more than 37 of these physicians. Fewer than 5 were examined by eleven states. The proportion of failures in 73 schools of the total of 94 was

25 per cent or more. In the United States in fifteen years, 1930 to 1944 inclusive, 12,949 were examined, of whom 6,834 passed and 47 2 per cent failed. There has been a decrease of 340 in the number examined in 1944 as compared with the previous year. In 1943 there were 599 fewer examined than in the previous year. The percentage of failures, however, has not changed significantly in recent years. The greatest number of failures occurred in 1941, when 59 2 per cent failed. At no time in this fifteen-year period did fewer than 30 7 per cent fail.

From the year 1936 to 1940 there were large

annual increases in foreign graduates examined, so then in 1940 there were over three times as many tested as in 1936 Since 1940 there have been annual decreases. The number last year was 1,397 fewer than that of 1940 but has not yet reached the average number of foreign graduates examined annually prior to 1936 and before the increased migration of foreign physicians to the country from Europe.

Respectfully submitted,

F LESLIE SULLIVAN, M D, Chairman

Section 16 (See 79)

Supplementary Report of Special Committee— Part XII Publications

The Special Committee on Publication recommends that the House of Delegates continue this Special Committee of the Society working under supervision of and reporting to the Council, and that the House give the following directive as to the continuance of its personnel in keeping with the action of the House of 1944

"The Committee on Publication shall consist of the Secretary, the Treasurer, the Director of the Public Relations Bureau, the literary editor, and one trustee, who shall be chairman, the trustee to serve shall be selected by the Chairman of the Board of Trustees, and the literary editor shall be selected by the Committee on Publication at its first meeting after this meeting of the House of Delegates, the former literary editor not voting. This is deemed to be the most satisfactory way to choose the incumbent of this position, who thereupon becomes a member of the Committee, because of the familiarity of the Committee with the duties involved and the qualifications necessary for the satisfactory performance of them"

Medical Publicity —News Letter A new publication in the form of a news letter was initiated in April to contain spot news of Society activities for information of those who devote more than the usual amount of time to the Society's activities. This is published at irregular intervals as occasion

demands
Wagner-Murray-Dingell A new version of the
controversial Wagner-Murray-Dingell Social Security Bill was introduced in the Congress early in the
summer and again contains a compulsory health
insurance provision, this time including dental and
nursing care. Copies of the bill were sent immediately to officers of the Society and a summary of the
bill was made and sent out to a larger list in July
Further activity waits upon action of the House of
Delegates

Antivivisection Toward the end of the last legislative session there suddenly was introduced and passed in the Senate a bill forbidding the use of dogs in medical laboratories. The danger was imminent and the Bureau used its resources to rally those who could bring influence to bear on the legislature. The bill was stopped in the Senate. At the present time

preparations are being made to combat any further attempt at such legislation. Material has been gathered and printed matter is in the process of preparation for wido distribution when the time

Medical Licensure Similar action was taken regarding a bill to license physicians from schools not accredited by the Board of Regents of New York.

This legislation, too, was etopped.

Woman's Auxiliary Contact with leaders of the Woman's Auxiliary has been kept up during the year in preparation for activities which this group will undertake in conjunction with county societies.

Section 17 (See 58)

Supplementary Report of Council-Part XIV War Participation.

To the House of Delegates Gentlemen

Your Committee on War Participation wishes to report the following activities on the work of ald to

medical veterans.

Out of approximately five thousand questionnaires sent out, one thousand, five hundred and forty have been filled in and returned. Information requested follows postgraduate work (nine hundred and seventy-four refresher courses and two hundred and thirty two hospital readencies), assistantiships with specialists, four hundred and five, comparatively few desire industrial and research positions, one hundred and nineteen inducate relocation (either in New York State or elsewhere), and seventy five were undecided.

Your Committee has answered all inxuiries, obtaining information requested and transmitting it to the medical officers. Twelve different form letters have been compiled and used where applicable and in other cases individual responses were sent. With all correspondence pamphlet information on "Serv icemen's Readjustment Act," No 346 has been en-

closed.

Requests for relocation have been referred to State Procurement and Assignment Service for New York State or the Bureau of Information of the American

Medical Association.

Through the excellent cooperation of medical schools and special groups appointed for the pur-pose of chtaining hospital information, the Com-mittee has been able to furnish definite and on various problems facing medical officers in the transition to civil practice. Available office space and references for industrial positions have been furnished.

The Committee authorized a separate file for War Participation activities pertaining to question-naire inquiries. This has been established and is

available for future reference.

Requests for financial aid have been many and, in the opinion of the Committee, this matter has been handled by reference to the G.I. Bill of Rights as the Society legally is not permitted to lend money

The matter of assistantahips with specialists is being handled through the cooperation of local county societies. Circularization of county society committees reveals that the majority of counties are

planning machinery to aid in this work.

In conclusion, it is the opinion of the Committee that the work in this program has been carried on in the best interests of the medical officer, and personal interviews have been and will be held whenever de-sired in furtherance of the purposes for which the questionnaire was sent.

All of the sorting and classification of the questionnaires, the vast majority of the correspondence. and interviews have been conducted by Mrs. Alice Arana, under the supervision of Dr Anderton, and the Committee is deeply indebted to both of them.

The Committee feels that its name is now obsolete and that its work should now be turned over to a committee on veterans affairs.

Respectfully submitted,

LOUIS H. BAUER, M.D. Chairman NOBMAN S. MOORE, M.D. JAMES F. ROOVET, M.D. HENRY W CAVE, M.D. JOE R. CLEMBONS, M.D.

#### General Matters

Convention

To the House of Delegates Gentlemen.

This Committee has had difficulties. Dr Walter P Anderton tripped to Washington and in other ways threw around the weight of the Medical Soof Delecates might come to pass after V-E Day, as you know, it is only now, after V-J Day, that realisation can be promised for October 8 and 9, at the Hotel Statler in Buffalo Travel restrictions are now

lifted for everybody
We hope the Delegates will make the effort to be present. It will be a big time for discussion and voting. And what a grand get-together

Respectfully submitted.

JOHN L. BAUER, M.D. Chairman

Reorganization

To the House of Delegates Gentlemen.

A meeting of the Reorganisation Committee was held in New York City on June 13, 1945 Present at this meeting, in addition to the Committee members, were the Chairman of the Workmen's Com-pensation Committee of the Medical Society of the State of New York, officers of the Medical Society of the State of New York, and representatives of the Workmen s Compensation Board of the New York State Department of Labor At this meeting, it was proposed that the Council appoint a Subcommittee of the Workmen's Compensation Committee to work with the Chairman of the Workmen's Coin pensation Board of the New York State Department of Labor Miss Mary Donlon. This proposal was submitted to the Council on June 14 and it was voted that the President be given authority to appoint five physicians who would be available to confer with anyone on Workmen's Compensation and related activities.

On September 12, 1945 in New York City, a meeting of the Reorganization Committee was held to discuss activities and business affairs of the Society In addition to the members of the Committee officers of the Society were also present.

Respectfully submitted.

O W H. MITCHELL, M.D., Chairman

Belated Bills —The Council voted to pay and sub-mit to the House of Delegates for approval, the following bill for expenses in connection with State Society duties which was not turned in until after source that was the state of th 1914, and March, 1944.

Section 18 (See 42-49) Annual Report of Board of Censors

To the House of Delegates, Gentlemen

On June 1, 1944, the Board of Censors of the Medical Society of the State of New York heard an appeal of Dr Joseph F Montague from the decision of the Board of Censors of the Medical Society of the County of New York, suspending him from the rights and privileges of membership for a year commencing February 14, 1944, for infraction of the principles of professional conduct of the Medical Society of the State of New York.

There were present at the meeting Drs Stephen H Curtis, Dan Mellen, Peter J Di Natale, Herbert H Bauckus, President, and Peter Irving, Secretary, and Thomas H Clearwater, Esq, Attorney There were also present Reed B Dawson, Esq, Attorney for the Medical Society for the County of New York, and Dr Montague with Counsel, Samuel R.

Gerstein, Esq.

After full consideration of the grounds for appeal, the records furnished by the Medical Society of the County of New York, testimony by Mr Reed B Dawson, Attorney for the Medical Society of the County of New York, and by Dr Joseph F Montague and Counsel Samuel R. Gerstein, the Board of Censors of the Medical Society of the State of New York unanimously affirmed the decision of the Medical Society of the County of New York, suspending Dr. Montague from the rights and privileges of membership for one year

An appeal has been taken by Dr Montague to the

House of Delegates

Respectfully submitted, W P Anderton, M D, Secretary

Section 19 Memorials

Speaker Bauer There are a number of memorials, some of which went to Reference Committees and others of which have been presented since Instead of referring these to a Reference Committee for later report, if Dr Flood is ready I will ask him to present the memorials to the House at this time, and they can be acted upon, if there is no objection, directly by the House

Dr. Edward P Flood, Bronx It is with a deep sense of regret that I present these memorial resolu-

tions to you

### DR PETER IRVING

"Dr Irving, Secretary and General Manager of this Society since 1937, died on December 28, 1944, at Roosevelt Hospital, after a cardiac illness

of several months
"His death is a great loss to the Society and a great sorrow to all who have been associated with

him in the work of the Society

"It would be impossible to overestimate his Not only was he Secretary and General Manager, and as such was conversant with and helpful in everything that was undertaken by the Society, but also he was Managing Editor of the NEW YORK STATE JOURNAL OF MEDICINE Under his editorship the Journal steadily improved, and the improvement will continue under new plans already formulated with his help and

"He was appointed in 1943 by Governor Dewey as a member of a Commission to investigate the management and affairs of the Department of Mental Hygiene of the State of New York

"Dr Irving was born in 1878 in Madison, Wisconsin His preliminary education was in a private preparatory school, St Austins, Staten Is-He went to Columbia University and recerved his AB in 1900 In 1903 he graduated from the College of Physicians and Surgeons (Columbia University) and was the winner of the second Harsen Prize.

"His internship was in Roosevelt Hospital, from which he graduated as house physician, and after that he was on the staff of that hospital continuously, first as clinical assistant (for many years Chief of the Medical Dispensary) up through all the grades until, finally, before his returement from active practice, as attending ply-

"At the time of his death he was consulting physician to Roosevelt Hospital and also to New York and Seton Hospitals

"Ho was a member of the Alumni Association of Roosevelt Hospital, a Fellow of the New York Academy of Medicine, a Fellow of the American College of Physicians, and a Diplomate of the

American Board of Internal Medicine

"We are inclined to think of Dr Irving as the full-time Secretary and General Manager of eur Society, but before that, for thirty-two years, he practiced medicine in New York County He had great knowledge and skill in medicine, but he did not call himself an internist or a diagnostician.

"He was a family physician at its fullest and best He treated people and not merely diseases. His judgment was so sound and so very sane

"Called in to see one patient for some illness or ailment, he would soon be guiding the whole

family in health matters.

'Nothing was too much trouble, nothing was too trivial for him to take an interest in. He knew people, and he knew the art of medicine, that troubles that are of little importance from the doctor's point of view do not seem unimportant

to the patient.
"There are not many family physicians like him left in the larger cities, and medicine and the

public are the worse for their lack.
"His former patients still talk about his wenderful work for them, whether it was a critical illness in which they are convinced that he saved their lives, or a successful regimen of life which has kept them in health

"Dr Irving first took an active part in organized

medicine in 1927, when he became a member of York County Society He served on the Economics Committee in 1928 and 1929, was Assistant Secretary from 1930 to 1936 He served on the Board of Censors for one year and then took up his duties with the State Society Wo have already spoken of his work with us since 1937, its excellence, his unfailing attention to duty, but it is not so easy to describe what he gave us over and above

"There was something about his personality, his candor, his friendship, and his keeness of mind that was an inspiration to all who worked with him, that was a solace and a help to all the members of the Society who came to him for help and

for advice
"Perhaps his outstanding characteristic was his intense loyalty, loyalty to the Society and loyalty

to his friends and associates

"We shall never forget him and it will be a long time, if ever, before we see another man like him "Be it resolved by the Council of the Medical

Society of the State of New York that this resolution be spread upon its minutes and that a copy be ment to his family, and that it be printed in tho JOURNAL!

#### DR. J RICHARD KEVIN

"At his death on January 8, 1945, Dr J Richard Kevin completed a long record of devotion to his patients, of continuous study in the science of medicine, of interest in the civic affairs of the people, and in the administration of good government in municipality state, and nation, and of unflagging loyalty to his profession and its ideals.

"He was born in LaCrosse Wisconsin, over eighty-one years ago He attended the University of Vermont for his classical training and Bellevuo Hospital Medical College, where be graduated in 1888. After graduation he came to St. Mary's Hospital, Brooklyn for his internship and through the remainder of his life was associated with that hospital and its interests as assistant surgeon, attending surgeon and at the time of his death was one of the Board of Senior Surgeons. For many years, too, he was an attending surgeon at the Broad Street Hospital, Manhattan.

"Ilo became a member of the Medical Society of the County of Kings one year after his graduation and was always keenly interested in its affairs. Ho was elected President of that Society for the year 1914 and President of the Medical Society

of the State of New York in 1921

"Ho was President of the Brooklyn Surgical Society in 1909, President of the Hopsital Surgeons Association in 1914, and was one of the original Fellows of the American College of Sur

geons in Brooklyn.

"He was Surgeon of the famous 23rd Regiment of the New York National Guard and went with that regiment to the Mexican Border in 1916 as a major in its Medical Corps. He was a member of the Alumni of St. Mary's Hospital, of the Brooklyn Pathological Society and of the Associated Physicians of Long Island. Through his different medical societies he presented many scientifie contributions based on his studies and surmeal

experience.
"He was a member of the Board of Education of New York City, of the New York State Board of Charities later the New York State Board of Social Welfare from 1913 to 1944 and was elected its Vice-President in 1929. He was a member of the Grievanco Committee of the New York State

Board of Regenta for several terms.

"During all his active life he was the loved head of his family, the esteemed, wise, unselfah eitizen of his country the loyal friend, the wise counselor and exemplar to many of his conferres, old as well as young, and all through that long life as a doctor a credit and adornment of the medical profession."

#### WILLIAM KRIEGER Α,

"For many years Dr kneger was a devoted worker, actively participating in the discussions of the Council and the House of Delegates of the Medical Society of the State of New York.

"He was a former Vice-President of the Society, and Chairman of the Scientific Exhibits at the Annual Meeting over a period of years, and dele-gate to the American Medical Association

'Dr Krieger died May 19, 1944. Flowers were sent by the Society to his funeral and members of the Council wrote letters of sympathy to Mrs. Krieger

"His passing has been keenly felt by his many friends."

#### DR. EDWARD C PODVIN

"Dr Edward C Podvin, Assistant Secretary of this Society since 1937, died on September 27 1944, at his home in the Bronx after a cardiac

Illness of a few days' duration,

"Dr Podvin was born in Hudson Falls New York. He received his early education there and later entered Manhattan College in the City of New York, from which he received the Bachelor of Arts degree in 1895. He entered the Albany Medical College and received his medical degree there in 1808. After his internship in Albany he engaged in the practice of medicine in Johnstown, New York, for two years, and then came to the Bronx at the turn of the century to engage in the

practice of medicine.

'During his entire professional career in that community, he served with great distinction in many capacities. During the entire existence of Fordham University School of Medicine, he was the professor of hypens and was a familiar and beloved figure to all the graduates of that institution. For many years he had been an attending physician at St. Francis Hospital in the Bronx and later a consulting physician at that institution and consulting gastroenterologist to Fordham Hospital. He was the chairman of the Bronx Tuberculosis and Health Association. His interest in organized medicine was an outstanding feature of his professional career He was a charter mem-ber of the Bronx Medical Society in 1914. He had been a delegate to this House from the Bronx since that time. In 1924 after a long service as Committeeman and Censor in the Bronx County Medical Society he was elected its Prosident, For over ten years he was the executive officer of the Bronx County Medical Society Ho was the editor of the Bronz County Medical Bulletin He was appointed by Governor Lehman as a member of the Industrial Council of the State of New York. Since 1937 he has been Assistant Secretary of this Society and he had served as a delerate of this Society to the House of Delegates of the American Modical Association for three terms.

"Dr Podvin'e stately and striking figure was a familiar one on the floor and platform of this House over the course of years. His love of good fellowship was well known and deeply appreciated hy his wide circle of friends. His memory will

long live with us.

"Be it resolved by the House of Delegates of the Medical Society of the State of New York that this resolution be spread upon its minutes and that copies thereof be sent to his family and published in the Journal."

#### DR. WILLIAM AVERY GROAT

"William Avery Groat was a scholar of exceptional ability, an outstanding member of the pro-fession as an internist, teacher, and investigator the was born in Canastota, New York, on No-vember 9, 1879 and received both his B.8. and M D degrees from Syracuse University In 1901 be became a member of the faculty of Syracuse University College of Medicine. In 1911 he was appointed professor of clinical pathology a posi-tion he held until his death. He received many honors and one greatly treasured was that of

trustee of his Alma Mater He was a fellow of the American College of Physicians and a member of numerous scientific and honorary societies work in hematology and metabolism gained him a

place of foremost rank in these specialties

"He was a member of the staffs of St Joseph Hospital, Syracuse Memorial Hospital, University Hospital of the Good Shepherd, Syracuse City Hospital, Syracuse Psychopathic Hospital, and Syracuse Free Dispensary During the year 1938, when he was serving as chief of the medical staff of the Syracuse Memorial Hospital, he was elected President of the Medical Society of the State of New York. Dr Groat was chairman of the Committee on Scientific Work of the Society for the five years 1932–1936 Following his term as President, he was a member of the Board of He was especially interested in maintaining a conservative relationship between government and private medicine and to this subject he

devoted his retiring presidential address
"In World War I he was a major and continued to serve his country as a lieutenant colonel in the Medical Reserve Corps of the United States Army

His interests were extremely wide and varied His tastes were discriminating and his voluminous reading and retentive mind endowed him with wisdom and discernment all too rare

Introduction of Representatives From Other State Societies

Speaker Bauer It has long been a tradition of this Society that we invite delegates from our sister state societies on our borders, namely, Connecticut, New Jersey, and Vermont Norman M Scott, of New Jersey, and William H Curley, of Connecticut, are here Is there anyone else present from these states, or is there any delegate here from Vermont?

(There was no response)

SPEAKER BAUER Will Drs Scott and Curley

please arise?

(The delegates from the New Jersey and Connecticut State Medical Societies arose, and were ap-

plauded)

SPEAKER BAUER I want to welcome you to our I hope you will feel free to take part in our discussions, and I will be very glad to offer you the privilege of the floor at any time

Section 21

Commendation of Personnel of State Society's Office

Speaker Bauer There is one other matter that I want to hring hefore the House, which I think speaks very well indeed for the morale of the personnel in our State Society office You know that this meeting was called at rather short notice, and

there was a tremendous amount of work to be done Some of the reports had heen printed, but they had to he reprinted Others were received so late they to he reprinted Others were received so late they could not he printed and had to be mimeographed. All in all, there was a tremendous amount of work to To help matters along an elevator strike came, and those of you who are not familiar with our State Society office may appreciate what I am going to say when I tell you that the office of the Society is on the twenty-first floor, and I want you to know that the girls in the office of the Society walked up those stairs in order to get the work out so that the deliherations of this House could be facilitated If it had not been for their loyalty we would have been in a rather difficult situation. It certainly would have impeded the actions of the House. The Chair would like to entertain a motion that the House go on record as thanking the personnel for their demonstration of loyalty to the Society

DR GEORGE W KOSMAK I SO MOVE

Dr. B Wallace Hamilton, New York I second

the motion

The motion was seconded, and as there was no discussion, it was put to a vote, and was unammously carried with applause

SPEAKER BAUER Dr Anderton and Miss Dougherty will be delegated to see to it that the personnel

know about this action.

Section 22

Announcements

SPEAKER BAUER Dr Brown, Chairman of the Committee on Arrangements, requests that you all be informed that the dinner of the House of Delegates will be at 6 30 PM. tonight in the Ballroom. Delegates are invited to hring their vives, and members of the Society who are not delegates are also invited The Woman's Auxiliary has canceled its dinner and will attend Some of you who registered early before the tickets were on sale at the registration desk may obtain them there when you leave this meeting We have had several questions about dress, and I assure you it will be informal.

The floor is now open for the introduction of

resolutions

Section 23 (See 78)

Appointment of Special Subcommittee to Study Availability of Medical Care in New York State

DR REGINALD A HIGGINS, Westchester This is a resolution introduced by the Westchester County Medical Society regarding the appointment of a special subcommittee to study availability of medical care in New York State, and reads

"WHEREAS, the Medical Society of the State of New York is vitally interested in the problem of the quality and availability of Medical Care for

all people of this state, and "WHEREAS, we believe that leadership in this matter must stem from the Medical Society of the

State of New York, and
"WHEREAS, this hody should go on record as
being willing to cooperate wholeheartedly with
any plan which actually improves the quality and

availability of medical care for all the people, and "Whereas, the Planning Committee for Medical Policies have rendered such a complete and satisfactory report on the hospital and laboratory facilities in the State of New York and have themselves recommended that their committee or another committee be continued for the purpose of the study of the whole problem of medical care in the State of New York, therefore be it

"Resolved, that the Planning Committee for Medical Polices be continued and that the Medical Society of the State of New York shall set up a special subcommittee of the Planning Committee for the express purpose of studying existing facilities for the medical care of the people of this state collecting all factual data in this field, with a view of evaluating any deficiencies in the present system and formulating concrete plans which might eliminate any madequacies, and be it further

and formulating controls plans which might eliminate any madequacies, and be it further "Resolved that the Executive Secretary of this subcommittee shall be the Director of the Bureau of Medical Care Insurance of the Medical Society of the State of New York, and be it further

"Resolved, that the Council and Trustees of the Medical Society of the State of New York are memorialized to appropriate from the Society's treasury such monice as are necessary to adequately implement the purposes of this resolution."

SPERKER BAUER INASMUCH as that resolution

SPEAKER BAUER Inasmuch as that resolution pertains specifically to the Planning Committee, instead of referring it to a reference committee on new buances I will refer it to the Reference Committee on the Report of the Planning Committee, Dr Di Natale Chairman.

Section 24. (See 84)

Amendment of Workmen'e Compensation Law (Sec. 13C, Subdiv 1-C)

DR. JOSEPH C O GORMAN, Erre Mr Speaker, the County of Erre has its resolutions in order and it is at your discretion whether they may be heard, one right after another

The first one reads

"WHEREAS, The Workmen's Compensation Law of the State of New York commands the medical societies of all counties with less than 1,000,000 population to certify to the Chairman of the Workmen's Compensation Board all applicants for a compensation medical burean or laboratory license, and

Whennas, the aforesaid statute also directs the said county medical societies to ascertain by inspection of each proposed medical bureau or laboratory whether it qualifies for a hereas under the law and the rules of the Chauman of the Workmen e Compensation Board governing the heening and operation of such medical bureaus or

laboratories, and

"Whereas the aforesaid law in addition imposes upon the said county medical societies the duty of making periodic inspections of all compensation medical bureaus so certified and incensed, to ascertain that their equipment is adoquate and their staff is qualified to provide proper medical care and that the ostablishment is conducted and operated in conformity with the legal requirements, and "Wheneas, the aforesaid law further requires

"WHEREAS, the aforcasal law further requires the said county medical societies to investigate, bear, and determine all charges of professional or other misconductor of a volation of the Workmen's Compensation Law by any compensation medical bursus as certified and learned and

medical bureau so certified and heensed, and "Whenkans, the aforesaid law piaces upon the said county medical societies the obligation to see to it that no compensation medical hureau or laboratory is conducted or operated unless it is capable of rendering competent medical care and is licensed in the manner aforesaid, and

Withheas, the said county medical societies in the full discharge of the foregoing duties necessarily incur substantial clerical stenographic,

travalling, and other expenses, and
"Whereas the aforesaid law provides that
each compensation medical bureau or laboratory
so licensed pay to the Chairman of the Workmen's
Compensation Board an annual license fee of \$50,
and

"Whereas the aforesaid law makes no provieion for defraying the said expenses of the county medical societies incurred in the performance of the foregoing duties, and

"Whencas the said expenses of the county medical sociouse are a proper and legitimate cost chargeable to the administration of the Workmen'e Compensation Law, now, therefore, be it

"Resolved by the House of Delegates of the Medical Society of the State of New York, that it be recommended to the Chairman of the Work men'e Compensation Board, of the Department of Lebor, and the Legasisture of the State of New York, that the Workmen'e Compensation Law be amended to provide that one-half of the annual license fee paid by said compensation medical bureaus and laboratories, pursuant to Sec. 18C, Subdr 1-C, be paid to the county medical society that has recommended the licensing of such compensation medical bureau or laboratory"

SPEAKER BAUER That resolution is referred to the Reference Committee on New Business A, of which Dr Heliman is Chairman. The Reference Committee is also directed to confer with the Chairman of the Reference Committee on Report of the Council—Part X, dealing with Workmen e Confpensation, of which Dr Leo F Simpson is Chairman

Section 25 (See 05)

Survey of Public Attitude in New York State Toward Compulsory Medical Care Insurance

Dr. John C Bradt Erie This resolution has reference to a survey of public attitude in New York State toward Compulsory Medical Care Insurance

"Whereas, forces and intereste advocating or actively seeking establishment of a compulsory government-operated, medical-care insurance system in New York State habitually place emphasis on their clams that there is an undeniably strong movement throughout the world, nation, and state for compulsory government-centrolled medical-care insurance, that the need for a compulsory health insurance program is evidenced by various national 'polls of public opinion conducted by certain magazines, committees, and organizations, that the public attitude toward compulsory medical care insurance must be gaged from such socialida polls, and that on the basis of such 'public demand socialization of medicine is inovitable, and

Whereas, the medical profession in the State of New York seriously questions, if not sharply challenges, the correctness and validity of the claim that these various polls accurately reflect the attitude of the people of New York State toward the medical profession and the degree to which the idea of socialized medicine has been accepted by the residents of New York State, it being the profession e belief that the people of this State or a vast majority thereof, do not want State medical care provided by bureaucrats and polliterians but desire to purchase their medical security voluntarily under the American system of American modecine, and

"Whereas, an enlightened approach to this

pronounced conflict of views between proponents of compulsory government-controlled medical care and defenders of America's free and progressive medical profession would seem to require that it be determined with certainty not only what the people of New York State are thinking with respect to medicine but what they want and what they do not want in the field of good medical care, the ascertainment of the true state of the collective mind being the basic object, without

elements of guess or gamble, and "WHEREAS, there exists strong reason to believe that by far the greatest number of people, when given a free choice, which they are reported to have been denied in some polls, will select as most destrable a voluntary prepayment plan as against compulsory government-operated medical service for the sick, there also being good reason to beheve that many persons have been swayed into recording themselves for government-run medical care by false and delusive promises and representa-tions by proponents of centralized control of medical service, whereas if all thinking persons would fully comprehend the threats to personal liberty concealed in these bureaucratic schemes, they would take a firm stand for continuance of

"WHEREAS, it is vital and important that the things that lead people to form wrong opinions be corrected, studies in some states having disclosed that three out of four persons never have heard of the voluntary, nonprofit, prepayment medicalsurgical service programs sponsored by the medical profession, this lack of familiarity with the physicians' own plans which offer the sound alternative to mandatory government health insurance constituting a calamitous situation, which would, however, be rectified to a marked extent by personal interviews by trained research workers,

the American system of the best possible medical

care under free enterprise, and

now, therefore, be it "Resolved, that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, appoint a Special Committee to determine upon and formulate plans for the conduct at the earliest possible date of a survey of public opinion in New York State toward the medical profession and compulsory, government-run medical-care in urance, such survey to embrace a representative cross-section of the population of the state who shall be contacted by trained investigators or research workers employed by a company of national standing utilizing the standard scientific 'sampling' method of personal interviews and a comprehensive questionnaire form devised in collaboration with said

Special Committee, and be it further

"Resolved, that said survey be sponsored financially by the Medical Society of the State of New York, the cost to be an expenditure from the general funds of the State Society, it being the judgment of the House of Delegates that the price paid for such a study would be an excellent investment in combating the threat of governmentcontrolled medicine because it would (1) Obtain an accurate reflection of the existing public attitude throughout the State, which attitude, we believe, decisively favors a voluntary prepayment plan when the people know there is a choice, (2) Enable medic e to bring home to 'on-the-fence' persons the difference between the medical millenium many think socialized medicine would bring them, and the sad and disappointing realityslump to the low and indifferent standards of

medical care current to those countries saddled with state medicine, (3) Furnish and arm the medical profession in this key state with indisputable facts and information to be utilized by its spokesmen in establishing the fallacy and unsoundness of compulsory government-dominated health insurance as sought by any group or official body including the New York State Commission on Medical Care, which at hearings and in other ways has plainly disclosed to medicine its desire and its intention to offer a bill in the next Legislature setting up in New York State a compulsory, taxpaid health insurance system, (4) Spur the medical profession in this state to cooperate more wholeheartedly in the several existing voluntary medical-care programs to the end they be made so widespread in coverage and so attractive that government control and management will be clearly unnecessary to the vast majority of citi-

SPEAKER BAUER This resolution is referred to the Reference Committee on New Business C, of which Dr Monteith is Chairman

Section 26 (See 96)

Opposition of the State Medical Society to Establishment of Any Form of Government-Operated Compulsory Medical Care Insurance in the State of New York

Dr. Harry C Guess, Erre Mr Speaker and Members of the House of Delegates, this resolution was brought to the floor of the Mcdical Society of Erie County, discussed, and passed unanimously by that organization It has to do with seeking the opposition of the State Medical Society to the establishment of any form of government-operated compulsory medical-care insurance in the State of New York

"WHEREAS, the first objective of the medical profession in the State of New York is the provi sion of good medical care to every person in the state under a guarantee of professional freedom to both physicians and their patients and preservation of the American system of the private prac-

tice of medicine, and

"WHEREAS, the medical profession in the State of New York intends to promote this objective, recognizing that the accomplishment of the goal of providing the highest quality of medical care is not simple but is one requiring the sincere cooperation of the medical and allied professions, labor, industry, and many other interested groups and individuals, particularly in light of the postwar revision of wage levels and living standards,

and "Whereas, solution of this broad problem does not, and will not, require government interference to control, compulsion, or burdensome taxation, the physicians of New York State, through their voluntary, prepayment, nonprofit medical-care insurance plans having demonstrated their ability to develop programs pertaining to the medical economic security of this State, the same programs being founded on the principle that the care of the public health and the provision of medical service to the sick is primarily a local

responsibility, and WHEREAS, medicine acclaims the growth of voluntary medical care insurance plans in this State under the stimulus of the Central Bureau of Medical Care Insurance created by the Medical Society of the State of New York, to coordinate existing prepaid voluntary medical-care insurance

plans, effect formation of new plans in unserved territory and educate the public, notably those in the lower income brackets, as to the many advantages and availability at a minimum cost of voluntary medical service insurance, in evolving these plans the medical profession of this State

being prompted by a feeling of social responsi-bility in the vital field of medical care, and "VHENDAS the fourteen point program for the extension of improved health and medical care to all the people of the nation, as presented by the physicians of the United States through the American Medical Association, contains the fundamental principles upon which a sound progressive plan for providing good medical care in any state may be established, with proper emphasis on the problem of earing for the indigent sick and these having chronic Illness, for which there are no suitable provisions under existing or proposed compulsory sickness insurance plans in the Legisla-ture of the State of New York, and

Whereas the medical profession in this state recognizes that the establishment of hospitals, laboratories, and other medical facilities in areas not having ade uate provision to meet medical needs meets with general approval as do grants of government and to acctions where need is demonstrated but points out that the needs of these inadequately supplied arons cannot properly be used as a reason for subjecting to state regula-tion the major portion of the State having far more advanced standards and facilities, the areas of higher standards being able to progress better under their own planning than they would under any governmental pattern, and "VI HEBEAS, medicine in this State submits that

voluntary methods of insurance, utilization of existing facilities as far as possible, expansion of existing public-health services, aid to the indigent and impoverished communities preservation of private practice and the principle of local deter mination of need end local control of administration are basic principles of Americanism, and these principles which are the expression of a public-spirated profession devoted to human well are should not be ignored or circumvented, and "Vittingas, though understanding of these

principles by the public and our legislators should pave the way for anthumastic cooperation of the medical profession and other responsible groups in providing the best of medical care to all residents of this State, it has become necessary to protect the public by opposing the substitution of a system of medicine with regimentation of patients and physicians in New York State, such as would destroy the American qualities of medical services that are most important to health, and

WHEREAR, study of government-run compul sory insurance plans in other countries has revealed marked tendencies to loss of the importance of the individuality of the patient and to deteriora tion of the quality of the service political manipu-lation and exploitation for political patronage purposes as well as diversion of insurance funds to various purposes, the entire pattern of such government-dominated systems being contrary to the Intrinsic American principle of personal initia tive and individual effort, and

WHEREAS, there now is before the Legislature of the State of New York the Ives Compulsory Health Insurance Bill for New York State, and medicino is threatened with the introduction at the 1946 Legislative Session of other measures pro-posing compulsory government-operated medicalcare insurance-measures which would create a state-wide network of local administrative hurcaus financed by additional millions taken from the pockets of already harassed taxpayers, measures which would break down the old fashioned physiolan relationship and lower, not raise, the stand ards of medical practice, now therefore be it

"Resolved, that the Medical Society of the State of New York represented at this duly convened meeting of its House of Delegates, is keenly aware of the ultimate consequences of imposing on the people of New 1 ork State a government-controlled compulsory medical-care insurance system and is deeply concerned over existing and impending leg islation to put just such a system into operation in this state but at the same time is prepared to meet the issue of State Medicine vs. Free Medical

Practice, and be it further Resolved, that the Medical Society of the State of New York hereby places itself on record as condemning all attempts to establish to the State of New York any form of compulsory, governmentcontrolled, medical-care insurance and pledges itself its members and its resources to vigorous and uncompromising opposition to any and all bills or other proposals introduced in the New York State Legislature or made the subjects of hearings or conferences, which have for their pur-pose the placement of the licalth and medical service of this State under a State hursqueracy, the medical profession believing it can be entrusted to accomplish all that any state medicine plan could accomplish, and to do it without regimentation of the people and the profession "

SPEAKER BAUER That resolution is referred to the Reference Committee on New Business C, of

which Dr Monteith is Chairman

Section 87 (See 85)

Amendment of Workmen's Compensation Law-Chapter 258, Laws of 1935

Dr. Moses H. Krakow, Bronz. Lake the resolu tion from Eric County which affected counties of a population of less than 1,000 000, we now present a companion resolution which will be effective in counties of a population of over 1 000 000, regarding the Workmen's Compensation Law

WHEREAS, Chapter 258 of the Workmen's Compensation Laws of 1935 empowered all the county medical societies throughout the State to administer the medical provisions of the Compensation Law, and

"Whereas the administration of this law was carried out with complete success by the county medical societies in so far as their jurisdiction

Permitted, and
'Unuseas this law was amended in June 1044 for the alleged purpose of correcting so-called abuses existing in the administration of the county

medical societies; and
'Wheneas this amended law of 1944 wholly
deprived medical societies in counties of a popula tion of over 1,000,000 from participation in the

administration of the law; and "WHEELAS, this amended law of 1944 placed in the hands of a Medical Practice Committee of three the whole administration of the law for countles baving a population of a million or more.

with Medical Practice Committee cannot possibly conduct the volume of work assumed to it as shown by (a) The specific request of the Labor Department that the county societies, deprived by law, assist the Medical Practice Committee in its administration, (b) Complaints by physicians of undue delays in arbitrations and unfair awards in arbitrations, (c) Complaints of delays in the qualifying of physicians, (d) Failure of physicians to obtain competent information from any source at the Labor Department on matters pertaining to the law, therefore be it "Resolved, that the Medical Society of the State

of New York be requested to press for legislation as soon as feasible to reinstate to the medical societies in counties of a population of over 1,000,000 the powers formerly existing under Chapter 258,

Laws of 1935 "

Referred to Reference Com-SPEAKER BAUER mittee on New Business A, of which Dr Hellman is Chairman, with the same provision on that as I gave on the other resolution covering the same subject matter in counties under 1,000,000 population, that the Reference Committee consult with Dr Simpson, the Chairman of the Report of the Council, Part X, pertaining to Workmen's Compensation.

Section 28 (See 102)

Combatment of the Growing Antivivisection Menace

Dr. Harold F R Brown, Erre I have been asked by the Eric County Medical Society to offer the following resolution on an antivivisection law

"WHEREAS, the Medical Society of the State of New York is deeply conscious of the rapidly spreading antivivisection menace, as evidenced by the introduction in the Congress and numerous state legislatures of bills to prohibit the use of live dogs in scientific animal experimentation, the arrest of high officials of Northwestern University at the instigation of publicity-seeking Chicago antivivisectionists, the appearance in certain national periodicals of sensationally-phrased, inflammatory, and outrageously untrue articles against animal research, the current campaign by antivivisection groups to enlist new members in their movement to outlaw by destructive legislative enactments future animal research in our biologic and pathologic laboratories, our medical schools and scientific institutions, as well as by other activities reflecting fanaticism, undue emo-tionalism, false sentimentality, and utter irre-

sponsibility, and "Whereas, the 1945 session of the New York State Legislature was witness to the introduction of two bills to prohibit scientific experimentation by the use of live dogs, one of which measures swept through the State Senate with only nine opposing votes, thus becoming the first bill of its kind ever passed by either branch of the New York State Legislature, this same piece of legislation finally being defeated in the State Assembly after the bitterest of contests between forces of enlightened medical progress and forces of scientific

ignorance and misrepresentation, and "Whereas, defeat of the bill in question must be attributed in the main to the courage and clear thinking of our State Assembly leadership and members, who recognized that the great benefactions of medicine and surgery granted humanity far outweighed the necessary sacrifice of some

lower animals, and "Whereas, those legislators who opposed and brought about the death in Assembly Rules Committee of this pernicious measure, with emphasis on the names of the Hon. Oswald D Heck, Speaker of the Assembly and Rules Committee Chairman, and the members of the Rules Com-

mittee, are to be warmly commended and congratulated for their cooperation with medical science in standing firmly against those who sought to throttle medical research dedicated to the promotion of human health, the alleviation of misery, and the prolongation of human life, and the medical profession of the State of New York hereby acknowledges its debt of gratitude for such splendid assistance, and

"WHEREAS, the self-same antivivisection elements, heartened by their near victory at the last session of the State Legislature, now are preparing, according to well-informed sources, to introduce and press for passage in the coming 1946 session of the New York State Legislature a bill similar to that which almost received the approval of the

1945 Legislature, and

"WHEREAS, the voice of medicine and science, so far as it receives authoritative utterance, is overwhelmingly opposed to legislation, federal, state, or local, which proposes in any way to outlaw, restrict or interfere with animal experimentation and research, which offer the prospect of even greater scientific gains in the future, and

"Whereas, the medical profession believes that a truly intelligent consideration of the facts about animal experimentation can bring but one conclusion—that medical science will perish if animal research is eliminated or curbed, and that to achieve that intelligent consideration by the public is the task confronting medicine and science

in this State, and

"WHEREAS, The Medical Society of the State of New York has noted with high interest and approbation the recent action of the Medical Society of the County of Erie in setting up a Committee for the Defense of Medical Research, composed of twelve Erie County leaders in the fields of medical practice, education, research and science, which committee is dedicated to this triad of (1) A progressive program of education to adequately inform the public as to the truth and facts with respect to scientific animal experimentation by the use of the lower animals, which at no time is cruel, and the great benefits of animal experimentation to mankind, (2) Development of public and legislative opposition to enactments which would hamper or destroy medicine's cease less struggle to conquer disease, (3)\_Combatment on the floor of the New York State Legislature, in cooperation with Erie County and Western New York lawmakers, of any measure that would control, limit, or prohibit the free course of beneficent

scientific inquiry, and
"Whereas, the expanded activities of the antivivisection bloc in many states and the national capital have impelled the Committee for the Promotion and Protection of Animal Experimentation in Biological, Medical, and Dental Research and Teaching, of the Association of American Medical Colleges, to undertake the establishment of a Bureau of Public Relations for the planned education of the American public relative to the value of medical and biologic research, inclusive of animal experimentation, such Bureau to be financed by member institutions and prominent medical institutes, which developments on a nation-wide footing emphasize the need for action on the part of state medical groups to offset the vicious efforts

of the antivivisection elements, and "Whereas, The Medical Society of the State of New York, being gravely concerned over the antimedical crusade being waged by misguided forces in this State and thoroughly aroused over their efforts to deal a devastating blow to medical research and public welfare, is agreed that medicine must prepare at once to meet renewal of the antivivisectionists' drive at the 1946 legislative

session, now, therefore, be lt
"Resolved, that the Medical Society of the State of New York, represented in this duly convened meeting of its House of Delegates, appoint with all convenient speed a special committee to deter mine and formulate, on a state-wide basis an effective educational and defensive program to combat the growing antivivection threat, such program to include a strong recommendation to every county medical society in the State that it establish without delay a local committee for the Defense of Medical Research patterned after the Eric County Medical Society's committee, thus providing a united medical front for the promotion and encouragement of scientific achievement and the defeat of legulative proposals to hamper or cripple medicine s efforts to advance the cause of public bealth."

SPEAKER BAUER Referred to the Reference Committee on New Business B, of which Dr Moore 18 Chairman

Section 29 (See 92)

#### Medical Care

DR. B M. BERNSTEIN, Kings I wish to introduce the following resolution

"WHEREAS, the organised medical profession has always indicated its willingness to confer with any individual or group in the dirating or consideration of legislation affecting medical care, and

"Winners, the earnest desire of the organized profession to cooperate with labor, industry, or with the government in the study of the providing of the best medical care to all the people, has con

austently been ignored, and Whicheas, it is of the utmost importance that the public be informed and convinced of the earnestness of the medical profession to give its all for the care of the sick and the prevention of disease without the necessity for the interference of an 'outside agency, be it

"Resolved, that the organized medical profession

reaffirms lts readiness and willingness to cooperate with all agencies in the discussion and study of

plans and measures proposed for complete medical care for all of our people, and be it further 'Resolved, that the Medical Society of the State of New York stands ready to cooperate in a statewido conference of labor, industry, social agencies, government, and medicine for such a discussion.

and be it further

"Resolved, that the House of Delegates of the A.M.A., likewise be urged to reaffirm its willing ness to cooperate in a similar National Conference of labor, industry social agencies, covernment, and medicine in order to reach a meeting of minds in a discussion as to the best methods and measures, procedure, and plans which can be evolved to provide for all of our people the best possible medical care, without regard to economic status or

geographic location, and be it further

Resolved, that all possible publicity be given to
this resolution and that all concerned individuals be fully informed, and urged that such anticipated conferences be called at an early date.'

SPEAKER BAUER Referred to the Reference Committee on New Business C of which Dr Mon teith is Chairman

Section 30 (See 106-105)

Remission of Dues (County of Monroe) Dr. Leo F Simpson Monroe This is introduced at the request of the Medical Society of the County

of Monroe "WHEREAS, many of our colleagues, members of the Medical Society of the County of Monroe, have given their services to their government dur

ing the present World War, and "WHEREAS, this separation from civilian life has resulted in a change from a civil to a regimented

military life, and

"Whereas, many of our members now serving in the Armed Forces will have difficulty in resum ing civil practice and many will wish to enter noon postgraduate work for varying periods, therefore be it

'Resolved, that the Medical Society of the County of Monroe remit the dues of all of those members returning from the armed forces for a

period of months, or years, equivalent to that served in the armed forces, and further be it "Resolved, that the Medical Society of the County of Monroe petition the Medical Society of the State of New York to remit the state assessment for these members for a similar period."

SPEAKER BAUER This is referred to the Refer ence Committee on New Business B, of which Dr Moore is Chairman.

Section 31 (Sec 90)

War Memorial Fund

DR. EUGEND H. Coon, Nassau. This resolution is read at the request of the Executive Committee of the Nassau County Medical Society

"Whereas, some five thousand one hundred and more members of the Medical Society of the State of New York have entered the services of our country, and

"WHEREAS, certain of these members have

made the supreme sacrifice, and "WHERDAS it is only fitting, and we believe the members would deem it a privilege, to establish a suitable memorial in their honor, and "Whereas, there can be little doubt that the

advanced education of the children of these gold star members, a project dear to the heart of any professional father, will entail great sacrifice or be impossible to achieve, be it therefore

Resolved, that the House of Delegates of the

Medical Society of the State of New York requests the Board of Trustoes to establish a fund for the ndvanced education of the children of our col leagues who have died in the service of our coun

try, and be it further "Resolved that said fund may be raised by a small increase in dues or an annual levy over a period of years, for example one dollar per year for ton years, in order that each member may have a part in the memorial."

SPEAKER BAUER Referred to the Reference Committee on New Business C, of which Dr Monteith is Chairman.

Section 32 (See 87)

Principles of Professional Conduct

DR. HAROLD B DAVIDSON, New York This is being proposed by me, and is seconded by Dr Andrew Eggston, of Westchester County This is

WHEREAS the Principles of Professional Con-

duct' of the Medical Society of the State of New York fails to specify precisely what may properly bo stated in the advertisement or announcement of a book, article, or other publication written by a doctor for the lasty, therefore be it

"Resolved, that a special committee be appointed to study this problem and formulate such necessary amendments as the Committee deems advis-

able.

SPEAKER BAUER Referred to Reference Committee on New Business A, of which Dr Hellman is

Section 33 (See 77)

Separation of Professional Service Fee From Hospital Insurance

DR. STEPHEN H CURTIS, Section Delegate introducing this resolution at the request of the Section on Pathology It covers the separation of professional service fees from hospital insurance

"WHEREAS, 'The Practice of Medicine' as defined in the Education Law clearly includes the practice of pathology, radiology, anesthesiology,

and physical therapy, and
"Whereas, amendment of the Labor Law by recommendation of the Stichman-Moreland Commission gave further legislative action affirming such characterization of these branches of medi-

"Whereas, Article IX-C of the Insurance Law specifically provides that no corporation shall furnish both hospital service and medical expense in-

demnity insurance, and "Whereas, The Medical Society of the State of New York, by action of its House of Delegates, has defined the distinction between hospital service

and the practice of medicine, and "WHEREAS, the physician members of the governing boards of United Medical Service, Inc., and the affiliated Associated Hospital Service of New York are publicly indicated as representatives of

organized medical societies, and "Whereas, an agreement, at a conference between representatives of organized medicine and the Executive Committee of United Medical Service, Inc Board, was later affirmed in a resolution adopted by the United Medical Service, Inc. Board, that at the expiration of six months Associated Hospital Service of New York would provide a companion hospital service contract to be issued in combination with the new United Medical Service, Inc. General Medical Expense Indemnity contract, and

"WHEREAS, this agreement reached between representatives of medicine and the United Medical Service, Inc Board has not been officially accepted or otherwise recognized by the Board of Directors of the Associated Hospital Service of

New York, now, therefore, be it "Resolved, that the Medical Society of the State of New York, by action of the House of Delegates, notify both United Medical Service, Inc. and Associated Hospital Service of New York that the physicians serving on their Board shall fulfill their duties as directed and agreed upon with repre-sentatives of organized medicine, and be it further "Resolved, that no member of this Society shall

continue to serve on a Board of Directors which fails to recognize and abide by the explicit terms of the laws relating to the practice of medicine, tho administration of nonprofit hospital service and medical-expense insurance, and the official definition of the Medical Society of the State of New

York relating to the distinction between hospital service and the practice of medicine, and be it further

"Resolved, that a copy of this resolution be published for the information of the members of this Medical Society and that a copy of this resolution be mailed to each physician who is now a director of United Medical Service, Inc. and of the Associated Hospital Service of New York, to Mr Louis H Pink, President of Associated Hospital Service of New York, and to the Secretary of the Medical Society of the State of New York, and to each of the seventeen county medical secreties within the territory of United Medical Service, Inc., to the President of the New York State Hospital Association, Mr John F McCormack, and to Mr Robert F Dineen, Superintendent of Insurance"

SPEAKER BAUER Inasmuch as the subject matter of this resolution is covered in the report of the Planning Committee, this resolution will be referred to the Reference Committee on the Report of the Planning Committee, Dr Di Natale, Chairman

(See 100) Section 34

Transfer of Health Services from the Children's Bureau to the U S Public Health Service

Dr. Oliver W H MITCHELL Mr Speaker and Members of the House of Delegates, this resolution is submitted by the Council Committee on Public Health and Education and the Subcommittees on Maternal and Child Welfare

"WHEREAS, the US Public Health Service is the official agency of the Federal government primarily responsible for the prevention of disease and the protection of the public health, and "Whereas, the US Public Health Service car-

ries on these activities through the State Departments of Health and other state agencies in the

field of Public Health, and

"WHEREAS, the health services for mothers and children now conducted by the Children's Bureau of the Department of Labor parallel and in many instances overlap the responsibilities of the Public Health Service and require duplication of district facilities and personnel and a confusing duplication of federal relationship with State Health Departments and other State agencies in the field

of public health, and
"Whereas, it would be more logical, effective and more economic to have all public health responsibilities concentrated in one federal agency and establish one direct channel of relationship

with State Health Departments, therefore he it "Resolved, that the House of Delegates of the Medical Society of the State of New York hereby memorializes the House of Delegates of the A M A to petition the Congress and the President of the United States to transfer the personnel, facilities, and budget of the Children's Burcau frem the Department of Labor to the US Public Health Service'

SPEAKER BAUER Referred to the Reference Committee on New Business B, of which Dr Moore 18 Chairman

Section 35 (See 98)

Discontinuance of the Drafting of Professional Students

This resolution per-Dr. John D Naples, Erre tains to the discontinuance of the drafting of professional students

"WHEREAS, the madequacy of our national

medical resources, which became acutely evident during World War II threatens to become a chronic situation unless prompt and effective steps are taken to solve the problem, keeping in mind that the war has multiplied the medical responsihilltles of the nation, and

"Whereas, the supply of physicians is not great enough numerically, in the judgment of competent observers, to provide for a high standard of medical care for both civilian and government require-

ments, and

WHEREAS, one of the reasons for this condition was the unfortunate policy of Selective Service in refusing to defer prospective medical students which is bound to result for many years to come in a decrease in the usual annual increment of physicians, military policies also having curtailed the training of specialists during the war, and

Whereas, there is little doubt in any physician's mind that the present federal policies will hring about a critical condition in meeting civilian

and other medical needs in the years to come, and "WHEREAS the Council on Medical Education and Hospitals of the American Medical Association has repeatedly urged the necessity for changes in the policies of governmental agencies, notably the Selective Service System, having to do with the education of premedical students and the House of Delegates of the American Medical Association took official cognizance of the seriousness of this problem, and

'WHEREAS, the medical profession is being depleted by about four thousand deaths and an un-known number of retirements annually which placed alongade the constant withdrawal by Selecture Service of premedical students from their studies will add up to a very serious situation, If not the greatest deficit of medical men in history unless a continuous flow of medical-student gradua

tions is maintained annually, and "Wheneas, similar alarm is registered by the professions of dentistry law pharmacy, engineering, nursing, and other highly skilled pursuits likewise those concerned with the various sciences,

now, therefore be it

'Resolved that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, goes on record as strongly favoring the immediate discontinuance of the drafting of all persons engaged in studies preparatory to practice of any of the recognized professions or engagement in any scientific occupa-tions, and that the War and Navy departments and the Selective Service System be and they heroby are urred and petitioned to remove this menaco to professional education and professional standards by ceasing the drafting of all such students." SPEALER BAUER Referred to the Reference

Committee on New Business B of which Dr Moore is Chairman,

Section \$6 (See 105)

Remission of State Society Dues to Discharged Medical Officers

DR. JOHN D NATLES, Eric. This concerns the remission of State Society dues to discharged medical officers for a twelve-month period following retirement from service, and is similar to the resolution introduced by Dr Simpson for Monroe County.

WHEREAS, thousands of members of the Medical Society of the State of New York left their homes and practices to serve with the armed forces all over the globe in World War II which recently ended and

Whereas many of these medical officers have been discharged from military service and many others now are returning or will sometime return, to New York State to re-establish themselves, and Wheneas, it is recognized that a large propor

tion of these returned medical officers will face financial and economic problems in connection with their adjustment to civilian life, and

"WHEREAS the Council of the Medical Society of the State of New York more than a year ago adopted the following procedure with respect to remission of dues of members duscharged from the A member discharged from armed services the Armed Forces after more than sixty days of service, shall have his dues remitted for the calendar year in which he was discharged regardless of the month, however unless he has served a total of at least fourteen months he shall not be entitled

WHEREAS, a considerable number of members of the Medical Society of the State of New York feel that the present policy and procedure could well be liberalized to accord to the returned medical society. cal officer an even creater measure of financial cooperation and a fuller expression of good will, now,

to remission of more than one years, dues, and

therefore boit

Resolved, that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, hereby goes on record as favoring and proposing that the existing procedure be revised and liberalized to provide for remission by the State Society of its portion of dues for a full twelve months period to every member-medical officer after and from the date of his retirement or discharge from the armed services, and that all county socioties be requested to pur sue the same method.

SPEAKER BAUER That will be referred to the same Reference Committee on New Business that received the other resolution, B of which Dr Moore

15 Chairman,

Section 37 (See 80)

Restoration of Prewar Four-Year Education Course for Medical Students and Discontinuance of Nine-Nine-Nine Months' System

DR. NELSON W STROHL Eris. Mr Speaker and Members of the House of Delegates, I have a resolu tion which has been unanimously adopted by the Medical Society of the County of Eric in regard to the restoration of prewar four-year education course for medical students and discontinuance of the nine-nine-nine months' system

"Wheneve, medical education and training have attained an unequaled standard of excellence in medical colleges and schools conducted in the State of New York, which high standard the medical profession of this state is keenly anxious

shall be maintained, and

Whereas for the efficient training of a modical student it is occessary in the judgment of the State Department of Education and the medical profession, that he shall have satisfactorily completed four courses of at least eight months each in a medical school registered as maintaining at the time a standard satisfactory to the State Department of Education, and

Whiteras, a majority of the medical schools and colleges of New York State, because of the national emergency adopted an accelerated war time teaching program whereby the regular reguirements for the M D degree are completed in three calendar years, which accelerated program policy still is in force notwithstanding the fact that

the war has terminated, and

"WHEREAS, in the opinion of the medical profession of New York State, as well as the responsible heads of the medical colleges and schools of this State, it would be in the best interests of the people of this State, if the prewar, full four-year period of study and training for student-candidates for the M D degree were restored at the earliest possible date, there being no sound reason, so far as medicine has any knowledge, for the indefinite continuance of the accelerated program policy, and

"WHEREAS, because of the national emergency, now concluded, there also was established a system, which still is in force, whereby every graduate in medicine in the State of New York usually serves a nine months' internship, in place of the prewar period of one full year's internship, tho same abbreviated nine months' service policy applying to the periods of service as assistant resident physician and resident physician in a hospital, the whole being denominated the nine-nine-

nine months' program, and

"Whereas, a number of valid reasons are advanced for the discontinuance of the accelerated nine months' internship program and restoration of the full year's internship policy, among these reasons being that (1) The nine months' internship does not provide the new graduate in medicine with sufficient training to equip him to take up an assistant residency or residency, (2) Some medical graduates in the past have been prone to take only a one year's internship, which in itself is generally regarded as too short a training period, whereas reduction of the regular full year's period to nine months provides a wholly inadequate training period, (3) The resident or assistant resident who has had only nine months' preparation under these circumstances becomes an inadequately prepared candidate for future specialist training, (4) The nine months' internship policy and the restriction as to numbers reduces the number of interns allowed for each hospital, imposing too heavy a duty load on the interns in these civilian institutions and denying patients that high quality of professional care from the house staff which they were assured when the hos-pital boasted a complete staff and every graduate remained for a minimum of one full year,

"Now, therefore, be it

"Resolved, that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, hereby goes on record as strongly favoring and urging the termination of the accelerated three-year teaching program for medical students in the medical colleges and schools of New York State and the country at large at the conclusion of the academic year beginning October 1, 1945, and that the so-called ninenine-nine months' program be discontinued at the earliest possible date in favor of restoration of the full year's training period, or more, for an internship, for an assistant residency, and for a residency, such return to prewar medical educational policies being recognized as necessary to the preservation of the high standard of medical education in the state's and nation's medical colleges and schools and in the public interest, and be it

"Resolved, that the government of the United States, through its appropriate agencies and officers, be, and it hereby is, respectfully memorialized to take the necessary steps to effectuate the foregoing recommendations"

SPEAKER BAUER Referred to the Reference Committee on New Business A, of which Dr Hellman is Chairman

Section 38 (Sec 104)

Early Release of Doctors from Armed Services

Dr. John T Donovan, Erie Erie County would like to present this resolution on the early release of doctors from the armed services

"Whereas, the medical profession of the United States as a body, as well as all of the citizens of our country, have just reason to be proud of the achievements of the Medical Corps of all branches of the armed forces in World War II, their skilled services having greatly reduced battle fatalities and enhanced military morale, contributing materially to the ultimate victory which was the portion of the Allied Nations and writing another shining chapter in the history of American medi-

cine, and
"Whereas, the upwards of sixty thousand American physicians  $\pi$  ho responded to the call of their country in the greatest struggle in which our nation ever has been engaged nobly left their homes and occupations, in many cases at a large personal sacrifice which never can be adequately compensated by a grateful people, to serve bravely

and well in farflung war areas, and "Whereas, the end of World War II has brought a swelling demand from medical organizations, industry, labor, members of Congress, the press, from doctors themselves in uniform, and above all from the civilian public to whom medicinc on es its heaviest responsibility, for the speedy release of the greatest number possible of physicians in the armed services, in the national inter-

est, and
"WHEREAS, the medical profession feels that it has discharged its obligation in the emergency the armed forces were required to face and seeks the same sympathetic consideration for its colleagues in uniform as will be accorded other servicemen in Army, Navy, Marines, and Coast Guard, to wit, that the reduction of the number of medical officers in the service be in the same proportion as

that of line personnel, and "Whereas, while the medical profession is fully aware that during the next few months problems of care, evacuation, and disposition of the wounded and sick still coming from overseas as well as the task of general demobilization will require the continued services of doctors, for the performance of which vital functions medicine definitely favors the provision of a sufficient number of trained physicians, it nevertheless is deeply concerned over the possibility of arbitrary retention in the armed forces of a huge surplus of doctors unnecessary to military demands and detrimental to civilian population welfare, and

"WHEREAS, more and more medical officers, in letters received by state and county societies from individuals and groups, reflect concern over the feeling that the several Medical Corps have large numbers of doctors who could be released at once to return to civilian practice, particularly in communities where need for returning medical officers is acute and in which thousands anxiously await the homecoming of their own family doctor, and

WHEREAS, the medical profession has read the statement that physicians will be discharged from military service on a point system similar to that covering the servicemen whom they have treated, and likewise has noted with interest the more recent announcement that some thirteen thousand physicians of the Army Medical Department only will be returned to civilian life by the end of 1945 but it believes and holds that the system of release should be at once revised and liberalized to embrace all branches of the Armed Service, and

"WHEREAS the Medical Society of the State of New York like the American Medical Association well realizes it has the power merely to recommend the elimination of further delays in freeing to civilian practice the reputed surplus of doctors in military service, but hastens to point out that failure to facilitate in every possible way the discharge of medical officers would constitute a grave mjustice to the public and unfair treatment of both the service dector who placed devotion to country above all personal considerations and the homefront physician who has been taxing his strength, now, therefore, be it
"Resolved that the Medical Society of the State

of New York, represented at this duly convened meeting of its House of Delegates, hereby earn estly urges and petitions the Government of the United States, through its proper and appropriate Federal departments and officers, to bring about the effective accomplishment of the foregoing objects, namely, the honorable discharge and re-turn of all medical officers to private practice as soon as military necessity will permit.

SPEAKER BAUER Referred to Reference Com mittee on New Business B of which Dr Moore is

Chairman.

Section 39 (Sec 95)

Proposed Pepper Bill, S 1518 (E M.I.C. Program)

Dr. Stanler E. Aldrison, Albany This is a resolution unanimously passed by the County Society of Albany last month. It relates to the Pepper Bill, S 1818 which proposes legislation to extend the benefits under the E.M.I.C program which now applies to the wives and children of servicemen, to apply to the health and welfare of mothers and children and for services to crippled children throughout the nation. For the purposes of this legislation children are construed to be all those under twenty-one years of age

"Whereas there has been introduced in the Senate of the United States by Mr Pepper, Mr Walsh, et al., a bill entitled A hill to provide for the general welfare by enabling the several states to make more adequate provision for the health and welfare of mothers and children and for serv ices to crippled children, and for other purposes',

"Whereas, a companion hill has been intro-duced in the House of Representatives by Mr Kelley of Pennsylvania and

"WHEREAS, said hills provide for the extension of the E.M I C program to the entire population of the several states and possessions of the United States, plus additional provisions for disabled

children etc, and

"Whereas said hills will eventually defeat the purpose for which they presumably were intro-duced, that is, 'to make more adequate provision for the health and welfare of mothers and children', first by raising maternal mortality and infant morbidity through reducing attendance at prenatal and well baby clinics to such a degree that teaching material will be so curtailed that

the adequate training of our medical students and the resident staffs of our hospitals will be impossible, second, by discouraging young men and women from study in the fields of obstetrics and pediatrics, and

"Wherman, such legislation will eventually epread to all fields of medicine, "Be it resolved" (1) That the Medical Society of the County of Albany, New York, hereby resolved (1) the supersystem of the County of Albany, New York, hereby resolved to the Albany of the Statement (1) and the supersystem of the Statement (1) and the supersystem of the Statement (1) and the Stat cords itself as being opposed to the aforementioned bills, (2) That our delegates to the meeting of the House of Delegates of the Medical Society of the State of New York, to be held in Buffalo early next month, be instructed to present this resolution to the House of Delegates and to use their energies in securing favorable action upon the sentiments expressed herein. (3) That our delegates be instructed to urge the House of Delegates to appoint a special committee to study the bills, to understand the ultimate consequences to the medical profession and the general public, and to appear before the appropriate Congressional Committees in opposition to the proposed legislation."

SPEAKER BAUER Referred to the Reference Committee on New Business C, of which Dr Mon-

teith is Chairman.

Section 40 (See 85)

Minimum Wage Law Dr. B M Beanstein, Kings Taking a cue from the excellent address made by Dr. Cunnifie, I wish to introduce the following resolution

"WHEREAS, the House of Delegates agree fully with the sentiment expressed by Dr Cunniffe, President of our State Society, in regard to the necessity for medicine showing its attitude on matters concerning economic welfare of our peo-

ple, be it "Resolved that the House of Delegates of the Medical Society of the State of New York in convention assembled advocate that the minimum wage to be granted by industry to labor be high enough to permit the worker to be, and remain, an independent individual, able economically and willing to pay his or her way in the purchase of all the necessities of life, and be it further

Resolved, that the Secretary of Labor and the appropriate committees of the Congress of the United States and the national officers of all labor organizations and the U.S. Chamber of Commerce and the National Association of Manufacturers be informed of the contents of this resolution, and be it further

"Resolved, that the House of Delegates of the American Medical Association be urged to adopt a similar resolution and to follow similar action in regard to its publicity"

SPEAKER BAUER Referred to the Reference Committee on New Business A, of which Dr. Hellman is Chairman.

Are there any further resolutions?

(There was no response.)

SPEAKER BAUER. Those of you who have resolutions will have an opportunity to introduce them this afternoon. I will ask you please to try to get them in this afternoon. The men who are from out of town have requested that we try to finish our busi-ness by 2 30 o clock tomorrow afternoon, so they can get a train. I promised to do so if it was physically possible, but to do that I will need your coperation. If you have resolutions, get them in this alternoon. That will give the committees a chance to work on them tonight, whereas if they are introduced tomorrow morning it may be necessary to push them over until the afternoon session, and I would rather have as little business deferred until the afternoon session as possible, in order to facilitate an early adjournment and to have as many delegates present as we can to act upon all business before the House

We have one very important matter to take up before the House It is an appeal from the decision of the Board of Censors You have had a rather strenuous morning, so wo will now give you three minutes in which to stretch, but please don't leave the room because we will reassemble promptly at

the end of that time

(Recess)

Section 41

Condolences to Be Sent to Dr Charles M Allaben

SECRETARY ANDERTON Mr Speaker, late last evening word was received that the wife of a member of the Council, Dr Charles M Allaben, has died Therefore, your Secretary took the liberty of sending the following telegram

"Dr Charles M Allaben, 114 Murray Street, Binghamton, New York

Officers and councillors express deep sympathy of Medical Society of State of New York to you and yours in this bereavement

W P ANDERTON, Secretary,

Medical Society of the State of New York"

Arrangements were made through the courtesy of Dr Diekson to have some flowers sent with an expression of sympathy of the House of Delegates

May I request, Mr Speaker, that the House approve this action and expense on my part?

Dr. Harold B Davidson I so move Dr. James F Rooney I second the motion.

There being no discussion, the motion was put to a vote, and was unanimously adopted

Section 48 (See 18-49)

Appeal of Dr Joseph F Montague From Decision of Board of Censors of the Medical Society of the State of New York

Speaker Bauer May I ask if Dr Joseph F Montague is here?

DR JOSEPH F MONTAGUE Yes, he is Speaker Bauer And your counsel? DR MONTAGUE I have no counsel.

SPEAKER BAUER You wish your appeal to be

heard without your counsel present?

DR. MONTAGUE Yes
SPEAKER BAUER Under the provisions of the bylaws a person who has been disciplined by a county
society may appeal to the Board of Censors If he
is not satisfied with that decision, he may then appeal to the House of Delegates

Under date of July 5, 1944, the Medical Society of the State of New York received the following letter from Samuel R. Gerstein, attorney and counselor at

law, which I will read

"Medical Society of the State of New York 292 Madison Avenue

New York, New York

Dear Sirs

Dr Joseph F Montague, a member of the Medical Society of the County of New York, by Samuel R. Gerstein, his attorney, hereby appeals from a decision, and every part thereof, made by the Board of Censors of the Medical Society of the State of New York, which decision is undated and

copy of this is annexed hereto

The grounds upon which such appeal is hereby taken is that there was error in finding that Dr Joseph F Montague in any way breached Article 4, Chapter VIII of the Bylaws of the Medical Society of the County of New York, or any of the Bylaws of the Medical Society of the State of New York, and that Dr Joseph F Montague did not commit in any way any act which might unfavorably affect the character, dignity, or interests of the Medical Profession, that Dr Joseph F Montague did not commit any act which might subject him to discipline, that the decision of the County of New York, affirmed by the Board of Censors, was an abuse of discretion

Dr Joseph F Montague desires to be present in person and represented by counsel, and Samuel R. Gerstein of 52 William Street, New York City, is

hereby designated as his counsel

Yours very truly,

Samuel R. Gerstein

That was duly acknowledged, and due to the delay in the meeting of the House of Delegates this matter, of course, has had to be postponed, and it now comes before us

In order that there might be a full and informal discussion of this, the Speaker referred the matter to a Reference Committee, of which Dr Masterson is Chairman, and Dr Montague was invited to appear

before it, if he so desired, which he did

That Reference Committee held sessions yesterday In addition, all the transcript of the testimony taken before the county society and the Board of Censors has been mimeographed and sent to every member of the House of Delegates before he came to this meeting, so you had an opportunity to become familiar with the whole situation.

The matter before us now is this appeal, and I will call on Dr. Masterson, Chairman of the Reference

Committee, to make his report

DR. HOMER J KNICKERBOCKER, District Delegate I move we go into executivo session, and that the room be cleared of all but delegates, except, of course,

Dr Montague and his counsel.

SPEAKER BAUER Dr Montague was given the opportunity of having this in an executive or open session, and ho replied that he preferred to have it in an open session However, if Dr Montague wishes an executive session now I would be very glad to direct it

Dr. Montague Am I being directed to absent

myself from this room?

SPEAKER BAUER No, you would be present.

DR. ALFRED M HELLMAN, New York That the room be cleared of all but delegates except you and your attorney, it was stated

Speaker Bauer Naturally, you would remain. Dr. Montague I don't understand the ques-

tion then.

Speaker Bauer If the House went into executive session, it would take out the press, and it would take out those who were not voting members of the House of Delegates except some of the members of the official family

DR. MONTAGUE I respectfully request that it be

an open session
SPEAKER BAUER Dr Montague has the right to
claim an open session, and it will be an open session

We will now hear the report of the Reference Committee

DR JOHN J MASTERSON, Kings I met Dr Bauer

In the lobby last night, and I did not know whether I should shake his hand or ignore him for appointing me as Chairman of this particular Reference Committee. Belonging to the particular branch of medicine that I do I suppose he thought I might be able to see through this thing (1 ou will please note that I have not told you what that branch is, and that I have not mentioned anything about specialists or specialties because those words are in had repute.)

However, when this thing was referred to the House of Delegates, it was the duty of the Speaker to appoint a committee to review the matter and I wish to state that when Dr Bauer asked me to become a member of this committee I very gladly assented because somebody had to do the work.

All of you have a copy of the record, so there is no use of my going into the matter and giving you a long dissertation The hour is late, you all know the facts, so I will proceed with the report of your

Reference Committee, which is as follows

The matter considered in the appeal of Dr Joseph F Montague to the House of Delegates of the Medical Society of the State of New York from the decision of the Board of Censors of the Medical Society of the State of New York June 1, 1944, affirming the action of the Medical Society of the County of New York on February 17 1944 in suspending Dr Montague from the rights and privileges of member ship in the Medical Society of the County of New I ork for a period of one year

Your reference committee bas carefully considered the entire record of the proceedings submitted to us and the members of the House of Delegates. At our preliminary hearing beld in Buffalo on the ovening of October 7, 1945 Dr Montague was present, et the invitation of the Speaker of the House. We have gone into every aspect of the case with its many ramifications and have no desire to burden you with a lengthy discourse of our prolonged discussion and study of the evidence and the exhibits submitted.

We are of the upinion that the violation of Section 31(A) of the Principles of Professional Conduct of the Medical Society of the State of New York was not intentional on the part of Dr Montague. Dr Montegue has agreed to submit all present and future advertisements of his publications for the consideration of the appropriate committee of his County Society We, therefore, recommend as follows

That the determination of the Board of Consors of the Medical Society of the County of New York affirmed by the Board of Censors of the Medical Society of the State of New York, he medified as follows that the sentence of suspension imposed be set ande, and that in lieu thereof the sentence be

changed to consure without any further penalty.

This report is signed by Herbert E. Wells, J.

Henry, O J McKendree Joseph D Hallinan, and John J Masterson, Chalrman I move, Mr Speaker, the adoption of our recommendation.

ndation.
Dr. Kirby Dwight I would like to seems ......
Preserver Bauer Dr Montague, you have the privilege of the floor

Mr Chairman and Gentlemen. DR. MONTAGUE I have prepared an appeal, and I would like to have

the privilege of reading it.

SPEAKER BAUER You have that privilege.

DR. MONTAGUE I esteem very highly the privilege of appearing before you as one of the last courts of appeal, within the Society, in the matter of a charge brought against me in the New York County Medical Society to the effect that I violated professional ethics by permitting the publication of a certain advertisement of one of my books.

First lot me say that I shall be most brief—as brief as is possible, considering the importance of this issue both to myself and to all authors of medical books and to the profession itself. I understand that the documentary evidence is in your hands for such perusal as you require. I shall not burden you with the details but will point out the chief points involved.

Now the case in point is as follows During my twenty-eight years as a medical practitioner, I have been a member of the Medical Society of the County of New York, and during these years have exclusively specialized in diseases and disorders of the gastrointestinal tract. During this time I have written several books. My latest health book for the latty was written recently. The publishers of this book being impressed with its merits and being desirous of selling what they thought was a worth while book, proceeded to have an advertisement written describing the fact that the book existed, that it dealt with certain ailments, that it was written by a person who was well qualified to write such a book, and further, that some of those who had read the book had said such and such about it, and, finally that the book could be obtained by filling out a customary mail order coupon. This advertisement was submitted to me for approval as to the medical facts contained therein. On looking it over, I decided that there was nothing untrue in the advertisement, that it made no false or extravagant claims, and thet it was in accordance with the pattern of advertisements customanly used to promote the sale of popular health books. Finally, I viewed it as a book ad vertisement and not as an act of self-aggrandizement. Moreover, it followed essentially the same pattern as did an advertisement of one of my provious books which advertisement was accepted and published by the A.M.A. publication, Hygera, a popular bealth marazine.

The advertisement under criticism had been prepared for the publishers by the firm of Schwab & Beatty who are advertising specialists in the writing of bealth book advertisements, and this firm is beyoud repreach in that particular field. Further the fact that the New York Times, a paper noted for its digmty and conservative attitude, had accepted the advertisement made me feel that my judgment was correct, especially since it is my understanding that the New York Times is guided in the selection of its health book advertisements by the New York County Medical Somety

All this, of course, was stated to the Board of Censors and later to the Comitia Minora of the New York County Medical Society At these hearings I denied any thought of this advertisement's being considered an instrument of self-aggrandizement and freely expressed my willingness to submit all future advertisements which came to me for approval directly to the Committee on Publicity concerning whose existence I was not hitherto aware. Appar ently, our colleague, Dr Crohn, and some other medical anthors were equally unaware of its exist-

After the hearing had, to all eppearances, ended and I was under the impression that I was to recard the proceeding as a warning against such action in the inture, a colloquy ensued in which I prosumed to set forth my ideas as to bow the Censors could better obtain the cooperation of medical authors. I realize now that my forthrightness in speech offended some of the gentlemen of the Board, although I assure you no offense was intended. However, the resentment

which was noticeable at that very moment was evidenced by the fact that the Committee gave no warning but peremptorily decided that by permitting the advertisement to refer to me as a well-known specialist, I was guilty of a violation of medical ethics and they decided on the penalty of one year's suspension of privileges. An appeal to the State Medical Society, protesting such unreasonable distortion of the facts, was of no avail, and a conclusion adverse to me was reached by the New York State Board of Censors. However, I still appeal for exoneration, since I do not consider their position tenable nor a violation proven

I would like to have you search deep in your minds for the reason why I should appeal As a result of the verdiot, if confirmed by you, I am to be penalized for this alleged violation and the penalty is to consist in a suspension of privileges of membership in the county medical society for a period of one year This will deprive me of the privilege of receiving the publications of the Society, of my voting privilege, and of the privilege of participating in the group insurance I am not persisting in my appeal and in my determination to carry the fight on and on merely because of the threatened loss of these privi-I am persisting in my appeal because I feel that the integrity of this Society, of which I am a member, is being placed in jeopardy—that its stand-ing as a body of honorable, fair-minded, and emo-tionally mature professional men is being imperiled by the arbitrary act of a few men who have resented my critical but well-intentioned remarks previously I feel that I am fighting a battle for all authors who happened to be members of the Medical Society and that it is a fight for that freedom of speech guaranteed me by the Constitution of the United States and not forsworn by me or any other author that I know of by mere membership in the

Society They say I have violated ethics, and one is reminded of the Essays of Bacon, in which appears, "What is truth?' said jesting Pilate, and did not stay for an answer" I shall ask you, gentlemen, representing the profession—What are ethics? further, I shall give you the answer Both ethics and morals are commonly defined and accepted as being a manner of conduct based on custom In the mstance of my alleged violation of ethics I have attempted, but have not been permitted, to offer in evidence great numbers of exhibits which constitute proof that it is a contemporaneous as well as a recent custom to refer to the author of a health book as being particularly qualified in his particular field I am accused of violating ethics by permitting a publishing firm to refer to me as a well-known specialist Still, custom in such matters and present-day usage are entirely in accord with the act which would make it conform to any commonly accepted definition of I offered in evidence the advertisement of Dr Crohn's book, but this was deemed immaterial. I also offered to submit a great many other similar advertisements, but they were deemed irrelevant Yet these constitute tangible evidence of those existing customs which constitute ethics therefore, counsel for the county medical society attempts blithely to brush aside the exhibits as being irrelevant or inadmissible, I emphatically protest against any such star-chamber procedure and insist that if Webster's and other leading dictionaries are correct in stating in their definition of ethics that it is based on custom, I have the logical, moral, and legal right to introduce evident showing what that custom is When it is stated that I have, by allowing the customary mention of my name and qualifica-

tions in connection with a book which I have written to be stated in public print, brought about publicity such as would tend to effect personal aggrandizement, I claim that it is a hideous and malicious dis-If this ruling is permitted to go untortion of facts challenged, no author could maintain membership in the county and state Societies without forever having some article of speech or punctuation mark interpreted as tending towards self-aggrandizement short, his freedom of expression in being permitted to write a book will mean nothing unless the book is permitted to receive public announcement and distribution untrammeled by the heckling of a board of censors, or some other self-constituted purity league within the Society

Counsel for the Medical Society will admit that it is set forth in the record that the Society found nothing wrong with the book, that they realized the book had to be advertised, that, in fact, the only thing toward which there was any objection was the fact that I was referred to as a well-known specialist. In other words, simply because I, in looking over an advertisement containing a thousand and one words, could not by clairvoyance divine the fact that the Board of Censors objected to the use of one or two words, I am to be penalized to the extent of having my privileges in the Society suspended for a period

of one year

How ludicrous this will appear to the public at large when they review or have reviewed for them the fact that at about the same time more than one member of this Society received only a ten- or fifteen-day suspension for stealing money through workmen's compensation kickbacks and in violation of law, ethics, and common decency! Contrast this to the penalty of one year's suspension meted out to me because of a difference of opinion between the Board of Censors and myself over one or two words, at the most, one phrase in the advertisement of a book of which I am the author and with which the Board of Censors and the Comitia Minora admit they had no fault to find.

There are two glaring discrepancies in the conduct of the Comitia Minora. In one place in the record—page 7, Trial Committee, January 25, 1944—you will note that the contention is made that the advertisement is not in accordance with the Committee's idea of taste, and yet, still later in the testimony, taste is apparently discarded as an issue and it is bluntly said that the same committee doesn't care if the book is, as they say, "boosted" as long as I do not profit by it—In other words, gentlemen, must I practice my profession at a loss in order to remain in favor with this interpetation of ethics? What a petty attitude for men—grownup men—professional men—to assume! And where, may I ask, is there a sentilla of evidence that I actually did profit?

Second, I would like to acquaint the House of Delegates with the fact that the Board of Censors which declared that I was not to be permitted to be referred to as a well-known specialist or a specialist of any kind, that even the titles of previous books of which I am the author could not be mentioned, has given its approval to a second advertisement by Dr Crohn which permits him to be referred to as a specialist. Further, I submit an additional exhibit, that of a book written by one of our professional colleagues—a member of the county and state medical societies—in which the author is referred to as a noted psychiatrist and which makes mention of the fact that the author's books "are notable for original thinking and clear expression and are very widely

[Continued on page 2570]

[Continued from page 2568]

read and discussed" (This exhibit is in the hands

of Dr Masterson)

Apparently, the Comitia Minora and the Board of Censors are in a state of confusion either as to what the standards of cthics are in relation to the publicity of health books or else they are in a state of confusion as to whom they care to have such rules as they make up apply Is it possible that discrimination or a private campaign of persecution is being advanced in the guise of protecting the medical profession against an infraction of its code of ethics? I have evidence, which I shall not introduce in these hearings, to show that such might very reasonably be an explanation. However, permit me to sum up the facts as I see them, and add to such a summation a suggestion for amicably settling such differences as may exist

Whereas, I completely deny that I intended committing or condoning an act of self-aggrandizement by the mere approval of the publisher's advertisement in vuestion, and I categorically deny that I intentionally violated any of the principles of the eode of ethics of the county or the state medical society,

and

Whereas, the ruling in my case now before you is

contrary to natural justice, and

Whereas, I have never received any request to cause discontinuance of advertisements mentioning my name and have never received any warning that same was contrary to the wishes of the Committee on Publications, a committee of whose existence I was unaware at that time, and

Whereas, such ruling was an abuse of discretion,

and Whereas, I have already suffered nearly two years of humiliation, damage, and considerable expense because of such ruling, and

Whereas, I have freely expressed my willingness to submit such matters in the future to the designated

Committee on Publicity,

I therefore respectfully request the House of Delegates to reverse said ruling and to terminate the matter here within the Society and now at a time when we can prevent this from becoming a public

And now, gentlemen, I thank you for your kindness and patience in listening to me and leave the matter in your hands for decision

SPEAKER BAUER Have you anybody else you

want to call on to speak in your behalf?

Dr. Montague No, I will leave it in the hands of the members

The motion before the House Speaker Bauer is that the penalty imposed by the Comitia Minora of the Medical Society of the County of New York, and confirmed by the Board of Censors of the Medical Society of the State of New York, should be modified to relieve Dr Montague from any suspension of membership and that there be inflicted a censure only The matter is now open for discussion Dr. Joseph A Geis, Essex Does

Does this vote decide whether or not further litigation should go on

from a civil angle?

That is something out of our Speaker Bauer This is merely a matter of confirmbands entirely ing, disapproving, or modifying the action of the Board of Censors, and the motion is that the action should be modified.

DR MONTAGUE May I say I have no desire to make a public issue of this or to bring it into the civil courts, but I have only one course to pursue. My honor is at stake My professional reputation is at stake Would I not be very derelict both to

myself and my profession if I were to let the matter drop without having my honor satisfied? I think

Dr Benjamin M Bernstein, Kings Montague accept a censure and call it quits?

SPEAKER BAUER Dr Montague does not have

to answer that question unless he wishes to

There were calls for the question

Gentlemen, in a matter of this SPEAKER BAUER character it is customary that the vote should be taken in executive session Ordinarily, we permit certain exceptions to the executive session, but in this particular case I feel it would be prejudicial to the interests of the appellant to permit anyone to remain in the House who is not a voting member of the House, with the exception of our reporter, who has to be here to take down the action of the House.

In order to protect further Dr Montague against any discussion taking place in his absence, I would suggest that someone move the previous question

DR JAMES F ROONEY I will move the previous

question

DR. EUGENE H Coon, Nassau I second the motion

There being no discussion, the motion was put to a vote, and was unanimously carried

The motion is carried, and no Speaker Bauer

further discussion of this matter can take place.

Dr Bandler, the Chair will designate you as sergeant-at-arms to clear the House, and as his assistants I will appoint Dr Laurance Redway, of Westchester, and Dr Elton R Dickson, of Broome. I rise to a question of information. Dr. Rooney

Is this vote to be by secret ballot or viva voce?

Viva voce, unless the House SPEAKER BAUER orders otherwise.

(There was no dissent expressed with the ruling of

the Chair)

Those permitted in the House Speaker Bauer at this time are Past Presidents, Officers of the Society, District, Section, and County Delegates, Mrs Grimm, and nobody else.
Dr. Clarence G Bandler, New York

is no one now in this House except accredited mem-

The Sergeant-at-Arms de-SPEAKER BAUER

clares we are now in closed session

The previous question having been moved, the question now before the House is on the motion shall the action of the Board of Censors of the Medical Society of the State of New York confirming the action of the Canada New York confirming the action of the Comitia Minora of the Medical Society of the County of New York be modified to remove the suspension of Dr Joseph F Montague from membership and inflict censure only All those in favor of that motion will say "Aye", those opposed, "No" The motion is carried unantmously

Will someone now move we return to open ses-

I so move

DR. JAMES F ROONEY I second the mo-DR WILLIAM KLEIN, Bronx tion.

There being no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER BAUER We are now in open session I will make another motion, Mr Dr. ROONEY I think it is only just and right that Dr Speaker Montague be immediately informed of the action of the House of Delegates, in order that there may not be any ill feeling left in his mind in relation to any further continuance of the litigation outside of this Society, which would engender an enormous amount

[Continued on page 2572]

# Information! -ABOUT THE NEW

## ADOUT THE NEW

# *Camblells*, strained BABY SOUPS

# Q What are the ingredients in Campbell's Strained Baby Soups?

A Campbell a usa carefully selected meats cereals and those vegetables scientifically recognized as having the most desirable nutritive qualities. All the food properties are natural. Because Campbells are accustomed to purchasing only selected meats and vegetables the best is assured for Campbell's Strained Baby Soups.

# Q What about vitamin and mineral retention?

A The latest scientific information has been drawn upon in the development of a cooking method to insure the affective conservation of vitamins and retention of minerals

# Q When should Baby be started on strained soups?

A Campbell's Strained Baby Soups can be started as early as any strained beby foods Depending upon the baby, pediatricians recommend beginning between the ages of three and six months.

#### Q Why do Campbell's Strained Baby Soups taste better?

A The superior flavor is the natural result of the high quality meats and vegetables together with Campbell's many years of experience in making soups that taste good. This flavor superiority has been substantiated by the enthusiasm with which these soups were welcomed upon their in troduction to doctors and mothers in Philadelphia soms months ago

A comprehensive analysis of each soup may be had upon application to Campbell Soup Company Camden, Naw Jersey

5 KINDS

LIVER CHICKEN LAMB BEEF VEGETABLE

All in Gion

Campbell's Strained Bsby Soups represent fine quality in ingredients in care and method of cooking in retention of minerals and comer vation of vitamms and in good flavor Every resource of Campbell's Kitchens is devoted to that aim

of publicity that would be of evil import to the Society in these precarious days I so move that he be invited to come in, and be informed by the Speaker of the House of the action that this House has just taken

I think there is no necessity of That will be done SPEAKER BAUER

taking a vote on that

SECRETARY ANDERTON Shall I go outside and bring him in?

SPEAKER BAUER Yes.

(Secretary Anderton returned to the platform

with Dr Montague)

Dr Montague, the House of SPEAKER BAUER Delegates unanimously voted the recommendation of the Reference Committee that your suspension be removed and that censure only be inflicted.

Dr. Montague Thank you

Section 43

#### Welcome Extended to New Delegates

Gentlemen, in just one mo-I think at this meeting of the SPEAKER BAUER ment we will recess House of Delegates there are more new members That has been brought than at any previous one about by the fact that the meeting was postponed and many of the regular members on short notice were unable to come There are a number of alternates here We have also had a reapportionment of the House since the last meeting, and some counties have more delegates than they had previously been entitled to We would like to have every man in this House who is attending his first session to stand

About thirty-five members arose, amid applause

Gentlemen, I would like the SPEAKER BAUER new members to realize that they are members of the legislative body of the second largest medical society in the world You will find this organization a very serious, earnest-minded organization, and a group of men with whom you will be proud to be associated I hope that your blushing modesty will not deter you from taking part in our discussions simply because you are new I assure you that length of service is not necessary to get recognition from the

Now that you may have something to shoot at, I am going to ask Dr Brittain, of Delaware, to stand

Dr Robert Brittain arose, amid applause SPEAKER BAUER Dr Brittain is now attending his fifty-second session of the House of Delegates

DR ROBERT BRITTAIN, Delaware I thank you, gentlemen It gives me pleasure to see the number of new delegates that we have here this year I appreciate this privilege

Judging from the bald heads of SPEAKER BAUER some of the new members, I don't think they are going to make his record. (Laughter)

The House will now be in recess until 3 30 P.M. (At 1 40 o'clock P M a recess was taken.)

(To be continued in the December 15 issue)

# Physicians know from clinical experience

the reliability of

# Pil. Digitalis

(Davies, Rose)

They conform now,

# Postgraduate Medical Education

Programs arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York are published in this Section of the Journal The members of the committee are Oliver W H Mitchell, M D, Chairman (428 Greenwood Place, Syracuse), George Baehr, M D, and Charles D Post, M D

### "Problems of Practice in the First Year of Life"

P OSTGRADUATE instruction in pediatrics was given before a meeting of the St Lawrence

Medical Society at 1 30 PM., November 8, at the A Barton Hepburn Hospital, Ogdensburg "Problems of Practice in the First Year of Life" was the topic discussed by Dr Gaylord W Graves, clinical professor of pediatrics, New York University College of Medicine

Dr Graves was sponsored cooperatively by the Medical Society of the State of New York and the New York State Department of Health

Dr Graves spoke on the same topic before the Jefferson County Medical Society at 8 00 PM, November 8

The medical society mot at the Black River Valley Club, in Watertown

## Treatment of Arthritis

A N EVALUATION of the present methods of treatment of arthritis, by Dr Russell L Cecil, professor of clinical medicine, Cornell University Medical College, was the topic of a meeting of the Monroe County Medical Society on October 30.

Tho meeting was held at the Rochester Academy of Medicine

Dr Cecil's talk was arranged by the Council Committee on Public Health and Education of the Medical Society of the State of New York.

#### FIND MOSQUITOES CAN TRANSMIT SLEEPING SICKNESS TO HUMANS

One of the common American mosquitoes—Culex tarsalis-has been found guilty of carrying encephalitis, an infectious inflammation of the brain, to human beings

Evidence to support this fact was obtained by four investigators, W McD Hammon, MD, W C Reeves, PhD, and Bernard Brookman, AB, all of San Francisco, and S. R. Benner, M. D., of Yakıma, Washington, who report the results of their study of the annual epidemics of encephalitis in the Yakıma Valley, Washington, in the August 18 issue of the Journal of the American Medical Association

Various forms or types of encephalitis are recognized by medical science. All are caused by disease agents or viruses which attack the central nervous Popularly known as "sleeping sickness," this virus disease usually causes the patient to be-come lethargic or sleepy Convulsions and paraly-sis sometimes accompany the somnolence or lethargy, and in many cases there is a delirium in which the patient may have emotional outbursts, delusions, or periods of depression. Unfortunately, scientific medicine has not yet developed any specific method of treatment that will prevent this disease or arrest its progress.

The peak of the Yakıma Valley epidemics, which occurred in 1939-40-41-42, was reached during the middle and latter part of August Studies of the numbers of mosquitoes showed that the activity of the C tarsalis mosquito parallelod the epidemic

The authors explain that "the period of greatest activity of several species, including C tarsalis, just preceded the peak in onset date of human cases, a period representing probably the incubation period in man and mosquito" The incubation period is the duration between the time the virus is introduced into the body and the appearance of visible symptoms

"During July and August," the authors report on their 1942 study, "a total of 24,751 mosquitoes, including nine species, were collected and tested for virus content, yielding 49 strains of virus Of these mosquitoes 9,466 were C tarsalis A total of 45 viruses was isolated from this species, 41 western equine and four St Louis strains Thus, an infection rate was demonstrated in C tarsalis of at least one in each 210 collected, as compared to one in each 386 found the preceding year. The role of C tarsals as a natural vector [carrier] of these viruses in the Valume Valume the control of the control the Yakıma Valloy is thus amply confirmed "

Collections of mosquitoes were made on the horse, cow, and man to determine which of the various mosquito species fed on these animals It was found that C tarsalis fed frequently on birds and included most of the common domestic animals in its feeding range The results of laboratory tests, and the repeated isolations of the virus from this mosquito give strong support to the probability that domestic fowl are an important "reservoir" of infection in the

Yakıma Valley

With children "the benzedrine inhaler can be satisfactorily employed for young children for the relief of obstructive symptoms in the nasopharynx due either to infection or to allergic edema. No untoward symptoms were noted from the use of the inhaler."

Vollmer E.S. Use of the Benzedrine inheler for Children, Arch. Otolaryng 25.81

Benzedrine Inhaler

In a recent survey of pediatricians, 77% were lound to use Benzedrine Inhaler N.R., In their practice

Children accept Benzedrine Inhaler therapy willingly and show none of the hostility which so often complicates the administration of drops tampons, or sprays. Each Benzedrine Inhaler is packed with racemic amphetamine S.K.F. 200 mg menthol, 10 mg, and aromatics. Smith, Kline & French Laboratories Philadelphia Pa.

## Medical News

## Insurance Companies Plan Heart Research

SPONSORSHIP of a medical research program by one hundred and forty-three life insurance companies in the United States and Canada with funds of \$3,500,000 in prospect for the next six years was announced on November 2 by M. Albert Linton, chairman of the joint committee of the American Life Convention and the Life Insurance Association of America

Initial research will be in the field of heart and arterial diseases, which have been termed "Number 1 Killer" Annual contributions of \$578,000 to the fund will more than double the total annual grants from foundations for this phase of research

In addition to aiding institutions engaged in studying the cause and cure of heart ailments, the insurance group will establish medical-research fellowships for individuals

Recommendations for allocations of funds will be made by an advisory council of eight medical school and university representatives Four life insurance company medical directors will cooperate with a board of nine directors and the advisory council.

#### Tuberculosis Sanatorium Conference Held in New York

THE thirty-fifth clinical session on chronic pul-monary diseases of the Tuberculosis Sanatorium Conference of Metropolitan New York was held at

the Cornell University Medical College Amphitheatre on November 7 at 8 30 r m.

Two papers were presented "Ten Years' Experience with BCG (Clinical and Experimental)," by Dr Sol Roy Rosenthal, of the Chicago Municipal Tuberculosis Sanatorium and University of Illinois School of Medicine, and "The Results of BCG

Inoculation of Children from Tuberculosis Homes in New York City," by Dr Milton I Levine, assistant professor of pediatrics at Cornell Univer-

assistant professor of pediatrics at Cornell University Medical College
Dr W G Childress, chairman of the Tuberculosis Conference, presided. The papers were discussed by Dr Edgar M. Medlar, associate professor of pathology, College of Physicians and Surgeons, Columbia University, and Dr Jules Freund, Public Health Research Institute, New York.

## County News

#### Albany County

On December 5, 1945 the county society will hold its annual dinner and dance in the DeWitt Clinton Hotel as a homecoming celebration for its physician veterans

Dr Charles D Rancourt, promoted to major in the Medical Corps in June, was separated from the Army at Fort Dix, and has returned to his home in Albany

Overseas since the fall of 1942, Major Rancourt flew to Washington, D.C., from Paris He entered the Army in August, 1942, and headed the x-ray department for the Second General Hospital while on the European continent

He served in English hospitals prior to transferring to France last February. He was formerly a practicing physician in Watervliet and the school physician of the city \*

Dr Harold P McGan, of Albany, who entered the Army three and a half years ago as a captain and was promoted to lieutenant colonel during overseas service, resumed the practice of medicine in Albany on November 1

His overseas service included two and a half years

in Africa, Sicily, and Italy \*

## Cayuga County

At the regular meeting of the county society, held October 18, the entire program was devoted to the men now in service when they return to their private practice. The motion was made that a questionnaire be sent to all these men asking the following questions 1 Do you intend to return to the practice of

a discussion of what the society could do to help

medicine in Cayuga County?

2 Do you intend to do the same type of practice?

If not, what changes do you contemplate?

3 Do you desire assistance or advice from the Cayuga County Medical Society? If so, what can

we do for you?

When this information is available the society will then be in a better position to decide what special types of practice are desirable and available, what places in the county and city will remain to be filled, and what is advisable for the group to do to adapt themselves to the changing conditions of the present day and age. It is hoped that this endeavor will greatly improve the medical setup in Cayuga County and at the same time aid the men now in service in returning to their private practice.

Columbia County

Dr Leonard M Niesen, of Hudson, was elected to head the county society at the annual meeting held on October 2 at the General Worth Hotel.

Dr Niesen succeeds Dr John Mambert Other new officers include Dr Elah Bliss, vice-president, and Dr L J Early, secretary Dr Early was re-elected

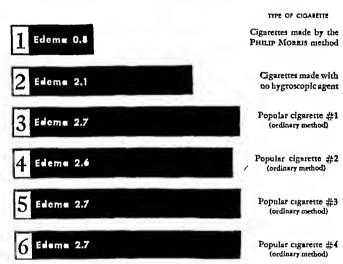

The society pledged a contribution of \$500 to the Columbia Memorial Hospital building fund \*

TO THE PHYSICIAN WHO SMOKES A PIPE. We suggest an unusually fine new bleed-Country DOCTOR PIPE MIXTURE, Made by the same process as used in the manufacture of Philip Morris Cigarettes. [Continued from page 2576]

Capt Harold Levine has received his discharge from the Army and returned to Hudson on October 6 The Hudson physician was overseas three years, being sent overseas two months after enlisting \*

Maj Carl V. Whitbeck, of Hudson, who has been serving in the Army Medical Corps for the past four years, and more recently in the India-China-Burma area, has arrived back in the States at the Port of New York Ho is now at Fort Dix, where he expects to receive his honorable discharge. Upon receiving his discharge he will return to Hudson \*

#### **Dutchess County**

Lt Col John F Rogers, of Poughkeepsio, is on terminal leave from the Army and plans to resume his private practice \*

#### Genesee County

Dr Benjamin Slater, associate medical director of Eastman Kodak Company, spoke on October 22, at 8 00 r m in the Chapel of the Presbytchan Church, Batavia His topic was "Public Health Planning—Postwar World" The address was given under the sponsorship of the Christmas Seal Committee \*

### Jefferson County

On November 8 the county society held its annual meeting at 6 30 P m at the Black River Valley Club, Watertown. The program consisted of a lecture entitled "Problems of Practice in the First Year of Life," given by Dr Gaylord W Graves, clinical professor of pediatrics at New York University College of Medicine, followed by a movie called "Managing Fresh Wounds of Violence," made by the late Montgomery R Reid, of the University of Cincinnati

Election of officers was held at this meeting

Maj Holger C Nelson, (MC), USA, has been honorably discharged from the service at Fort Dix, and has returned to Watertown to resume his practice of surgery

Dr Nelson entered the service September 14, 1942, with the commission of a captain in the air corps of the army He served at Don CeSar Hospital, St Petersburg, Florida, as a surgeon and later was transferred to the 70th Field Hospital as chief of surgery

He served with the 70th Field Hospital in the China-Burma-India theater of operations for a year, leaving the United States Scotember 22, 1944 and returning to this country September 28, 1945. He wears two battle stars for having participated in the Northern Burma and Central Burma campaigns.\*

#### Kings County

Mayor Fiorello H LaGuardia was the principal speaker at the tenth anniversary celebration held at the Bushwick Health Center of the New York City Department of Health, Brooklyn, on November 1, 1945 The ceremonics marked the completion of ten years of health service in the first city-

owned building to be used as a health center Dr Anna E Ray Robinson, health officer of the Bushwick district, presided over the program, which was presented at 3 30 PM in the auditorium of the Center Other speakers included the Health Commissioner, Dr Ernest L Stebbins, Assistant Commissioner for District Health Administration, Dr Margaret W Barnard, John Downing, Director of Recreation, Department of Parks, and Master Donald Messomer. The speakers reviewed the Center's achievements in "Better Health For Bushwick." Preceding the ceremonies the public was conducted on a tour of inspection of the Center

#### Monroe County

Eleven more physicians who are members of the county society have returned from military service, the society has announced

They are Drs Lloyd Allen, Fred W Geib, Leonard Horn, D M Jenkins, Thomas B Jones, J F McAmmond, J N McEachren, Gerald S McGuire, Libby Pulsifer, Joseph I Thaler, and Edward T Wentworth.\*

#### Nassau County

Ways and means of expanding the cancer educational program in the schools and communities of Nassau County were discussed by the representatives of county-wide organizations at a meeting of the educational advisory committee of the Nassau County Cancer Committee at Nassau Hospital in Mincola

The educational work of the cancer committee and its services to the medical and nursing professions, as well as to cancer patients, will be continued and expanded during the coming year, it was announced by the Rev Joseph A Smith, of West Hempstead, chairman of the educational advisory committee and a director of the cancer committee

Edward W Palmer, new executivo secretary of the Nassau County Cancer Committee and secretary of the educational advisory committee, stated that six thousand pieces of educational literature had been distributed to the public during the past four months as part of the educational program He also brought several new pieces of literature to the attention of the committee.

Some new means will be sought for the distribution of this literature so that the educational message might be extended to all residents of the county and members of the committee were urged to assist in arranging educational meetings, exhibits, and the distribution of cancer literature to the groups with which they were affiliated \*

## New York County

To meet the need for providing refresher courses for doctors returning from war service, the College of Physicians and Surgeons of Columbia University is expanding its postgraduate programs in nineteen of the voluntary and municipal hospitals in New York and one in Jersey City, New Jersey, Dr Willard C Rappleye, dean of the college, disclosed on November 2

Every hospital affiliated with the university, he said, plans to increase the number of its residencies, consistent with available clinical material for such training, and the medical school is providing instruction in the medical sciences. More than three hundred discharged medical officers will be enrolled

in this plan of long-term training

## Thirty-one Blue Cross Plans Offer Medical-Surgical Benefits

THIRTY-ONE of the eighty-five regional Blue Cross Hospital Service Plans now offer medical and/or surgical benefits through affiliated organiza-

This was announced on November 1 by William S McNary, chairman of the medical relations committee of the Hospital Service Plan Commission Regional directors of these nonprofit hospital service plans have just concluded a four-day national conference in New York

"The public demand for complete health service must and will be met," said McNary "Hospitals are the logical centers for community health programs, and Blue Cross hospital-service plans will cooperate with local medical societies and similar groups to extend nonprofit medical services to the

public on an ever-increasing scale "

Of the nineteen million Blue Cross members in the United States and Canada, eleven million belong to Plans, which are coordinated with nonprofit medical- and/for surgical-service programs most cases the Blue Cross staff handles enrollment and administration of the affiliated medical plan some areas a single nonprofit corporation provides both medical and hospital benefits The latter arrangement is in effect in the Blue Cross Plan with headquarters at Wilmington, Delaware, Huntington, West Virginia, New Orleans, Louisiana, and Chapel Hill and Durham, North Carolina

Present membership in Blue Cross affiliated medical service plans is two million The largest is the Michigan Plan, which covers eight hundred and sixty-eight thousand persons Others with more than one hundred thousand are those covering Colorado, Massachusetts, and New York City Typical arrangement for providing medical or

surgical benefits is the formation of a nonprofit medical-service plan under the sponsorship of the local or state medical society The association then establishes a contract with the Blue Cross Hospital Service Plan serving that area, to offer medical or surgical benefits to Blue Cross subscribers through the same field and administrative personnel

McNary said, "Nonprofit medical protection is in about the same stage as the Blue Cross Plans were nine years ago whon the Bluo Cross Plan Commission was established to study and promote the development of prepaid hospital care medical-plan enrollment is increasing more rapidly now than Blue Cross Plans were nine years ago It may be expected that the total protection for physicians' and surgeons' services will soon approach the total of 19,500,000 persons covered by hospital

## Blue Cross Representatives Met in New York

 $R^{\,\rm OY\,E}$  Larsen, President of Time Inc , and Fannie Hurst, novelist, were the principal speakers

at a dinner of Blue Cross representatives held on October 30 at the Hotel Commodore, New York

## Improvements

The St Charles Hospital for Crippled Children, in Port Jefferson, has been presented with an orthopedic fracture table, it was announced early in October The table, which represents the most recent development in the orthopedic field, was the gift of Harry Dash, Manhattan business man \*

## County News

Albany County At the House of Delegates meeting held in Buffalo on October 8 and 9 Mrs. Alfred L Madden was elected president-elect of the Auxillary to the Medical Society of the State of New York

Mrs Arthur J Wallingford deserves commendation for her wonderful work for the success of the

annual card party and food sale

At the meeting of the Executive Board held on November 1, Mrs Emerson Crosby Kelly, president, announced the following important coming events. The next meeting of the Auxiliary took place at the City Club, on Wednesday, November 21, at 2 30 PM. The special speaker for this meeting was Mrs Harold E Himwieh, associate in the depart-mont of physiology and pharmacology, Albany Medical College, whose topic was "What You Eat and What You Are"

The surprise announcement was that the Albany County Medical Society will hold its annual dinner and dance, cancelled during the war years, at the De Witt Chnton Hotel, Albany, on December 5, at

7 00 PM

The returned medical officer veterans will be honored at the dinner By request, the members of the Auxiliary will present a skit "The Pains and Passions of Dr Greatheart" The guest entertainer will be Dr Irving Davidson, his subject, "Selected Stories from the Humor of the United Nations"

The annual Fall luncheon of the Auxhary will take place at O'Connor's Banquet Hall, Albany, on December 11 Mrs Arthur J Wallingford, entertainment chairman, will soon announce the list of guests and speakers

Nassau County Pending legislation in rolation to

medical matters was discussed by two speakers at a Joint meeting of the Nassau County Medical Society and its Auxiliary in the MacArthur Auditorium of Mercy Hospital, Rockville Centre Dr W C Atwell, of Great Neck, presided and Mrs E Freeman Miller, of Freeport, vice-president of the auxiliary, was on the speakers' platform

Dr Joseph Lawrence, director of the Washington office of the Council on Medical Service and Public Relations of the American Medical Association, spoke on "Washington Gossip" He told of the work in his department, which acts as a liaison between the A M A and the general public He related some of the amusing queries which coine from individuals He also discussed questions from legislators and

physicians on bills before Congress

The second speaker was Dr Louis H Bauer, of Rockville Centre, trustee of the AMA, member of Council, and Speaker of the House of Delegates of the Medical Society of the State of New York He ovplained the "fourtcen-point program" advanced by the A M A as a counterproposal to the socialized medicine bills, now before both state and national legislators

Schenectedy County The Auxiliary to the Schenectady County Medical Society had its regular meeting on October 23 at the Mohawk Golf Club Luncheon was served Afterward, Dr. Glen Smith, President of the Schenectady County Medical So-

ciety, spoke informally

A skit entitled "Tho Pains and Passions of Dr Greatheart" was givon by a cast of fourteen meinbers of the Auxiliary The same cast gave a repeat per-formance for the Auxiliary of Sunnyview Hospital on October 30

#### PENICILLIN AND LATENT SYPHILIS

Since penicillin is proving to be very effective in the treatment of primary and secondary syphihs and in early asymptomatic syphilis where the duration of the disease is less than one year, many physicians are wondering whether the drug would be equally useful in latent syphilis, particularly in those patients who are seroresistant to standard methods of therapy

The effectiveness of penicillin in latent syphihs has not yet been determined Latency, by definition, allows no point of observation at which the action of the drug upon a subclinical inflammatory process can be studied. The effect upon the serologic titer appears to decrease with increasing duration of the disease, and in late latent syphilis penicillin is not effective in reversing a positive sero-

logic test to negative
The question of whether the administration of penicillin in latent syphilis will provent later cardiovascular and central nervous system involvement can be determined only after the passage of many The answer can come only through a controlled series of observations such as the study now being conducted by the New York State Depart-

ment of Correction and Health at the state penal institutions At the present time, however, the patient with latent syphihs should be given the institutions benefit of a recognized form of therapy, consisting of arsenical and bismuth injections, and not be made to rely upon a drug of unknown efficacy This would appear to be particularly true in the cases of women who are pregnant

Frequently there arises the problem of a young person, with no history of symptoms, who is found to have a positive serologic test during a routine

examination

Because of the age of the patient, the possibility of recent infection appears hkely, and the physician favors peniellin therapy because of the rapidity with which infoctiousness is controlled and treatment completed in early cases. However, asymptomatic syphils discovered at any age, in the absence of contrary ovidence such as recent negative serologic tests. tests, may be several years old If such patients are treated with penicillin, they should be given the If such patients additional insurance of a year of continuous arsenical-bismuth therapy—I J Brightman, M D, in Health News, Aug 6, 1945

To be denied the privilege of motherhood is sometimes an unnecessary tragedy, for the woman who loants a baby:

In the absence of organic deficiencies or pathogenies, hostile genital secretions may apparently (in some instances) cause infertility merely through immobilization of human sperm.

In such cases Nutri Sal-a physiologic glucose douche powder, -encourages a more favorable environment, and supplies metabolic stimulus for sperm motility. Clinical tests have shown that in cases where pregnancy can occur a pre-coital douche of Nutri-Sal will often promote fertility

when the G.J. Tract KICKS UP

Administered in the presence of peptic ulcer, spastic colitis, mucaus calitis, spastic cansti patian, diarrhea, pylara, spasm, cardiaspasm and ather evidences of smaath muscle spasticity in the gastrointesti nal tract—Dannatal affords all the advantages inherent in the pure, natural belladanna alkalaids in exerting peripheral action without taxicity. At the same time it pravides nanarcotic sedation

Dannatal is a rational, balanced combination containing fixed proportions of the only belladanna alkalaids passessing therapeutic importance (hyoscy amine, atropine and scapalamine), with minimal dasage of phenobarbital (1/4 gr per tablet). The pharmacodynamic synergism provided by the three individual alkalaids—plus the sedation afforded by its barbituric acid component—renders Dannatal especially efficacious for lang-term medication with aut danger of aver sedation. Of interest to many patients, Dannatal may be prescribed at approximately half the cost of synthetic preparations!

### REST and SUPPORT for the ARTHRITIC SPINE

### CAMP

Among the conditions for which Camp Orthopedic Supports are prescribed, we frequently find arthritis of the lumbar and dorsal spine. They are efficient and practical aids in the treatment of this condition because—

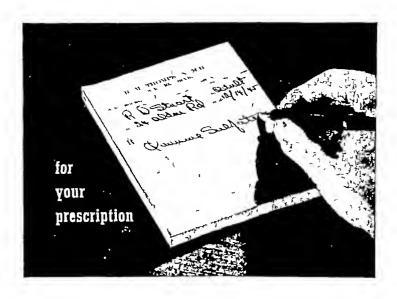

- Their basic construction assures rest and protection to the spine...
- They may be reinforced with pliable steels or the Camp spinal brace as desired by the Orthopedic Surgeon or Physician . . .
- They are easily removed for treatment with other forms of physical therapy...
- They are made of varying height to support the involved region or beyond as prescribed by the attending physician or surgeon.

Patient of intermediate type-ofbuild. Support covers the major portion of the dorsal spine, the lumbar spine, the pelvic region and the gluteal region. Obese patient with pendulous abdomen which must be supported in order to avoid the drag on the lumbar spine. Note support of the gluteal region.

### QUININE IS AGAIN AVAILABLE

RESERVED exclusively for the use of our Armed Forces throughout the War, Quinine has now been released for civilian use as an antimalarial and therapeutic agent.

Merck & Co., Ioc. cootributed to the Wardime quinine program by supplying a substantial part of the Govern ment's stock pile from our reserve stocks. We also expanded our production facilities and continued the manufacture of Quinine and other Cinchona Salts for our Armed Forces and essential public health needs throughout the War

We are pleased that we can again make Quinine available to the physician for the treatment of malariz and other conditions in which it has proved so effective.

(Smooth emulsion of mineral oil with Irish Moss)

- Accelerates normal bowel function
- Is effective in both atomic and spashic constipation
- Is smooth and reliable in action
- Is free from roughage

### Three Forms for all Types of Constipation:

Kondremul Plain—intended to be used over a period of time to aid in normal bowel action

Kondremul with non-bitter Extract
of Cascara\*—recommended for
those of cases where the action of
Kondremul combined with the mild
tonic action of Cascara is desired

Kondremul with Phenolphthalein\*
(2 2 grs phenolphthalein per tablespoonful)—for those obstinate cases
where the laxative action of phenolphthalein is indicated

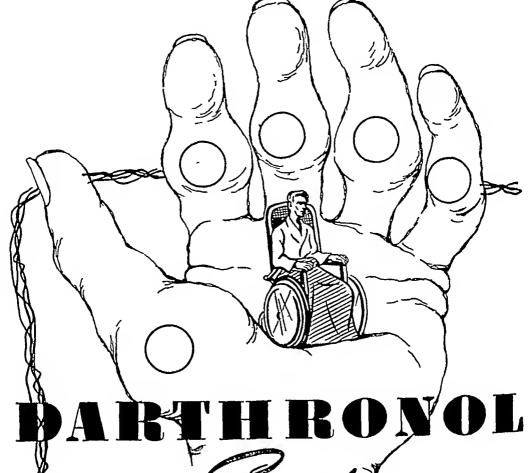

\* Caution. Use only as directed.

Systemic

REHABILITATION OF CHRONIC ARTHRITICS

That chronic arthritis is a systemic disease, of which the joint lesions are only one manifestation...

is revealed by the frequent concurrence of many symptoms referable to systemic disturbances loss of weight, anemia, neuritis, senile metabolic changes, gastro-intestinal affections, impairment of liver function, increased sedimentation rate, impaired carbohydrate metabolism, and early development of arteriosclerosis.

For the effective treatment of a systemic disease as complex as arthritis it is necessary to institute a complete program of systemic rehabilitation. Such a program must include optimal intrition, physical and mental rest, supervised exercise, physical therapy, orthopedic measures, and all the essential vitamins in amounts sufficient to exert both nutritional and pharmacodynamic influences.

Darthronol merits inclusion in such a program of systemic rehabilitation. It supplies in a single capsule massive dosage of vitamin D in addition to adequate doses of the eight other essential vitamins. The need for greatly increased amounts of all the essential vitamins has been repeatedly demonstrated in arthritic patients.

Extensive bibliography on the role of these vitamins in the management of arthritics and the comprehensive brochure 'Systemic Therapy in the Arthritides' will be sent on request.

### WHEN YOU NEED A GOOD SUPPORT FOR REDUCIBLE HERNIA—may we suggest the advantages of

"custom-made" Protection, designed to meet the described needs of each particular case? Physicians, who know from experience, can tell you that Rice "custom-made" Supports for reducible HERNIA are truly different and that our methods are dependable. With dozens of different styles, shapes and types of pads at our disposal and with a full realization of our responsibility to those who put their faith in us—we respectfully offer our services for your approval. Descriptive literature and measurement charts on request.

WILLIAM S. RICE, Inc., (Lock Box 101), ADAMS, NEW YORK BRANCH SUPPLY AND FITTING OFFICES BUFFALO, N. Y.—ROCHESTER, N. Y.—PITTSBURGH, PA.

Before Copperin appeared, massive iron doses were inflicted on the anemic Most of the iron was not utilized The excess, excreted fecally, produced gastrointestinal irritation and upset—thus defeat-Ing the original purpose of the clinician

Copperin represents a sclentific conception of iron needs in secondary anemia The Iron content per capsule is small - 32 mgm - but wholly adequate The potent catalytic agent, copper suiphate, makes ALL the iron

available for regenerative processes

There is rapid replacement of hemoglobin and new red cells This is markedly manifested in treating the hypochromic anemia of children, the "milk anemia" of infants, hemorrhagic anemia foilowing blood donation, pregnancy anemia, chiorosis and anemia of middle aged women

In two strengths Copperin "A" for aduits, Copperin "B" for children

Professional samples gladly sent on request

PALATABLE • WELL TOLERATED • THERAPEUTICALLY EFFECTIVE
The development of CALCREOSE (Maltible) has, in
deed, "smoothed the rough spots" in creosote therapy
so frequently provocative heretofore of nausea and
distress • Moreover, CALCREOSE (calcium creosotate)
exerts bactericidal and bacteriostatic action up to
three times as great as that of creosote. • Thus, in
providing all the well known benefits of creosote in
a pleasant and palatable form, CALCREOSE proves
highly effective in many bronchial and respiratory
affections lessening cough, diminishing expectoration, reducing its purulency and deodorizing
sputum; Also it tends to stimulate the appetite
and improve the patient's general condition.

AVAILABLE: As tablets (4 gr) in bottles of 100, 500, and 1000 COMPOUND STRUP CALCREOSE in pint or gallon bottles

# Announcing

the attainment of another objective in the field of nutrition

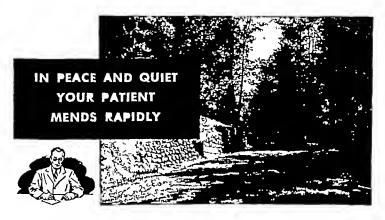

The SQUIBB THERAPEUTIC FORMULA Vitamin Capsule is a truly therapeutic mixed vitamin preparation. It is founded on the concept that therapeutic requirements cannot be met by any simple multiple of present maintenance dosages.

Squibb Therapeutic Formula, based on practical clinical experience, provides the following dosages of therapeutic magnitude in a single capsule

Vitamin A 25,000 units Riboflavin . . . 5 mg
Vitamin D 1,000 units Niacinamide 150 mg.
Thiamine HCl 5 mg Ascorbic Acid 150 mg

VITAMIN CAPSULES

Nature endowed the Saratoga Spa with naturally carbonated mineral waters of great therapeutic value, and she placed them in surroundings of surpassing beauty and screnity

Here, in peace and quiet, your patients achieve the mental and physical relax ation that gives full scope to the restor ative powers of the Spa's famed waters. In superb facilities erected by the State of New York, they receive the benefit of your continuing medical direction.

in regimens which you yourself recommend for the treatment of cardiac, vascular or rheumatic disorders of a chronic nature.

Well trained physicians are available in Saratoga Springs for consultation with your patient on the details of the program.

Practitioners who found the Spa a valued adjuvant in less busy times are today doubly conscious of its service in lightening their postwar burden.

#### PHYSICIAN, GIVE HELD TO THINE OWN HEALTH"

Many physicians have recently come to the Spa for the same kind of treatments that helpod their patients here. After a restorative "cure" at the Spa, you, too, would return to your practice refreshed, revitaired, ready for the husy days that still lie ahead.

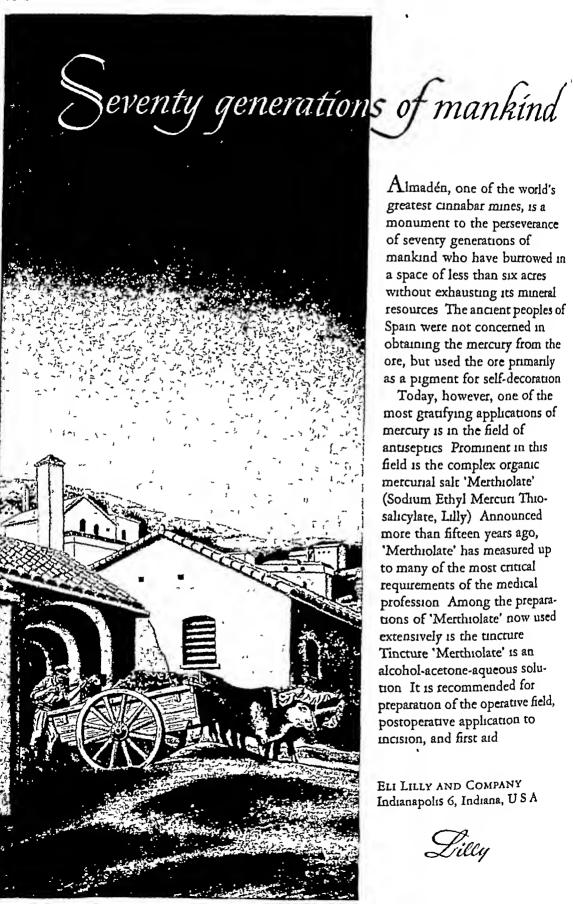

For professional publications of the Spa, and physician's sample carton of the bottled waters with their analyses, please write W S. McClellan, M D., Medical Director Saratoga Spa,

# **Editorial**

### Answer The Higher the Fewer II

In our December I issue, referring to the about-face of the Board of Regents on September 21, 1945, in the matter of admitting to examination for state licensure certain graduates of unrecognized medical schools, we titled our editorial "When Is Higher Education as it Spins?" We now caption this editorial "Answer The Higher the Fewer" Both captions seem to make as much sense as the action of the Board of Regents

Now, possibly we are unjustly critical of the Board We hope that this will eventually prove to be so We, most likely, are a fault in our dull way, for failing readily to grasp the idea behind it all For instance, we just can't fathom why the Regents opposed the proposition to admit to examination for state heconsure certain graduates of unrecognized or substandard medical schools when the legislature decided to do this very thing earlier in tho year, and now, presunably on their own motion, approve regulations to effect the thing they have just finished opposing Such an about-face might be understandable, say, in the U.S.R.

But this is not the USSR. It is the State of New York, USA Or, at least, that has been our impression Now, we don't know what to think.

Maybe we are raising a tempest in a teapot in our blundering editorial way. We are assuming that the actions of the Board have to make sense. Is this assumption justified? Looking over the record of past years, the actions of the Board with respect to standards of medical licensure have seemed to be on the side of maintaining the highest possible standards for protection of the public. We can find the law that compels them to do so I It also seems to be a matter of common sense that they would do so, since that seems to have been the job they were appointed to do, and apparently did do until September 21, 1945 Of course. this entails only a little matter of the erosion of standards of medical licensure haps we are picayune in expecting consistency of the Board, even in small things of this kind

<sup>&</sup>lt;sup>1</sup> University of the State of New York Handbook No. 9 Jan., 1944, Higher Education, ¶ 1256 Sections 1-5.

Why should the Board be denied a little excursion through the looking glass now and then? We have never concurred in the waggish dictum that boards were usually long, narrow, and wooden, and here is the proof

They can be human and fallible, warmhearted and playful! And likely we are just stodgy old fuss-budgets with little or no imagination, no sense of humor, and probably unreasonable in the bargain

What a world!

# Medical Rackets

Of all undesirable things, racketeering in medicine, trafficking in human misery, could be said to be about the worst. Current reports of witnesses testifying in the trials of those responsible for the horrors of the Nazi prison camps occasionally allude to the degradation and degeneracy of Nazi doctors, of whom in all conscience the less said the better

It seems doubtful that doctors and the kind of medicine they learn and practice could degenerate all at once Many centuries of high ethical standards and practices in this profession have graven deep the precepts, have multiplied the examples. Individual failures to uphold them one understands After all, doctors are human beings But the disciplines of medicine have been and are still valid

Where, however, political disciplines are permitted to dilute or are substituted for those of medicine itself, by so much the rights of the individual sick to medical service of a high ethical or scientific quality are infringed. This is not necessarily to impugn all political disciplines, but to damn them as diluents or substitutes. And the more the political disciplines are rotten the more malodorous the mixture.

If you don't think this is so, argue it with the New York Times "Medical Rackets," says the rewspaper in headlines! covering a wireless dispatch by Quentin Pope under dateline of October 5,2 "Medical Rackets Grip New Zealand" That should stir up some action. It does The subhead reads "Government Weighs Scrapping of Free Physician Service—Bills Thickly Padded" Now here appears the smear technic which seems to be inevitable when systems of "free" medical service are introduced. To

October 7, 1945, pp 1 and 31 From Wellington, New Zealand.

sell the idea of "free" medical service to the public proponents of socialized medical service promise more than can be produced To implement the service, insufficient appropriations are made to provide the "free" care, because, in the inception of the scheme. to mention the predictable real cost would run the sale of the project to the people Then, when the mevitable failure of the scheme commences because of abuse of the "free" medical service by the public which demands what it thinks is its money's worth, the doctors find themselves ground between the upper and nether millstones Medical disciplines have been diluted or substituted by political ones and the mixture sturks

The New Zealand dispatch to the Times continues

"Because of abuses, the Government is senously considering whether New Zealand's free physician service will be continued, Health Minister Arthur Nordmeyer said last night in the House of Representatives

"This government admission of widespread racketeering which followed the institution of a system under which any New Zealander may consult any physician as frequently as he likes and the dootor can collect a fee for each visit follows efforts by the National Medical Council to have the Health Ministry act to control what it holds to be an unwarranted drain on the social security fund

"It has been revealed that, though many doctors are still in the armed forces, payments to doctors have been 50 per cent higher than the \$5,000,000 a year that the Government calculated would cover the total annual peacetime cost of medical care

Note that the costs have been 50 per cent higher than the amount the Government calculated would cover the total annual peacetime cost

Just a slight mistake of the proponents,

but easy to fix. How? The dispatch shows you

"The Government, which originally strove to employ physicians on the basis of a fixed annual fee for each patient, is believed determined to put doctors on a fixed income "

That will stop the racketeering Note that the ever-loving Government originally strove to employ physicians at a fixed annual fee We reported that to you in our issue of the Journal, March 15, 1941, as follows, in part, "It is estimated that the payments would give even unsuccessful doctors the equivalent of \$700 yearly" Munificent, is it not? Well, the physicians could have told the Government that it would not do And they did Results? Trouble, inevitable trouble. Racketeering The remedy? Application of common

<sup>2</sup> Editorial, "New Zealand Acts" N Y State J M. 41: 6, 558 (March 16) 1941.

sense? What would you expect? Well, look

"Government leaders have retorted that the present income taxes, which go as high as seven-eighths of all earnings, enable the Government to recover most of the money paid to such doctors."

Here is the remedy according to Government. But there is a bright side, apparently, for

"Parliamentarians emphasize that since free medical care began New Zealand has created the biggest hospitalisation set-up in the world"

Well, it'e all very mysterious But we etill oppose Government in medicine for some reason What do you think? The USA, is a free country and you may think as you please. And we could be wrong on both counts.

### Common Sense in Veterans' Medical Care, II

In the September 15, 1945, issue of the JOURNAL we published under the above title an editorial discussing the very interesting, practical, and well-thought-outplan of the Monmouth County (New Jersey) Medical Society for the outpatient care of veterans

On September 27, we received a communication from a Committee of sixteen physicians in service who were interested in our statement of the plan. These physicians seemed to consider the plan the only practical solution of the problem of outpatient medical care for veterans, but objected to the omission of the words "physician-veteran" in the statement. They consider this discriminatory, and point out that "the entire stress is on specialists." They further point out that

"The Army and Navy have functioned on a dispensary basis where the screening doctors are general practitioners. If they thought it necessary the patient was then referred to a specialist. This Army and Navy medical-care plan has been adequate, as shown by the results of this recent war

<sup>1</sup> Pp. 1964 and 1965.

A continuation of this system seems the only logical procedure. Any plan set up, we believe, must be based upon physicians returning from military service. It may be that he may have to call on nonveteran specialists if the need arises for assistance

"In this veterans' plan those men who were 'essential' to their communities or those who were permitted long residencies or whose 4-F status prevented them from inducting (sic) military service are unfit by their lack of military experience to treat the service-connected adequately abilities and illnesses. The doctors who have this experience know the ills of the veterans, the whys and the wherefores of those ills We are more capable of doing justice to the veteran and to the community than the doctors who have been home all this time. In the second place, some of us will need and feel we are entitled to priority in securing these veteran outpatients. In spite of all the complaints of overwork on the part of civilian physicians it seems unbelievable that they are seeking additional work.

Your plan will automatically exclude many of us as we are not 'specialists' At this stage, we are too tired, or too old, or too broke or will need many years to get 'specialty status'",

We sent this letter to the Monmouth County Medical Society, explaining that we thought the service doctors had misunderstood the plan as published From Dr Granville Jones, President of the Monmouth (New Jersey) County Medical Society, we received a reply, from which we quote, in part

"We have no intention whatever of excluding the veteran physician from our plan Neither do we believe that it would be a wholesome and constructive approach to limit participation to veteran physicians. We think that the exserviceman is entitled to the best medical care available—whether the physician be veteran or nonveteran, male or female, Protestant, Catholic, Jewish, or what have you Some of the examining specialists will be veterans of this or the previous war, and many of the physicians treating the patients will be veterans.

"It will be unfortunate if there arises any class feeling within the medical profession. We trust that when the returning veteran physicians become acquainted with the details of our plan they will realize that it is not, in fact, discriminatory against them."

We are happy to publish this explanation for the benefit of any physicians in the services who may have received a wrong impression of the intent of the plan. Our own view coincides exactly with Dr. Jones' statement. We realize only too well that misunderstanding may occur when opportunity for free discussion is denied by circumstances, or when, for some reason, ideas are not stated sufficiently clearly. If anything can be misunderstood it will be misunderstood.

We append, through the courtesy of Dr. Jones and the Monmouth County Medical Society, the agreement between the Society and the Veterans Administration in full The plan and agreement are too excellent, in our opinion, to be jeopardized by misinter-pretation. Again we urge other county societies to study the plan for possible adoption in their own localities. And we urge service doctors to read it carefully with a view to later participation in their communities.

Veterans Administration Washington 25, D C October 12, 1945

IN. Y State J. M.

Dr Granville L Jones, President Veterans' Committee Monmouth County Medical Society New Jersey State Hospital Marlboro, New Jersey Dear Dr Jones

Confirming the agreements reached in our discussion this morning, I am committing to writing the plan for the provision of outpatient care for the veterans of Monmouth County, New Jersey, by the Monmouth County Medical Society

- 1 All members of the Monmouth County Medical Society, and of other County medical societies in New Jersey, who are designated by the Monmouth County Medical Society, will, with their consent, be designated as part-time physicians of the Veterans Administration
- 2 The Monmouth County Medical Society will establish in such hospitals as it may determine, triage or sorting clinics. Such clinics will be open for the examination of veteran patients at such times as the need indicates, probably once each week or oftener. Each such clinic will be staffed by such specialists as are indicated after a trial. The function of these clinics is
  - a To determine by examination whether or not the veteran needs treatment

b To determine what such treatment should be and where it should be given

c In cases where treatment is authorized by the Veterans Administration, to refer the patient to the proper physician or hospital for such treatment

3 The Monmouth County Medical Society will form a disciplinary or reference committee to see that the patient receives the treatment indicated by the designated physician, and to pass upon complaints from all sources

4 The Monmouth County Medical Society will operate this program for a trial period not to exceed three months without pay, except that physicians giving treatment authorized by the Veterans Administration will be paid fees. The Monmouth County Medical Society will submit to the Veterans Administration a schedule of fees which its members believe to be reasonable and just, and the Veterans Administration, after consultation with the Society, if necessary, will determine the schedule of fees to

be paid. Except for the payment of authorused service to patients, the Veterans Administration will not be obligated financially during this trial period

The Veterans Administration will provide the proper haison and facilities for making prompt decisions as to service connection in each of the clinics

I want to express to you and your mem-

bers again my deep appreciation of your splendid cooperation, and my assurance that I shall assist you in every way in this program

With kindest regards, I am

Sincerely yours, PAUL R. HAWLEY. Major Gen., AUS, Acting Surgeon General

### Otosclerosis in Pregnancy

Progressive deafness in women is frequently assumed by both physicians and the larty to present an adequate reason for the interruption of an intercurrent pregnancy, mainly because of its assumed effect on tho patient and the possible transmission of the affliction to the offspring

We know little about this disease, as a matter of fact A mere hereditary factor does not explain the pathologic process by which spongy bone is deposited in the area of the ear ossicles and the oval window Certain German observers have assigned the process to a definite Mendelian mechaman, others deny that these conclusions are valid. It is not possible to prophesy from available clinical evidence whether the progeny will be afflicted or whether eugenic measures will stamp out the disease, as claimed by some Again the natural changes

in the endocrine system, particularly during the early months of gestation, may have an influence on embryonic tissues at this period The latter assumption, however, seems too indefinite to warrant therapeutic measures along these lines at the present time

In view of all these uncertainties one must welcome the conservative attitude expressed in two recent articles on this subject, one by an obstetrician, the other by an otologist ? The general practitioner as well as the specialist should not be too ready to advise abortion in such cases. We know too little about the cause of the disease to warrant radical measures Every case must be coneidered on its individual indications, no general rule is applicable.

Allen, Edward Am. J Obst. & Oyneo, 50; 83 (Jan.) 1945.

11) 1945.

#### Current Editorial Comment

#### Of This and That

Significant The Increase in Syphilis of the dissolution and social dislocation wrought by the Nazis in Europe is the widespread increase of syphilis which has oc-curred during World War II in Denmark, 8weden, and Norway The notable success achieved in these countries between the two World Wars had made syphilis "almost a rare disease" in 1933, according to Dr

Walter Clark, speaking for the New York City Commission to Investigate the Prevention and Control of Syphilis and Gonorrhea.1

In a recent Monthly Statistical Letter, the Venereal Disease Division of the United States Public Health Service calls attention to the following data taken from an article published in the Epidemiological Information Bulletin for June 30, 1945 released by the United Nations Relief and Rehabilitation Administration

No attempt is made in the article to analyze the various factors contributing to the increased attack rate in these countries, but the figures themselves indicate increased control measures are essential in wartime. The fourfold increase in syphilis incidence in Sweden, a country not directly involved in the war, is significant.

In view of Sweden's acknowledged leader-ship in venereal disease control, it is interesting to note the emphasis which that country continues to place on contact investigation. Appraisal of this procedure and comparison with other methods of case finding is pertinent at this time. The closing sentence of the article referred to in the UNRRA Epidemiological Information Bulletin indicates the importance of such evaluation.

"One of the tasks awaiting the coming World Health Organization might be to undertake a comparative study of methods of combating venereal disease in order that systems the value of which have been proved may be adopted in preference to procedures found less successful in the past"!

General Omar N Bradley has ordered the Veterans Administration reorganized so that its functions will be decentralized to thirteen branch offices as rapidly as possible Simultaneously, he named Mai Gen. Paul R Hawley as acting Surgeon General of the agency and made these other appointments.

Col Eldon L Bailey, recently released from the Army, to serve as his executive assistant.

Dr Charles M. Griffith, medical director, as assistant to General Hawley.

A. D Miller, formerly executive assistant to the Administrator, as assistant to General Hawley on administrative affairs

The new branch offices will be set up in districts roughly comparable to Army Service Command areas. They will supervise the work of fifty-three existing regional offices and of hospitals and other facilities. Insurance and death claims may be transferred later to the branch offices.

General Bradley cautioned against expecting any miracles from the reorganization. He said, however, that he hoped within two months to bring lagging veterans' death and insurance claims up to date

He said that when he took office a month ago the Veterans Administration was functioning satisfactorily for 5,000,000 men, but that the load shortly will be 20,000,000 men.

"They're being thrown on us in a hurry," he said.

Meanwhile, the House Veterans Committee urged that the Veterans Administration be given the necessary office space and personnel forthwith so that veterans and their families will not have to wait months for benefits which have accrued "or the employment to which they are entitled"

# Immediate Return of Directory Information Requested

DOCTORS are urged to return the biographic and World War II Service cards recently sent to them immediately, as soon as the requested information has been filled in. This is important in order not to delay publication of the 1946 Medical Directory of New York, New Jersey, and Connecticut.

#### EXTRAPERITONEAL CESAREAN SECTION

With Special Reference to the Waters Technic

RAYMOND J PIERI, M.D., and FRANCIS R IRVING, M.D., Syracuse, New York (From the Department of Obstatrics Syracuse University College of Medicine)

URING the past decade there have appeared in the literature many pleas for the abandonment of the old classic cesarean section. Indirectly, one of the aims of this presentation is to submit to the conscientlous obstetric surgeon one more entreaty for the final abolition of this

now almost obsolete operation

Obstetrics has diligently kept pace through the years with the improvements noted in the other surgical specialties Of this art it may truly be said that the midnight oils have been burned long past the midnight hour-but not in vain out of the experiences of those thousands of wearsome nights has emerged the proficient, modern obstetric surgeon. Progress in obstetries, which is as old as humanity itself, has not been meteoric It has, however, more than any other specialty, attained its accomplishments literally through blood, sweat, and fears From ocean to ocean had come dismal reports of mor bidity and mortality following performance of the classic cesarean. To supplant this procedure there was introduced a slightly more technical but safer ebdominal section—the laparotrachelotomy, low-flap, or lower-segment operation Other improvements and other procedures have likewise been introduced

Today the competent, streamlined obstetric surgeon is no longer skilled only in the use of forceps. He is, in addition, a hematologist, surgeon, and gynecologist, who brings comfort in the form of relief to the parturient, and safely shortens her labor, and has, besides, a profound respect for the fetal brain and the structures of the hirth canal He shuns the classic cesarean, and has abandoned the old Porro operation He shrinks from the permanently damaging effects of high forceps delivery upon the hahy's brain and upon the mother He discards craniotomy, and is almost convinced that he should perhaps also discard even those former insignia of his arduous art, the axis-traction forceps

In well-selected "clean" cases, given the proper indications for intra abdominal delivery, he operates through the noncontractile lower segment of the uterus, employing the relatively bloodless technic of one of the various transperitoneal exclusion or laparotrachelotomy procedures However, when labor has been unduly

Read at the Meeting of the Eighth District Branch, Medi-cal Society of the State of New York, Buffalo, October 4 1945.

prolonged, when potential or actual infection is present, when obstetric abuse or mismanagement, real or suspected, exists and makes such transpentoneal delivery hazardous, his equanimity remains undisturbed He etill has recourse to a comparatively safe suprasymphysial extraperitoneal procedure For it is in precisely the latter type of case that extraperitoneal delivery becomes to the surgeon a source of genuine consolation

Our present low cervical or low flap operations owe their popularity for the most part to the extensive studies of Sellheim<sup>1</sup> (1910) concerning the surgical anatomy of the pelvis, the attachments of the peritoneum, and its relation to the bladder Noting the advantages of operating through the low, noncontractile portion of the uterus he devised the so-called fourth operation of Sellheim, which provided the fundamental steps of the present laparotrachelotomy of Opits, Krönig, Franz, DeLce, and Beck. These procedures. of course, though greatly superior to the old classic operation, are, nevertheless, transperitoneal or intrapentoneal operations, so do not completely obviate the danger of contamination of the abdominal cavity from uterine "spill" and the lurking dread of peritonitis

To devise a truly extraperitoneal operation that can be performed with reasonable facility has long been the dream of the obstetric surgeon As early as 1820 Ritgen's attempted to enter the lower uterine segment by inciming above and perallel to the right Pouparts' ligament displacing the intact pentoneum upward and retracting the hladder laterally, he exposed and incased the uterus, but such severe hemorrhage ensued that the operation, gastroelytrotomy, was abandoned and completed by the classic ronte According to Dewees, Physick had recommended a similar operation in 1824 but had never attempted it.

The year 1909 brought forth the two extraperitoneal operations of Döderlein and Latzko . The aim of each of these procedures is to reach the passive segment of the uterus by bluntly dissecting the peritoneum neward over the upper left of the bladder, while that organ is pulled downward and to the right. Thus, there is exposed about one half of the field originally covored by the latter organ A longitudinal incision into

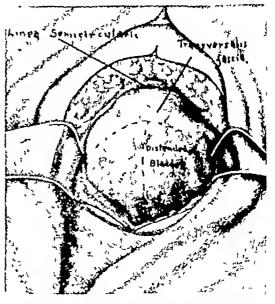

Fig 4. (After Waters) A T-shaped incision is made over the bladder down to muscularis. The peritoneal attachment is above the transverse portion of the incision.

the uterus then serves as a means of delivery of the child

Aldrich<sup>6</sup> still further modified this approach (1937) by incising the fascia of the perivesical capsule in the midline and retracting the bladder sufficiently to enter the uterovesical space. In the case of a large baby the space made available

for delivery in these operations, however, sometimes invited great risk of injury to maternal structures and made delivery a formidable procedure

In the United States, until 1939, Davis, Burns, Steele, Norton, and Aldridge had performed collectively what was probably the largest

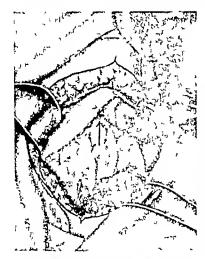

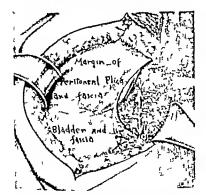

Fig. 5 Dissection of the perivesical fascia upward carries with it the adherent peritoneum.

Fro 7 The finger raises the peritoneal fold Note the "tugging" of the fascia. Dissection across the bladder proceeds from left to right. L. S., lower uterine segment.

number of cases delivered by the Latzko or modified Latzko method In January of that year Dr Edword G Waters proported a series of 32 cases in which he had successfully accomplished extraperitoneal delivery in accordance with a new and apparently safer modification of opera

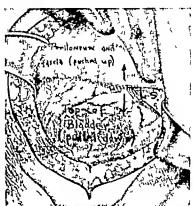

Fig. 6. As the pentoneum and fascas are dissected upward, the left top of the bladder is carefully pushed downward, revealing L. S. (the lower uterine segment) and the left margin of the pentoneal "sac,"

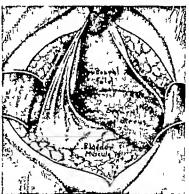

Fig. 8. As dissection continues the divested bladder drops downward. More and more of the lower segment is thus exposed.

tave technic. To demonstrate the surgical simplicity of this latter operation, to stress to the obstetrio surgeon that it is both rational and practicable, and to emphasize its advantages are the real purposes of this presentation.

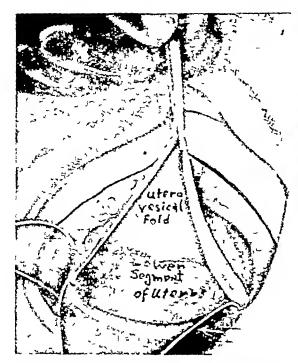

Fig 9 The uterovesical fold of peritoneum is completely separated from the bladder, which is now held behind the pubes by means of a retractor

This so-called direct supravesical operation is based upon certain well-established anatomic facts

The first essential, briefly expressed, is concerned with the distribution of the fascia endopelvina 11-15 The latter (pelvic fascia) is practically a continuation of the transversalis fascia, a thin, avascular aponeurosis which forms a line of cleavage between the inner surface of the transversus abdominis muscles and the extraperitoneal fat The transversalis fascia lines the entire abdominal wall, and in the midline separates the peritoneum from the posterior sheath of the recti muscles from above downward to a short distance below the navel Here, the posterior rectus sheath terminates in a definite margin (linea semicircularis). From this point the transversalis fascia, lying now between the peritoneum and the posterior surface of the recti, descends to become more or less continuous with the pelvic The main sheet of the pelvic fascia gives off four layers,14 one a laminated layer that encloses the bladder (fascia vesicae or perivesical fascia) and a second that envelops the uterus (fascia uten) A third layer forms the vesicovaginal septum, while the fourth forms the rectovaginal septum.

It is well known to all who are familiar with surgery of the lower uterine segment that the peritoneum covering the uterovesical space (Fig

Fig 10 Additional retractors expose a wide area of the lower segment. The proposed crescentic incision is made as indicated (see text)

1) is freely movable and that the bladder can be separated from the uterus bloodlessly and with remarkable ease between the respective fascial coverings of these two organs. This loose attachment between peritoneum, bladder, and lower uterine segment, greatly increased during pregnancy, permits enlargement of the gravid uterus and proper function of the bladder (Fig. 2), which obviously could not distend if restricted by rigid fascial or peritoneal bands. Only at the summit and posterior aspect of the bladder are the peritoneum and perivesical fascia intimately adherent to each other. This close adherence is limited to a relatively small area.

Cognizant of these factors, we have performed a series of extraperitoneal operations employing a technic that is practically identical with that demonstrated by Waters

#### Procedure

After the usual preoperative preparation for cesarean section, a retention catheter is connected to an ordinary irrigator containing 500 cc. of sterile indigo-carmine, or methylene blue solution of which about one half or more is allowed to flow into the bladder (Fig. 3)

Distended in this manner, the bladder cames with it the adherent peritoneum upward into the superficial portion of the proposed operative area (the extraperitoneal space) This facilitates the task of dissection

The operator works usually from the patient's right side. Through either a low left paramedian incision or a Pfannenstiel incision the recti muscles are separated and rather widely re-

tracted laterally from the midline, exposing the intact transversalis fascia between the linea semi-circularis above and the pubes below The area thus exposed demarcates the proposed operative field The outline of the distended bladder is visible through the intact transversalis fascia, which is now carefully and gently incised vertically to expose the underlying and more closely approach the proposed fascia.

woven layers of the perivesical capsule of fascia A short (1 or 11/2 inch) vertical incision through the laminations of this fascia down to the bladder muscularis is now cautiously made in the midline, beginning a few cm below the bladder fundus in order to avoid the attached peritoneum. Various small blood vessels on the surface of the muscularis and as a landmark at this stage of the procedure. With the closed scasors or with the knife handle the fascia is freed from muscularis and incised transversely The bladder musonlars has now partially been exposed by two incanons, not unlike the letter T (Fig 4), made through the antenor penvesical fascia Separation of the fascia above the transverse incision (Fig 5) carries upward with it the peritoneum Meanwhile, with the aid of a sponge, separation of the bladder downward is begun over the upper left border of this organ, seeking the peritoneal margin of the venicouterine fold Thus step is facilitated by previous labor and by the usual dextrorotation of the pregnant uterus, which makes the left portion of the vesicouterine space more shallow Here, the loose areolar tissue lateral to the bladder fundus permits exposure of a portion of the lower uterine segment as the margin of the peritoneal fold or "sao" is carefully sought and identified (Fig. 6)

The bladder is now emptied, and under direct vision the left index finger is introduced into the vesicouterine space below the exposed peritoneal fold and is gradually insinuated toward the operator between the lower uterine segment and the bladder. With slight traction in pward (Fig. 7) the edge of the peritoneal plica is placed on a stretch. The posterior perivesical fascia is now in front of the finger and is clearly visible "tug-

ging" between the edge of the peritoneal fold and the hindder Incision of this fascia without dam age to pentoneum is now meticulously accomplished from left to right, the divested bladder dropping downward as it is freed in this fashion (Fig. 8) while the severed fascia adheres to the peritoneal fold above. In some cases a prominent median umbilical ligament (urachus) is encountered, apprizing the operator of the location of the midline The dissection, however, traverses the entire adherent area. Experience has shown that preservation of the urachus is irrelevant and, therefore, optional. Any bleeding vessels injured during the dissection are simply ligated with fine catgut. Shortly, the pentoneal plica above is entirely freed from the bladder below Between them in the background (Fig 9) lies the lower uterine segment Excellent exposure of the latter is secured, using a wide. curved retractor to bold the bladder downward, a lateral retractor on each side, and a fourth to retract the freed and intact vesicoutorine fold above The operative field is spacious, bloodless, and completely extraperitoneal Even additional space, seldom necessary, may be oreated by bluntly separating upward more of the uterine peritoneum from the anterior surface of the lower segment

The uterme incision is started as a "inck" in the lower segment about an inch or so above the bladder retractor. Culture of the ammiotic fluid is routine. With bandage scissors the incision, as recommended by Dr. Waters, is carried widely toward each side, curving the ends upward to a level 1 to 1½ inches above the original inch. This creates a crescentic aperture, the curved diameter (Fig. 10) of which makes possible a much larger opening than could be provided by any straight incision similarly located. The still is removed by suction.

In vertex presentations, either the face or the vertex is brought to the front, delivery being accomplished manually or with forceps, exactly as in laparotrachelotomy, or (as also recommended by Waters) a single blade of the instruments,

## CLINICOPATHOLOGIC CONFERENCES

FOURTH MEDICAL DIVISION OF BELLEVUE HOSPITAL

Date October 15, 1945

Conducted by Dr Arnold Koffler

DR SHIRLEY SCHMONES-WALLACH The patient, M P, a 49-year-old white woman, complained of progressive asthenia, browning of the skin of the forehead and extensor surfaces of the forearms, and edema of the lower extremities and trunk for eight months prior to her admission to Bellevue Hospital on April 4, 1945 Five months before hospitalization the patient first noted marked exertional dyspnea, she was told at that time that she had hypertension Although her appetite remained good and there was no change in bowel habit, she had vomited daily for the two weeks prior to admission

In 1942, the patient was told she had diabetes mellitus. She took insulin for a short time, and then was well controlled on diet alone. There was no familial diabetic history. Illness of any kind prior to her diabetes was denied. All pregnancies were normal. The menopause had occurred six months before admission.

Physical examination on admission revealed a 49-year-old white woman who appeared chroni-Her temperature, pulse, and respiration were normal, blood pressure was 220/120 She had a tan, sallow facies with brown pigmentation between the wrinkles on her forehead and on the extensor surfaces of her forearms, there was no mucosal or conjunctival pigmentation Conjunctivae were pale The pupils reacted to light and accommodation Funduscopy revealed blurring of the disc margins, venous engorgement, multiple recent and old hemorrhages, auriculoventricular nicking, tortuosity of small arteries and arterioles, and broadened light re-Examination of the head, neck, ears, nose, and throat was not remarkable Lungs were clear to percussion and auscultation The heart was shown to be enlarged to the right and left by percussion, the rhythm was regular, there were no thrills, murmurs, or rubs, the heart sounds were of fair quality Massive pitting edema encircled the entire trunk up to the level of the There was evidence of considerable ascites, through which liver, spleen, and kidneys could not be palpated, percussed, or ballotted The lower extremities also had massive pitting

A rectopelvic examination revealed only marked rectogenital edema

Laboratory Examination—Urine specific gravity was fixed between 1.010 and 1.013, 4 plus albumin, there were occasional mild glycosuria, no acetone, granular and hyaline casts,

5 to 10 red blood cells per high power field, 20 white blood cells per high power field

Blood counts hemoglobin ranged from 90 to 66 Gm, 2,500,000 red blood cells—average, 10,000 to 20,000 white blood cells with essentially normal differentials. A blood Wassermann test was negative

Blood chemistries nonprotein nitrogen fluctuated within a range of 53 to 129, urea nitrogen 23 to 75, and creatinine, 2 3 to 4 5 Cholesterol, 500, esters, 308 Calcium, 8 4 to 9 0 Phosphorus, 7 6 to 10 4 Sugar, 77 to 160, Carbon dioxide, 17 to 44 volumes per cent Total protein, 4 2 to 6 5, albumin-globulin ratio, 1 1 Cephalin flocculation was negative, icteric index, 13 Alkaline phosphatase, 2 5 (Bodansky units), acid phosphatase, 2 5 (Bodansky units)

Intravenous glucose tolerance test fasting 91, one-half hour, 160, one hour, 167, two hours, 148 mg per cent The electrocardiograms revealed regular sinus rhythm, low voltage, and progressive myocardial changes Serial chest x-rays revealed an enlarged heart, widened supracardiac aorta, and engorgement of the lungs with small effusions at the bases Excretory urography revealed no contrast medium in either urinary tract Biopsy from the extensor surface of the left forearm was reported as normal skin

Course - Despite a therapeutic regimen which included high-protein and low-salt diet, iron, high-vitamin dosages, 500 cc of red-blood-cell suspension, hypertonic solutions of calcium gluconate, magnesium sulfate, and glucose; thyroid extract, digitalis, and mercupurin, the patient gained weight steadily On June 1, 1945, the patient was transferred to Goldwater Memorial Hospital for chronic care In addition to the above therapy she was given several whole Anasarca, anblood and plasma transfusions uria, cardiac failure, and vomiting became intractable On her ninety-eighth day of hospitalization the patient became comatose, the nonprotein nitrogen at this time was 180, urea ni-The coma deepened and she died trogen, 116 on July 14, 1945, her one hundred and fourth hospital day

#### Discussion

DR ARNOLD KOFFLER Before discussing this case it might be well to add the records of two previous admissions of this patient in Bellevie Hospital

The first of these admissions was to the Fourth Surgical Division in 1942 She was treated for an infection of three toes of her right foot. Her fasting blood sugars on this admission varied between 210 and 330 Her urmary sugar on admission was recorded as 4 plus, with acctone 2 plus She was treated and well controlled with diet and insulin and the toes were healed at the time of her discharge. It is interesting to note that her blood pressure was recorded as 130/90 and her urine showed 1 plus alhumin with a negative microscople examination. Her liver was not enlarged and there is no notation of any skin pirmentation.

The second admission was in July, 1944, approximately two years after the first and one year before her final admission. She complained of swelling of the feet and legs of two months' There was no dyspnea or orthopnea. Her diabetes had been controlled with five units of insulin daily Her blood pressure then was 220/125 Her discharge diagnosis after five days of hospitalization was hypertensive beart disease and diabetes mellitus Her x ray showed the heart and aorta as normal Her electrocardiogram at this time showed sinus tachycardia and her urme showed 3 plus albumin with numerous granular casts and 1 to 3 red cells per field Fasting blood sugar at this time was 188 and the nonprotein nitrogen was 35

I think it is important to have the records of the previous admissions so that we may better evaluate the sequence of events in this woman's illness. In the first place, we have a patient with diabetes with an infection of the toes that respended well to insulin therapy After the infection was controlled it was evident that her diabetes was mild and continued to be mild even to the end

On the second admission she showed an entirely different picture She now showed marked hypertension with albuminum and edema of the lower extremitles that responded to bed rest and diuretics by mouth There is very little evidence of heart failure, no dyspnes, no cardiac enlargement, and the electrocardiogram findings were not agnificant.

The final phase, on her third and last admission, was characterized by massive edema, ascites with marked hypertension, hypoproteinemia, marked and mcreasing azotemia and cholesteremia, anemia, cardiac enlargement with progressive myocardial degeneration, and pigmentation of the skin.

The nephrotic syndrome, consisting of pronounced albuminuria, anasarca, lowered plasma proteins, and hypercholesteremia is present in Its entirety in this case. The association of this syndromo with diabetes mellitus suggests the presence of the specific focal lemons in the kidneys first described by Kimmelstiel and Wilson,

and called intercapillary glomerular sclerosis This lesson has been confirmed by many workers, Including Newburger and Peters, Walker and Porter, and Sigal and Allen The typical lesions consist of hyalized masses, spherical or oval, focally distributed in the intercapillary spaces

Its incidence in diabetes varies from 20 to 63 per cent with different authors' diabetic groups, and in a much smaller percentage in cubacute and chronic glomerculonephritis, hut is extremely rare in arteriolar nephrosclerosis

The description of this lesion by Kimmelstiel has made it necessary for many pathologists to review their autopsy material, and its acceptance as a definite entity is general In fact, Laipply, Eitzen, and Dutra suggest that intercapillary giomerular eclerosis is a more epecific anatomio lesion in diabetes than hyalinization of the islets of Langerhans. The severity of the diabetes does not seem to bear any relationship to the development of the glomerular lesions, and so the fact that the diabetes was mild in this patient does not exclude the possibility The exclusion of subscute or chronic glomerular nephritus is difficult The progressive anemia does favor this diagnosis. It is possible that we are dealing here with both conditions

Another condition we considered was the possibility of hemochromatosis The pigmentation of the skin and glycosuma suggested its possibility The liver, however, had not been palpated on the hospital admission a year previous and this militates against this Skin biopsy was also negative. The akin was not typically hiuegray and there was no mucous-membrane pigmentation.

Thus, I believe this patient had intercapillary glomerular scierosis and subscute or chronic diffuse glomerulonephritis

DR. HENRY C FLEMING I agree with Dr. Koffler's diagnosis of intercapillary glomeruloaclerosis. It has been established that this case presents the ypical syndrome consisting of hypertension, albuminuma, diabetes, renal insufficiency, and retinal vascular changes. In this condition most patients are past 40 at the time of development of the diabetes or alhuminuma. or both, but frequently the fundus changes and bypertension precede the other symptoms by many months or several years

When heart failure occurs it is predominantly left sided Right-sided failure is rarely proportionate to the degree of edema frequently observed, the venous pressure and circulation time from arm to tongue are often normal or only alightly elevated

Anemia in this condition is hypochromio, normocytic, or microcytic and is presumably of renal origin This disease is characterized by extensive arterial and arteriolar degeneration

The pigmentation of the skin observed in this patient is probably due to increased melanin production, commonly seen in cachectic states. There is rarely difficulty in delineation of this condition if the syndrome is well developed. Amyloid disease with diabetes and hypertension is rare, and the nephrotic stage of chronic glomerular nephritis usually occurs in younger subjects and is commonly associated with a definite history.

DR KOFFLER Thank you, Dr Fleming Dr Appelbaum, would you express your views on this case?

DR EMANUEL APPELBAUM There are certain features about this case that are quite definite. The patient had hypertension, hypertensive heart disease, evidence of arterio- and arteriolosclerosis, a nephrotic syndrome, and final exitus in uremia. Now, it is very important to know whether or not she had diabetes mellitus. In the protocol presented this morning evidence for the diagnosis of diabetes mellitus is lacking. However, a review of her previous admissions reveals that she had diabetes mellitus of a rather benign type

As is well known, the pathologic lesion of intercapillary glomerulosclerosis is quite common in diabetes. But intercapillary glomerulosclerosis as a clinical entity is uncommon, particularly the form which includes a nephrotic syndrome. It is important to emphasize that the nephrotic syndrome is not common in this condition. There is also general agreement among pathologists that in diabetes a nephrotic syndrome does not occur unless the patient has intercapillary glomerulosclerosis.

In view of these facts, it is reasonable to assume that the patient had intercapillary glomerulosclerosis, although some of the features were not typical. On the other hand, it is possible that the patient had more than one pathologic entity. There are cases on record in which lesions of both intercapillary glomerulosclerosis and those of glomerulonephritis are present.

I am not inclined to regard the pigmentation as significant. There is certainly insufficient evidence on which to base a diagnosis of hemochromatosis. However, the negative skin biopsy doesn't entirely rule it out. It is important to study carefully the mucous membranes, particularly the rectal mucosa. Incidentally, I should like to point out that in hemochromatosis one must investigate for the presence of two distinct pigments, namely, hemosiderin and hemofuscin

DR HARRY A SOLOMON Nowadays, if a patient known to have diabetes begins to show albuminum, the clinician first directs his suspicion to the development of intercapillary glo-

Such a suspection is justified merular sclerosis on the basis of many pathologic reports which agree that the characteristic renal lesions of this condition are found in a high percentage of the kidneys of patients with diabetes who have been When, however, a diabetic develops examined a nephrotic syndrome, as in the case presented, intercapillary glomerular sclerosis can be diagnosed as a practical certainty, as Dr Koffler has indicated And, as in this case, intercapillary glomerular sclerosis usually develops in patients with longstanding but mild diabetes and the nephrotic features are intractable and progressive But this case presents a number of features that cannot be explained on the basis of intercapillary glomerular sclerosis alone For example, there was a persistently high blood pressure which antedated the clinical appearance of the nephrotic state and would not have been maintained at a persistently high level by the nephrosis alone

Second, the anasarca is usually easily controlled by mercural diuretics and other means, while the course of the disease is quite benign for a number In this case the anasarca was very resistant to all therapy and the patient detenorated very fast with renal failure reasons, therefore, namely, pre-existing and persistent high blood pressure, severe nephrosis, and rapid development of uremia, it is expected that the kidneys will show, in addition to the lesions of intercapillary glomerular sclerosis, other diffuse pathologic lesions such as nephrosclerosis or glomerular nephritis Dr Koffler points out that anemia is unusual in this condition, but, of course, it can be ascribed in this case to the azotemia which depresses bone marrow function, the uremia also accounting for the hyperphosphatemia

From the cases we see at Bellevue, one cannot help but wonder whether toxic absorption from areas of gangrene or infection does not play a part in the development of intercapillary glomerular sclerosis. In this case, gangrene of the foot antedated the clinical appearance of the nephrotic picture, one of our most recent and youngest patients was a boy of 20, with diabetes, on Ward B2, who developed the nephrotic syndrome after acquiring trophic ulcers of the soles of his feet with secondary infection.

Regarding the suggestion of the diagnosis of hemochromatosis because of the pigmentation of the skin and diabetes, this can be seriously questioned. In the first place, the pigmentation was not typical for hemochromatosis, and even though the distended abdomen precluded palpation for liver and spleen, there was no evidence of cirrhosis of the liver or diffuse hepatic damage, as judged by the negative cephalin flocculation

test. Cirrhosis of the liver is found in almost half of the patients with diabetes coming to autopsy, but I doubt whether it will be found in

this case.

DR KOFFLER Thank you, Dr Solomon In summary, therefore, our clinical diagnosis is diabetes mellitus, hypertensive and arteriosclerotic cardiovascular disease, uremia, nephrotic syndrome, intercapillary glomerulosclerosis (kimmelstiel-Wilson syndrome), subacute or chronic diffuse glomerulonephritis, and secondary anemia

Dr Margaret Bevans, pathologist at Goldwater Memorial Hospital, has been kind enough to come to our conference this morning to present the

autoney findings in this case

DR. MARGARET BEVANS At nutopsy there was e generalised and severe anasarca The skin seemed tan even over the unexposed parts of the body, but no abnormal pigmentation of the mucous membranes was noted. The parathyroids There were about 500 cc of encapsulated finid in the right and 180 cc of free fluid in the left pleural space The heart weighed 350 Gm and the left ventricle was hypertrophied There was a thick fibrinous deposit over the pericardium and epicardium. There was moderate coronary sclerous In the abdominal cavity there were 6,500 cc of serous fluid The liver was 2 cm below the costal margin in the axillary line, golden-brown in color, and cut with increased resistance The spleen was hypertrophied and extended 1 cm below the costal margin The cut surface of the spicen was a deep brownish-red The kidneys were large, pale, and smooth. There were suhmneosal pelvic hemorthacea.

On microscopic examination one parathyroid was of normal size hut was composed of waterclear cells There was nn acute fibrinous peri-

carditis Hemosiderosis of the liver, spleen, and pancreas, and cholesterosis of the mallbladder were present. The kidneys present the most interesting lesions None of the glomeruli were normal Many of the afferent arterioles had thick hyalinized walls, but others were thin even though they entered badly damaged glomeruli The basement membranes of the glomeruli were thickened hy hyalin material and much of this material was arranged in circular masses et the periphery of the glomeruli. There were also many edhesions between the tufts and Bowman's capsule The tubules were filled with various kinds of casts Many tuhules were ntrophic, others showed proinferation and metaplasia of the lining epithelium Hemosiderin deposits were scarce in the kidney The glomerular lesions were typical of those described by Kimmelstiel and Wilson The arteriolar disease was severe In addition, I believe that the patient had chronic glomerulonephritis which antedated the discovery of diabetes The clear-cell metaplasm of the parathyrold is typical of chronic renal disease The anssarca and acute fibrinous pericarditis were the result of renal decompensation The hemosiderosis was probably due to transfusions and to increased hemolysis, which is not infrequent in renal disease

The existence of Kimmelstiel-Wilson syndrome as a clinical entity is well established Pathologasts have differed in their opinions as to whether or not it is part of arteriolar disease of the kidney which accompanies it. One thing is certainno matter how severe the arteriolonephrosclerosis in nondiabetics, the nephrotic syndrome is not seen. In this patient a pre-existing chronic glomerulonephritis may have accelerated the downward course and increased the intensity of

the nephrotic syndrome.

#### "DOCTOR JONES" BAYS-

A very nice lady I've known a good many years-I heard her say once that she was greatly relieved, after she and her husband were married, to discover that he had a little volgar streak in his make-up. And, you know, some of us that've lived a good many years in the same houses—I think maybe we like 'em better for some of their defects.

And so these folks that're campaigning against home accidents when we find on their lists of bousehold hazards things we've got in our own houses, we're sort of inclined to resent it. Like Grandma Peasley when I said her cellar stairs were too steep she said they were just the way she wanted em and then she went and fell down em to prove it.

Of course that kind of a reaction it's what my mother used to call "buting off your nose to spite your face." And it's always possible too that we might have a guest some time that, if he fractured his skull on our low doorway, its being our doorway— he might not consider that sufficient compensation. But one thing I'd think we could all agree on

if we're going to build a new house from the ground up, it'd be good sense and good business to have it as near right as possible. To build potential hazards into a new structure—it'd be just about as sensible to build in bedbugs and cockroaches.

When you stop to think of it there's any number of common structural defects that're responsible for ocidents. Eaver running water down to make icicles to fall on people or to make ice for people to fall on, steep, narrow starways with irregular steps and no handrails, low doorways and cellar ways to bang your head on, inflammable partitions may be a few for the fall of the fall o

ways to being your head on, inflammable partitions next to heaters round-bottomed bathtube

If "Mother Goose" was being written today, we might have something like this This is the stair way properly built that the man walked down without getting kill't that employed the architect free from guilt that planned the house that Jack built. It's funny, ain't is, what silly ideas we got sometimes.—Paul B Brooks, M.D. Health News, Men 11 1015. May 14, 1945

### CLINICAL STUDY OF 15 CASES OF SINUSITIS

## E C McCulloch, MD, Mariners Harbor, New York

THESE patients presented themselves over the period of a year, from May 1, 1944 to May 1, 1945, in a factory employing 1,500 people, the Port Ivory, Staten Island, factory of the Procter and Gamble Company Most of the cases were frontal sinusitis. The chief complaints were as follows

Headache—frontal, bilateral	8
Headache—right or left frontal	2
Dizziness	2
"Eyes do not focus"	1
Buzzing and fullness in both ears	1
Nausea and famtness	1

Of the patients complaining of headache, 3 also complained of dizziness, and 2 of nausea, 1 patient complaining of dizziness also had nausea but no headache

#### Symptoms

From experience with sinus cases over twenty-five years, the most pronounced symptom is seen to be a dull, aching pain in the region of the involved sinus Frequently slight vertigo and nausea or vomiting are also present The patient may have received a blow on the head weeks or months previously, and these symptoms are apt to be interpreted as a "postconcussion" syndrome, whereas the patient really has acute sinusitis, the concussion having apparently been a predisposing cause I have been able to demonstrate this in a number of cases, and this is very important from a compensation angle Headaches should be labeled "psychogenic" or "neurotic" only after exclusion of every possible organic cause Any persistent headache in a male patient is very probably due to sinusitis If the headaches are severe at times and alternate with periods of complete freedom from pain, it is a "snap" diagnosis

Sometimes the chief complaint is atypical and may not suggest sinus infection. Some of these are

as follows

1 Pain in occipital region, in the ear, in the teeth (sometimes needless extractions are made)

2 Eye symptoms which lead patients to think they need glasses, and may result in unnecessary prescription or alteration of lenses

3 Vertigo

- 4. Nausea and sometimes vomiting
- Inability to concentrate on work.
- 6 A state resembling neurasthema, with vague complaints such as "I don't feel good."

- 7 A constricted feeling in the throat, or dry cough
- 8 A prolonged cold. "I never had a cold hang on like this one"

#### Diagnosis

The diagnosis is established by the results of the treatment described below. X-rays are expensive, and when made are sometimes reported negative because the sinuses are filled with a clear secretion which does not obstruct the ray. Transillumination tests are open to the same objection. Finger pressure and percussion tests are uncertain.

#### Treatment

The treatment used consists of the time-honored method of spraying the masal cavities with an aqueous shrinking spray and inserting into the middle fossae cotton swabs moistened with 10 per cent ichthyol in glycerin. The patient inclines the head forward and exhales strongly through the nose. In a few minutes a thick, glarry mucous or mucopurulent secretion begins to flow down the applicators. The applicators are left in place fifteen or twenty minutes, and the nose is finally sprayed with menthol and camphor in oil. Treatments are given daily, and the average acute case lasts about a week-

The characteristic discharge appears only in cases of sinusitis, and a rough prognosis of duration of treatments can be based upon the quantity and character of the discharge Both frontal and maxillary cases respond, but the frontal cases clear up faster Sometimes there are no results from the first treatment because the ostia of the sinuses are not opened, repeating the treatment on successive days may produce drainage. If there are recurring acute attacks, or a chronic condition exists, some intranasal operation is necessary to improve drainage.

The diagnosis is established by the character and amount of the discharge and the marked relief of the headache or other symptoms following treatment. The treatment requires no special apparatus, is simple, inexpensive, and effective, and can even be used by the patient himself if he is unable, for financial or other reasons, to visit his physician often enough. If the general practitioner will apply this therapeutic test in obscure cases "on suspicion" he will uncover a surprising number of cases of sinusitis to his own profit and the eternal gratitude of his patients

#### THE SOUL OF ENJOYMENT

Health is the soul that animates all enjoyments of life, which fade and are tasteless, if not dead, without it—Sir William Temple

## House of Delegates Minutes of the Annual Meeting

[Continued from page 2574, December 1 issue]

#### Afternoon Session

October 8, 1945

The session convened at 3.80 P.M., pursuant to recess.

SPRAKER BAUER The House will be in order Is the Chairman of any Reference Committee ready to report?

Section 44 (See 9)

Report of Reference Committee on Report of Council—Part III. School Health and Industrial Health

Dr. Dan Millen, District Delegate Regarding School Health, the Reference Committee suggests the continuance of this committee for the development of the school-health program, its expansion, and increasing efficiency

Regarding industrial health, this Reference Com

mittee commends the study committee on industrial bealth and suggests that it should be continued. I move the ndoption of the report, which is signed by Mahion C Hallech, J C Brady Madge C L. McGunness and Dan Mellen, Chairman.

The motion was seconded, and as there was

no discussion, the motion was put to a vote, and was unanimously carried

Sectson 45

Report of Reference Committee on Report of Board of Trustees

Dr. EDWIN A. GRIFFIN, Kings Your Reference Committee has read and digested the report of the Board of Trustees and makes the following comments

We note with sincere sympathy the death of Dr Peter Irving and we shall long remember his loss.

Dr Joseph Lawrence, after twenty years with the Medical Society of the State of New York, resigned. Our good wishes go with him for his success in his new duties with the American Medical Association in Washington, D C

The business of the Board of Trustees has been most efficiently carried on by the following com mittees

The Committee on Investments, The Special Committee on Publications, The Special Committee on Management and Administration.

Dr Devid Kaliski was selected by the Council to carry on as full-time director of the Bureau of Workmen e Compensation

Dr Robert R. Hannon succeeded to the vacancy caused by Dr Lawrence s resignation as Executiva

Officer of the Society

Mr George P Farrell is the new head of the Bureau of Insurance.

Be it noted that in the contracts of Drs. Kaliski and Hannon end Mr Farrell they are in feet re sponsible to and under the direction of the Council and e Council-appointed committee The demands upon the space of the Society's

quarters due to its greatly enlarged program makes the need of new offices imperative.

The subject of a pension system for employees of the Society has been under discussion, and if found feasible will be presented to the Council and House of Delegates.

Our financial house is in order, and we are happy to report that our operating expenses are well within our operating income. We would ask all our mem

bers to review the financial report. The investment committee keeps an ever watchful

eye on our investments; and changes our holdings to our advantage from time to time

We owe a debt of gratitude to our Treasurer for

his very complete report and sound edvice.

To the Board of Trustees we extend our sincere thanks for the tremendous amount of work done by

them in these days of etress,

them in these days of etress.

I move the adoption of the report of the reference
committee consisting of Archibald K Benedict,
Regunald A. Higgons, Victor W Bergstrom Edward
C Veprovsky, and Edward A Griffin, Chairman
The motion was seconded.

SPEANER BAUTER Too have before you the report
of the Reference Committee on the Report of the
Board of Trustees, which carries no specific recommendation other than approval of what has been
carried on. carried on.

Is there any discussion?

DR. GZORGE W KORMAK There is one correction to be made in that report. It is a grammatic one Mr Parrell is not the new head of the Bureau, he is the head of the new Bureau. The way you have it there now it sounds as if he were succeeding somebody olse.

DR. GRIFFIN I see what you mean. We will change that to read, "Mr George P Farrell is the head of the new Bureau of Insurance"

SPEAKER BAUER With that correction, is there any further discussion on the report of the reference committee?

The question was called, and the motion was

SPEAKER BAUER Thank you, Dr Griffini

(See 8) Section 48

Report of Reference Committee on Report of Council-Part II Maternal And Child Welfare

DR. DAVID BEARD Schohorie After careful study of the Report of the Council, Part II, the Reference Committee feels that the Council Committee and Subcommittee are to be sincerely congratulated on the successful carrying out of the recommendations of the Reference Committee at the last meeting of the House of Delegates in regard to obtaining in cressed fees for specialists under the E.M I C plan, more in keeping with their actual work.

We most thoroughly agree with the Committee's

statement that this plan shall apply only for the

duration of this emergency and six months thereafter We recommend to the House of Delegates that our delegates to the American Medical Association be instructed to oppose any attempt to make the EMIC plan or any similar plan a permanent arrangement

This report is signed by Halford Hallock, John E Wattenberg, Joseph O'Gorman, and David Beard, Chairman I move the adoption of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER BAUER Are there any other Reference Committee Chairmen ready to report?

(There was no response )

Speaker Bauer Are there any resolutions?

Section 47 (See 99)

Surplus Medical and Dental Equipment

DR. SAMUEL Z FREEDMAN, New York This is a resolution that was adopted by the New York County Medical Society

"Whereas, after the last war surplus army and navy dental and medical equipment was sold to dealers who in many cases made exorbitant profit by resale to physicians and dentists, many

of whom were veterans, and "Whereas, some method should be found whereby surplus medical material and equipment of World War II may be made available to physicians and dentists at reasonable prices, therefore

"Resolved, that the Medical Society of the State of New York request the proper government authorities to devise a procedure whereby such material may be purchased directly from the government or that a ceiling price be set for resale through dealers, so that veteruns and other physicians may be enabled to purchase needed equipment at the lowest possible prices, and be it

further "Resolved, that the Board of Trustees of the American Medical Association be urged to use its influence in working out a plan for this purpose SPEAKER BAUER Referred to the Reference Committee on New Business B, Dr Moore

Chairman.

Section 48 (See 75)

Liberalization of EMI.C Policies and Requirements in Relation to Applications for Specialist Status in Obstetrics

DR. HERBERT E WELLS, Erre I would like to present a resolution that was offered by our Erie County Medical Society on the matter of liberalization of EMIC policies and requirements in relation to applications for specialist status in obstetrics

"WHEREAS, under the provisions of the Federal Emergency Matermity and Infant Care Program (New York State-approved plan) differential fees are allowed for complete maternity-care services performed by physicians under the supervision of the EMIC Bureau of the Now York State Department of Health, a diplomate of the American Board of Obstetrics and Gynecology rendering such services being entitled to a fee of \$75, whereas a general practitioner who has not been certified by his American Board and has not qualified as a specialist in obstetrics with E M I C is allowed a fee of \$50 for his services, and

"Whereas, physicians who are not members of the American Board of Obstetrics and Gynecology, but who seek certification from EMIC as specialists in obstetrics, must present evidence that their training and experience in obstetnes meet the requirements of training and expenence for admission to the examination of such Specialty Board, or that they have had 'equivalent training and ovperience' in their specialty, which in the opinion of the State Commissioner of Health, with the help of an advisory board, would qualify

them as specialists in obstetrics, and "Whereas, the procedure for enrollment or application of a physician for specialist service and status in obstetries under the EMIC program is as follows. The enrollment of applica tion form, as completed by the physician-applicant, is returned to the county medical society for submission to the chairman of the special committee on qualifications for specialists of the Society, which committee, if it decides to recommend that the applicant have the status of a specialist in obstetrics, forwards such application to the District Health Officer for transmission to the State Commissioner of Health for final decision, and

"Whereas, the physician who has been certified as a specialist in obstetrics by his American Board merely is required to state the name of his Board and the date of his certification, while the applicant-physician who is not a diplomate of his Board is required to meet minimum requirements based on those listed in the Directory of Medical Specialists, consisting of some seven or eight

detailed questions, and "Whereas, the EMIC Bureau of the State Department of Health sets forth on the enrollment or application form No 10 that the general policy with respect to nondiplomate applicants for certification as specialists in obstetrics shall be as follows. It is understood that in each instance, individual consideration will be given to equivalent experience and training instead of stated requirements, for consideration of an applicant for specialist status under the E M I C Program, and "Whereas, this pronouncement of policy, which ovidences an apparent desire to adjust

applicants for specialist certification and status on the basis of their professional standing, actual qualifications, recognized skill, experience, and general fitness, rather than on the basis of hard and fast standardized requirements, is sharply at variance, in our judgment, with the text of the questionnaire on said application form, there

existing a marked conflict, and

"WHEREAS, due to the stringency of such requirements, as embodied in the aforementioned questions, certain physicians with many years of practice and experience in obstetrics and possessed of recognized ability in this branch of medicine, but who are not diplomates of their Board, have encountered great difficulty, or have failed, in their efforts to obtain approval of their applications giving them official status as specialists in obstetrics under EMIC and entitling them to the 50 per cent increase in fees for their services, even though many of these practitioners specialized in obstetrics long before the inception of

Specialty Boards, and "Whereas, the failure of the questionnaire on said application blank to conform with and abide by the letter and spirit of the pronouncement of policy heretofore recited in full has created confusion, misunderstanding, and resentment, making it difficult for county societies and their special committees on qualifications for specialists to carry out the provisions of the E MIC program with respect to specialists' status it being the contention of numerous county socioties and practitioners that the already quoted statement of policy has not been adhered to or construed in such a manner as to benefit the physician with out Board certification who actually has the

necessary qualifications, now therefore, be it "Resolved, that the Medical Society of the State of New York represented in this duly convened meeting of its House of Delegates, registers its professional interest in these individual physicians whose opplications for specialist status in obstetrics under the E M I C program have met with rejection, and hereby requests the E M I C Bureaus of the State Department of Health and the Children's Bureau of the U.S Department of Labor, over all administrativo agency which opproved the New York State Plan to interpret officially the present requirements and policies in New York State with respect to certification of specialists in obstetnes under E.M.I.C. and to rovice the same, if necessary, to insure a broader more liberal fairer set of provisions under which discrimination cannot occur and the objects and aims of the program can be accomplished with facility and satisfaction"

SPEAKER BAUER Inasmuch as this resolution per tains very closely to the matter which we just con-adered, I will refer to the Reference Committee on Report of the Council Part 2 Maternal and Child Welfare, of which Dr Beard is Chairman this resolution

Section 49 (See 18-42)

Further Report of Reference Committee on Board of

DR. JOHN J MASTERSON Aings This is a further report of the Committee on the Board of Consors.
Dr Joseph F Montague has requested me to announce before this House of Delegates that he will abide by the decision of the Delegates in opproving our recommendation. (Applause)

Section 50 (See 91) Publicity—Returning Servicemen

DR. II J KNICKERBOCKER, District Delegate This resolution has to do with returning servicemen

WHERLAS many of our members returning from service with the armed forces will encounter difficulties in the re-octoblishment of their practice, and

"Whereas, it is the desire of the Medical Society of the State of New York to extend every assistance within its power toward the ro-establishment of these men in their former locations and

"WHEREAS it has come to our attention that various county sociotics in other states are follow ing this proposed plan therefore bo it

Resolved that this House of Delegates recommend to the component societies that whenever a member returns from the ormed service to his former location with the intention of resuming practice at that place that the county society of which he is a member cause to be noted in the local newspapers of necessary by paid advertising space, that the sald doctor has returned and is about to or has established himself again in private practice ond be it furthermore

'Resolved, that the said county society spe-

cifically in its own name, request said doctor's patients to again return to his care, and be it furthermore

"Resolved, that said publicity shall be limited to not more than three consecutive issues of any one paper"

Speaker Bauer This is referred to the Reference Committee on New Business C, Dr Monteith, Chairman,

Section 51 (See 8)

Report of Reference Committee on Report of Coun-cil—Part VII Public Relations and Economics

Dn Moses H. Krakow, Bronz This report deals with the following

Medical expense insurance

Blue Cross proposal ā Ives Bill

4 Medical care of veterans

Medical care of welfare group 1 The Council Committee, with its Sub-committee on Medical Expense Insurance, has, by direction of the 1944 House of Delegates, selected

Mr George P Farrell, Buffalo, to be Director of the new Medical Caro Insurance Bureau, and this Bureau began to function in February, 1945 Ever since then the Burcau has received numerous requests from all parts of the State for information regarding medical-care insurance. Mr Farrell has personally appeared before several county medical groups and presented advantages of the voluntary modical insurance plan. Ho urged cooperation of physicians with existing plans, and where none existed he niged formation of such medical plans. Many diversified prohiems arose, both in areas where plans were established ond where no plans. were available. A concentrated effort is being made to hring these problems before each county somety together with accumulated experience in the operation of these plans. A study is now being made of existing benofit associations which have retarded the acceptance of nonprofit plans in certain communities. Apparently there is no question of the usefulness of the Bureau as a central pool of information and advice to the county socioties.

In the supplementary report from the Chairman of the Council Committee on Public Relations and Economics, the following activities of Mr Farrell

are given

The Rochester Plan known as the Genesce

has now incorporated and Valley Medical Plan, Inc., has now incorporated and has applied to the State Walfare Department for approval, plans to be in operation before January 1,

Mr Farrell has appeared at the meetings of the Fifth Third, Fourth, and Sixth District

Branches

3 On October 1 Mr Farrell appeared before Marron County Medical Society at their Annual Moeting and discussed the proposed plan in the Albany area and a motion was adopted that Warren County would participate in whatever plan was adopted in the Albany District and on October 3 a meeting was held in Albany and a definite program

was agreed upon

4 Three meetings have been hold with the Chairman of the Program Committee of the Woman's Auxiliary Committee and arrangements are being made to present medical-care insurance before all of their auxiliary groups.

At the present time there are four approved plans operating in New York State, with a membership of over 230 000 When the two plans which are now

in the process of formation are in operation, the entire state will be covered, with the exception of two counties, Chautauqua and Jefferson, which have individual Blue Cross Plans However, the Medical Society of Jefferson County has requested Mr Farrell to speak to their group on October 11 regarding the possibility of extending medical-care insurance to their country

Your Reference Committee is in complete agreement with the report that the question of voluntary medical insurance is of the utmost importance to the medical profession, and joins the Committee in urging wholehearted support of the Medical Society of the State of New York to the various plans in this state, to the ond that with the aid of the new Bureau and its Director, medical-care insurance be made available in every part of the state

The Committee calls attention to the proposal of the Blue Cross organization for a national surgical plan which may well lead to inroads on medical care We strongly approve the recomin the future mendation that if the plan is created the control should be definitely in the hands of the medical profession, and that the plan should only operate where no plans endorsed by medical societies exist In areas where such medical plans do exist, the Blue Cross should not compete with same, and should leave the medical expense insurance to the existing medical plans, taking caro of hospitalization of subscribers only, without inclusion of any medical services

The attention is called to the Ives Bill, intro-3 duced into the Legislature in the past session, and which is sure to come up for consideration at the next session of the Legislature We approve the next session of the Legislature We approve the recommendation of the Council that every physician should carefully study this Bill, and recommend that a careful analysis of it should be prepared and published in the JOURNAL with suitable editorial comment calling attention to it

I move the adoption of this portion of the report of the Reference Committee

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Dr. Krakow Continuing with the Report of the

Reference Committee

The Council Committee called attention to the importance of the present status of the medical care of veterans This is another serious problem and of vital interest to the medical profession There seems to be no reason why the veteran, as any other worthy citizen, should not be able to choose his own doctor and hospital The Committee recommends study of the question, and your Reference Committee would suggest that conference be sought with appropriate officials of the Veterans Bureau in order to bring about a liberalization of the rules and regulations of the Veterans Administration, in order to permit veterans to obtain medical care through their own physicians

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, the motion was put to a vote, and was

unanimously carried

DR KRAKOW Continuing with the Report of the

Reference Committee

We commend the continuing cooperation between the Society and the State Welfare Department through its Subcommittee of Public Medical Care

I move the adoption of this portion of the report . . The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried.....

DR KRAKOW Now I move the adoption of the report, which has been signed by Lyman C Lewis, John M Galbraith, Fenwick Beekman, and M H. Krakow, Chairman, as a whole The motion was seconded, and as there was

no discussion, it was put to a vote, and was unani-

mously carried

Section 52 (Sec 13)

Report of Reference Committee on Report of Council-Part VIII. Medical Service and Public Rela-

DR Moses H Krakow, Bronx This report consists of a description of the Regional Conference with the corresponding Council of the AMA, held in December, 1944, at which time Dr Joseph S Lawrence outlined the problems of the Washington office and its program for the coming year He will keep us informed of the bills introduced, and he has requested that Congressmen and Senators from each district of the State of New York be contacted and made acquainted with our wishes in regard to these bills We approve the emphasis that there is a great need of bringing to the attention of the Congressmen the attitude of medicine, and strongly endorse the idea that our program should be constructive and aggressive, and not defensive

The Committee has also reported on a regular meeting which was held in February in Albany At present, the new Wagner-Murray-Dingell Bill is the subject for discussion This report contains no recommendations and, therefore, no action is required in regard to it. I move the adoption of this report, which is signed by Lyman C Lewis, John M Galbruth, Fenwick Beekman, Leo E Gibson,

and M. H. Krakow, Chairman
The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Section 53 (See 103)

Request for a Session on Chest Diseases at the Next Annual Meeting

DR NELSON W STROHM, Erre I have a resolution requesting a session on chest diseases at the next Annual Meeting This resolution is presented by me at the instance and suggestions of about two hundred members of the Medical Society of the State of New York

"WHEREAS, at the 1941 Meeting of the House of Delegates a resolution by the House of Delegates recommending a symposium on chest diseases was approved, and

"Whereas, such a symposium was given on chest diseases at a general session of the annual

convention of 1942, and

"WHEREAS, this general session was enthusastically attended and appreciated, indicating the definite interest of the medical profession in the subjects presented, and

"Whereas, a certain chest disease, namely, tuberculosis, has always become the forgotten

disease, and

"WHEREAS, this disease is the most common of all chronic chest diseases and is very amenable to care and treatment, therefore be it

"Resolved, that the House of Delegates of the Medical Society of the State of New York establish a session on chest diseases for the next annual meeting"

SPEAKER BAUER Referred to the Reference Committee on New Business B, Dr Moore, Chairman

Section 54. (See 56-72-82)

Report of Reference Committee on Constitution and Bylaws Amendments (District Branches)-Proposed Amendment to Article XI, Section 1

DR. B WALLACE HAMILTON, New York Your Reference Committee on Report of Constitution and Bylaws Amendments begs to report as follows in reference to the amendments enbmitted

"Article XI, Section I, shall be amended so that there be deleted from the fourth paragraph the name "St. Lewrence" These paragraphs would then read

The Fourth District Branch shall comprise the members of the Medical Societies of Frank lin, Clinton, Essex, Hamilton, Fulton, Montgomery, Schenectady, Saratoga, Warren, and Washington

The Fifth District Branch shall comprise the members of the Medical Societies of the Counties of Onondaga, Onelda, Herkimer, Oswego, Lewis, Madison, Jefferson, and St. Lawrence."

Your Reference Committee has been advised that the members of the Medical Society of St. Lawrence desire the above noted change. The Committee received information regarding this proposed change from Dr John A. Pritchard, member of the House of Delegator from 24 of Delegates from St. Lawrence County Dr Pritchard submitted the following factual report 1 The Fourth District Branch is composed of

eleven countres the Fifth, of even
2 The Fourth District Branch area is 12,738

square railes the Fifth 7,676
3 If St. Lawrence County were changed from
the Pourth to the Fifth District Branch the areas

would be 9,906 and 10 448, respectively which is approximetely equal.

1. The largest towns or cities in St. Lawrence County are Ordenaburg, Massena, Gouverneur, County are Decider

Canton, and Potsdam.

5 The most distant cities from these in the Fourth District are Glens Falls Schenectady, Amsterdam, Saratoga Springs, and the everage distance is 187 miles.

The most distant cities from these same towns and cities of St Lawrence County in the Fifth District are Fulton, Syracuse, Oncids, Rome and Utica, and the average distance is 127 miles.

It follows therefore, that for physicians of St. Lawrence County to attend meetings of the Fourth District Branch in the more distant cities, necessitates their driving 120 mlles further (60 each way), than if they were to attend meetings in the more distant cates in the Fifth District Branch.

In attending meetings in the most southern cities in the Fourth District such as Schenectady or Amsterdam it is necessary for physicians from St. Lawrence County to drive through almost the entire length or width of the Fifth District passing through four of the seven counties to reach the Fourth District beyond it. In other words, to reach Schenectady in the Fourth District, physicians go through Utica one of the most distant cities in the Fifth District and 78 miles beyond it. There would seem to be no adequate justification to continue this unantisfactory arrangement.

The driving distances to most meetings in the Fourth District are so great that it is almost impossible to nttend the meetings and return home the same day whereas this would be quite practicable if attending meetings in the Fifth District Branch Since doctors very frequently find it underirable to be away overnight, this is an important considera tion.

The usual travel from St. Lawrence County 10 is much more in the direction and territory of the Fifth District than of the Fourth and, therefore, St. Lawrence County physicians are better acquainted and have more in common interests with physicians of the Fifth District than with those of the Fourth Professional contacts are also much District. greater with physicians in the Fifth District and not with those in the Fourth for the reason that when consultation is desired or required, this is invariably sought in the large cities of the Fifth District and not in those of the Fourth.

While boundance of the district hranch are 11 usually the same as those of the judicial district, this is not always the case, as Medison County is in the Fifth District Branch but in the Sixth Judicial

District, according to the 1941 Legislative Manual 12. The paramount consideration in determining county assignment to a district branch should be the convenience of the physicians, and those of St Lawrence County definitely feel that the Fifth District Branch would be much more convenient District Brainer within the much more convenient and desirable for them than the Fourth. The county society so resolved, and the proposed amendment is sought in accordance with such resolution 13. The St. Lawrence County Society, therefore, through its duly elected delegate, urgently requests a favorable report by your committee on the proposed

amendment

This Committee interviewed the Secretary of the Fourth District Branch, Dr F Leslie Sullivan, who is in accord with the proposed change. In behalf of the Fifth District, this Committee interviewed the President of the Fifth District Branch, Dr Dan Mellen, who stated that the Fifth District Branch was in a receptive mood to welcome the members of the Medical Society of the County of St. Lawrence to the Fifth District Branch. With all this harmony your reverent committee begs to recommend the adoption of the proposed amendment.

The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-mously carried

Proposed Amendment to Section 2, of Chapter XV of Bylaws (Transfers)

DR. HAMILTON Your Reference Committee on Report of Constitution and Bylaws Amendments begs to report as follows in reference to the amendments submitted

Proposed Amendment to Section 2 of Chapter XV of Bylaws

"It is proposed to amend the first paragraph of Section 2, Chapter XV of the Bylews to read as follows

Chapter XV, Section 2 When an active member in good standing in any component county medical society removes to another county in this state, transfer of his name to the roster of the county somety to which he removes shall be contingent upon the acceptance of the Board of Consors or Comitie Minora of the letter society Such transfer shall be made et the member's request and be effected without cost to him and provided that he files a certifi cate with the secretary signed by the precident and accretary of the component society from which he removes, as to his good standing in such society No member however, shall be an active member of more than one themonent society, nor shall any component county society accept a physician residing in another county in any other way than in accordance with the law governing transfers '

We interviewed the representatives of Queens County, who introduced this resolution, and they state that they request its adoption as this affords opportunity to review transfers from one county to However, in discussion I requested the Queens County representatives to enlighten us as to what would happen to a man who formerly resided in Buffalo, and moved his office to Albany, and the Albany County Medical Society did not exactly approve of him for one reason or another Dr Wolff, of Queens County, said he would still remain a member of Erie County under those conditions It seems to me that that leaves a man a little bit out on a limb if he were unacceptable This is a minority report as the Reference Committee declined to sign it

SPEAKER BAUER Does the balance of tho Reference Committee wish to make an independent

report?

DR HAMILTON Apparently not SPEAKER BAUER Will you read your individual recommendation again?

DR HAMILTON The individual recommendation is that we approve this report, and I move its adoption, as this affords opportunity to review transfers from one county to another

May I interpolate that Section 4 of Chapter I

of the Bylans provides

"A member of one county society shall not be permitted to transfer to membership in another county society until he has established a legal residence or has his principal office in the county to which he desires transfer "

That is now in our bylaws, and the naive question put up to the Queens County delegation was that if a man did transfer his office, and was not acceptable to that county society, where would he

SPEAKER BAUER You have before you the report of the Chairman of the Committee, which is a minority report, the balance of the Reference Committee not having submitted one, which recom-mends adoption of this proposed change to the bylaws Is the motion seconded?

The motion was seconded

Speaker Bauer Now it is open for discussion Dr. Ezra A Wolff, Queens I would say in answer to Dr Hamilton's question about what would happen to a man that was undesirable would be that he would be out on a limb, and that is where I would want him to be if he were undesirable question first came up in our Society because in the metropohtan area we have a problem which is somewhat different from that which some of you people have upstate We have members who transfer back and forth from New York County to Queens County for the purpose of obtaining compensation ratings in one county that they could not obtain in the other To some extent that argument becomes invalid now, although the recommendations of the county society, we hope, still carry some weight for com-pensation rating, but it was also felt that fundamentally each county society should be autonomous in selecting its members, that it creates its own rules for the selection of new members and, therefore, the same rule should apply for other members who transfer from other component societies to it. It was for this reason this amendment was formulated

DR Monnis Maslon, Warren I would like the matter clarified a little bit about this minority report because I don't understand it I was a member of that Reference Committee What is the majority

SPEAKER BAUER That is what I asked for, and I

was told they did not make any

Dr Masion But you cannot have a minority

report without a majority report DR JAMES F ROONEY Right

SPEAKER BAUER This is merely the report of an ındıvıdual

DR MASLON Who is the individual who made it? SPEAKER BAUER It represents the report of only one member of the Committee, the Chairman Is that right?

Dr Hamilton Right, the Chairman

SPEAKER BAUER Are the other members of this committee present?

DR MASLON I am here
DR JACOB WERNE, Queens I move that the
matter be referred back to the Committee

SPEAKER BAUER The matter should be referred back to the committee with the instruction that they bring in a majority report, and if they wish to add a minority report to do so At present we are dealing purely with one individual The matter will then be referred back to the Committee

Proposed Amendment to Chapter XVI, Section 2 Annual Meeting (Papers)

DR HAMILTON Your Reference Committee on Report of Constitution and Bylaw Amendments begs to report as follows in reference to the amendments submitted

Proposed Amondment to Chapter XVI, Section 2

"All papers read before the Society at its Annual Meeting by its members shall become the property of the Society but shall not be accepted necessarily for publication in the New York STATE JOURNAL OF MEDICINE unless approved by the Editor responsible for this function

Your Committee is of the opinion that an additional safeguard in the matter would be to alter the last line "That approval by the Publication Committee "

SPEAKER BAUER That would leave the last sentence, "unless approved by the Publication Committee" rather than by the Editor, is that correct?

DR HAMILTON We make an additional safeguard, "by the Editor and the Publication Committee"

SPEARER BAUER The Roference Committee then recommends that the article in the Bylans will now

"All papers read before the Society by its members shall become the property of the Society but shall not be accepted necessarily for publication in the New York STATE JOURNAL OF MEDICINE unless approved by the Editor responsible for this function and the Publication Committee"

DR HAMILTON Right

SPEAKER BAUER Is there a second to that motion? DR GEORGE W KOSMAK I will second it

Speaker Bauer Any discussion on it?
Dr Benjamin M Bernstein, Kings Suppose the paper is turned down by the Publication Com mittee, may that man refer that paper to some other journal?

SPEAKER BAUER It would be my interpretation

he would I am subject to correction, however

Dn. HAMBITON That is the property of the Society for publication in the Nr w York STATE JOURNAL OF MEDICINE but If they do not want it I should say he would have the right to submit it to another journal.

DR. ALPRED M. HELLMAN, New York How long

does he have to wait before he can do that?

SPEAKER BAUER It would be the property of the State Society It would either be rejected or ac cepted for publication in the JOURNAL. My in terpretation would be that if it were rejected they would send it back to the author for such other disposition as he saw fit. Perhaps it might be well to clarify that, however so there would be an additional sentence to cover that point

Dr. LEO F Schiff Chalon I was going to sug gest that it would only be fair to ask the committee to take this hack and clamfy it by an additional sentence stating what happens to the paper if it is rejected for publication in the Journal, so as to

mako lt clear

DR. GEORGE C ADIE Westchester If I am not incorrect, the resolution reads 'if a paper is presented by a member of this Society" What happens about a guest partlespant in the Society?

SPEAKER BAUER Can you answer that Mr

Chairman?

Dr. Hammon Suppose I read it over again

"All papers read before the Society at its Annual Meeting by its members shall become the property of the Society but shall not be accepted necessarily for publication in the New York the Editor responsible for this function and tho Publication Committee

Dr. Adre. What about a guest speaker? Speaken Bauen For your Information, the present hylaw reads the same way

"All papers read before the Society by Its members shall become the property of the Society Permission may be given however by the Council or House of Dolegates to publish such paper in advance of its appearance in the NEW YORK STATE JOURNAL OF MEDICINE'

DR. JAMES F ROONEY I think it should have a qualification, and I will move to amend so that the context shall be as Dr Hemiton has given it, provided that when a paper which is presented by either a member of this Society or a guest of the Society is not eccepted for publication in the Journal, the paper will be returned to the person presenting it within a period of three months with authorization to publish elsewhere as he desires

DR. BENJAMIN M BERNSTEIN I second the

SPEAKER BAUER You have before you the amend ment to the original motion The question comes first on the amendment Is there any discussion on

Dr. George W Losman I don't believe we should impose on invited guests that restriction namely that their papers or contributions to the program are the property of the State Society don t believe that that applies anywhere I think that a guest is always given the privilege of publishing the paper wherever he wants to publish it It is hardly fair to an invited guest to restrict him in that particular fashion

Dr. ROOMEY I don't think there is anything in the provision of the Reference Committee that uses the word 'guesta," but in view of the fact that there might be the construction that they were required

to conform to the bylaws of the Society even though they were guests. I purposely added the word 'guests' so there could be no question about it Spraker BAUER Except that the amendment itself pertains only to papers by the members

Dr. ROOMEY That is quite true You mean the

proposed amendment?

Speaker Bauer The present hylaw says "by its members" and this proposed change has not altered that.

Dr. ROONEY But in my qualifying amendment I added the words or guests," which would qualify the preceding portion so that it would relate to both members and guests and would at least resolve the apparently unclear agnificance of the original report

DR. ALFRED M HELLMAN New York I don't see how we can make a hylaw requiring that guests' papers become our property. We cannot enforce such a law Why make such a law when we have no

power of enforcement?

DR. ROONEY But we have not done that.

SPEAKER BAUER The interpretation of bylaw does not require that the papers of guests be

considered the property of the Sonsty
Dn. Hellman But the amended resolution of
Dr Rooney does. It says specifically 'or guesta."
SPEAKER BAUER Except that If the paper is sub-

mitted for publication in the Journal and is re-jected it will be returned.

Dr. Rooner Thet is the point.

Splaker Bauen The papers that are the property of the Society are from members only, not from guests, but if a guest submits a paper for publication in the JOURNAL and it is rejected that

will be returned to him.

Dr. Rooner That is the point. You will find that I said, 'is not accepted for publication in the

The question was called for on the amend ment, which was put to a vote, and was carried the motion, as amended was put to a vote, and was carried

### Proposed Amendment to Chapter III, Section 4

DR. HAMILTON Your Reference Committee on Report of Constitution and Bylaw Amendments begs to roport as follows in reference to the amendments submitted

Proposed Amendment to Chapter III, Section 4 "There shall be added to the end of the present section the following

When available a voting machine shall be

used instead of printed ballots." Your Reference Committee is in accord with the proposal in societies with very large urban member

ship, in smaller someties it would be impracticable and prohibitive in its expense.

Speaker Bauer What is your recommendation?

Dr. Hamilton We recommend the approval of

the amendment.

DR. BAMUEL Z FREEDMAN, New York. Docs that mean the county society?

SPEAKER BAUER No, this is the State Society olection.

Dr. FREEDMAN Why was the part inserted then that In smaller societies it would be impracticable and not feasible?

SPEAKER BAUER That was just a general com ment wasn't it Dr Hamilton?

Dr. HAMILTON We were thinking in different terms

2666

Dr. Freedman You mean this only applies to the State Society?

SPEAKER BAUER Yes, Chapter III deals with the State Society election of Officers, Councilors, Trustees, and Delegates

DR FREEDMAN Then I have no objection to it

DR THOMAS M D'ANGELO, Queens The com-

ments of the Chairman seem to be completely against a voting machine, yet his resolution at the end favors the adoption of a provision calling for a voting

May I ask that he please read that resolution

again?

SPEAKER BAUER Will you reread that, Dr Hamilton?

DR. HAMILTON Your Reference Committee on Report of Constitution and Bylaw Amendments begs to report favorably in reference to the amendment submitted to Chapter III, Section 4

"There shall be added at the end of the present section, the following

When available, a voting machine shall be used instead of printed ballots'"

DR D'ANGELO That was not the complete gist of your remarks before unless I misunderstood them

DR HAMILTON Then I added that your Reference Committee is in accord with the proposal, in other words, we recommend its adoption

Dr. D'Angelo That wasn't the way I got it

DR LAURANCE D REDWAY, Westchester Being responsible for this amendment, which I introduced through the courtesy of the Speaker at the very end of the meeting at the Hotel Pennsylvania at the last General Meeting, perhaps I can clarify the matter a As you know, we have always had this complicated system of collecting ballots by tellers, etc

As it so happens, the agenda of the Delegates' Meeting is pretty full, especially toward the end of the meeting, and it seemed as though it might be a time-conserving thing when a voting machine were available to have the delegates vote by a voting Instead machine just as you do in the polls today of the complicated system of writing out the ballots, and having your tellers, designated by the Speaker, collect them and tally them, that time-consuming procedure would be eliminated and the voting machine would give the House the result almost immediately, if such voting machine were available

That was the purpose in introducing the amendment which has now been reported on by the Reference Committee, and who have presumably com-

mented favorably upon it

DR MORRIS MASLON, Warren I again wish to state that I was a member of that Committee, but I did not understand it that way It occurs to me now that in order to use a voting macine one would have to know who the candidates are way in advance to fix up the machine accordingly I cannot believe that there is any such machine available, is there, that fixes up the names of candidates weeks in advance of their being nominated? (Laughter) If there were, I am sure you would not admit it (Laughter) I move that this be referred back to the Reference Committee for discussion to reconsider that

DR STEPHEN R. MONTEITH, Rockland I second

that motion to recommit

The question being called, the motion was put to a vote, and was unanimously carried. .

Section 55

Notice of Proposed Amendments to Constitution and Bylaws

SPEAKER BAUER While we are on the Constitu-tion and Bylaws, there are other amendments which have been submitted. Some of them have been printed in your Annual Reports, but as they have never been presented before the House of Delegates the bylaws require that they must be read at this meeting, and then they will be in the hands of the Secretary until the next meeting of the House of Delegates, and acted upon then However, they must be read, so I will ask Dr Anderton if he will read the proposed amendments, and there is one other which has come in since. All it requires is a mere reading, and no action can be taken thereon at this time

# Chapter VII, Section 6, of the Bylaws

Secretary Anderton This appears on page 54 of the Annual Reports

In Chapter VII, Section 6 of the Bylaws, delete the second and third sentences, which read

'These minutes shall be copied from a stenographer's notes with such deletion only as will not modify, alter, or becloud the history of the actions of the said bodies. The stenof the actions of the said bodies. The sten-ographer's typewritten copy shall be pre-served until ordered destroyed by the House of

Delegates ' Insert the following language in place of the

deletion
'He shall perform such other duties as may be prescribed from time to time by the House of Delegates or the Council,

amending said section so as to read as follows Section 6 The Secretary shall attend all meetings of the Society, the House of Delegates, the Council, the Board of Trustees, and the Board of Censors, and shall keep minutes of their respective proceedings. He The Secretary shall attend all shall perform such other duties as may be prescribed from time to time by the House of Delegates or the Council'"

# Chapter VII, Section 7, of the Bylaws

SECRETARY ANDERTON This also appears on page 54 of the Annual Reports

In Chapter VII, Section 7 of the Bylaws, delete the following words from the first sentence

be responsible for and have general charge of the Society's offices and the employees therein He shall be '

Insert in place of said deletion the following

language countersign all checks issued by the Treasurer

on funds of the Society, he shall be' Section 7 The Secretary shall countersign all checks issued by the Treasurer on funds of the Society, he shall be the custodian of the seal of the Society, and of all books of records and papers belonging to the Society, except such as properly belong to the Treasurer, and shall keep an account of and promptly turn over to the Treasurer all funds of the Society which come into his hands. He shall provide for the registration of the members at all sessions of the Society With the aid and cooperation of the secretaries of the county societies, he shall keep a proper register of all the registered physicians of the State by counties

He shall aid the officers of the District Branches in the organisation and improvement of the county societies and the extension of the power and influence of the Society He shall conduct the official correspondence, notifying the members of meetings, officers, councillors, trustees and Board members of their election and committees of their appointment and duties. He shall affix the seal of the Society to all credentials assued to members of the Society elected by the House of Delegates and to such other papers and documents as may require the same. He shall make an annual report to the House of Delegates He shall supply each county society with the necessary hlanks for making their annual reports to this Society Acting in cooperation with the Council he shall prepare and issue all programs. He shall be a member of the Council. He shall be ex officio a member of all beards and committees without vote He shall record the name and date of admission of each member of the Society '"

### C. Repeal of entire Chapter VIII of Bylaws

SECRETARY ANDERTON C reads "Repeal entire Chapter VIII of the Bylaws entitled 'Direction of Activities."

### D Chapter XVIII, Section 2, of Bylaws

SECRETARY ANDERTON D reads

"In Chapter XVIII, Section 2 delete the following

'given at a provious annual meeting of the House of Delegates, and before the same can be acted upon it shall be published once before

the annual meeting in the and insert in place of said delotion the following published one month before the annual meeting in the,

so that said Section 2 of Chapter XVIII shall

read as follows Section 2 Notice of the proposed amendment shall be published one month before the annual meeting in the official buildin or

# journal of the Society '" R. Article IV of Constitution

SECRETARY AMDERTON The following amend ment to the Constitution has been proposed by Dr James F Rooney, Trustee

"Amend Article IV, Council by adding the words "Second Vice-Fresident' after the word President-Elect' and adding the words 'Assistant Secretary' after the word 'Secretary' after the word 'Secretary', the words 'Assistant Tréasurer' after the word 'Treasurer' and the word Vice-Speaker' after the word 'Speaker,' and 'the President of each district branch of this Society for the term to which he was elected.' The article would then read 'Threa shell be a Conneal composed of the

There shall be a Council composed of the President, the President-Elect, the Second Vice-President, the immediate Past-President, the Secretary the Assistant Secretary, the the Secretary the Assistant Secretary, the Treasurer, the Assistant Treasurer the Speaker, the Vice-Speaker the Chairman of the Board the Vice-Speaker the Chairman of the Board by the of Trustees nine other members elected by the House of Delegates, and the President of each district branch for the term to which he was

### F Chapter II, Section 1, of the Bylaws

SECRETARY ANDERFOR There is also an amendment proposed to Chapter II, Section 1 of the Bylaws by Dr James R. Reuling, as an individual

"That Chapter II, Section 1 of the Bylaws be amended by inserting after the sentence.

'Each component county society shall be entitled to elect as many delegates as there shall be State Assembly Districts in such county at the time of election, but each county medical society shall be entitled to elect at least one delegate '

the following sentence

'Any component county medical society which, according to the rolls of the State Society, on May 1 of the previous calendar year shall have had 125 or more members, shall be entitled to elect not less than two delegates, any Society with 250 or more members, not less than three delegates, any Society with 375 or more members, not less than four delegates, any Society with 500 or more members not less than five delegates, any Society with 1,000 or more members shall be entitled to elect not less than one delegate for each 250 members and fraction of that number "

SPEAKER BAUER These amendments are read purely for your information They will remain in the hands of the Secretary, must be published at least once before the Annual Meeting and will then come up for consideration.

#### Section 56 (See 54-72-82)

Reconsideration of House on Action Taken in Connection with Chapter XVI, Section 2, of Bylaws (Annual Meeting Papers)

Dr. James R. Reuling I would like to make a motion to reconsider the action that the House has just taken relating to the publication of papers read before the State Society, and dealing with Chapter VY Section 2 of the Bylaws.

SPEAKER BAUER How did you vote on the resolution?

DR REULING I voted for it

SPEAKER BAUER O.K.

DR. REULING The intent is not entirely clear That is the purpose of my making the motion. I would like to move to reconsider it so that I might make another motion that it he re-referred to the Reference Committee

SPEAKER BAUER A motion to reconsider the action of the House in amending Chapter XVI Section 2 of the Bylaws is before you. Is there a

second?

DR. KIRBY DWIGHT I will second lt.

DR. HOMER J KNICKERBOCKER, District Delegate Why could not the same objective be accomplished hy consultation with the Reference Committee?

SPEAKER BAUER It caunot be done. The House has taken action on it. It will have to be recon aldered

The question was called, and the motion to reconsider was put to a vote and was carried SPEAKER BAUER It is now up for reconsideration

Do you wish to move that it be re-referred?

DR REULING Yes, I move it to re-referred to the Reference Committee for clarification. SPEAKER BAUER The motion has been made

that it be recommitted to the Reference Committee for reconsideration and the hringing in of a subse-

quent report.

The motion was seconded, and as there was no discussion, it was put to a voto and was carried.

SPEAKER BAUER It has been so recommitted Will you see that word of that gets to Dr Hamilton? SECRETARY ANDERTON Yes.

Section 57 (Sec 12)

Report of Reference Committee on Report of Council-Part VI Rehabilitation

DR THOMAS D'ANGELO, Queens Your Rescrence Committee has carefully reviewed the report of the Council, Part VI, on Rehabilitation, and has also interviewed the chairman of the committee, Dr Mitchell It has been impressed by the scope of the work planned by the State of New York in this Very few physicians are aware of the implications of this law Before discussing the report itself, the reference committee thought it wise to give the delegates some background and history of this work

This program is being carried out under the State Education Law, Article 47, as amended by Chapter 88, Laws of 1945, in effect April, 1945, and called the Vocational Rehabilitation Law This law implements the work of the Federal Vocational Rehabilitation Program under the Federal Social Security This cost is borne by both the Federal government and the State government in equal proportion, except that the Federal government pays the cost of administration and also all the cost for rehabilitation of the war veterans

In this State the law is administered by the Department of Health and the Department of Education with some help from the Department of Social

Welfare and the Industrial Commission

Under this act, rehabilitation shall mean "Tho rendering of a handicapped person fit to engage in a remunerative occupation" It specifically exempts aged or helpless persons requiring permanent custodial care, or any person in any State mental institution or confined in any correctional or penal institution, or any person, who in the judgment of the Commissioner of Education may not be susceptible to rehabilitation, or persons under fourteen years of age It shall, however, apply to other than physically handicapped persons if, through psychiatric examination, the Commissioner of Education is satisfied that such persons are susceptible of re-

The work of the medical profession under this act is mainly with the Department of Health connection the policy of the State Board calls for a Professional Advisory Committee whose duties and responsibilities will include (a) advising the Supervisor of Physical Restoration with respect to general policies, setting of standards, selection of rates and methods of payment for services, supplies, and prosthetic appliances, etc., and (b) it is desirable that the Professional Advisory Committee include representatives from at least the following professional advisory are professional and the professional and the professional areas are professional areas are professional areas and the professional areas are profess fessional groups medicine, public health, nursing, and hospital administration

The Manual of Policies also advises the State to set up standards in order to qualify medical specialists It specifically advises the State Agency to

utilize the following criteria

Certification by the appropriate American

Medical Specialty Board

(b) Fulfillment of the training and experience requirements for admission to examination of such boards

(c) State agency standards for the qualification

of physicians in specialties

(d) Be qualified at the discretion of the Commissioner

The Council Committee of Rehabilitation was appointed to study this Act and meet with the state agencies in order to present the viewpoint of the

medical profession In this respect the Committee has done very well when we consider the short time that the Committee had to do this work. The State has decided to limit the scope of rehabilitation to surgery. With this in view, the membership of the Committee was well chosen because, besides Dr Mitchell, the Chairman, the Committee is composed of an orthopedist, a general surgeon, an ophthalmologist, an obstetrician and gynecologist, and a plastic surgeon

Your Reference Committee commends the fact that the fee schedule is not to be lower than the compensation fee schedule, and as a matter of fact is somewhat higher The state agency has also agreed to raise the fee schedule if the compensation rates The Committee has endorsed the are raised standards for qualifying the medical specialists.

Your Reference Committee finds all this a very good beginning, and we feel that in this case the state agencies are availing themselves of the advice of the medical profession. We commend the Com-mittee for its excellent work, and move the adoption of the Report of the Council, Part VI

The motion was seconded

Speaker Bauer You have before you the report of the Reference Committee, which commends the work of the Subcommittee on Rehabilitation Is there any discussion on it?

DR OLIVER MITCHELL I think there is one error in it, where it said that that particular activity was conducted by the Department of Health meant the Department of Education, did you not?
DR D'ANGELO Yes.

SPEARER BAUER That one correction will be add. It has been accepted by the Reference made Committee

DR D'ANGELO RIGHT
DR THOMAS A MCGOLDRICK I would like the speaker to further clarify the sentence as to the relation of the state work to the Social Security Board of Washington He did mention the amount of money that would be paid to the state from Washington, and I would like to know if there is any other relationship Does the program have to be approved by Washington? Are there any reports that must be made by the State to Washington?

DR D'ANGELO I cannot answer that question, Possibly Dr Mitchell can McGoldrick furnish you with that information, though
SPEAKER BAUER Dr Mitchell, can you answer

the question?

DR MITCHELL The Division of Rehabilitation, as set up in this State, is in the State Department of Education, and I have only had conferences with the director of that Division, Mr Bohlin There is no medical director in that setup Provision is made, I believe, for a medical director, but sufficient money has not been appropriated for them to secure the man they want When I asked Mr Bohlin about our schedule of fees, whether or not that would be acceptable to Washington, he said yes We have not dealt directly with Washington.

DR McGoldrick That answers in part my question As the Chairman of the Reference Committee has stated, this money comes from the Social Security Board at Washington. Now it is a standard practice and principle of the Social Security Board at Washington to get control of medicine throughout the states by the states by a special formula. That formula is to give a certain amount of money to each statethey may call it for administration or for assistance, but then they direct absolutely, as in the EMIC Plan, just what shall be done The state will then

arrange n program of its own, but it must be submitted with these other plans to Washington and the Board there approves of it, If they approve of it at all. In other words just as in the different bills which we have had to consider, it is another step which the Social Security Board of Washington takes to secure greater and greater control of the health and the practice of medicane throughout the states. They will give some pittance of money to the state so that the control will be in their hunds, and if the state is financially weak enough to have to rely on that then the state s power is lost in the long run. It is the same thing as in these other propositions so I asked just what relationship there is. As Dr Mitchell has just said, even the fee schedule will be submitted to Washington, and he has not yet heard the result

We talk n great deal of what the state may do in regard to that Emergency Maternity and Infant Care but strictly speaking it can do very little The program is laid down in Washington and the state must conform to those plans so laid down for them there or there will be no money given, and the money is used as a whip hand. This is another encroachment on the control of medicine. It is

taking away from the states certain powers. I make this point, not, of course objecting to any rehabilitation of people. No doctor is objecting to that in any possible way. Nor am I objecting to the program itself. I am thinking of these insidious influences that are manifesting themselves, and there also comes to my mind what a noh state New York is Last year they had more than \$50 000 000 in income put ande that they could not spend, and the Governor has directed that it is going to be used for these veterans returning from service You see hero a question not only for voterans but for psychiatrie treatment and psychiatric examination which have had nothing to do with the war so I fear that these encroachments on the part of the Federal government more and more into the control of medicine and the health of the people are dangerous and open up the way to absolute control in a short while

DR DANGELO I am sure that the committee welcomes the words of Dr McGoldrick However the committee was faced with a law that had already been enacted, and was called in purely to see how that art could be administered in the State of New York. The Committee fully realizes the tremendous implications of this law and I only wish to read

once more from our report

"Under this act, rehabilitation shall mean The rendering of a handicapped person fit to engage in n remunerative occupation.

Such n wide and broad statement practically takes in everybody in the State of New York above the age of fourteen, except if they are blind or in a mental institution, who has any sort of chronic illness whatsoever

DR SAMUEL Z FREEDMAN New Fork Might I ask that you read again the qualifications for the

specialist? Dr. D'Angrio These are the bases of the qualifications. They need not be accepted by the state or by the Federal government. The Federal state or by the Federal government. government itself has asked the state to utilize the following critorin

(a) Certification by the appropriate American

Medical Specialty Board

(b) Fulfillment of the training and experience requirements for admission to examination of such boards.

(c) State agency standards for the qualifications of physicians in specialties.

(d) Be qualified at the discretion of the Com missioner

DR. FREEDMAN I don't know exactly what the proper procedure for me to follow would be. don't want to go against the report of the Reference Committee, but I think we should heatnte very very seriously to O.K that last part of calling somebody a specialist at the discretion of the Com-missioner That certainly is an all-inclusive thing. They might use that at some other time, perhaps, to classify and make specialists of their own choosing without going to the qualifying boards, and so on.

SPEARER BAUER Do you wish to make any motion, Dr Freedman?
DR. FREENMAN Yes I would like to make n motion not to approve of that part, that they be

qualified at the discretion of the Commissioner SPEAKER BAUER In order to clarify the situation if I misunderstood the Chairman he will correct me-the report is not approval of this law but approval of what our Council Committee has done DR. D ANGELO That is exactly it.

SPEAKER BAUER In trying to set up a situation in New York, which we had to accept whother we liked it or not and it is approving the work of the Committee in doing the best they could in a difficult

atuation.

DR. D Anomo You are exactly right. SPEAKER BAUER Now Dr Freedman has moved that the House go on record as disapproving that that the House go on record as disapproving that particular portion which provides that a specialist may be so designated at the whim of the Commissioner Is that correct, Dr Freedman?

DR. FREEDMAN That is correct.

SPEAKER BAUER That has been moved, of course,

as an amendment to the Committee's report. The Committee's report simply recommends approval of our Council Committee's activities in what they have been able to do, and asks them to carry on in the same way

DR. JACOB WEENE Queens I would like to make an amendment to the amendment, specifying that that recommendation be sent by the Committee to

the Commissioner administering this law Speaking Bauer. Will you repeat that? I could not bear you.

DR. WERNE I would move an amendment to the amendment, specifying that the recommendation that the Commissioner be not permitted to qualify specialists at his discretion be sent to the Com missioner by the Committee.

SPEAKER BAUER Inasmuch as that has not been

seconded, will you necept it?

Dr. FREEDMAN Yes, I will necept that as part of the amendment.

SPEAKER BAUER That will save time The amondment as proposed by Dr Freedman and by Dr Werne is that that portion of the report which deals with the designation of n specialist by the Commissioner is not approved by the House of Delegates. Is there any further discussion on the

amendment? DR D ANGELO I would like to speak in regard to Werne's amendment to the amendment, or qualification to the amendment One must remember that most of this work is being carried on through your committee and the agents of the State Department of Health and the State Department of Education. These talks, up to now, have been most informal, and a great deal of progress has been made. I think it would be wise for the amendment to leave out the fact that it had to be sent to the Commissioner It would be well to leave that at the discretion of your committee, which has done some very good work up to now, to present that part to the state agents with whom they are at present

discussing the entire problem

DR MADGE MCGUINNESS, New York May I ask why this is limited to surgeons only? Tuberculosis is coming into this picture of rehabiliation, and surely the surgeons would not set themselves up against the experts in tuberculosis Psychiatrists will also be called upon, as well as those interested in physical medicine The physiotherapists have been doing much in the field of rehabilitation for a long

DR D'ANGELO The reason this is being limited at present to surgery is because the act is just in its infancy. The work has to begin somewhere. Because of the fact that there are not at present sufficient funds to carry out the entire act, surgery

was taken as the first problem

DR ROGER A HEMPHILL, Livingston May I say that rehabilitation is taking place in tuberculosis, that we have patients consistently in my institution with tuberculosis of the knee, tuberculosis of the spine, and tuberculosis of the chest who are receiving, and have received, training and rehabilitation under the vocational training service of the state?

WERNE I would like to move another amendment to the motion calling for the acceptance of the reference committee's report to the effect that the House of Delegates go on record as advising that other specialties than surgery be represented in the committee for the reasons stated by Dr McGuinness and Dr Hemphill

SPEAKER BAUER Before I can accept that amendment, we will have to dispose of this other one, because that is apart from this The present amendment is that the section of the report allowing the Commissioner to designate specialists be dis-

approved by the House of Delegates

DR MITCHELL If you will read the report, as submitted, you will find the story as to why this Committee was appointed To go back into the history of the Crippled Children's Act in this state, which was a good many years ago, laws were passed which are administered by the State Department of Education of Health and the State Department of Education, and the real service department there is the State Department of Health The Crippled Children's Act has to do with the care of such children, and the money is provided by the county and one half of the cost is then provided by the state. It is a sub-sidized state program. That is all within the state At the time that program was started I believe Dr Sadher was the chairman of a committee, and I was a member of it, to prepare a fee schedule to guide the judges in the courts, because they would not know, otherwise, what the approximate cost would be for the care of such children Since that time the Health Department has realized that that fee schedule was too low, so they came to me about it I said that that was not a matter that I could decide, and that I would report it to the Council

Shortly after that the Director of the Division of Vocational Rehabilitation, Mr Bohlin, conferred with the Health Department regarding the surgical program of the Division which he directs, and wanted to know if we would confer with them I said we would be very glad to, so I saw Mr Bohlin and I saw the representatives of the State Health Depart-

ment The fee schedules are uniform They are the same for both the Health Department with the rehabilita-

tion or the Crippled Children's Act and the vocational rehabilitation in the Department of Educa-Mr Bohlin did not submit any program to us

except regarding surgery

Having had those talks, I reported to the Council. and it was felt advisable to appoint a committee As long as we were dealing only with surgery, I thought we would stick to representatives in those fields, which we have done At the same time we had meet with us the physicians in charge of our workmen's compensation activities in the State Medical Society, Dr Aranow and Dr Kaliski, so we compared all of these schedules and made them uniform That is as far as we have gone at the present time Mr Bohlin told me that it was not his intention at the present time to expand that program When he expands it, I certainly would recommend that we put on additional members

The question was called, and the amend-

ment was put to a vote, and was carried
SPEAKER BAUER That amendment is carried. Now, Dr Werne, I understand you have another amendment?

Dr. Werne No, I will withdraw my amendment. DR McGoldrick I would like to offer an amendment, that there be added to the report and recommendations of the Reference Committee an expression of opinion of this house that the work of rehabilitation in New York State be conducted and controlled by the State of New York and its political subdivisions, and that there be no financial control or authority over it by any central or federal bureau Dr. J STANLEY KENNEY I will second that

amendment

There being no discussion on this amend-

ment, it was put to a vote, and was carried SPEAKER BAUER You now have before you the original motion of the Committee, together with the two amendments, one by Dr Freedman and the other by Dr McGoldrick Is there any discussion on the amended motion?

... The question was called, and the amended

motion was put to a vote, and was carried Splaker Bauer The motion is carried, and the report is adopted, with the amendments you, Dr D'Angelol

Section 58 (See 17)

Report of Reference Committee on Report of Council-Part XIV. War Participation, General Matters. Convention, Nursing, Office Administration and Policies, Reorganization Committee, Woman's Auxiliary

DR EDWARD P FLOOD, Bronz War Participa-tion The Reference Committee felicitates the Council Committee on War Participation for the excellent type of questionnaire submitted to the members in service as evidenced by the large proportions of replies to those sent out. When the replies to the questions relative to the availability of refresher courses, internships, residencies, and assistancies to specialists are completed, we recommend that they be published in the JOURNAL and that an adequate number of reprints be furnished to the county societies and the academics of medicine and medical demobilization centers for distribution to the demobilized medical officers

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

DR FLOOD Still on War Participation, we agree that the work of the committee has been in the best interests of the medical officers. We concur in the recommendation that the committee be discharged and its functions relinquished to a new council Committee on Voterans' Affairs This committee should have in its membership representation of medical officer veterans of the recent war

I move the adoption of this portion of the report. The motion was seconded, and as there was no discussion, it was put to a vote and was unani-

mously carried.

Dr. Floor General Matters The Report of the Council Committee on the Convention -- Wo regret the necessity of the cancellation of our scheduled meeting in the spring of 1945 We express our gratitude to the convention committee and the subcommittees on Arrangements, on Scientific Pro-grams, on Scientific Exhibits, and on Technical Exhibits for their efforts toward the success of a project that died aborning We regret that the plan of Mr Dwight Anderson for a convention hy mail had to be canceled because of a paper shortage.

Nursing -The issues engendered by the recruiting programs of the armed forces are now, thankfully, a matter of academic interest, as is the necessity of a program curtailing the previously recognized standards of nursing education. We agree with the opinion of the Committee on Nursing

Education that the curriculum recommended by leaders in nursing education should be strengthened to enhance the ideal of a trained nurse as a pro-fessional individual The Reference Committee approves the comment of the Council Committee on Nursing relative to the training of the so-called practical nurse Because in the lay mind the so-called "high cost of medical care" is often the result of the disproportionate cost of the nursing care, we should welcome efforts for the extension of numing-care insurance

Office Administration and Policies -The activities and accomplishments of the special committee on Office Administration and Policies are commended The Reference Committee agrees with the recom-mendation that the House of Delegates continue the committee working under the supervision of and reporting to the Council, and that the House give the iollowing directive as to the continuance of its

personnel

"The Committee on Office Administration and Policies shall consist of the Secretary, the Business Manager of the Journal and Directory the Literary and Managing Editors, the Treasurer, and one member of the Board of Trustees to be appointed by the President of the Society, after consultation with the Chairman of the Board of Trustees."

I move the adoption of this portion of the report. The motion was seconded and as there was no discussion, it was put to a vote, and was unanimously

carned.

Dr. FLOOO Reorganization Committee .-- The action of the Committee relative to the matter of compensation for the late Dr Irving and the appointment of Dr Walter P Anderton as Secretary is approved We approve the recommendation of the committee that an Office Manager to be designated as Executive Secretary be appointed

Wecongratulate the committee on the appointment of Dr. Kosmak as Editor of the Nzw York Statz American Medical Association on securing the services of Dr. Joseph S. Lawrence at its Washing-ton Dropping and the services of Dr. Joseph S. Lawrence at its Washing-ton Dropping and the services of Dr. Joseph S. Lawrence at its Washing-ton Dropping and The State of the Stat ton Bureau, and we are happy in our own good fortunn in securing Dr Robert R. Hannon as Executive Officer of the Society

The Council is to be commended on its appointment of a Subcommittee on Workman's Compensation which will work directly with the Chairman of the Workman's Compensation Board of the De-partment of Labor, Miss Mary Donlon We hope that this action will result in a continuance of our amicable relations with the Bureau of the Workman's Compensation.

Woman's Auxiliary—The activities of the Woman's Auxiliary in the war effort have redounded to its great credit. The work of the Woman's Auxiliary was of paramount importance to the welfare of the Society in legislative matters.

Belated Bills —We approve the recommendation for the payment of the belated hill rendered for expenses of the Subcommittee on Hard of Hearing and the Deaf

I move the adoption of this portion of the Com-

mittee's report

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Dr. Flood Now I move the adoption of the report as a whole, signed by Denver M Vickers, Charles A. Prudhon, Moses A. Stavers, and myself

as Chairman

The motion was seconded, and as there was no discussion, it was put to a vote, and was unam monaly carried.

SPEAKER BAUER Thank you, Dr Floodi

Section 59 (See 60-108)

Report of Reference Committee on Report of Council-Part XIII. Malpractice Defense and Insurance and Legal Counsel

Dr. William B Rawls, New York The Reference Committee desires to call attention to a change in paragraph 2, part 1, made by the Com-mittee on Malpractice Defense and Insurance as follows

"In accordance with that directive, the Committee has made an extensive study of the malpractice insurance situation in this state, including a review of the history of the Group Plan since its organization in 1921 The Committee has made a conscientions effort to fulfill the directive of the House of Delegates but feels that further study is necessary to cover other problems that have arisen during the course of this study "

The Reference Committee recommends the approval of the suggestions for reorganization made hy the Committee on Malpractice Defense and In-

surance namely

(a) That a Committee on malpractice insurance and defense consisting of five members be created to replace the present Council Committee on Malpractice Defense and Insurance.

(b) That the members of the Committee be

appointed for one, two, three, four, and five years, respectively, and that each year the incoming

respectively, and that each year the incoming president appoint a new five-year member (c) That the Secretary Treasurer, Indemnit; Representative, and Legal Counsel be ex officion members of the Committee (d) That the Committee meet at the call of its

chairman and have duties similar to those of a board of directors of a corporation, that it receive the reports of and advise with the indomnity and legal representatives and report its findings and recommendations to the Council.

I move the approval of this recommendation

SPEAKER BAUER The motion is not in order in that the Malpractice Defense and Insurance Committee is already set up in the Bylaws as a Council committee of three members, and it would require an amendment to the Bylaws to accomplish the aim of the committee That portion of the report which deals with the functions of the committee can be accepted at this time if the House desires, but the reorganization of the committee to consist of five members, with one-, two-, threc-, four-, and fiveyear terms, respectively, constitutes an amendment to the Bylans and cannot be considered until next I will accept your motion for the adoption of that part of the report which does not pertain to the amendment of the bylaws

DR RAWLS I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

SPEAKER BAUER That portion of the report is adopted, and that section dealing with the amendment to the bylaws will be placed in the hands of the Secretary for publication and consideration at the

next year's meeting

DR RAWLS The clear and concise way the aims and functions of group insurance are presented, we believe, make it worth while for each member to read and study this report in its entirety, and particularly that part which has to do with the basic requirements of the Group Plan Tho Reference Committee wishes to compliment the Committee on the enormous amount of work done, and recommends a vote of thanks from the House of Delegates

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

Dr RAWLS I now move the adoption of the report as a whole, with the deletion suggested by the

Speaker, and already voted upon by the House The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

Section 60 (See 59)

Notice of Amendment to Bylaws Reconstituting Present Committee of Malpractice Defense and

DR KENNEY We have prepared an amendment to the bylaws providing for such reconstitution, and if it is proper to introduce it at this time I should like to have that done to implement that recommendation

Speaker Bauer This is as good a time to do it

as any, if it is ready
DR KENNEY Yes Dr Flynn, will you present

DR JAMES M FLYNN It reads

"Whereas, the Group Plan of Malpractice Insurance and Defense was organized by the Medical Society of the State of New York to stabilize and perfect this type of protection for the members, and "WHEREAS, in accomplishing that purpose, the

Group Plan has grown to the size of a corporate enterprise large enough to require the supervision

of a board of directors, and

"WHEREAS, the direction of an undertaking of the size and character of the Group Plan requires continuity of supervision by a committee or board whose members remain in office long enough to become thoroughly familiar with the many

business and professional problems involved in the successful operation of it, and

"WHEREAS, the present Council Committee on Malpractice Defense and Insurance, after a careful study, has recommended that its functions be transferred to a permanently organized special committee or board, now, therefore, be it

"Resolved, that the Constitution and Bylaws of the Medical Society of the State of New York be,

Sections 2 and 3 of Chapter XII of the Bylans entitled "Special Committees" are renumbered 3 and 4, respectively

A new Section 2 is added as follows

and they are hereby amended as follows

'A Special Committee, to be known as the Malpractice Insurance and Defense Board, consisting of five members, including a chairman, shall be appointed by the President with the approval of the Council Five members of the committee shall be appointed in 1946 for one, two, three, four, and five years, respectively, and thereafter one new member shall be appointed each year to serve five years Vacancies for any cause shall be filled for the unexpired term by appointment by the President with the approval of the Council The Secretary, Treasurer, Legal Counsel, and Indemnity Representative shall be ex officio members of the committee with voice but without vote It shall be the duty of the committee to study and supervise, on behalf of the Society, all matters having to do with mal-practice insurance and defense "

Speaker Bauer That is purely for your information, gentlemen. It will remain in the hands of the Sccretary until next year

Section 61 (Sec 7)

Report of Reference Committee on Report of Council-Part I Postgraduate Education

DR ALBERT F R. ANDRESEN, Kings This report of the Council Committee on Public Health and Education is in two parts—the original formal report, followed by a supplementary report As the years go by your Reference Committees run out of sufficient laudatory adjectives in praising the highly important work done by Dr O W H Mitchell and his Committee Into his postgraduate education program he has gathered together many agencies interested in this work and in recent years has obtained great financial assistance from the Now York State Department of Health to provide expenses and honoraria for speakers

The education program consists of preparation of postgraduate lecture courses covering all phases of the practice of medicine, adding each year courses on pertinent new advances, such as the recent courses on penicilin and sulfonamide therapy, tropical medicine, and virus diseases courses are made available through publication of the magnificent Course Outline Book, listing all the available courses During the past year, one hundred and five lectures were given in thirty

counties

In addition to this the Committee arranges regional meetings and teaching days in various parts of the state, gathering together members from groups of counties During the year ninety lectures were given at twenty-five such regional meetings, thirteen meetings being devoted to cancer, nine to poliomyelitis, one to rheumatism and rheumatic heart disease, one to general medicine and psychiatry, and one to psychotherapy and general medicine Practically all counties in the state except a few of the larger ones were covered in these

It is impossible to estimate the great service being rendered by Dr O W H Mitchell and his Committee, not only to this state hut hy his shining example to the whole nation. The postgradunte program cannot fail to raise the standard of medical practice in this state resulting in direct benefit to every citizen of the state. The methods used by Dr Mitchell are being carried out in an increasing number of other states Today Dr Mitchell can be easily classed as one of the leading educators in the country

I move the adoption of the report giving Dr Mitchell and this Committee a voto of thanks for invaluable services rendered and advising continuance of his Committee. This is signed by Joseph H Diamond, Vincent Juster and myself as Chairman.

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was unanimously carried

SPEAKER BAUER Thank you, Dr Andresen!

Is there any other reference committee chairman ready to report?

(There was no response)
SPEAKER BAUER If not I believe Dr. Murray, of New York, has a resolution he would like to intro-

# Section 82 (Sec 94)

Governor's Commission on Medical Care

DR. PETER MURRAY Acto I ork. On behalf of the delegates of the Medical Society of the County of New York I wish to submit this resolution

"Wiereas, the New York State Commission on Medical Care was appointed by Governor Dewey in September, 1944 and charged by the Governor with the task of devising a workable plan for broadening the availability of medical services and bospitals while at the same time preserving the integrity and freedom of the medical

profession', and "Wheneas, the tentative plans developed by this Commission as revealed recently to repre sentatives of the Medical Society of the State of New York, contain many proposals and features which in their judgment, are impractical or would prove detrimental to sound medical progress, and would effectually destroy the integrity and free-

dom of the medical profession, and
"Wheneas the medical profession yields
place to no other group in its determination to
improve the quality and availability of good
medical care to every person in New York State
as oridoned by its energytic development of

as evidenced by its energetic development of voluntary modical-care insurance plans, and "WHEREAS, the New York State Commission on Medical Care, as presently constituted, con tains an inadequate number of physicians who truly represent the general practice of medicine,

and WHEREAS it would obviously be in the public interest if the support and participation of the medical profession might be assured in advance for any program to be offered by the Governor's

Commussion, therefore be it
"Resolved, that the Governor be requested by the House of Delegates of the Medical Society of the State of New York to reconstitute the New 1 ork State Commission on Medical Care by the appointment of additional netive practitioners of medicine and be it further

"Resolved, that the Medical Society of the State of New York, hy action of the House of Delegates, through its Council, request the Governor's Commission on Medical Care to provide for a continuing conference with representatives of the Society for the purpose of developing 'a workable plan for broadening the availability of medical services and hospitals while at the same time preserving the integrity and freedom of the medical profession '"

SPEAKER BAUER Reforred to the Reference Com mittee on New Business C, of which Dr Monteith is Chairman

### Section 63 (See 88) Medical Bihics

DR. BENJAHIN M BERNSTEIN, Kings This concerns Medical Ethics

"WHEREAS, the education of the lay public in medical matters is the direct concern of the medical profession, and

"WHEREAR, it is of the utmost importance that such lay education be factually correct and ethically sound, and

"WHEREAS, proper regulation of the means to be employed and the channels to be used for this purpose will be of benefit to the public and to the

medical profession, be it "Resolved, that the Public Relations Committee or similar committee of each county society shall be directly responsible for the carrying out and enforcement of adequate regulations and safeguards for the proper dissemination of medical knowledge to the lay public, and be it further

Resolved, that a special committee be appointed for the study and review of the present Code of Ethics of the State Society for report at the next regular meeting of the House of Delegates of the State Society for its action '

SPEAKER BAUER Referred to Reference Committee on New Business A of which Dr Heliman is Chairman.

#### Section 64. (See 114)

Recommendation of Abolition of 5 Per Cent Discount to Insurance Carriers on Compensation Bills

DR. EXRA A. WOLFF Queens The following resolution is presented at the instruction to the Queens delegation of its county society

"Whereas, the 5 per cont discount for payment of bilis within thurty days of submission of such bills by physicians for the treatment of patients under the Workmen's Compensation Law appears to be unfair to the physicians rendering

the hills, therefore be it

"Resolved, that the membership of the Medical
Society of the County of Queens, Inc instruct its
delegates to the House of Delegates of the
Medical Society of the State of New York to propose the discontinuance of the 5 per cent discount on bills over \$15 and in its place recommend to the Commissioner of Labor the payment by insurance companies of 6 per cent per annum interest on all blils which are not paid within sixty days of the date of receipt of such hills."

SPEAKER BAUER That is referred to the Reference Committee on Report of the Council, Part X, dealing with Workmon's Compensation of which Dr Leo Simpson is Chairman.

Section 65 (See 101) Veterans' Hospitals

DR J LEWIS AMSTER, Bronx The resolution I am about to introduce deals with the care of veterans

"Whereas, our attention has been called to the need of additional hospitals for the care of veterans who have served in World War I and

World War II, and "Whereas, this need is becoming more and more emphasized with the rapid homecoming of our sick and disabled men in the armed forces, and

"Whereas, some of the veterans' hospitals situated in and around the City of New York are

now taxed to capacity, be it "Resolved, that the Medical Society of the State of New York approves the immediate erection of additional hospitals for the care of sick and disabled veterans in this vicinity "

SPEAKER BAUER Referred to the Reference Committee on New Business B, Dr Moore, Chairman

Section 66 (See 4-5)

Report of Reference Committee on Reports of the Past-President and the President

DR EUGENE H COON, Nassau Your Reference Committee on Report of the Past-President feels that the Medical Scorety of the State of Now York has been particularly fortunate to have had so capable a leader as Dr Herbert H Bauckus during this past year Thus has been a trying and troublesome year However, Dr Bauckus has at all times been awaro of the changing medical trend, and his clear thinking and sound opinions have proved to be valuable assets

We have read the report of the President committee heartily concurs with Dr Bauckus' remarks concerning the deaths of Drs Irving and Podvin and the resignation of the executive secretary, Dr Lawrence We appreciate that the loss thus suffered by the Society was most keenly felt by him, and we commend him and the nowly appointed personnel for the efficiency with which the Society has functioned under difficult conditions Dr Bauckus points out with prido the part our membership engaged in the military services has played in winning the war We, also, are proud of their role and suggest that some memorial be in-stituted in memory of those members who have mado the supremo sacrifice

Ho fails to see any virtue in a basic science law and appeals for upholding the high standard requirements of the Medical Practice Act We wish to emphasize this point and say that we must continuc with every device at our command to oppose lesiglation that would legalize chiropractic must strive for proper enforcement of the present Medical Practice Act It is our hope that he will maintain an active interest regarding this particular

legislation

The President has called attention to the work of the Public Relations and Economics Committee and the Subcommittee on Medical Care Insurance urge that the membership at large read the reports of these committees so that they may be better informed regarding the efforts of organized medicine in New York State to solve the problem of voluntary medical-care insurance, and second, we urge that the membership give its wholehearted support to the various society-sponsored voluntary medical-care insurance plans

This committee approves the action of the Council and the Board of Trustees to submit regular reports in suitable form to the component county societies

We commend the President's reference to the wonderful esprit de corps of our Medical Society and observe that it is largely due to the leadership of Dr Herbert H Bauckus and others, who have given so freely of their time to forward the crusades of our Society

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Cunnifio has assumed office Coon Dr under unusual and trying circumstances proving himself a master in conducting the affairs of the Society

The committee is pleased to note the good work accomplished by the Society through his guidance, as exemplified by the survey of Dr Sullivan's Subcommittee of the Council Committee on Public Health and Education

Dr Cunnifie points out the need for a uniform policy for voluntary medical care. We concur with his request and urge that the House of Delegates

take some action on his suggestion

We heartily approve the emphatic statements made by the President regarding antivivisection. We, too, commend Erie County for its plan to educate the public concerning the value of animal experimentation, and recommend that similar action be considered by the various component county societies

The committee feels that despite the handicaps under which Dr Cunnifie has labored he has accomplished much, and anticipates a most successful

year under his energetic loadership

I move the adoption of this portion of the report SPEAKER BAUER You have before you this report which pertains to the romarks of the immediate President of the Society, Dr Cunnifie Is there any discussion on it?

You made one remark in that report that suggested that the House take some action on his recommendation, but you made no specific recommendation, is that correct?
DR COON That is right

The motion was seconded, and as there was no discussion, it was put to a vote, and was

unanimously carried Dr. Coon Now I Now I move the adoption of the report as a whole, which is respectfully submitted by Drs. J A Pritchard, Louis A Friedman, Morris Ant, Benjamin Abramowitz (in absentia), and Eugene H Coon, as Chairman

. The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER BAUER Thank you, Dr Coon!

Section 67 (See 15)

Report of Reference Committee on Report of the Council-Part XI Medical Licensure

DR ANDREW A EGGSTON The reports of the Council Committee on Medical Licensure for 1943-1944, composed of Drs F Leslie Sullivan, Chairman, Howard Fox, and David A Haller, are most complete and thorough and should be read by every member of the Society in order to get a bird's-eye view of medical licensure not only in New York It is well State but in the entire United States

presented, with appropriate tables and significant comments. It comprises such interesting paragraphs as consolidated examinations, failures by candidates homse by reciprocity and endorsement graph of additional licentlates to the medical pro-lession in the past few disruptive years is of interest. License under the accelerated program, as well as premedical acceleration, is thoroughly reviewed. A comprehensive report is offered on the relocation of physicians. The annual registration of doctors' requirements by various ctates is partinent. The number of candidates examined in the difficult period of 1939-1944 is included. A review of the registration of physicians by written examination, reciprocity, or credential endorsements, both for our states and from other countries, is comprehensive The Council Committee concludes with the very pertinent remark

"The Council of the Medical Society of tha State of New York, through its Committee on Medical Licensure, has approved and sent to the Legislative Committee for action

That citizenship as a requirement be in-

corporated in the Medical Practice Act

2 In lieu of this, that an amendment similar to Article V, Section 2193 of the California Medical Practice Act be introduced Thus is in addition to other accepted requirements that we now have in our Medical Fractice Act and would be added to alleviate some of the difficulties we have encountered with foreign licentura

If the applicant is not a citizen of the United States, the country in which he has been licensed to practice medicine and surgery will admit to practice therein citizens of the United States upon proof of prior admission to practice medicane and surgery in some state of the United States or upou proof of metters similar to those required in this section for graduates of foreign medical

schools

The Department of Education has al ready instituted a ruling that the Department will not accept the credentials of a graduate of any medical college who matriculated after January 1, 1940 unless the Department of Education or its agent had had an opportunity to inspect and approve such schools

In relation to the number of repeat examinations a necessary change in the law would have to be made in Section 1258 of the Statutory Law This insertion was approved by the

Council

If a candidate falls on the first examination, he may have a second examination without fee. This phrase is then to be inserted. 'A candidate who, through failures of three examinations, has shown insufficient knowledge for admission to the practice of medicine may be archided from further examinations by the Department until he prosonts evidence of further study in a regular school of medicine and processors. of medicine satisfactory to the Department

Your Reference Committee on Licensure recommends the approval of this part of the report, and I

The motion was seconded.

SPEAKER BAUER You have before you the recommendation of the Reference Committee for the approval of this portion of the report. Is there any discussion. discussion?

DR. W GUERNOET FRET, JR. I did not undertand what that was all about, the reference to the

California law

Dr. Eggston I will read that over again

"If the applicant is not a citizen of the United States, the country in which he has been licensed to practice medicine and surgery will admit to practice therein citizens of the United States or upon proof of prior admission to practice medicine and surgery in some state of the United States or upon proof of matters similar to those required in this section for graduotes of foreign medical schools."

In other words, if they will allow our applicante to practice there, if they have a similar education to what their applicants have to come into the states. that is the way I interpret that paragraph

SPEAKER BAUER Is that satisfactory, Dr Frey?

Dr. FREY Yes

DR. DAVIN CORCORAN, Suffolk I think the word "may" has very little significance, it would be preferable to have "must," so that it would read "must be excluded from further examination by the

Department "etc.
DR. JAMES F. ROONEY In relation to these two affairs I think the word "may is of necessity embodied in this recommendation because the Medical Society of the State of New York cannot dictate to oither the Legislature or the Board of Regents, and particularly to the Board of Regents It will have to be qualified because if we try to put in the word "shall" or "must" immediately this grandiloquent, superlegislative authority which controls education in the State of New York supposedly conformable to the law, but not always so, will react backward Therefore, it is wise to have "mey" there.

one thing further in relation to this California law, which I think you asked about, Dr Frey We have had to dedge this question of citizenship in the State of New York repeatedly for the last twenty-click years. We got it into the lew shortly after 1921 it remained in the law until 1924, and then the Legislature felt that we were not quite as universal as we should be, so they did not require citizenship Cahiornia had a similar situation confronting them in their legislature, so they very quietly killed the dog without cutting his tall off because there is not a single country outside of the United States of America that recognizes an American license or allows United States citizens to practice in that country-not a single one.

I attempted to have the low amended in a similar manner several times in 1916 and then after the last war was over in 1921 1922 1923, 1924, and 1925, providing that we would reciprocate if the standards of these various countries were equivalent to those required by our educational authorities and if they would admit under the same conditions our men to practice medicine in these countries that they requested we should do for their graduates. Not even England will license a physician of the United States unless he completes or supplements his medical education in an English school.

I admit that this is rather dovious, but it is a very good way of getting around this question of citizen ship, which I fear for some years will still be a very difficult provision to get through our Legislature as it is at present constituted.

DR. EMIL Korrier, Bronz. Dr Rooney men tioned that not even England would accept our graduates to practice, but not even our neighboring country Canada, admits an American graduate to practice medicine there I ou have to take one year in their schools, and pass three examinations.

The question was called, and the motion was

put to a vote, and was unanimously carried

Dr. Eggston The report of this same Committee continued for 1944 is equally comprehensive, and concludes with this significant paragraph, which is for information only

"The greatest number of foreign graduates examined by any one state was 510 in New York (252 less than the 762 examinees in 1943), of whom 224 passed and 286, or 56 1 per cent, failed other state tested more than 37 of these physi-Fewer than 5 were examined by eleven states The proportion of failures in 73 schools of the total of 94 was 25 per cent or more United States in fifteen years, 1930 to 1944 inclusive, 12,949 were examined, of whom 6,834 passed and 47 2 per cent failed There has been a decrease of 340 in the number examined in 1944 as compared with the previous year In 1943 there were 599 fewer examined than in the previous year. The percentage of failures, however, has not changed significantly in recent years The greatest number of failures occurred in 1941 when 59.2 per cent failed At no time in this fifteen-year period did fewer than 307 per cent

"From the year 1936 to 1940 there were large annual increases in foreign graduates examined, so then in 1940 there were over three times as many tested as in 1936 Since 1940 there have heen annual decreases The number last year was 1,397 fewer than that of 1940 hut has not yet reached the average number of foreign graduates examined annually prior to 1936 and before the increased migration of foreign physicians to the country from Europe"

Your Reference Committee on Licensure recom-

mends the approval of this report, and I so move The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

Dr. Eggston Now your Committee, consisting of Drs W A Peart, Harold B Davidson, M J Dattelbaum, Ralph Sheldon, and Andrew A Eggston, as Chairman, recommends the approval of the report as a whole, and I so move

The motion was seconded, and as there was no discussion, it was put to a vote, and was

unanimously carried

Section 68

Report of Reference Committee on Reports of Secretary, Treasurer, and District Branches

DR HENRY W MILLER, Putnam Report of the Secretary—Your Reference Committee commends the action of the Council in appointing Dr W P Anderton as Secretary, and Dr W Guernsey Frey, Jr, as Assistant Secretary, following the passing of authorizing of the secretary of the Peter Irving our esteemed former Secretary, Dr Peter Irving, and the Assistant Secretary, Dr E C Podvin As memorial notices will be presented elsewhere (in fact, they have already been acted on hy this House), we refrain from expressing here in detail our sense of great loss of these efficient officers

Dr Anderton, in assuming the duties of Secretary, has presented the report of the activities of his office since his acceptance of the office note changes in the management of the Office of the Secretary The resignation of Dr Joseph S Lawrence, the Executive Officer, who resigned to accept the position of Director of Council and Medical Service and Public Relations of the American

Medical Association in Washington, took place the year Joe Lawrence was a very important cog in our machinery, and his place has been filled by the appointment of Dr Robert R Hannon as Executive Officer in Albany, for whom we anticipate a successful career in handling our ever-increasing legislative Mr Dwight Anderson, of our Public Relations Bureau, has been given the title of Executive Secretary and his work is commended by your committee. The Administrative Assistant, Miss Doris K Dougherty, and the other personnel in the Office of the Secretary have always fulfilled their duties with an efficient and courteous approach which is highly appreciated Your committee urges the publication of the Directory for 1946 We recommend a careful perusal of the report of the Secretary so that you might familiarize yourselves with the activities of that office

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR MILLER Report of the Treasurer—Your Reference Committee on the Report of the Treasurer is unable to find any objection, as usual, to the Report of the Treasurer Our treasury is in a very healthy condition despite the remission of our 1944 dues of members in the service to the amount of \$47,000

We find that there is still an excess of recepts over the expenditures of \$42,804 47 The suggestion of the Treasurer to place the sur-

plus of the Journal account in a reserve fund for future needs of the JOURNAL, for the reasons detailed by the Treasurer, meets with an approval

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

MILLER Report on District Branches, Your Reference Committee desires to commend the activities of the various District Branches, where, in spite of the war situation and the general pressure of activities of all civilian physicians, successful scientific meetings were held in every district, with exceptionally good attendance. The scientific programs were well arranged and stimulating. Your grams were well arranged and stimulating committee is firmly convinced that the scientific and social purposes of conjoined meeting of the various county societies amalgamated in the District Branches are most important and serve to enhance the progress of organized medicine

Your Committee hopes that the officials of the District Branches will continue in their efforts to make their District Branch meetings the success

they deserve

We further feel that some of the problems which confront the House of Delegates might very profitably be discussed at the District Meetings

We note with pleasure that the President of the State Medical Society, Dr Herbert H Bauckus, attended every branch meeting and gave an inspiring address

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

DR MILLER Now I move the adoption of the report as a whole

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER BAUER Thank you, Dr. Miller!

Section 00 (See 107)

Report of Special Committee to Study the Question of Medical Practice in the State of New York

Speaker Bauer Gentlemen, I regret to say it has been called to my attention that there was one report of a Special Committee to Study the Question of Medical Practice in the State of New York which was presented to the Council, and the Council directed that certain portions of that report should go to the House of Delegates. Through an overmight that was not mimeographed nor distributed. If you wish, I will read the report in its entirety, but I can summarize it for you very briefly and then it can go to a reference committee for more detailed study

This report involved four questions

Should there be a thorough revision of the entire Medical Practice Act?

The recommendation of the subcommittee is

against such a revision at the present time
2. Should amendments to the present statutes pertaining to the practice of medicine he proposed? The recommendation of the subcommittee was

that amendments that would strengthen the Medical Practice Act as a protection to the public should be made and in that coonection certain suggestions were made

Whother the present Medical Practice Act should be changed to admit cults under standards equal to those required of medical graduates.

The subcommittee does not recommend changing the present Medical Practice Act to admit cults to licensure for practice or such recognition of cults

Whether to recommend or not to recommend a "Basic Science Law" for New York State

The subcommittee goes on record as being opposed to the principle of a basic science law for this state at

this timo This was referred to the Council and the Council recommends that Questions 1 (should there be a thorough revision of the entire Medical Practice Act) and 2 (should amendments to the present statutes pertaining to the practice of medicine be proposed) be referred to the House of Delegates as requiring further study by the Council, but with authority for the Couocil to have drafted such legislation as may seem necessary or advisable The Council further approved the recommendations pertaining to Questions 3 and 4 of the subcommittee (Three you will recall, was whether the Medical Practice Act should be changed to admit cults, and the sub-committee says no the fourth is whother we should have a basic science law and again the subcommittee says no ) If you wish this complete report read, I will do so but it is getting late. If there is no objection, I will refer it direct to the Reference Committee for consideration by them Hearing none, I will refer this report to the Reference Committee on New Business B Dr Moore Chairman

I am sorry this oversight occurred It was only called to my attention a few mloutes ago, and it was too late then to have it mimeographed

#### Section 70

#### Announcement by Speaker

We still have a tremendous amount of work to do There are seven committees to raport, and there are some twenty-odd resolutions in the hands of the Reference Committees on New Business from which we have not heard That is a tremendous amount of work to get through hy tomerrow afternoon. If we are to adjourn by 2 30 PAt we can have practically nothing left for the afternoon session except the eloction of officers and the election of retired members

The schedule of sessions which was published of the House calls for the House to most at 9 o clock tomorrow morning I know that nobody likes to get up early but on the other hand I know too that many of you want to get away by 2 80 I as Speaker cannot change that schedule once it is published without the authority of the House, but I would suggest that we convene at 8 30 tomorrow morning, so that we may get through

### Section 71

# Schedule of Sessions of the House Changed

Dr. Samuel Z Freemman, New York I move that the schedule of sessions of the House be changed so that the time for convening tomorrow morning shall be 8.30

SPEAKER BAUER Is there any objection to that? (There was no dissent expressed )

SPEAKER BAUER I hear no objection therefore. when the House recesses which it will in a short time we will convene at 8.30 temorrow morning

# Section 72 (Sec 54-50)

Further Report of Reference Committee on Amendments to Constitution and Bylaws. Amendment to Section 2 of Chapter XV of By-Laws (Transfers)

DR B WALLACE HAMILTON New York After consultation with two attorneys the Treasurer and the Assistant Treasurer, and much oratory on behalf of Queens County, your Reference Committee on Report of Constitution and Bylaws Amendments begs to report as follows in reference to the amond ments submitted

Proposed Amendment to Section 2 of Chapter XV of Bylaws

It is proposed to amend the first paragraph of Section 2, Chapter XI, of the Bylaws to read as follows

"Chapter XV Section 2 When an active member in good standing in any component county medical society removes to another county in this Stato, transfer of his name to the rester of the county society to which he removes shall be cootingent upon the acceptance of the Board of Censors or Comitia Miloora of the latter society Such transfer shall be made at the member's request and be effected without cost to him and provided that he files a certificate with the secretary signed by the president and secretary of the component society. From which he removes as to his good standing in such society. No member however shall be an active member of more than one component society nor shall may component society accept a physician residing in another county in any other way than in accordance with the law governing transfers."

Your Reference Committee disapproves the proposal to amend the first paragraph of Chapter 2 of the Bylaws presented in behalf of the Medical

Society of the County of Queens.

SPEAKER BAUER It is moved by the Chairman of the Reference Committee that this amendment be rejected?

Dr. Hamilton That is right I so move SPEAKER BAUER Is this a majority report?
DR HAMILTON A majority report, and a unani

mous report.

DR EZRA A WOLFF, Queens I should like to point out an error in Dr Hamilton's reading of the amendment I believe he read the present constitutional provision rather than the amendment that was submitted I believe he read that such transfer shall take place at a member's request, which is not in the wording of the amendment. The amendment states that transfer shall be contingent upon acceptance by the receptor society SPEAKER BAUER That is correct, Dr Wolff

DR HAMILTON Should I cross that out?

SPEAKER BAUER The bylaw amendment, as printed, reads

"When an active member in good standing in any component county medical society removes to another county in this State, transfer of his name to the roster of the county society to which he removes shall be contingent upon the acceptance of the Board of Censors or Comitia Minora of the latter society"

So it is in there

"Transfer shall be made at the member's request," then follows, so that is in there but in a different sentence than you mentioned

Is there any discussion on this?
Gentlemen, if you vote "Aye" on this, you vote to reject the amendment, if you vote "No" on this you vote to approve the amendment

The question was called for, and the motion

was put to a vote, and was carried

SPEAKER BAUER The report of the Reference Committee is adopted, and the amendment is rejected

# Proposed Amendment to Chapter XVI, Section 2 (Annual Meeting Papers)

Dr. Hamilton On reconsideration of the Proposed Amendment to Chapter XVI, Section 2, your Reference Committee on Report of Constitution and Bylaws Amendments begs to report as follows

"All papers read before the Society at its Annual Meeting by its members shall become the property of the Society Whenever such paper shall not be accepted for publication in the New York STATE JOURNAL OF MEDICINE it shall be returned to the author within a reasonable time '

We recommend its adoption, and I so move

DR JAMES F ROONEY It seems that the amendment that I proposed to the prior resolution on this subject relating to the time within which that paper should be returned after a rejection for publication is not embodied in this present proposal

SPEAKER BAUER While you were out of the room, let me say for your information, the House reconsidered its adoption of that and sent it back to the

Reference Committee for reconsideration

DR ROONEY The House showed great judgment in waiting until I got out (Laughter) We can still vote to amend the report of the committee SPEAKER BAUER That is true

DE ROONEY But I hesitate to do so because I am unfamiliar with the debate that occurred while I was unavoidably absent at the request of two or three of the Reference Committees Could you summarize that briefly for my information, without consuming too much time?

SPEAKER BAUER There was no debate. It was

brought out that the language was not clear as adopted, and that it should be reconsidered and reworded so as to avoid any possible misunderstanding as to what the amendment meant

DR ROONEY Might I ask in what way it was supposed that the language was not clear? This is the first time I have had that happen, and I am very

Interested to know in what way it was not clear SPEAKER BAUER I don't think it was your language, it was rather the language that pertained

to guest speakers, and so on
DR ROONEY "Within a reasonable time," that is at the option of the Publication Committee or whom? I really feel this way about that If a member's paper is rejected, it may be considered by them that a reasonable time is a year or it may be less than a year, it may be a month I don't feel it is just that that man should be prevented from publishing that paper elsewhere if it is rejected for publication in our JOURNAL. If he has something that he has wanted to say, and it is rejected for publication in our JOURNAL, that paper should be returned to him within two months and he should be allowed to publish it elsewhere and not wait until the end of a year, when it is just like yesterday's newspaper That was my particular reason for putting in that provision Just what is "reasonable," as specified here?

SPEAKER BAUER The Chair does not like to get into this argument, but it seems to the Chair that the amendment is still up in the air in that it speaks of rejection but it does not say who will have the authority to reject
DR ROONEY That is true

SPEAKER BAUER And that certainly should be in

the bylaw

DR. ROONEY In order to save time, I am going to move that that portion of the Committee's report relating to this amendment be rereferred to the Committee for clarification and rewording and presented tomorrow

The motion was seconded, and as there was no

discussion it was put to a vote, and was carried. SPEAKER BAUER It is recommitted

Proposed Amendment to Chapter III, Section 4 (Voting Machine)

DR. HAMILTON Your Reference Committee on Constitution and Bylaws Amendments begs to report as follows in reference to the amendments submitted

Proposed Amendment to Chapter III, Section 4 "There shall be added at the end of the present

section, the following When available, a voting machine shall be

used instead of printed ballots '" Your Reference Committee disapproves the

recommendation, and I so move
DR ROONEY I second the motion
The question was called, and the motion was

Put to a vote, and was carried

SPEAKER BAUER The Committee's recommendation is carried, and the amendment is lost

We will recess until 8 30 o'clock tomorrow morning Please be prompt, because we will have a considerable amount of work to be done tomorrow morning ,,,,The session recessed at 6 10 P M

# Morning Session

Tuesday, October 9, 1945

The session convened at 8.40 A.M. SPEAKER BAUER The House will be in order Mr Secretary, is there a quorum present? Secretary Anderton Yes, many more than a

quorum are present

Are there any other resolutions to be introduced? I invite your attention, gentlemen, to the provision of the hylaws that no resolution can be introduced in the final session namely, this afternoon, except by a two-thirds vote of the House Judging by the temper of the House wanting to get away, I think you would have trouble getting that twothirds, so if you have any resolutions you had better put them in now

Section 73 Basic Science Law

DR. JOHN J BUETTNER, Onondaga, I wish to introduce the following resolution

"Whereas, the special committees designated for the study of the general problem of control and/or elimination of cultists in this state have given much time and thought to the various ramifications of the question of a basic science law, and "WHEREAS, we are not in full accord with all of

their opinions as reported to us, and "Whereas, we feel that the benefits to be expected from such a Basic Science Law might effectively ontweigh any disadvantages which may accrue, and

"WHEREAS, we feel that the considered opinion of the individual members of the House of Delegates would be of value to the Society and to our existators in forming any final mature public opinion in this question, be it therefore

"Resolved, that this question be thrown open to general discussion from the floor of the House of

Delegates.

SPEAKER BAUER I think it is not necessary to refer that resolution to a reference committee. merely asks that it be thrown open for discussion The subject is already in the hands of a Reference Committee on New Business which will bring in a report, and it is bound to be open for discussion, so if there is no objection we will just file that resolution. It does not require any action. It is bound to take place anyway

(There was no dissent expressed with the ruling )

Section 74 (See 97)

Voluntary Medical Insurance—Establishing a National Casualty Indemnity Company

DR. CARLTON E WERTE At the instance of many of us who are interested in the development of the voluntary type of insurance, not only in this state but in the United States, and knowing the danger of the compulsory type I introduce this resolution

"Whereas, the development and promotion of voluntary medical insurance can be advanced by the organization of a casualty company for the purpose of coverage in areas of New York and other parts of the United States where no plans now exist, and

"WHEREAS, such a casualty company is neces-sary as an agency to relate the enrollment of nation wide employers to the various local nonprofit medical plans, and

WHEREAS, such a casualty company can be organized wholly within the control of the medical

profession, therefore be it "Resolved that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, instruct that the Council create a special committee of three members charged with the task of in-vestigating the leasibility of developing and putting into operation a national casualty indemnity corporation chartered under the laws of the State of New York to enter into contracts with catablishments in this state for a Surgical Care Indemnity Insurance Plan, and that this Com-mittee report its recommendations to the Council not later than January 31 1940
"It is recommended to the Council that the

Committee be instructed to provide, if the Council approves, that all such contracts entered into by the proposed corporation take into consideration and utilise all existing local medical- and surgicalcare insurance plans with supplemental coverage to be contracted for only in cases where local

plans are not available and be it further "Resolved, that the special committee of three be empowered to take all necessary action, subject however, to the approval of the Council of the Medical Society of the State of New York, and that the Council, if it approves, request that the Board of Trustees to invest such funds for the setting up of the proposed corporation as in their opinion is required or desirable."

SPEAKER BAUZE Referred to the Reference Committee on New Business C, of which Dr Montieth is Chairman

Section 75 (See 48)

Report of Reference Committee on Report of Council-Part II Liberalization of E.M LC. Policies and Requirements in Relation to Applications for Specialist Status in Obstetrics

DR. DAVID BEARD Scholaris This is a resolution on the liberalization of E.M.I.C policies and requirements in relation to applications for specialist status in obstetrics which was referred to the Reference Committee on Report of Council, Part II and considered by us after we made our report yesterday The resolution reads as follows

WHEREAS, under the provisions of the Federal Emergency Maternity and Infant Care Program Emergency Maternay and missit care Program (New York State Approved Plan) differential fees are allowed for complete maternity-care services performed by physicians under the super vision of the E.M.I.C. Bureau of the New York State Department of Health, a dipiomate of the American Board of Obstetries and Genecology rendering such services being entitled to a fee of \$75, whereas a general practitioner who has not been certified by his American Board and has not qualified as a specialist in obstetries with E.M LC is allowed a fee of \$50 for his services, and

"Whereas, physicians who are not members of the American Board of Obstetrics and Gynecology, but who seek certification from EMIC specialists in obstetries, must present evidence that their training and experience in obstetries meet the requirements of training and experience for admission to the examination of such Specialty Board, or that they have had 'cquivalent training and experience' in their specialty, which, in the opinion of the State Commissioner of Health, with the help of an advisory board, would qualify them as specialists in obstetrics, and

"WHEREAS, the procedure for enrollment or application of a physician for special service and status in obstetrics under the EMIC program The enrollment or application form, is as follows as completed by the physician-applicant, is returned to the county medical society for submission to the chairman of the Special Committee on Qualifications for Specialists of the Society, which Committee, if it decides to recommend that the applicant have the status of a specialist in obstetrics, forwards such application to the District Health Officer for transmission to the State Commissioner of Health for final decision,

"Whereas, the physician who has been certified as a specialist in obstetrics by his American Board mercly is required to state the name of his Board and the date of his certification, while the appli-cant-physician who is not a diplomate of his Board is required to meet minimum requirements based on those listed in the Directory of Medical Specialists, consisting of some seven or

eight detailed questions, and
"Whereas, the EMIC Bureau of the State
Department of Health sets forth on the enrollment or application form Number 10 that the general policy with respect to nondiplomate applicants for certification as specialists in ob-

stetrics shall be as follows

It is understood that in each instance, individual consideration will be given to equivalent experience and training instead of stated requirements, for consideration of an applicant for specialist status under the E M I C Program',

"WHEREAS, this pronouncement of policy which evidences an apparent desire to adjudge applieants for specialist certification and status on the basis of their professional standing, actual qualifications, recognized skill, experience, and general fitness, rather than on the basis of hard and fast standardized requirements, is sharply at variance, in our judgment, with the text of the questionnaire on said application form, there existing a

marked conflict, and

"WHEREAS, due to the stringency of such requirements, as embodied in the aforementioned questions, certain physicians with many years of practice and experience in obstetrics and possessed of recognized ability in this branch of medicine, but who are not diplomates of their Board, have encountered great difficulty, or have failed, in their efforts to obtain approval of their applications giving them official status as specialists in obstetrics under EMIC and entitling them to the 50 per cent mercase in fees for their services, even though many of these practitioners specialized in obstetrics long before the inception of specialty boards, and
"Whereas, the failure of the questionnaire on

said application blank to conform with and abide

by the letter and spirit of the pronouncement of policy heretofore recited in full has created confusion, misunderstanding, and resentment, making it difficult for county societies and their special committees on qualifications for specialists to earry out the provisions of the EMIC program with respect to specialists' status, it being the contention of numerous county societies and practitioners that the already quoted statement of policy has not been adhered to or construed in such a manner as to benefit the physician without Board certification who actually has the necessary

qualifications, now therefore be it "Resolved, that the Medical Society of the State of New York, represented in this duly convened meeting of its House of Delegates, registers its professional interest in these individual physicians whose applications for specialist status in obstetrics under the EMIC program have met with rejection, and hereby requests the EMIC Bureaus of the State Department of Health and the Children's Bureau of the US Department of Labor, over-all administrative agency which approved the New York State Plan, to interpret officially the present requirements and policies in New York State with respect to certification of specialists in obstetrics under EMIC and to revise the same, if necessary, to insure a broader, more liberal, fairer set of provisions under which discrimination cannot occur and the objects and aims of the program can be accomplished with facility and satisfaction"

Your Committee recommends that this resolution be referred to the Council for discussion with the State Department of Health for such action toward liberalization of policy as can be obtained from the Children's Bureau of the Department of Labor I move the adoption of the report

The motion was seconded, and as there was no discussion, it was put to a vote, and was carried

Section 76 (Sec 5)

Report of Reference Committee on Report of Planning Committee Address of President Cunniffe re Compulsory Health Insurance

DR PETER J DI NATALE, Genesce To this Committee was referred that portion of the talk by Dr Cunnific referable to compulsory health insurance

Is it your wish that I read all this? SPEAKER BAUER No, I don't think that is

necessary DR DI NATALE Most of us heard the talk yesterday

SPEAKER BAUER Yes, and if somebody wants it

read, he can request it

Dr. Dr NATALE Your Reference Committee approves that portion of Dr Cumuffe's talk that dealt with compulsory health insurance

I move the adoption of the Committee's report SPEAKER BAUER You recall that Dr Cunnific talked yesterday on compulsory health insurance He was "agin" it

DR DI NATALE We are all "agin" it

SPEAKER BAUER And so is the Committee Unless you want that part of his talk read again, why, we will proceed to the discussion of the motion The motion was seconded, and as there was

no discussion, the motion was put to a vote, and was

unanimously carried

L

Section 77 (See 33)

Reference Committee on Report of Planning Committas Separation of Professional Service Fee From Hospital Insurance

Dr. Di Natale This resolution was presented from the Section on Pathology

WHEREAS, 'The Practice of Medicine as defined in the Lducation Law clearly includes the practice of pathology radiology anesthesiology

and physical therapy ond

"Williams, amendment of the Laker Law by recommendation of the Stichman Moreland Com mission gave further legislative action infirming such characterization of these branches of medicine and

WHEREAS Article IN-C of the Insurance Law specifically provides that no corporation shall furnish both hospital service and medical expenso

indemnity insurance, and "Whernas the Medical Society of the State of Naw York, by action of its House of Dolegates has defined the distinction between hospital

service and the practice of medicino and "Whereas, the physician members of the governing boards of United Medical Service, Inc. and the affiliated Associated Hospital Service of New York are publicly indicated as representatives of organized medical societies and

"WHEREAS on agreement at a conference between representatives of organized medicine and the Executive Committee of United Medical Service Inc., Board was later affirmed in a resolu-tion adopted by the United Medical Service Inc. Board that at the expiration of six months Associated Hospital Service of New York would provide a companion liespital-service contract to be usued in combination with the new I nited Medical Service Inc. General Medical Expense Indemnity contract and

WHEREAS this agreement reached between representatives of medicine of the United Medical Service, Inc., Board has not been officially necepted or otherwise recognized by the Board of Directors of the Associated Hospital Service of New York

now, therefore be it

Resolved, that the Medical Society of the State of Now York by netion of the House of Delegates notify both United Medical Service Inc. and Associated Hospital Service of New York that the physicians serving on their Board shall fulfill their duties as directed and agreed upon with representatives of Organized Medicine and be it further

Resolved, that no member of this Society shall continuo to serve on a Board of Directors which fails to recognize and ahido by the explicit terms of the laws relating to the practice of medicino the administration of nonprofit hospital-service and medical-expense insurance, and the official definition of the Medical Society of the State of Vew York relating to the distinction between hospital service and the practice of medicine and be it further

Resolved, that n copy of this resolution be published for the information of the members of this Medical Society and that n copy of thin resolution be mailed to each physician who is now a director of United Medical Service Inc., and of the Associated Hospital Service of New York, to Mr Louis II Pink President of Associated Hospital Service of New York, and to the Secre-tury of the Medical Secrety of the State of New York, and to each of the seventeen county medical societies within the territory of United Medical Service, Inc., to the President of the New York State Hospital Association, Mr John F McCor-mack and to Mr Robert F Dincen, Superintendent of Insurance"

Your Committee approves this resolution I move the adoption of the Committee a report

The motion was seconded
DR THOMAS M DANGELO Queens I would like to know if that resolution sets a time limit for tha doctors who are serving on the Boards of Directors of these various organizations?

Dr. Liner Dwiony It does six months,

Dr. D Anorlo I heard six months mentioned hut I am wondering whether or not that is a tima limit or do they contemplate doing something about It in six months?

DR DI NATALE There is a mention of six

months in one of the whereas clauses

Dr. D Angelo I can explain that a little bit because it is within six months that the Associated Hospital Service will change its contract and oxclude laboratory service anesthesiology etc, from its contract and piace them in the medical-service contract of the United Medical Service that is where the mx months reference applies don't think this resolution carries any definite time limit as to when these doctors on these boards of directors shall take definite action or retire so I think the resolution is general and can be very well supported.

Dr. Harry Aranow I feel the same way about it I don't like that threat to those men I believe the I bellove the men on those boards of directors are just as loyal to the interests of the State Society as any other men, members of the State Society. It was their effort that made this change possible, so the Associated Hospital Service is willing to do it. I don't think we ought to be threatened by being told to get off these boards unless they conform I think you can

leave that provision out

SPEAKER BAUER Do you propose any amend ment?

Dr. Aranow I propose to leave out that threat. SPEAKER BAUER That is rather a general amend ment I am afraid I cannot take that as such,

DR. JACON WERNE Queens I don't think that is a threat This House of Delegates has gono on record for many years as inverting the principle of this resolution but has done nothing at all to enforce notion in conformity with the spirit. The only way to force these hospital associations to the realization that we mean what we say is by telling them that unless they conform we will call off our representa-tives. There are certain issues upon which we cannot compromise, and this is certainly one of them

Speaker Bauer Is there any further discussion?
DR. Frederick W. Williams, Bronz. How can we force these men to resign? You say that unless they conform we should call off our representatives. Just how could you force them to rengu? Suppose happened to be on a board and you said to me, "If the majority don't vote this way, you are going to have to resign"? What could you do to make me resign from the Board of the Associated Rospital Service, for example?
Dr. Samuel 7 Ferenman New York Ask you

to do it in a nice way that is all.

Dr. Williams I ask that question because when all is said and done that is a threat and before you make a threat you should be able to carry out the consequences

Dr. Werne I don't plan to use physical violence with Dr Williams (laughter), but there is such a thing as moral suasion Of course, we can be a little bit more polished in our phraseology if you wish than "Calling all dogs," but we are saying simply this "You gentlemen who represent us on this Associated Hospital Service Board represent organized medicine If there are some issues upon which we feel that our interests are compromised, you simply must inform your Board that unless they conform you will have to withdraw as representatives of organized medicine," but you may certainly still stay on as individuals

The question was called, and the motion was

put to a vote, and was carried

(Sec 23) Section 78

Report of Reference Committee on Report of Planning Committee Appointment of Special Sub-Committee to Study Availability of Medical Care in New York State

DR DI NATALE Regarding the resolution presented by Dr Reginald A Higgons, of Westchester County, on the appointment of a special subcommittee to study availability of medical care in New York State, which resolution reads

"WHEREAS, the Medical Society of the State of New York is vitally interested in the problem of the quality and availability of medical care for all

people of this state, and
"WHEREAS, we believe that leadership in this
matter must stem from the Medical Society of the

State of New York, and

"WHEREAS, this body should go on record as being willing to cooperate wholeheartedly with any plan which actually improves the quality and availability of medical care for all the people, and "Whereas, the Planning Committee for Medi-

cal Policies has rendered such a complete and satisfactory report on the hospital and laboratory facilities in the state of New York and have themselves recommended that their committee or another committee be continued for the purpose

of the study of the whole problem of medical care in the State of New York, therefore be it "Resolved, that the Planning Committee for Medical Policies be continued and that the Medical Society of the State of New York shall set up a special subcommittee of the Planning Committee for the express purpose of studying exist

ing facilities for the medical care of the people of this state, collecting all factual data in this field, with a view to evaluating any deficiencies in the present system, and formulating concrete plans which might eliminate any inadequacies, and be

it further "Resolved, that the Executive Secretary of this subcommittee shall be the Director of the Bureau of Medical-Care Insurance of the Medical Society of the State of New York, and be it

"Resolved, that the Council and Trustees of the Medical Society of the State of New York are memorialized to appropriate from the Society's treasury such monies as are necessary to adequately implement the purposes of this resolution

After much discussion, and hearing a lot of the members of our Society speak to us on this, your Committee feels that this resolution should be disapproved

I move the adoption of the recommendation of the

Reference Committee that this resolution be disapproved

The motion was seconded

Speaker Bauer You have the recommendation of the Reference Committee, which carries with it disapproval of the resolution. Is there any discussion on it?

EMIL KOFFLER, Bronz What are the  $D_R$ 

reasons for the disapproval?

Dr. Dr NATALE The reasons for this, sir, are A subcommittee under Dr F Leslie Sullivan has made a survey on laboratory service and medical care throughout the state We were in conference yesterday, so I do not know what action was taken on that, Dr Sullivan's subcommittee's report

SPEAKER BAUER That has not come up yet DR. SAMUEL Z FREEDMAN, New York The recommendation has been made, I believe, to continue that subcommittee's work

DR DI NATALE Our purpose was this In Dr

Sullivan's report he states

"It was the understanding of the Committee, as moved by Dr Louis H Bauer, that this was a pre-liminary study and later, if the need arose, a special committee or field worker might be hired to intensify the survey The primary purpose is to study the need for increased facilities for diagnostic aid in rural areas, and if such aid is found to be necessary, to determine where these dingnostic aid centers should be located "

Our Committee feels that Dr Sullivan's subcommittee has done an admirable piece of work (Incidentally, I happen to be on that subcommittee) (Laughter) We feel, too, that to turn this work over to a man like Mr Farrell, who, the Lord only knows, has a big enough job as it is as full-time director of Medical Care Insurance Bureau, would be futile because he has all he can do If he does that work right, that should be all that is expected of him for the present That is why your committee felt that this resolution was not in order at this time

The question was called, and the motion was put to a vote, and was carried

SPEAKER BAUER The report of the Committee has been carried, and the resolution is lost

DR DI NATALE That is all I have to report on now, but I expect to have the Report of the Reference Committee on the Planning Committee ready shortly, and it will take me some little time to present that, as I expect there will be quite some discussion on it

Section 79 (See 16)

Report of Reference Committee on Report of Comcil—Part XII Publications and Publicity

DR NELSON W STROHM, Erre Your Committee has earefully considered the Report of the Council, Part XII, on Publications and Publicity, as published in the Annual Reports, pages 39, 40, and 41, as well as the supplementary reports

As a result of this study, your Committee was impressed with the accomplishment of the Editorial Committee of the Journal and the Publications Committee of the Journal during this very trying period. The following difficulties have been encountered in the past year

The transition period to replace the Manag-

ing Editor, this being a most difficult task

The shortage of paper

The shortage of scientific material, principally because of the postponement of the Annual Meeting of the Medical Society of the State of New York

The latter condition has resulted, at times in repetitious and textbook-like articles appearing in the Journal, which is to be regretted, but was un

avoidable under existing circumstances.

Your Committee is very happy to report that at the present time editorial material, review of articles and acknowledgment of the same have been much improved Your Committee feels that in particular Dr Kosmal, who was drafted as Manag ing Editor, has done an excellent piece of work the present time, the nuthor of articles submitted receives an acknowledgment within ten days or two weeks.

Your Committee wishes to call attention to the reports of the Therapeutio Conferences at Corneli and the Diagnostie Conferences at Bellevuo as a new feature of the Jounnal, which are now being published, and recommend that other similar conferences be included in the Journal when available

All advertising maternal has been and is, very carefully scrutinized as to text, truthfuiness and medical ethics. A statement is required from the advertiser as to the exact contents of the product Advertisers who fail to meet the standards of the Committee during the term of their present con

tract are refused renowals.

One of the most interesting parts of the report is the financial statement which shows a surplus of a considerable amount of money It is to be re-membered that this is undoubtedly an accumulation, due to the fact that no Directory has been published for the past three years. This improved financial condition of the JOURNAL, we feel, is directly due to the fact that the JOURNAL is completely controlled by the Medical Society of the State of New York, through its appropriate committee, rather than through an outside agency Therefore, neurplus has accused instead of the former deficits. We feel that the present arrangement should be continued.
We recommend that the House of Delegates con

tinue this Special Committee on Publications of the Society working under the supervision of and re-porting to the Council. We recommend that the House of Delegates be given the following directive as to the continuance of the Committee a personnel, in keeping with the action of the House of Delegates

of 1914

"The Committee on Publications shall consist of the Socretary the Treasurer, the Director of Public Relations, the Managing Director, the Laterary Editor, and one Trustee, who shall be Chairman. The Trustee to serve shall be selected by the Chairman of the Board of Trustees. The Managing Editor of the JOURNAL and the Literary Editor shall be selected by the Committee on Publications, the former Managing Editor and the Literary Editor not voting"

This is deemed to be the most satisfactory way to choose the incumbent of these respective positions because of the familiarity of the member of the Com mittee involved with the qualifications necessary for

the satisfactory performance of his duties.

I move the adoption of this portion of the Com-

mittee s report.

The motion was seconded, and as there was no discussion, it was put to a vote and was unanimously carried.

DR. STROMM Concerning the Directory Your Reference Committee is happy to report that the Publications Committee expects that a Directory will be ready for distribution within the year probably the Fall of 1946. The work entailed in compiling the Directory is enormous, and takes considerable time, honce the distant date of publica-tion. Your Reference Committee well appreciates that this edition of the Directory may be somewhat limited in usefulness, due to the many changes of address necessitated by military service This Committee however, is informed that a new edition will be published as soon as the members of the Society are released from military service.

Committee on Publicity -Your Reference Committee notes that since the last session of the House of Delegates a new feature of publicity—The News Letter—has been initiated This contains spot news of the Society activities as a more instantaneous method of information. This is released at ous method of information irregular intervals as the occasion demands. We recommend that this service be continued.

I move the adoption of this portion of the report

The motion was seconded.

SPEAKER BAUER It has been regularly moved and seconded that this portion of the report, which relates to the Public Relations Bureau and the publication of the News Letter being continued be

adopted. Is there ony discussion?
DR. JOSEPH A. GEIS Essex Does that go to every member of the Society or just the delegates and

SPEAKER BAUER The Chair understands that it does not go to every member of the Society but to the House of Delegates the officers, and committees. Is that correct?

SECRETARY ANDERTON There are certain others. I think. SPRAKER BAUER But it does not go to every member of the Society?

SECRETARY ANDERTON No. DR. ARTHUR J BEDELL How much does that

SPEAKER BAUER Mr Anderson will have to answer that question

(Secretary Anderton left the platform brought Mr Anderson into the meeting room.)

SPEAKER BAUER Mr Anderson, the question has been asked from the floor as to what it costs to send out The News Letter, which goes out at irregular intervals. Can you give us an estimate of that?

MR. DWIGHT ANDERSON We send out five hundred of them, and there is a three-cent stamp on each one. The cost of the stationery is negligible, and the mimeographing is done in our own office, and the machinery used is set up there by our own people. If you said \$25 you would cover the total cost, including time postage, stationery, and overything.

SPEAKER BAUER Does that answer your question, Dr Bedell?

Dr. BEDELL Yes, thank you.

The question was called and the motion was

put to a vote and was carned

DR. STROEM We have noted the publicity on the new version of the Wagner Murray Dingell Social Security Bill which contains a compulsory health-insurance provision, including dental and nursing care. These facts in the form of copies of the bill, were sent to the officers of the Society and a sum mary of the bill was sent to the Society at large in July

Antivisection - The Publicity Committee, in conjunction with the Legislative Committee and the various county societies, did a very thorough and speedy job of informing the profession concerning this suddenly introduced logislation There is further work to be done by the Publicity Committee

We recommend a continuance of on this subject this particular publicity

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried
DR STROHM Medical Licensure —This law proposed to license physicians from schools not accredited by the Board of Regents of the State of New Action was taken by the Publicity Committee to assist the Legislative Committee, and this vicious legislation was stopped
The Publicity Committee contacted the Woman's

Auxiliary, and solicited their help in conjunction

with all publicity

Your Reference Committee wishes to acknowledge the service rendered by the Publicity Committee, and recommends that they continue and increase their services if, and when, it is possible

I move the adoption of this portion of the report The motion was seconded, and as there was no discussion, it was put to a vote, and was

unanimously carried

DR STROHM Now, Mr Speakor, I move the adoption of the report, which is signed by Drs William Klein, G Howard Leader, Ben A. Borkow, G S Philbrick, and myself as Chairman, in its

The motion was seconded, and as there was no discussion, it was put to a vote, and was unanimously carried

SPEAKER BAUER Thank you, Dr Strohm!

Section 80 (Sec 11)

Report of Reference Committee on Report of Council-Part V Laboratory Service and Medical Care

DR G Scott Towne, Saratoga We commend the very comprehensive and monumental survey of the various counties of the State of New York by the Subcommittee on Laboratory Service and Medical Care It is noted with pleasure that a large number of the counties of the State of New York are now adequately equipped with laboratory services, which are now functioning with satisfaction and credit in their respective counties

We approve the establishment of additional laboratory service in the counties or sections of the state which now lack adequate facilities. The Committee realizes that this survey is only a preliminary step in providing adequate laboratory service and medical care, and would urge that any future efforts directed toward this end be guided by the basic principle that such be under the auspices of the Medical Society of the State of New York.

The Committee sincerely appreciates the cooperation in the past that has been given to the study of this problem by the New York State Department of Health, and hopes that any further studies in this direction will be under the joint auspices of both groups. It further recommends to the House, however, that any final action in this direction must be instituted primarily by the regularly designated standing committees of the Medical Society of the State of New York

As a further recommendation, this Committee requests that the Medical Society of the State of New York, through its proper committee, do everything in its power to defeat the Antiviviscetion Bill if and when it comes before the New York State Legislature We feel that animal experimentation is the very foundation of laboratory service. We endorse the statement made by Dr. Cunniffe that a termination of this laboratory effort would set back the progress of medicine fifty years

I move the adoption of this report of your Reference Committee on Report of the Council, Part V

The motion was seconded SPEAKER BAUER This report covers the rather extensive work of Dr Sullivan's Subcommittee on Laboratory Service and Medical Care throughout the state and recommends that we approve of the setting up of laboratory facilities where they are not available, and that they be under the jurisdiction of the Medical Society of the State of New York, and that the ecoperation of the State Society with the State Department of Health be continued It also recommends efforts to defeat any further attempts to put through an antivivisection bill in the Legislature Is there any discussion on the motion to

adopt the report of the Reference Committee?

DR ARTHUR J BEDELL I note, as you summarized it, the report says that we would re-establish or establish laboratories in counties where they

are nonevistent?

DR TOWNE Yes
DR BEDELL Should there not be some proviso there, if that be deemed wise, rather than make a definite pointed statement that they should be?

DR Towne It was broadened a little bit by the

statement

"We approve the establishment of additional laboratory service in the counties or sections of the state which now lack adequate facilities"

That might involve three or four counties Dr. Bedell Elactly, sir, that is my point I

did not so hear it in the report though
DR TOWNE That is in the report
DR BEDELL I ask that that part be reread
SPEAKER BAUER Will you reread that section, Dr Towne?

DR. TOWNE "We approve the establishment of additional laboratory service in the counties or sections of the state which now lack adequate facilities"

I did not designate three or four counties in one, but "sections of the state" might cover that noticed in studying the report of Dr Sullivan that there were counties where they probably could not afford to sustain a laboratory, but they were so situated, generally in small counties, in the southern tier for instance, where one laboratory could adequately take care of all three or four counties if it is It does not designate counties properly placed exactly, nor which counties, but speaks of sections Does that cover it?
DR BEDELL The way it was read certainly

DR BENJAMIN M BERNSTEIN, Kings As & member of this committee I should certainly like to add my voice in commendation to the job done by Dr Sullivan and his subcommittee, but it leaves us way in the air A survey is excellent, and the study is beautiful, but how in heaven's name are you going to establish these centers? Who is going to pay for it? Are we going to let the government, either state or Federal, come into the picture, and say, in effect, to them, "We need a laboratory in Chemango County You establish it, and we will patronize it?"

I always feel that the specter that we are trying to down, control of the medical profession by the Federal government or state government, always 18 creeping up, and unless we are on our guard it is going to get us in the end You know these specters don't sometimes disappear by themselves, and in that connection, if I may, I should like to introduce a Biblical story for a moment. The story is told of a man who was on his dying bed, with his three sons around him watching him pass out of the picture The sons were discussing the funeral arrangements. One of them said, "We need four or five carriages to carry all of our relations to the funeral

"Oh, no, we only need three We have n small samily," said the second one "One will do," said the third Whereupon the dying man got up and said, "Don't argue, boys. Give me a pair of pants and

I will walk over to the cemetery my self

This specter of government medicine is not going over to the hurying grounds and hury itself unless wo belp it along If we let it raise its head, and do not fight it on every conceivable occasion, finally it will

become a living thing and overwhelm us

I raised this question in the Committee proceed Fine, we need diagnostic facilities in Chenango Chemung Delaware, and what have you, hut who is going to pay for them?" That is the im-portant thing I think that is what Dr Bodell had in mind, who is going to pay for the establishment of these centers?

I should urge that great caution be taken in the establishment of these centers. They are needed, of course, but let us find out who is going to pay for them, who is going to control them, who is going to man them, and what share we will have in carrying

them on

Breaker Bauer Is there any further discussion? Dr. Morris Maslon, Warren The Public Health Law of the State of New York authorizes the Board of Supervisors of any county to es-tablish a public-health laboratory which is run independent of the state laboratory hut is under their direct supervision to a cortain extent. The Public Health Law so permits any county or board of supervisors of any county too poor or too small to establish an independent laboratory to contract

with an adjacent laboratory to carry on their work.

The previous speaker asks "Who is going to pay for it?" The taxpayers of the county pny for it for it?" The taxpayers of the county pay for it. They are subsidized up to \$7 500 hy the State Department of Health or the State of New York, which helps pay part of their expenses. These laboratories are not run or cannot be run under the jurisdiction of the State Medical Society They are run hy a board of governors appointed by the boards of supervisors of the various counties in which the laboratory is organized Again I say they are partly supervised by rules and regulations promul gated by the State Department of Health through its Division of Laboratories and Research

It is n very simple matter, insofer as the labora tones of the state are concerned, but when you are speaking of diagnostic centers that is another matter That is where your troubles begin hut there is no trouble insofar as county laboratories are con-carned. The only thing is to urge the State Department of Health to use its efforts to try to get county laboratories established in the few countles that have not as yet established a laboratory I say that because I have been intimately associated with county laboratories for thirty-five years and can tell you exactly how they are run and who pays for them and I am sure that no one has questioned the efficiency of those laboratories

DR. JACON WERNE, Queens There was a very sorious misunderstanding, I think, of the purpose of this resolution that Dr. Towne and his committee favor It would be a very sad commentary on our understanding of the specialty of pathology or reentgenology for this House of Delegates to con

vey the impression to an observer that the field of diagnostic aid or of laboratory services should be given to the state as a public-health function. It would be just as logical to go into a community where there was inadequate obstetrie care or pediatric care and urgo the public health organiza tion of the state or Federal government to send obstetricans and pediatricians into that com-munity Diagnostic aid means pathology and roontgenology and I think the State Medical roontgenology and I think the Stato Medica Society should take whatever steps it can to en courage the staffing of these centers by practicing nnthologists and roentgenologists, and try, wherever possible, to assure them by one means or another of an adequate income to warrant their continuing in a special community If you add these facilities to the state you might just as well hand over surgery internal medicine and obstetrics, because surely the others will follow

DR. THEODORE J CURPTEY Nassau I would like to say a word in connection with this laboratory matter being on the committee. Dr Masion points out the value that the state laboratories serve in the community, but there is one other angle to it that I think the county medical societies should give eye to namely the tendency in certain of the counties in this state to give laboratory service free to the community as a whole on problems that do not concern the public health. I refer specifically to the case of Montgomery County, which I am sure many of you know, is at issue now with the National

Society of Pathologists

We recognize that these state-department-subsidised laboratories are very necessary doing an excellent job in respect to public health, hut many of us deery the tendency that these laboratories have of taking over laboratory medicine as a whole in the counties I think if the county medical societies would give an eye to the forma-tion and the functioning of these state-subsidized laboratories and keep them strictly in the field of public health, so as to leave puthology as it should be as a specially, in comparison with the other specialties of medicine, it would help Dn. Mascon Apparently the question of

public-health inboratories is again on the fire I wish to state that the so-called public-health laboratories not only do public-health work insofar as diagnostic examinations are concerned, but we do all sorts of others including pathology, for all the practicing physicians in the locality whether they are in this county or any other county more, these laboratories must be under the direct supervision of a trained pathologist who is trained to mader all sorts of reports. These laboratories have been demanded by the practicing physicians in have been demanded by the practions physicians from their counties, and every one of these practicing physicians are members of the State Medical Society. I have always stood heart and soul behind the practicing physician in my community and any other community. We render service to the physician primarily and to his patients. The physician primarily and to his patients. question as to whether we charge fees or not is another matter That has nothing to do whatever with the Director of the Laboratory Those fees are made and controlled hy the boards of supervisors. These fees are not part of our salary. They are returned to the Board of Supervisors, and help pay some of the running expenses of the laboratory If we are fortunate enough to receive a heavy endowment by some private individual so that we can render laboratory service to the various physicians free of charge, that is so much to the benefit of the practicing physician, but these diagnostle labora

tories render all sorts of diagnostic work to the Reports are sent to the physician only, and I cannot see where there could be any criticism of any kind directed toward such laboratories However, again I state that your question of diagnostic centers will be an entirely different matter. That is where your troubles will be, but there will be no trouble insofar as rendering laboratory service is concerned

Dr. Werne The fact that the service is rendered to physicians is no argument for the continuance of a principle that is hasically incorrect if we accept the private practice of medicine as heing an ideal You private practice of medicine as heing an ideal may render service to physicians in a certain community by giving them all free obstetric or surgical consultation They would like it fine, prohably, but the surgeons and obstetricians would not we pathologists object to being made Exhibit Number 1 in the experiment for the functioning of state medicine under the present system

The question was called for, and the motion

was put to a vote, and was carried

Section 81

Report of Reference Committee on Report of Council-Part IX. Legislation

FREDERICK W HOLCOMB, Ulster Committee feels that our State Society is fortunate in being able to secure the services of Dr Robert Hannon to carry on the duties of Executive Officer following the resignation of Dr Joseph Lawrence His experience in various fields of medical practice should qualify him to fill this important position in a manner that would create respect and confidence in any legislator or legislative group with whom he might come in contact As everyone in our Society realizes, this office requires a capable and versatile executive, and we feel that Dr Hannon is an excellent choice

Due to the reapportionment of senatorial and assembly districts, new duties have been added to the Executive Office. Dr Hannon, with the capable assistance of Miss Briggs, has assumed added hurdens in a very commendable manner

I move the adoption of this section of the report The motion was seconded, and as there was

no discussion, it was put to a vote, and was un-

ammously carried

Dr. Holcomb Re the Temporary Commission Your Committee notes the continuation by the. Governor of this Commission, with the addition of two more licensed physicians. We feel that this survey is a valuable one both from the standpoints of the public health and of the medical profession, because it deals largely with care of the needy sick Your Committee heartily endorses the work of this Commission

I move the adoption of this section of the report

The motion was seconded

Dr. Samuel Z Freedman, New York Concerning that last part of the report, I wonder if it would he possible to request that no action be taken on that, hecause New York County has introduced a resolution which certainly does not find that Commission is doing a grand piece of work, and I understand from the Reference Committee that that resolution will be reported out favorably I request that that he deleted from the report, in view of the fact that there is a definite resolution concerning this commission which will come up for action

Speaker Bauer What is your specific motion?

DR FREEDMAN. My motion is that that part of the report he disapproved

DR. THOMAS M D'ANGELO, Queens I move that

that part be tabled

The motion was seconded, and it was put to a

vote, and was unanimously carried

SPEAKER BAUER That portion of the report is
tabled Continue, Dr Holcomh, with the rest of

DR. HOLCOMB In regard to the Chiropractic bills. the Public Relations Bureau has done constructive and diligent work in comhatting this legislation in the New York State Assembly and Senate Your Committee feels that the apparent apathy and in difference of the medical profession, as individuals, is in a great measure responsible for this ever-present problem Apparently, some solution must be evolved in enforcing the Medical Practice Act. Your Committee feels that constant and continued medicolegal aggressiveness must be followed out in the interpretation and enforcement of this Act

Your Committee recommends that this House of Delegates approve the efforts of the Legislative Com mittee and the Public Relations Bureau in preventing the passage of a law licensing chiropractors and approves the continuation of such efforts. We also suggest that these efforts he continued and increased in finding better methods to enforce the existing

Medical Practice Act

I recommend the adoption of this section of the report

The motion was seconded

DR. FREDERICK W WILLIAMS, Bronz I would like to suggest that the word "preventing" be changed there Would you read that part again, please?

DR. HOLCOMB "Your Committee recommends that this House of Delegates approve the efforts of the Legislative Committee and the Public Relations Bureau in preventing the passage," etc. Dr. Williams I would suggest the word "opposing" he substituted for "preventing"

DR HOLCOMB That would be hetter

SPEAKER BAUER Is there any objection to changing that one word from "preventing" to "opposing," gentlemen? If not, we will not take formal action on it, as the Committee Chairman has accepted it.

DR. HOLCOMB Right
The question was called, and the motion was

put to a vote, and was carried DR HOLCOMB. In regard to Assembly Bills concerning "Acts to provide for the licensing of persons to practice medicine from unapproved medical schools," your Committee feels that in the exercise of his veto power, Governor Dewey has shown good judgment in maintaining the present high medical standards required of applicants to practice medicine in the State of New York Your Committee recommends that the House of Delegates go on record in approving this action

I move the adoption of this section of the report. The motion was seconded, and as there was no discussion, it was put to a vote, and was unani-

mously carried

DR HOLCOMB Your Committee 18 of the opinion that the change in procedure in handling cases before the Grievance Committee simplifies the solution of these problems and relieves the Board of Regents from much detailed work (We refer there to using the three-member group rather than the whole Board of Regents) We approve these measures

In regard to the bills amending the Compensation Law pertaining to services in x-ray, pathology, physiotherapy etc., we note that the Governor vetoed those bills after passage by the Senate and

Assembly

Apparently further amendments or changes in legislation will be reintroduced or incorporated into those bulls 1 our Committee has no suggestions in this matter of this time

I move the adoption of this section of the report. The motion was seconded and as there was no discussion, it was put to a voto, and was unani

mounty carried

Dr. Holcomb I move the adoption of the report as a whole except that portion that has been tabled This report is signed by Drs. Robert B Archibald, Sylvester C Clemans, Nathan Ratnoff Thomas B Wood, and Frederick W Holcomb Chairman.

The motion was seconded and as there was no discussion It was put to a voto and was

unanimously carried

Section 83 (See 54-66-72)

Report of Reference Committee on Report of Constitution and Bylaws Proposed Amendment to Chapter XVI, Section 2 (Annual Meeting Papers)

Dr. B Wallace Hamilton, New 1 ork This is the third edition of the report of the Reference Com mittee on Constitution and Bylaws Your Roference Committee on Constitution and Bylaw Amend ments begs to report as follows in reference to the amendment submitted to Chapter VI Section 2

"All papers read before the Society at its Annual Meeting by its members shall become the property of the Society Whenever such paper shall be deemed not occeptable for publication in the NEW YORK STATE JOURNAL OF MEDICINE IL sholl be returned to the outhor within four weeks after its receipt in the Publication Office of the State Society

We recommend its adoption, and I so move

The motion was seconded and as there was an discussion, it was put to a vote, and was manimously carried

SPEAKER BAUER Thank you, Dr Hamiltoni

Section 83 (See 27)

Report of Reference Committee on New Business A Workman's Compensation Law

DR. ALFREO HELLMAN The first two resolutions upon which we have to report deal with the Workman a Compensation Law The first was presented by Dr Moses Krakow of the Bronx, reading

WHEREAS Chapter 258 of the Workmon's Compensation Laws of 1935 empowered all the county medical societies throughout the State to administer the medical provisions of the com

ponsation law, and "Whennas, the administration of this iaw was carried out with complete success by the county medical societies insolar as their jurisdiction per

mitted, and

"WHEREAS, this law was amended in June, 1944 for the alleged purpose of correcting so-called abuses existing in the administration of the

county medical societies and
"Whereas, this amended law of 1944 wholly
deprived medical societies in counties of a population of over 1,000 000 from participation in the administration of the law and

Wireness this amended law of 1914 placed in the hands of a Medical Practice Committee of three the whole administration of the law for counties having a population of 1,000,000 or more, and

"Whennas, this Medical Practice Committee cannot possibly conduct the volume of work

assigned to it as shown by

(a) The specific request of the Labor Department that the county societies, deprived by law assist the Medical Practice Committee in its administration

(b) Complaints by physicians of undue dolays in arbitrations and unfair awards in

arbitrations,

(c) Complaints of delays in the qualifying

of physicians,
(d) Failure of physicians to obtain competent information from any source at the Labor Department on matters pertaining to the law, therefore be it

"Resolved that the Medical Society of the State of New York be requested to press for legislation as soon as feasible to reinstate to the medical socioties in counties of a populotion of over 1,000 000 the powers formerly existing under Chapter 258 Laws of 1935

I our Committee, after consultation with Dr Leo Simpson, of Monroe, Chairman of the Roference Committee on Workman's Compensation, recommends the adoption of this resolution, and I so move

SPEAKER BAUER As you know the law in effect now took away that right from the metropolitan counties of Greater New York.

DR. SAMUEL Z FREEDMAN, A ew York Does that chapter include the arbitration activities also?

Dr. HELLMAN It did

The motion was seconded, and as there was no discussion it was put to a vote, and was nnammously carried

Section 84 (See 24)

Report of Reference Committee on New Business A Amendment of Workmen's Compensation Law

DR ALFRED HELLMAN, New York The second resolution was presented by Dr O'Gorman, of Erio County ond reads as follows

WHEREAS, the Workmen's Compensation Law of the State of New York commands the medical societies of all counties with less than 1 000 000 population to certify to the Chairman of Work-men's Compensation Board all applicants for a compensation medical bureau or laboratory licenso, and

'WHERBAS, the aforesaid statute also directs the said county medical societies to ascertain by inspection of each proposed medical bureau or laboratory whether it qualifies for a license under the law and the rules of the Chairman of the Workmen's Compensation Board governing the licensing and operation of such medical bureaus or laboratories, and

"WHEREAS the aforesaid law, in addition imposes upon the said county medical societies the duty of making periodic inspections of all compenantion medical bureaus so certified and licensed, to ascertain that their equipment is adequato and their staff is qualified to provide proper medical care and that the establishment is con ducted and operated in conformity with the legal requirements and

Whenexs, the aforesaid law further requires the said county medical societies to investigate, hear and determine all charges of professional or

other misconduct or of a violation of the Workmen's Compensation Law by any compensation medical bureau so certified and licensed, and

"Whereas, the aforesaid law places upon the said county medical societies the obligation to see to it that no compensation medical bureau or laboratory is conducted or operated unless it is capable of rendering competent medical erre and

is licensed in the manner aforesaid, and "Wheneas, the said county medical societies, in the full discharge of the foregoing duties, necessarily incur substantial clerical, stenographie, traveling, and other expenses, and "Whereas, the aforesaid law provides that each

compensation medical bureau or laboratory so licensed pay to the Chairman of the Workmen's Compensation Board an annual license fee of

S50, and
"Wheneas, the aforesaid law makes no provision for defraying the said expenses of the county medical societies incurred in the per-

formance of the foregoing duties, and

"WHEREAS, the said expenses of the county medical societies are a proper and legitimate cost chargeable to the administration of the Workmen's Compensation Lan, now, therefore be it

"Resolved, by the House of Delegates of the Medical Society of the State of New York, that it be recommended to the Chairman of the Workmen's Compensation Board, of the Department of Labor and the Legislature of the State of New York, that the Workmen's Compensation Law be amended to provide that one half of the annual license fee paid by said compensation medical bureaus and laboratories, pursuant to Sec 13C, Subdy 1-C, be paid to the county medical society that has recommended the licensing of such com-pensation medical bureau or laboratory"

Your Reference Committee has been in conference with Dr Simpson, Chairman of the Reference Committee on Workmeu's Compensation matters are informed that there is a possibility that the arrangements requested in this resolution might be effected without legislation and, therefore, recommend a change in the last paragraph of the resolu-tion as originally offered and asking for amend-ment of the Workmen's Compensation Law, so that the last paragraph will read as follows

"Resolved, that the House of Delegates of the Medical Society of the State of New York request the proper officials of this society to take such action as may be advisable to secure for the county medical societies in counties of less than 1,000,000 population adequate reimbursement for the expenses incurred by them in earrying out the law"

I move the adoption of this recommendation of the Reference Committee, which would change the last paragraph of the resolution as originally presented, and as amended approve it

The motion was seconded, and as there was no discussion, the motion was put to a vote, and was

earried

Section 85 (Sec 40)

Report of Reference Committee on New Business A Minimum Wage Law

DR ALFRED HELLMAN, New York On the resolution introduced by Dr B M Bernstein, of Kings, your Committee recommends the approval of this resolution with a slight change of wording of purpose of clarification

"WHEREAS, the House of Delegates of the Medical Society of the State of New York agree fully with the sentiments expressed by Dr Edward R Cunnifie, President of the Society, regarding the advisability of organized medicine showing its attitude on matters concerning the economic welfare of the public, be it

"Resolved, that this House of Delegates go on record as favoring a minimum wage standard sufficiently high to permit the worker to be and to remain an independent individual able to pay he or her way in the purchase of the necessities of life and in providing for adequate medical care, be it

"Resolved, that the House of Delegates of the American Medical Association be urged to adopt a similar resolution "

As thus amended, your Reference Committee approves, and I move for its adoption

Speaker Bauer You read the amended resolu

Dr. Hellman That is correct

SPEAKER BAUER Is there any discussion on that? DR ABRAHAM KOPLOWITZ, Kings I think I saw that resolution before it was introduced, and I urged that that part referring to "providing for adequate medical eare" be stricken out. Let us at least onco show an altruistic motive without some per sonal motive behind it. It will lose its entire effect in asking for adequate pay to the laboring class if we put it on the ground that we want them to have enough money to pay the doctor I want to amend that, if you please, and move to amend it so as to strike out that phrase, "and in providing for adequate medical care "

The motion was seconded

Speaker Bauer The motion has been amended so as to strike out the words, "and in providing for adequate medical care," from the resolution as approved by the Reference Committee

DR HELLMAN We felt that that would be a way of saying that they could buy nonprofit medical insurance, that the wage may not be sufficient for them to meet the expenses of a catastrophe but it would be sufficient so they could have insurance that would meet that catastrophe
DR Koplowitz You are weakening the entire

thing by putting that clause in

DR. LEO F Schiff, Clinton I think Dr Koplowitz' amendment would nullify this whole thing and make it a ridiculous kind of motion for this House of Delegates to pass After all, we are not social reformers, and going around advocating the boosting of the workman's wage, much as we may personally approve of the minimum standard being high enough to do certain things Our only reason for passing such a resolution, and what was in Dr Cunnifie's mind, I feel, was this that we are not going to have the proper solution to the procurement of the necessities of life, which would include, according to the present trend of thought, adequate medical care, unless we see to it that minimum wage standards are raised sufficiently Let us, then, keep this resolution as your committee, which has studied it quite carefully, recommends Let us keep it in that form, or let us defeat the whole them and not have form, or let us defeat the whole thing and not have any resolution Without some reference to the provision for adequate medical care, it is a useless type of amendment Adequate medical care is now considered in many quarters as one of the necessities of lifo Let us keep that plirase in and make it sensible We oarefully worded that, "and in providing for adequate medical care," which did not mean that e wanted the wages high enough so that every man ould pay his doctor's bill but simply high enough o provide adequate medical care, which would mean all cases huy his food and drink, pay his rent, buy is clothes, and got enough to pay for insurance to ske care of ordinary and some extraordinary redical conditions in the family I ask for the deat of the amendment and the passage of the solution to its original form

DR. ARTHUR J BEDELL I feel that it is a very angerous procedure at this time in our existence to ater into this donatable field of economics. I on't see that the passing of this resolution will sast any of our patients or any physicians.

SPEAKER BAUER The discussion is on the amend ent now, Dr Bedell, not on the resolution

Dr. Benezz I would certainly support the mendment.

SPEAKER BAUER In there any further discussion a the amendment?

DR THOMAS A. McGOLDRIOR There is nobody Ir Speaker in this House but is anxious to secure dequate medical care for every one in the state but zero are more things required to socure adequate redical care than either money or insurance hy overnment or voluntary parties. We are interoverment or voluntary parties We are intersted, as Dr. Koplowitz said, in the altruistic part of the Wo do not say, as the American Medical evolution through its Council on Medical Care has ad, when we claim that people need botter housing r proper sowage facilities throughout the country working conditions that are sanitary for the orkman, that it is so they will secure adequate redical care. We say those are required for the aurpose of their acquiring botter health. That is he very reason that this Council on Medical Care as announced that need, and the Trustees of the merican Medical Association have inserted that ery resolution that we are in favor of adequate pav sent for the workman and for continued employ sent as far as possible but we do not mention that is for the purpose of securing medical care. It is or their health and to prevent disease

I feel if we put that clause in this resolution, and providing for adequate medical care it will a providing for adequate medical care it will estainly be misinterpreted. We know what we bean. We mean so they may secure that care for hemselves voluntarily but surely it will weaken our tand to have the press and these proponents if government, either state or national, medical care ay that the doctors are only doing this for their elich gain. The resolution does not say that but hat is the interpretation that I feel will be taken is Dr hoplowitz has mentiooed and there is noth or adequate medical care." We are interested in the means they will have of preventing discuss.

Furthermore we know what they will do when hey have better employment and better wages. It has been demonstrated in the last three years hat when they have continued employment and letter wages they have paid for medical care They have paid in the hospitals for semiprivate facilities. They have good to the physicians' offices. The free, ir so-called free, clinics have lost the great attend ince they have had. I think we can rely on the cople to do that, but to put that clause in the resoluion only to have the papers say tomorrow morning hat the doctors are strong for higher wages and continued employment so the people will be able to surchase medical care will injure our standing very Teatly

Dr. HELLMAN Might I read the original resolu

tion, because that wording is in the original resolution?

SPEAKER BAUER We will read that for clarifica

Dr. Hellaian This was the original resolution, and it contained that phrase

WHEREAS the House of Delegates agree fully with the sentiment expressed by Dr Cunnifie, President of our State Society in regard to the necessity for medicine showing its attitude on matters concerning the economic welfare of our people belt

Resolved that the House of Delegates of the Medical Society of the State of New York, in convention assembled urges that the minimum wage to be granted by lodustry to labor be high enough to permit the worker to be and remain an independent individual, able economically and willing to pay his or her way in the purchase of all the necessities of life including that of medical

care, and be it further
"Resolved that the Secretary of Labor and the pprepriate committees of the Congress of the United States and the national officers of all labor organizations and the U S Chamber of Commerce and the National Association of Manufacturers be informed of the contents of this resolution, and beitfurther

"Resolved, that the House of Delegates of the American Medical Association be urged to adopt a similar resolution and to follow similar action in regard to its publicity "

Dr. Benjamin M Bernstein Aings No that was crossed out of the original resolution, as submitted, in pencil by me.

SPEAKER BAUER According to the copy on the desk that particular item was eliminated

DR. BERNSTEIN That is right,

DR. HELIAIAN We thought it was still in

SPEARER BAUER No, according to the copy of the resolution we have on the deak it was crossed out ln pencil here.

DR. ARTHUR A FISCHL, Queens I think the resolution is fundamentally sound. I very strongly sup-port Dr. Koplowitz' attitude. I think it should be referred back to the committee for clarification.

CHORUS NO

SPEAKER BAUER Do you so move?

DR. FISCHL I guess not if there is so much oppontion

DR. Koplowitz I withdraw the amendment. sioce it does oot appear in the original resolution SPEAKER BAUER But it is in the Reference Com-

DR THOMAS B Wood Kings After listening to the proponents of the resolution saying that they approvo of having medical care inserted, and then thoir explanation that they don't mean medical care but insurance for medical care I am at a loss. Why should they say one thing and mean another? Why don't they say what they mean? If they mean to ourchase medical indemnity insurance, why don t they say lt?

CHORUS NO DR. JOSEPH A. GEIS, Esser Dr Schiff said that adequate medical care is part of the necessities of life. Then why here a redundancy in this hy men-

tioning it?

Secondly, it does not specify in there sufficient for the purchase of the necessities of life including broad clothing, etc. so why put in adequate medical care, when that is one of the necessities of life? It is a redundancy, and I think is unnecessary

The question was called for

SPEAKER BAUER The amendment is to delete the words "and in providing for adequate medical care" The motion was put to a vote, and the

amendment was carried

SPEAKER BAUER The amendment is carried, and you now have before you the amended resolution As a matter of information to the House, the Chair wishes to invite your attention to the last part of the resolution, which calls for memorializing the American Medical Association to do the same thing In that connection, I wish to point out that the Council on Medical Service and Public Relations and the Board of Trustees of the American Medical Association on June 22, 1945, adopted a constructive program for medical care, and the first item on that program reads

"Sustained production leading to better living conditions with improved housing, nutrition, and sanitation which are fundamental to good health, we support progressive action toward achieving these objectives?"

So it would appear to the Chair that that partieular item in the resolution, referring it to the American Medical Association, is unnecessary as they have already done it

DR BEDELL In view of your statement, would it not be wise to follow Dr Fischl's suggestion that it be rereferred?

Speaker Bauer Is that a motion?

DR BEDELL Yes, I move it be rereferred to the committee for clarification

Dr. Fische I second the motion

Speaker Bauer It has been moved and seconded that the matter be referred back to the committee Is there any discussion on that?

DR ALBERT F R. ANDRESEN, Kings The motion is it be referred back without the clause pertaining to providing adequate care

SPEAKER BAUER Yes, this is just on the matter of

rereferring it

DR ANDRESEN Without any medical-care olause in the resolution. It is rather irrelevant for a state medical society to pass on it after the American Medical Association has already acted In referring it back it might be well to put in a provision such as the A M A uses, at least

Speaker Bauer Is there any other discussion on the referral? If not, those in favor of recommitting it, say "Aye", those opposed "No" The "Noes" have it, and the motion is lost You still have before

you the amended resolution

DR EZRA A WOLFF, Queens Why should we be so overmodest? After all, we are in the business of providing medical care, and I don't think we should be afraid of saying so. The amendment would have provided that our Society is in its proper sphere of advocating proper medical care If we are going to be afraid of saying that, then every action we take has to be construed in the same manner I think the resolution has been emasculated by the deletion of

those words, and it serves us no purpose at this time
DR EDWARD P FLOOD, Bronx I move to amend
the resolution to include after the words "necessities
of life," "including the preservation of his health"

Chorus No

SPEAKER BAUER That would appear to be more or less along the same line as was deleted, therefore, it is out of order

DR HELLMAN I would like to move that we take out the second resolution in the light of what you have just told us that the American Medical Association has done, amend it to that

DR FISCHL May I ask that the resolution be read as is

SPEAKER BAUER. Will you read it? DR HELLMAN As amended, it reads

"Whereas, the House of Delegates of the Medical Society of the State of New York agrees fully with the sentiments expressed by Dr Edward R Cunnifie, President of the Society, regarding the advisability of organized medicine showing its attitude on matters concerning the conomic welfaro of the public, be it "Resolved, that this House of Delegates go on

record as favoring a minimum wage standard, sufficiently high to permit the worker to be and to remain an independent individual able to pay his or her way in the purchase of the necessities of

life, and be it further
"Resolved, that the House of Delegates of the
American Medical Association be urged to adopt a similar resolution "

The American Medical Association has already taken such action

Speaker Bauer I understood that you moved to delete the last sentence?

DR HELLMAN Yes

DR FISCHL I will second that amendment Speaker Bauer Is there any discussion on that

delotion?

Dr. McGoldrick I would like to amend by replacing the recommendation to memorialize the American Medical Association to adopt a similar resolution to state that we approve particularly of the program of the American Medical Association through its Council on Medical Service and Public Relations on that very subject

The amendment was seconded from all

quarters of the room

SPEAKER BAUER Are you willing to withdraw your amendment?

DR HELLMAN Yes

DR FISCHL I withdraw my second

Speaker Bauer The amendment now is that in place of the final sentence, the House of Delegates goes on record as approving the constructive program of the American Medical Association adopted in June, 1945, as pertains to this particular subject

DR BERNSTEIN How much publicity was given to the lay public on the report of the Council on Medical Service and Public Relations in regard to the attitude taken by the American Medical Association, in other words, does the laboring fraternity know how we feel about this thing, and does industry Know?

considerable was BAUER There Speaker publicity issued upon it, and it was commented on by the press all over the country That is as well as I can answer your question

The question was called, and the amendment

was put to a vote, and was carried

SPEAKER BAUER We have now the original motion with two amendments in it for your consideration, one consisting of a deletion and the other of a deletion and an addition

DR SAMUEL Z FREEDMAN, New York We ought to consider this matter a little further and think ahead as to whether or not we are not sticking our necks out quite far by passing this resolution You speak of a minimum wago standard which shall support the individual in obtaining all the necessities of life, but when you realize that today the minimum

wage scale is endoavoring to be elevated to the munificent amount of 65 cents an hour and figuring that an individual probably will work forty hours per week, you allow him the vast amount of \$26 to provide for all the necessitles of life and we, without telling the public about it are hoping that out of this \$26 a week at the new wage level be will be able to psy his private physician to carry on in the private practice of medicine. We seem to forget that we have said, both as individuals and as the profession by the A.M. A action, that it is perfectly all right for the individuel who cannot afford proper housing to have it subadized by the government Federal state and municipality. It is perfectly all right, as we heard today, for the public-health services of the city and the state to supply free laborator, services We certainly are not providing under this resolution for any thing more than that. We agree with what the trend is that is already taking place in this country, namely, that under minimum wave stand ards it is absolutely essential to subsidize the ladividual to obtain the necessities of life I know, too, that we would all like to stop this subsidisation -if that is the correct word for it -at a certain point to that we, as the practice of medicine shall not O.A compulsory health insurance We would like to say to thom, "I ou shall go so far and no further." If this resolution is to have any value at all we should word it not that the individual shall not receive \$28 a week but that the standard of living shall be so raised that everybody shall be able to provide out of his own funds for all the necessities of life When the building contractors complain that federal subsalizing of homes is wrong, that it intorfores with the American way of life, I have not heard the physicians outher individually or collectively agree-ment with them. I have not heard any agreement from the physicians when other individuals in differ ent professions and trades have objected to subsidiring by the government of the fellow who can not pay his own way, yet we expect support from the Public that this ludividual shall be taken care of in such a way that our relationship with him shall be continued. I don't want to talk against the resolu tion as a whole for I say this resolution has its place but it should be so worded that it means what it says and does not try to obtain from the Govern ment support for the individual at somebody cise's expense and not at ours

Dr. ANDERTON I move to table this resolution, because in approving the A.M.A. action we have

already covered the subject

CHORUS No

The motion was seconded and was put to a vote, and was lost.

SPEAKER BAUER The motion to table is lost. lou now have before you the original motion with its two amendments.

The question was called, and the motion was

put to a voto, and was carried

SPEAKER HAURR The motion is carried, and the resolution as amended is adopted

Section 86 (See 57)

Report of Reference Committee on New Business Restoration of Prewar Four-Year Medical-Education Course for Medical Students and Discontinuance of Nine-Nine-Nine-Months' System

DR. ALPRED HELLMAN New York Regarding the resolution on Medicai Education submitted by Dr Strohm, of Lne, reading

"WHEREAS, medical education and training

linve attained an unequaled standard of excellence in medical colleges and schools conducted in the State of New York which high standard the medical profession of this state is keenly anxious shall be maintained and

W nereas for the officient training of a medical atudent it is necessary, in the judgment of the State Department of Education and the medical profession that he shall have satisfactorily comploted four courses of at least eight months each in a medical school registered as maintaining at the time a standard satisfactory to the State De-

partment of Education and

WHEREAS n majority of the medical schools and colleges of New York State, because of the national emergency adopted an accelerated wartime teaching program whereby the regular requirements for the M.D degree are completed in three calendar years which accelerated program policy still is in force, notwithstanding the fact that the war has torminated, and

WHEREAS in the opinion of the medical pro-fession of New York State as well as the responsible beads of the medical colleges and schools of this state, it would be in the best intereste of the people of this State if the prewar full four year period of atudy and training for student-candidates for the MD degree were restored at the earliest possible date there being no sound reason, so far as medicine has any knowledge, for the indefinite continuance of the accelerated program policy,

"WHEREAS because of the national emergency, now concluded, there also was established n sys-tem, which still is in force whereby every gradu ate in medicine in the State of Now 1 ork usually ecryes n nine-months internship, in place of tha prowar period of one full years internship the same abbreviated nine months' service policy applying to the periods of service as assistant resident physician and resident physician in n hospital, the whole being denominated the ninenine-nine-months' program and

WHPHEAE a number of valid reasons are ad vanced for the discontinuance of the accelerated nine-months internship program and restoration of the full year's internship policy among these

reasons being that
(1) The nine-months internship does not provide the new graduate in medicine with sufficient training to equip him to take up an

assistant residency or residency,
(2) Some medical graduates in the past have been prone to take only a one-year a hiternship which in itself is generally regarded as too short a training period whereas reduction of the regular full year's period to nine months provides a wholly inadequate training period
(3) The resident or assistant resident who

has had only nine months' preparation under these circumstances becomes an inadequately prepared candidate for future specialist train-

ing.
(4) The nine-menths internship policy and the restriction as to numbers reduces the number of interns allowed for each bospital imposing too heavy a duty-load on the interns in those civilian institutions and denying patiente that high quality of professional care from the honse staff which they were assured when the hospital boasted a complete stall and every graduate remained for a minimum of one full Year, "Now, therefore, be it

"Resolved, that the Medical Society of the State of New York, represented at this duly convened meeting of its House of Delegates, hereby goes on record as strongly favoring and urging the termination of the accelerated three-year teaching program for medical students in the medical colleges and schools of New York State and the country at large at the conclusion of the academic year beginning October 1, 1945, and that the so-called nine-nine-months' program be discontinued at the earliest possible date in favor of restoration of the full year's training period, or more, for an internship, for an assistant residency and for a residency, such return to prewar medical educational policies being recognized as necessary to the preservation of the high standard of medical education in the state's and nation's medical colleges and schools and in the public interest, and be it further

"Resolved, that the government of the United States, through its appropriate agencies and officers be, and it hereby is, respectfully memorialnzed to take the necessary steps to effectuate the foregoing recommendations"

Your Committee, after due consideration of this resolution and for the purpose of brevity and clarification, submits the following as a substitute for tho resolution as originally offered. In principle it does not differ from the original

"WHEREAS, medical education and training have attained an unequaled standard of excellence in medical colleges and schools conducted in the State of New York, which high standard the medical profession of this state is keenly andous shall be maintained, and

"Whereas, for the efficient training of a medical student it is necessary, in the judgment of the State Department of Education and the medical profession, that he shall have satisfactorily completed four courses of at least eight months each in a medical school registered as maintaining at the time a standard satisfactory

to the State Department of Education, and
"WHEREAS, the medical schools and hospitals
in New York State, because of the national
emergency, adopted an accelerated wartimo teaching, intern, and residency program, and

'WHEREAS, it is the opinion of this House of Delegates that the emergency conditions necessitating this accelerated program have now been ameliorated sufficiently to permit a return to the prewar standards and practice in medical education, be it

"Resolved, that the Medical Society of the State of New York hereby records itself as urging the termination of the accelorated program for medical students, interns, and residents and the return to prewar practice in all phases of medical teaching, and be it further

"Resolved, that the government of the United States, through its appropriate agencies and officers, be and it hereby is respectfully memorialneed to take the necessary steps to effectuate the foregoing recommendations"

Your Committee recommends approval of this substitute resolution, and I move its adoption

The motion was seconded

SPEAKER BAUER Is there any discussion on the

substitute resolution?

DR. ARTHUR J BEDELL Question of wording, did I hear the wording that the government through -will you reread that part, please?

DR HELLMAN It reads

"Resolved, that the government of the United States, through its appropriate agencies and officers, be and it hereby is respectfully memorialized to take the necessary steps to effectuate the foregoing recommendations"

DR BEDELL Question of information, Mr Speaker, are we in a position to speak to the govern-

ment regarding a state affair?
Chorus Why not?
DR HELLMAN This can only be done through tho Federal government because it is a country-wide affair, but if we in New York State feel that it should be done why can't we ask for it?

DR BEDELL Why not start in our own state?

DR JOSEPH A GEIS, Essex I don't think that the

state matter of education has any business in the national government After all, no still have a certain amount of states' rights left in this country We may have given up some voluntarily during the war, but the war is over and we should take them over again. That part of the resolution that refers to the Federal government should be left out

DR THOMAS M D'ANGELO, Queens We are not telling the government what they should or should not do The government has advised that the internship be nine months. It has accelerated the premedical courses. All we ask now is that, since the emergency is over, they let us go back to our regular internship period and have a regular four-year medical course. That is all this resolution asks DR BEDELL Why shouldn't we start at home,

then, rather than going to the Federal government?
DR D'ANGELO The Federal government made

the ruling

DR BEDELL But as a state we can change the ruling as it applies to New York State Wc control those who go through our state colleges, and we control the medical schools in this state. That is a function of the state. It is a function residing in the Board of Regents of the State of New York.

The question was called, and the motion was

put to a vote, and was carried

Dr. Hellman The next two resolutions affect the Principles of Professional Conduct

Section 87 (See 32)

Report of Reference Committee on New Business A—Principles of Professional Conduct

DR ALFRED HELLMAN, New York The resolution submitted by Dr Harold B Davidson, of New York

County, reading

"WHEREAS, the Principles of Professional Conduct' of the Medical Society of the State of Now York fails to specify precisely what may properly be stated in the advertisement or announcement of a book, article, or other publication written by a doctor for the laity, therefore

"Resolved, that a special committee be appointed to study this problem and formulate such necessary amondments as the Committee deems

advisable,

has been slightly reworded by the Reference Com-

mittee, as follows

"WHEREAS, Section 31 of the Principles of Professional Conduct' of the Medical Society of the State of New York fails to specify precisely what may properly be stated in the advertisement or announcement of a book, article, or other publica-tion written by a doctor for the laity, therefore best

"Resolved, that a special committee be appointed to study this problem and formulate such necessary amendments as the Committee deems ad visable "

As thus modified, your Reference Committee recommends the adoption of this resolution, and I

The motion was seconded, and as there was no discussion it was put to a vote, and was unanimously carried

Section 88 (Sec 63)

Report of Reference Committee on New Business A Medical Ethics

DR. ALPBED HELLMAN, New York On the resolution presented by Dr. Benjamin M. Bernstein of Kings concerning medical ethics and reading

"Whereas, the education of the lay public in medical matters is the direct concern of the

medical profession, and

"WHEREAS It is of the utmost importance that such lay education be factually correct and ethically sound, and

"WHEREAS, proper regulation of the means to be employed and the channels to be used for this purpose will be of benefit to the public and the medical profession, be it "Resolved, that the Public Relations Committee

or a similar committee of each county society shall be directly responsible for the carrying out and enforcement of adequate regulations and safeguards for the proper dissemioation of medical knowledge to the lay public, and be it further "Resolved, that a special committee be appointed for the study and review of the present Code of

Ethics of the State Society for report at the next regular meeting of the House of Delegates of the State Society for its action."

This resolution has been slightly amended for purposes of clarification The amended resolution reads as follows

Whereas, the education of the lay public in medical matters is the direct concern of the

medical profession and WHEREAS It is of the utmost importance that such lay education be factually correct and

ethically sound, and

WHEREAS, proper reguletion of the means to be employed and the channels to be used for this purpose will be of benefit to the public and the

medical profession be it

Resolved that it shall be the duty of the Public Relations Commuttee or a similar com mittee of each county tocioty to carry out adequate safeguards for the proper dissemination of medical knowledge to the lay public and be it further

"Resolved that a special committee be appointed for the study and review of the present Code of Ethics of the State Society for report at the next regular meeting of the House of Delegates of the State Society for its action.'

We recommend the approval of this resolution as amended above, and further recommend that, if sdopted, it he referred to the committee provided for in the resolution on a similar subject hy Dr Davidson, of New York and which we have just acted upon I so movo

The motion was seconded and as there was no discussion, it was put to a vote and was unanimously carried

Section 89 (See 99)

Urge Priorities Be Given to Veterans for Buying Surplus Cars

SPEAKER BAUER We have a telegram which has just been received I don't know what you want to do with it but it reads

"Respectfully urgo that convention officially ask Washington to grant priorities to returning physicians among veterans for buying surplus cars. Need for such cars urgent and essential

HENRY ROSNER, Capt. (MC)

What does the House wish to do about it? DR. ARTHUR J BEDELL Ho has a priority now ChoRua Right.

Da. Joseph A Gens, Essex There is already a resolution in about surplus supplies, and that would an clude core

Speaken Bauer It has been called to my attontion that there is a resolution that has been introduced into this House on this very thing, so we will pass it over until that comes up for consideration in the Reference Committee e report.

DR. HARRY ARANOW Does this telegram refer to

government cars or other cars? SPEAKER BAUER It does not say

DR ARANOW I understood that telegram to mean

government cars, cars owned by the government. SPRAKER BAUER It does not say so officially ask Washington to grant priorities to re-turning physicians among veterans for buying sur-plus cars. One would assume from the word plus cars. One would assume from the word surplus" that it referred to government cars, because I don't think there are any surplus civilian cars but it does not say so specifically

Section 90 (See 51)

Report of Reference Committee on New Business War Memorial

Dr. S R. Monterru, Rockland On the recolu tion prepared by, and presented on behalf of, the Executive Committee of the Nassau County Medical Society reading

WHERLAS, some 5 100 and more members of the Medical Society of the State of New York have entered the services of our country, and

WHEREAS certain of these members have made the supremo sacrifice and

Wheneas, it is only fitting, and we believo the members would deem it a privilege to es-tablish a suitable memorial in their honor and

WHEREAS there can be little doubt that the advanced education of the children of these gold star members a project dear to the heart of any professional father, will entail great ancrifice or be

impossible to achieve, be it therefore 'Resolved' that the House of Delegates of the Medical Society of the State of Now York requests the Board of Trustees to establish a fund for the advanced education of the children of our colleagues who have died in the service of our country; and be it further

Resolved that said fund may be raised by a

small increase in dues or an annual levy over a period of years, for example one dollar per year for ten years, to order that each member may

have a part in the memorial '

Your Reference Committee approves this resolution without equivocation. However we feel that this is a matter for caroful study as to the number of people who might become recipients of this gratulty, the amount of money needed, and the manner in which the funds should be administered and dis-We do not have data necessary to make specific plans at short notice We, therefore, recommend that the Council of the Medical Society of New York undertake the study of this suggested plan as a War Memorial and take appropriate action

The motion was seconded
SPEAKER BAUER You have the recommendation of the Reference Committee which refers the matter to the Council for appropriate action Is there any

discussion on the question?

DR ABRAHAM KOPLOWITZ, Kings I am heartily in accord with the resolution as presented, but I would like to have the number rovised They stato there are five thousand and some physicians in As I understand it, we have more than that number of doctors from this state who have entered the service

SPEAKER BAUER That is right, but this refers to members of the Medical Society of the State of New York only There are 5,100 of such mombers who

have entered the armed forces

The question was called, and the motion was put to a vote, and was unanimously carried

Section 91 (Sce 50)

Report of Reference Committee on New Business C Publicity—Returning Servicemen

DR S R MONTEITH, Rockland Concerning the resolution presented by Dr Homer J Knickerbocker, District Delegate, reading

"Whereas, many of our members returning from service with the armed forces will encounter difficulties in the re-establishment of their prac-

tico, and
"WHEREAS, it is the desire of the Medical
Society of the State of New York to extend every assistance within its power toward the re-establish-

ment of these men in their former locations, and "WHEREAS, it has come to our attention that various county societies in other states are follow-

ing this proposed plan, therefore be it "Resolved, that this House of Delegates recommend to the component socioties that whenever a member returns from the armed service to his former location with the intention of resuming practice at that place, the county society of which he is a member cause to be noted in the local newspapers, if necessary by paid advertising space, that the said doctor has returned and is about to or has established himself again in private practice, and be it furthermore

"Resolved, that the county society specifically, in its own name, request said doctor's patients to

again return to his care, and bo it furthermore "Resolved, that said publicity shall be limited to not more than three consecutive issues of any one paper "

Your Reference Committee disapproved this resolution Our reasons for this disapproval are as follows

We are not satisfied that there will be a general need for this service

Wo feel that some returning servicemen would

resent such efforts on their behalf

3 We feel that the principles of practice generally prevailing throughout our profession are such that patients of returning service personnel can be returned to their care through the accepted channols of personal cards sent out by such doctors and through the ethical efforts of those practitioners in whose charge these patients now may be

We feel that the sponsoring of advertising by county societies, regardless of the appealing eircum stances under which such advertising might be undertaken, establishes a dangerous precedent contrary to accepted conduct Let not this disapproval of your reference committee be construed as a slight directed toward the returning serviceman nor as a bid on the part of doctors now in activo practice to retain patients rightfully belonging to those who have suffered many hardships through their military service, but let it serve rather as a plea directed to all practitioners to remember those time-honored principles which make advertising under whatever guise obnovious to us all

I move the adoption of the Committee's report

The motion was seconded SPEAKER BAUER It has been moved that the report be adopted, which carries with it disapproval of the resolution for the certain specific reasons stated by the Chairman Is there any discussion?

DR THOMAS M D'ANGELO, Queens I am not in accord with the entire resolution, but I am ecrtainly in accord with the spirit of the resolution. I don't think it is advertising in the ordinary sense of the word for a county society to tell the public in its community that Dr So-and-So has returned from service and is now in the practice of medicine. However, I feel that it would be going a little too far for you to insert an advertisement that Dr So-and-So's patients should return to him

Mr Speaker, I would like your advice on a parliamentary procedure here. The committee has voted to disapprove of the measure. I feel that the measure might have a better chance of passing if in some way I could have the privilege of making a motion to delete from the resolution that portion which asks that the doctor's patients be referred

back to him

SPEAKER BAUER What you wish could be accomplished by deleting from the resolution the paragraph that this House of Delegates recommends to the component societies that whenever a man returned from the armed services the county society of which lie is a member cause to be noted in the local newspapers, if necessary by paid advertising space, that the said doctor has returned and is about to or line established himself again in private practice. Then the resolution goes on

"Be it furthermore resolved, that the said county society specifically, in its own name, request said doctor's patients to again return to his name

"Be it furthermore resolved, that said publicity shall be limited to not more than three cor

issues of any one paper

Dr. D'Angelo Yes, delete those two Speaker Bauer Dr D'Angelom two final paragraphs of the one substitute for the report of the Ri

The motion was second DR HOMER J KNICKERBU As the introducer of the resc second that substitute moti

DR. LEO F SCHIFF, Chini the Reference Committee h entation on this particul men in our county societ of brains, and we could a sary, Jet maintain our of time specifying he advertising and how and so on If we , Reference at the end

"Let not this disapproval of your Reference Committee be construed as a slight directed toward the returning serviceman nor as a hid on the part of doctors now in active practice to re-tain patients rightfully belonging to those who have suffered many hardships through their military service, but let it serve rather as a plea directed to all practitioners to remember those timehonored principles which make advertising under whatever guise ohnoxious to us all

and added to the whole thing the request of this House of Delegates that the Secretary of this State Society send a full copy of this particular committoo's report to each component society, I think that would do the work and in a much better way than

trying to become too specific at this meeting
SPEAKER BAUER You then move to amend the original motion of the Reference Committee, is that

correct, Dr Schlff?

DR. SCHIFF To add to it that copies of the report of the Reference Committee be sent to each com

PONENT SPEAKER BAUER You have two propositions before you One is the substitute for the report of the reference committee, and the other is an amond ment to the report of the reference committee Wo will consider first the amendment and then after the amendment is disposed of we will consider the

substitute Dr Dwight did you ask for the floor?
DB. Kinny Dwight I wished to speak of the resolution as a whole and not of the amendment.

SPEAKER BAUER Is there any further discussion

of the amendment?

DR. GEORGE W KOSMAK May I state, for the information of those present, that a great many of the local papers now carry announcements of the return of these physicians, so I see no use for having any further action taken in regard to this. Frem the clipping service for our medical news column we run across that all the time, that the local papers throughout a great many parts of this state an nomince the return of these doctors to practice, so that the communities are well aware of that fact.

Dr. Mortzith I should just like to say that your Reference Committee in considering this thing, considered just the fact that Dr Kosmal has now stated, that in small communities there is certainly no particular need that we can see for this type of notice being given. We feel there is no general need for it, so why stick our neeks out on something that involves our sponsoring advertisements of any kind?

DR. A. A. GARTNEN I want to speak in favor of the amendment Many of the men that are return ing are specializing and changing the nature of their practice, so they possibly would not want their

former patients to roturn to them (Laughter)
DR. THOMAS A McGOLDBICK There is one other, perhaps it is a side question, which arises. We have been very much interested and intent on the subject of newspaper advertising in the last twenty-six or fewer hours. The defense put up by these people who are advertising—and so many of them are in the daily papers and in the weekly Sunday papers is that the other follow did it, therefore, I will do it. When we read in the papers of the eminent specialists, the renowned, distinguished surgeons and the very capable dectors, and these are quoted from the newspapers and passed around, the question is, where is it going to stop? After a year and a half's discussion in the New York County Society, and another discussion by our Board of Censors, within a week another doctor published in

the daily papers a few compliments to himself as he tried to sell a book for himself and for his publisher I feel if we advertise by paid advertisements in matters of this kind, some paper somewhere else or some doctor not so ethically minded will leave out the words 'inserted by such and-such County Society" and begin advertising in the dally papers on his own behalf That is another reason why paid advertisements for doctors should not be permitted

DR. CHARLES H. LOUGHRAN Kings As you all know, advertising is not legalized under the Medical Practice Act, so a county society has no more right to do it than the individual doctor, but I feel we do owe a certain duty to all these returning servicemen because a lot of them have had trouble getting word to their patients that they have returned. I would like to amend that resolution to read that every county society can, through its news bureau, advise that such-and-such doctors have returned, and that this is not to be construed as a paid ad

vertisment hut is a news item

DR. ARTHUR A FISCHI, Queens This situation arose in Queens County We received a letter from a veteran overseas who suggested it to us At the meeting of the Comitia Minora it seemed a logical function of a society on a local basis rather than n stato function, so we of the Comitia Minora approved permitting the insertion, purely on a local county society hases, of the names of the returning veterans for a limited number of days. I don't think it should be a state affair it is rather a local function.

Dr. Alfred Hellman, New York My atten-tion has just been called to the fact that if our county societies begin to huy space in the papers our public relations with the papers are going to suffer very materially, and we will be huying space for all sorts of things instead of getting it free as we new

Dr. D'Angelo I think most of this discussion has been on the entire resolution I would like to speak on the entire resolution, but I will not do so because

only the amendment is in order

SPEAKER BAUER The amendment by Dr Schiff is that the original report of the Reference Com mittee be adopted by adding to it a paragraph that the entire resolution plus the committee s report be sent by the Secretary to every county society, and that is what you are deciding now. Those in favor of that amendment, please say "Aye', now those opposed, 'No" The Chair is in doubt. All those in favor of the amendment, please stand, now those opposed please stand. The amendment is carried by a vote of 93 to 14

Now we have the question of the substitute motion of Dr D Angelo which is in place of the amended report of the Reference Committee, that we adopt the original resolution by deleting the words if necessary hy paid advertising space "and the final two paragraphs which said that the county society specifically, in its own name request the doctor's patients to again return to his care and that said publicity shall be limited to not more than three consecutive assues of any one paper. The question is on the substitute. Is there any discussion on the substitute?

Dr. D Angelo Are we going to vote on the entire motion?

SPEAKER BAUER We are going to vote on it when we finish with the substitution. We have to decide that first.

DR. HARRY ARANOW May I bring out a point of order? If this is going to be sent to all the county

societies then it automatically kills the recommendation of the Reference Committee, because the Reference Committee disapproved of the resolution

SPEAKER BAUER But the point of Dr Schiff was that the Committee cited reasons why they disapproved, and that those reasons should go along with the resolution

Dr Aranow Thank you for the explanation

Speaker Bauer Now those in favor of the substitute motion of Dr D'Angelo for the adoption of the amended report of the Reference Committee will please say "Aye", now those opposed, "No" The "Ayes" have it, and the motion is lost

The Reference Committee's report, as amended, is Is there any disnow before you for final adoption

cussion on that?

DR DWIGHT I think the insertion of any paid advertisment in a newspaper or any other publication concerning an individual doctor is very danger-It is not only dangerous as a matter of prece-

ous It is not only dangered dent but for its effect upon—

Speaker Bauer Just a moment We have speaker Bauer Just a moment That part has been lost—

The Reference Com-We liavo We are now on the adoption of the Reference Committee's report, as amended, which disapproved of the original resolution for certain reasons

DR DWIGHT I am spoaking for the report of the

Reference Committee

SPEAKER BAUER All right

Dr. Dwight And against the original resolution Is that in order?

SPEAKER BAUER That is in order, except we are now discussing only the adoption of the Reference Committee's report. The original resolution has Committee's report The original resolution has already been lost. The question is now on adopting or rejecting the Reference Committee's report as amended, and the Reference Committee's report as amended provides that the resolution plus the comments of the Reference Committee will be sent to every county society

Is there any further discussion? If not, all those in favor say "Aye", those opposed, "No" Tho

amended resolution is adopted

DR ARTHUR J BEDELL Question of information, does not the acceptance of that resolution appear in our Journal and go to every member of the House?

SPEAKER BAUER The resolution was not ac-The Reference Committee specifically discepted approved and you adopted the Reference Committee's report calling for disapproval

DR BEDELL I grant you that, but isn't this whole thing going to be published, and going to every

momber of the Society that way?

SPLAKER BAUER The resolution plus the Reference Committee's report giving the reasons for the disapproval are also going to each county society

DR BEDELL But isn't it all going to be published

in the Journal?

SPEAKER BAUER With the report of the Refer-

ence Committee, yes

DR BEDELL Exactly, then why do we have to have the duplication of sending it to the county societies as well?

SPEAKER BAUER That is what they voted

cannot answer that

Section 92 (Sec 29)

Report of Reference Committee on New Business C Medical Care

DR S R MONTEITH, Rockland On the resolution

introduced by Dr Bernstein, of the Kings County Medical Society, reading

"WHEREAS, the organized medical profession has always indicated its willingness to confer with any individual or group in the drafting or consideration of legislation affecting medical care,

"Whereas, the carnest desire of the organized profession to cooperate with labor, industry, or with government in the study of the providing of the best medical care to all the people, has con-

sistently been ignored, and

WHEREAS, it is of the utmost importance that the public be informed and convinced of the earnestness of the medical profession to give its all for the care of the sick and the prevention of disease without the necessity for the interference of an 'outside' agency, be it

"Resolved, that the organized medical profession reaffirms its readiness and willingness to cooperate with all agencies in the discussion and study of plans and measures proposed for completo medical care for all of our people, and be it

further

"Resolved, that the Medical Society of the State of New York stands ready to cooperate in a statewide conference of labor, industry, social agencies, government, and medicine for such a discussion, and be it further

"Resolved, that the House of Delegates of the A M A likewise be urged to reaffirm its willingness to cooperate in a similar national conference of labor, industry, social agencies, government, and medicine, in order to reach a meeting of minds in a discussion as to the best methods and measures, procedure, and plans which can be evolved to provide for all of our people the best possible medical care, without regard to oconomic status or geographic location, and be it further "Resolved, that all possible publicity be given to

this resolution that all concerned individuals and groups be fully informed that such anticipated

conference be called at an early date"

On approving this resolution, your Reference Committee wishes especially to emphasize that portion of the resolution which calls for publicity feel that no means should be overlooked whereby the public may be made aware of the ever-present willingness of the medical profession to lend its knowledge and resources in the attainment of the goal of full medical care available for all

I move the adoption of the report of the Refer-

ence Committee

The motion was seconded

SPEAKER BAUER You have before you the motion for the adoption of the report of the Reference Committee which carries with it approval of the resolution Is there any discussion?

DR JOSEPH A GEIS, Essex We are not willing to cooperate because most of these other organizations are definitely committed to compulsory care Wo are not willing to cooperate in any compulsory scheme of medical care, but we will work with them if they adopt the voluntary form That should be made clear before we adopt this, as to the reason why we will not cooperate

DR EZRA A WOLFF, Queens I believe the resolution calls only for cooperation in the study of the question, not for any cooperation in any precon-

ceived plan

Cuorus Right!

The question was called, and the motion was put to a vote, and was carried

Section 93 (See 39)

Report of Reference Committee on New Business C Proposed Pepper Bills S-1318

Dr. S R. MONTETTH, Rockland This is on the resolution introduced by the Albany County Medical Society reading

"Whereas, there has been introduced in the Senate of the United States by Mr Pepper, Mr Walsh et ol a hill entitled A hill to provide for the general welfare by enabling the several states to make more adequate provision for the health and welfare of mothers and children and for services to crippled children and for other pur-

"Wheneas a companion bill has been intro-duced in the House of Representatives by Mr

Kelley, of Pennsylvania, and

"WHEREAS said hills provide for the extension of the E.M I C program to the entire population of the several states and possessions of the United States, pius additional provisions for disabled

children, etc. and

"WHEREAR said hill: will eventually defeat the purpose for which they presumably were introduced, that is, 't make more adequate provision for the health and welfare of mothers and children first, hy raising maternal mortality and infant morbidity through reducing attendance at pronatal and well-bahy clinics to such a degree that teaching material will be so curtailed that the adequate training of our medical students and the resident staffs of our hospitals will be im possible, second, by discouraging young men and women from study in the fields of obstetrics and pediatrics and

Whereas, such legislation will eventually spread to all fields of medicino, be it

Resolved.

That the Medical Society of the County of Albany, New York, hereby records itself as

being opposed to the aforementioned hills

That our delegates to the meeting of the House of Delegates of the Medical Society of tho State of New York to be held in Buffale early next month be instructed to present this resolution to the House of Delegates and to use their energies in securing favorable action upon the sentiments expressed herein

That our delegates be instructed to urge the House of Delegates to appoint a special committee to study the bills, to understand the ultimate consequences to the medical profession and the general public, and to appear before the appropriate Congressional Committee in opposition to the proposed legislation."

Your Reference Committee approves of this resolution, with the deletion of the fourth 'Whereas (that one in which it makes the statements about not going to the well bahy clinics, and so on) and of the last section of the resolution wherein the resolu tion recommends the appointment of a special com-mittee to study the bills, which committee is instructed to appear before the oppropriate congressional committee in opposition to the proposed legislation

It is the belief of your Reference Committee that the bilis referred to will be dealt with hy already existing committees of the State Society and of the American Medical Association in due course these committees being piedged to oppose all forms of state medicine, one reason for their opposition to this particular measure being based on the fact that the Pepper Bill, S-1318, is apparently an attempt to perpetunto a hureaucracy established as an emer-gency measure and as such accepted in good faith hy the medical profession of the country

I move the adoption of the Committee's report

The motion was seconded SPEAKER BAUER The Committee's report recommends approval of the resolution with delotion of the fourth "whereas" and the final resolution pertaining to the committee going to Congress, and so forth Is there any discussion?

Dr. George W Kosmak May I suggest to the Chairman of the Reference Committee that he in clude there the other bills? There are some are or seven bills on the subject. I think the titles of all those hills should be included in that resolution

SPEAKER BAUER What do you wish to do? Dr. Kosuak I move that the titles of the other hills on this same topic be included in the original

resolution

SPEAKER BAUER Do you have the titles of such other bills Dr Kosmak?

DR KOSMAR NO

Dr. Movreith I do not either

SPEAKER BAUER It would seem to the Chair necessary, then to send it back to the Reference Committee to so amend it and hring it in for later consideration, unless you wish to go shoad with it as ıt is.

DR. KOSMAK Why not make it a general objection to all of the hills on this subject? There are

some six or seven of them

DR. MOYTETTH Would it do to insert that?

Dr. Joseph A. Geis Esser Yesterday your Reference Committee on Report of the Council, Part II, brought in a report where they discussed the E.M I C and said that this House should go on record as opposed to all offorts of extending the E.M I C beyond the period of the emergency, and that the A.M.A be memorialized to oppose any attempt to carry on the E.M.I C beyond the emergency I believe that covers this same resolu-

SPEAKER BAUER I think your point is well taken and I believe it is not necessary to take any action on this that being the case, as it covers the same sub-ject and the House has already acted upon it

DR. STANLEY E. ALDERSON, Albany I think the intent of that resolution was very similar but it merely said, if my recollection is correct, that our delegates to the A.M.A. should present to that Association our opposition to any extension. This resolution brings up the fact that this hill is actually in Congress at the present time, so why should we fail to take action on it?

SPHAKER BAUER The resolution which was adopted yesterday has a final paragraph

We recommend to the House of Delegates that our delegates to the Americae Medical Associa tion be instructed to oppose ony attempt to make the EM.I.C plan or any similar plan a perma nent arrangement."

Therefore the A M.A part of it was covered in that resolution

Dr. Alberson That is exactly my point, but why should we delay until the meeting of the A.M.A.? Why can we not take action on this resolution new if this bill is pending in Congress, as It is?

Dr. GEIS May I speak again for that Reference Committee?

SPEAKER BAUER Yes

DR GEIS We discussed this Pepper Bill, and due to the fact that the A M A is meeting next month-18 that not so?

SPEAKER BAUER Right, December DR GEIS Which will be before the Pepper Bill gets out of committee, we still will have plenty of

DR Kosmak May I speak again and say for the information of the delegates that the hearings on the Pepper Bill are scheduled for this month, the end of the month, and the AMA does not meet until December I believe that we should support this resolution, but I still insist that it would be better to have it more complete and include the names of all of the bills dealing with this subject

DR ARTHUR J BEDELL I move you, sir, to support this resolution coming from my county for the reasons that have already been stated regardless of We ask just for the any additions or deletions consideration of this particular bill at this particular time, and have so stated I certainly trust the House will support us on that

DR HAROLD B DAVIDSON, New York I see no objection to supporting the resolution I think the criterion is the question of whether this House of Delegates will support and give strength to tho

A.M A delegates in letting them know that this House of Delegates is supporting them, but I don't think it will make any difference in their actions because we may trust that the AMA delegates are working on this just as earefully as we are If it will in any way strengthen their hand, the resolution should be supported

DR ABRAHAM KOPLOWITZ, Kings Mr Speaker and Gentlemen, I am entirely in accord with the purposes of the resolution, but I think there is some very dangerous language in it All of our resolutions, once adopted, become official so far as our Society is concerned Wo cannot, for fear of being misunderstood, mention the fact that we need teaching ma-If that should ever become public-

DR KOSMAK That is deleted
DR SAMUEL Z FREEDMAN, New York That has been deleted by the Reference Committee
SPEAKER BAUER Yes, that has been deleted

by the Reference Committee

Speaker Bauer Is there any other discussion? You have before you the adoption of the reference eommittee's report, which has amended the original resolution Is there any further discussion?

The question was called, and the motion was

put to a vote, and was carried

[To be continued in the January 1 issue.]

# Yes-we have no pana-C-eas

Needless to tell you, Doctor, vitamin C is not a cure-all But—recent literature is replete with reports of good results obtained from massive doses of vitamin C in various allergies, particularly hay fever, in convalescence, in infectious diseases and toxic conditions, in some cases of gingivitis and pyorrhea, and in many other conditions due to vitamin C deficiencies

Heretofore, Doctor, you have been hands capped because of the gastric irritation and acid-shift effects that so frequently result from large doses of ascorbic acid but now SODASCORBATE has opened new horizons in vitamin C therapy For the first time the profession is offered a dry, neutral vitamin C in tablet form, free from the gastric irritation that so frequently results from large doses of ascorbic acid

Now you can take full advantage of the new vita min C therapy offered by 'Soda C (SODA SCORBATE) You can administer full and frequent does of vitamin C without these undesired side-effects. Each SODASCORBATE Tablet con tains 120 mg of sodium ascorbate equivalent in vitamin C activity to 100 mg (or 2000 U.S.P Units) of ascorbic acid

The average dose for adults and children over 12 years is one tablet 3 times daily or as indicated by the condition. For children under 12 one half tablet. For bables or very young children, one fourth to one-half tablet may be crushed and dissolved in milk.

Supplied in bottles of 40 and 100 tablets, as well as in "hospital-size bottle containing 500 tablets. For professional samples and covering literature sign and mail the coupon.

# Wider Medical Aid Set for Veterans

THE Veterans Administration, in a reversal of policies, announced on October 26 a program designed to provide modern specialized treatment for veterans and also make the career of surgeon in the department attractive to members of the medical profession

The program, which was promised by Gen. Omar N Bradley as Administrator, was described by its principal author, Maj Gen Paul R. Hawley, who returned from the post of chief surgeon in the European Theater to act as Surgeon General of the Veterans Administration He emphasized, at a press conference, that the program was based on cooperation already promised by leading medical schools and specialists.

High points in the program include

Nineteen new hospitals already announced for construction, and many others later, will be built near the best sources of medical advice, rather than in remote localities, the rule will be to "bring the veteran to the hospital, not to try to take the hospital to the veteran"

2 No veterans' hospitals will be abandened, but the regional units will serve emergency and routine needs Men needing specialized care will be moved into hospitals near the centers where such is avail-

able Because there is not a sufficient number of "top-flight" specialists to serve the needs of the [Continued on page 2708]

veterans' hospitals, the Veterans Administration will arrange for advisory and consultative service

by needed specialists on a part-time basis

4. The Veterans Administration is asking Congress to pass laws permitting its hospitals to operate as do other first-class institutions—providing resi-dencies, granting leaves with pay to selected men to undertake postgraduate work, and additional pay for specialization

The Veterans Administration will provide facilities for, and require that, its staff surgeons qualify for membership in the standard county,

state, and national medical associations

As a first step in this program, General Hawley announced the appointment of Dr Paul B Magnuson, of Chicago, orthopedic specialist, to supervise research programs, formulate training policies for medical personnel, and establish and operate "all schools or courses of instruction on professional subjects for Veterans Administration doctors"

Dr Magnuson, who is principally known as associate professor of surgery at Northwestern University, Chicago, was at the conference and said that his work would be based on the premise that "if you want service you cannot push doctors into

it, they have got to want to give it"

The Veterans Administration, under General Bradley's orders, has begun revising operations so that its staff surgeons are to be relieved of the paper work and routine. Investigations this year have shown that this paper work often required more time than the doctors were able to give patients.

# County News

Onondaga County

Heroic action in saving the lives of twenty-eight men has won for Capt John S O'Toole the Distinguished Service Cross

Captain O'Toole was awarded the decoration by Col. A. J Canning, commanding officer of the

Rhoads General Hospital, Utica

A practicing physician in Potsdam for five years before he entered service, Capt O'Toole went over-seas three years ago with a medical detachment with the 977th Field Artillery division. He served in the Mediterranean theater

On August 15, 1944, near San Raphael, France, during the invasion of southern France, Captain O'Toole performed the heroic deed which won him

An LST landing boat was struck by a radio-controlled bomb as it neared the beachhead. It was set ablaze, the ammunition was exploded, and flying fragments were sent in all directions

Captain O'Toole was on the beach at the time, and he received twenty pieces of shrapnel in his leg, the citation said. Nevertheless, he discarded his clothing and swam out to the boat and back repeatedly, rescuing the twenty-eight men He then remained on shore administering first aid until the men were evacuated before he cared for his own wounds 4

Ontario County

Dr B C Hurlbutt, of Rushville, was elected president of the county society at the fourth quarterly meeting, held in the Canandaigua Hotel. Dr W C Eikner, of Clifton Springs, was named president-elect, and Dr D A. Eiseline, of Shortsville, was re-elected secretary and treasurer for his

Hall, were named as new members Dr Homer J Knickerbocker, of Geneva, was named delegate to the annual meeting of the State organization next year, with Dr James S Allen, of Geneva, as alternate. Dr John W Karr is to continue as editor of the county society's Quarterly Bulletin \*

# Orange County

Dr Charles W Beattie, formerly of Wallkill, has opened his office for the practice of medicine in Newburgh.

Dr Beattie is a graduate of Cornell University Medical College He has been engaged in the practice of medicine in Wallkill for the past eight years.\*

Dr Arnold Bockar, who formerly practiced in Warwick, has opened an office in Newburgh, specializing in diseases of the genitourinary system

Dr E H Douglass, Jr, has resumed the practice of medicine and surgery in Newburgh after having served in the Medical Corps of the Army since June, 1942 He was discharged from Army service on October 3

Dr Douglas had a most varied experience in Army surgery After three months at MacDill, Florida, on surgical service, he was in England, North Africa, and Sicily with the 320th Bomber

Returning to the United States, he attended the School of Aviation Medicine at Randolph Field, Texas, and served at Eglin Field, Florida, and at Watertown, South Dakota, where he was base surgeon and chief of surgery in the Watertown Army Air Forces Station Hospital.

Vhile in North Africa Dr Douglass was detailed to Benghazi in the Near East for service when an

epidemic broke out in the British Army \*

Rensselaer County

Lt Albin A. Galuszka, of Troy, is returning to the United States after eighteen months of combat duty

in the Pacific Theater of War

Lieutenant Galuszka, a surgeon in the Second Armored Amphibian Battalion, was with the first Marines to land on Saipan, Iwo Jima, and Tinian, therefore being the first white doctor to step foot on those islands He also was with them on Guam and Mannagassa This battalion is one of the most famous and most decorated of the Marine assault troops which led the Second, Fourth, and Eleventh Marine Divisions at different periods during these campaigns.

The lieutenant himself, twelve years in the Navy, holds a Bronze Star Medal, two presidential citations, both Atlantic and Pacific-Asiatic campaign ribbons, five battle stars, an expert-pistol-shot medal, a special Navy citation, four divisional citations, and all the other ribbons which could be

velt Hospital He was also former consulting pediatrician at the New York Foundling Hospital, Seaside Hospital of St John's Guild, St Agnes Hospital for Crippled and Atypical Children, and the Holy Name Hospital After receiving his medical degree at the College of Physicians and Surgeons, Columbia University, in 1886, Dr Freeman went to Berlin, Vienna, and Paris to do postgraduate work He was a Fellow of the N Y Academy of Medicine, and member of the Association of American Physicians and the American Pediatrics Society, the medical societies of New York State and County, and the American Medical Association

Elias Gamrin, M D, of Brooklyn, died on September 7 at the age of 56 Dr Gamrin was graduated from the College of Physicians and Surgeons, Columbia University, in 1915, and was on the staff of the Jewish Hospital as assistant obstetrician. He was a momber of the Medical Society of the State of New York, the Kings County Medical Society, and the American Medical Association.

George Glucksman, M D, of New York City, died on June 2 He was graduated from the Long Island College of Medicine in 1904

Arthur Rogers Grant, M D, of Utica, died on November 8 in Pasadena, California, at the age of 73 Dr Grant was former surgeon-in-charge at the Utica Memorial Hospital, but retired recently after serving there for forty-eight years. He was a Fellow of the American College of Surgeons and a member of the American Institute of Homeopathy and the State Homeopathic Society.

John P Greene, M D, of Mamaroneck, died on November 5 at the age of 69 He was graduated from Bellevue Hospital Medical College of New York in 1896

Paul Robert Lavin, M D, of Whitney Point, died on July 6 of injuries received in an automobile accident. Dr. Lavin was 39 years old. He was graduated from Temple University School of Medicine, Philadelphia, in 1932, and interned at St. Vincent's Hospital in New York. He began active duty as a first lieutenant in the medical corps, Army of the United States, on July 26, 1941, and was released in September, 1942. He was formerly on the staff of the Southside Hospital, Bay Shore, Lourdes Hospital, Johnson City

Eugene Ross Linklater, M D, of Kenmore, died on October 18 after several months' illness. He was 62 years old. Dr. Linklater had served as health officer of Kenmore since 1924, and before that was a public school physician. He received his medical degree from the University of Buffalo, School of Medicine, in 1905, and engaged in general practice in Buffalo before becoming health officer of Kenmore. He was a Fellow of the Buffalo Academy of Medicine and a member of the Eric County Medical So-

elety, the Medical Society of the State of New York, and the American Medical Association.

James M MacEvitt, M D, formerly of Brooklyn, died on September 3 at the age of 83 He was graduated from the Long Island College of Medicine in 1891, and interned at St Mary's Hospital, later becoming senior physician at St Mary's and consultant to the Holy Family Hospital He was a member of the Kings County Medical Society, the Medical Society of the State of New York, and the American Medical Association

Kristine Mann, MD, of New York City, died on November 12 at the age of 72 Dr Mann received her medical degree in 1913 from Cornell University Medical College, and since 1925 had specialized in psychoanalysis

William Warner Meiners, M D, of Malverne, died on October 22 at the age of 90 He received his medical degree from New York University in 1890, and then practiced in Long Island City and Freeport For a time he was coroner in Long Island City He was a member of the Michical Society of the State of New York, Nassau County Medical Society and the American Medical Association

ciety, and the American Medical Association
Rudolph Patek, M D, of New York City, died on
November 3 Dr Patek received his medical degree
from the University of Vienna in 1908, and came to
this country in 1939 He was resident physician at
the Sea View Hospital, Staten Island He was a
member of the New York County Medical Society,
the Medical Society of the State of New York, and
the American Medical Association

William Joseph Pulley, MD, of New York City, chincal professor of medicine at the New York University College of Medicine for forty-two years until his retirement in 1934, died on November 16. He was 76 years old. He was graduated from Bellevue Hospital Medical College in 1891, and served his internship at the hospital there. In 1892 he joined the faculty of New York University, and served as director of the college chine. In 1932 he received the Alumni Meritorious Service Award from the Alumni Federation of New York University. He was vice-president of the Federation from 1933 to 1935. He was consulting physician to Riverside Hospital, a Fellow of the Academy of Medicine, and a member of the medical societies of the State and County of New York, and the American Medical Association.

New York, and the American Medical Association Frederick William Van Lengen, MD, of Syracuse, died on October 15 at the age of 71 He had been a practicing physician in Syracuse for nearly fifty years, going there immediately following his graduation from Syracuse University College of Medicine in 1898, and a year of internship at Bellevue Hospital He also taught anatomy at Syracuse University, and at the time of his death was on the staff of the People's Hospital He was a Fellow of the Academy of Medicine, a member of the Onondaga County Medical Society, the Medical Society of the State of New York, and the American Medical

Association

# SUGGESTIONS FOR CONTRIBUTORS TO THE NEW YORK STATE JOURNAL OF MEDICINE

The New York State Journal of Medicine asks its contributors to follow the suggestions listed below in the preparation of their articles. In this way they will greatly facilitate the expeditious publication of the Journal. These suggestions have been devised in order to save correspondence, avoid return of papers for changes, minimize the work of preparation for the printer, and save the high costs of corrections made on galley proof

Size of Articles —It is earnestly desired that scientific articles shall not exceed 6 Journal pages at the outside Longer articles tend to lower reader interest. An average of five or six seems to he the most desirable from this point of view. Calculation can readily be made by multiplying the number of double-spaced typewritten manuscript pages by the fraction two-fifths, eg, twelve manuscript pages will make five Journal pages.

Manuscripts —Papers must be typewritten on one side only of white sheets consecutively numbered, and he double spaced with one-inch margins. They should be prepared with great care so as to be typographically correct. All headings, titles, subtitles, and subheadings should he typed flush with the left-hand margin. This is imperative for rapid and accurate composition by the printers.

Titles.—The title should be brief and typed in capital letters. The subtitle can be longer and should he typed in caps and lower case letters. Under the title, or subtitle, if there is one, should appear the name of the author and city in which he lives. Directly under his name should be the hospital or institution with which he is affiliated.

Subheadings—Subheadings should be inserted by the author at appropriate intervals

References—It is the unfailing practice of the New York State Journal of Medicine to use specific "references" rather than "hibliography" There should appear in the text reference numbers, typed above and to the right of the word to which there is a reference. A list, consecutively numbered, of these references should follow at the end of the manuscript (Note that spelling in list is same as in text.) The arrangement should be as follows and should include all items

a. Books—author's surname followed by initials, title of book, edition, location and name of publisher, year of publication, volume, and page number Thus, Osler, W Modern Medicine, 3rd ed., Philadelphia, Lea & Fehiger, 1927, vol. 5, p. 57

b Periodicals—author's surname followed by

mitials, name of periodical, volume, par month (day if necessary), year of publicating Thus, Leahy, Leon J New York State, Med 40 347 (March 1) 1940

NOTE The JOURNAL does not include titles articles

Case Reports—Instead of abstracts of hosp histories, authors should write these reports in narrative style with properly completed sentence All unimportant details should be deleted with surgeneral negative statements as fit the case

Tables —While tables are very useful on lanter slides in the reading of papers, they fail of the purpose to a large extent in the printed page. For that reason it is urged that they be reduced as much as possible to descriptive language.

Illustrations.—These should be kept to the minimum necessary to make clear the points in the registered by the author. In some instance they are imperative to proper understanding, others they are merely picturesque. The lattican be excluded to good effect, both as to space

and the not inconsiderable cost

When illustrations are to be used they shoul accompany manuscripts and each should alway be referred to in the text, preferably by numbe Drawings or graphs should not be larger that 12 × 16 inches, and must be made with jet hild India ink on white paper Do not use typewriter filettering. The smallest lettering on 8 × 10 incopy should he no less than ½ inch high. Cross section paper (white with hlack lines) may be used but should not have more than 4 lines per inch. I finer ruled paper is used, the major division line should be drawn in with black ink, omitting the fine divisions. In the case of finely ruled paper, on hlue-lined paper can be accepted. Lettering an all markings must be large enough to be readable after reduction. Mail rolled or flat, never fold Photographs should he very distinct and show dea black and white contrasts. They must be on gloss white paper. Avoid round and oval photographs. The

Whenever possible "crop" photographs, 1e. mark portion that can be excluded when reproduced Crop marks should be on margin of photographs

Do not run pencil lines through photographs

It is important to mark the top of the illustration on the back, also its number as referred to in the text, thus, Fig. 1, 2, and the name and address 0 the author

Legends should be typewritten on one sheet opaper and attached to the illustrations

published in Human Fertility¹ shows an overwhelming preference by experienced clinicians for the "Diaphragm and Jelly" method of conception control

The report covering 36,955 new cases shows that the diaphragm and jelly method was prescribed for 34,314, or 93%

On the evidence supplied by competent clinicians we continue to suggest that for the optimum in protection the physician should prescribe the combined use of a vaginal diaphragm and spermatocidal jelly

When you specify "RAMSES"\* a product of highest quality is assured.
